Department of Educational Management

Enugu State University of Science and Technology (Esut),

Agbani, Enugu State, Nigeria.

University of Port- Harcourt, Rivers State, Nigeria.

Abstract

This study examined re-engineering teacher education programmes for sustainable development at the basic education level in Enugu State, Nigeria. Descriptive survey research design was employed in the study. Data was collected using a twenty item researcher's structured questionnaire titled —Re-engineering Teacher Education Programmes for sustainable development Questionnaire (RTEPSDQ). The reliability co-efficient of 0.79 of the instrument was obtained using Cronbach Alpha method. Two research questions and one null hypothesis guided the study. The instrument was administered to 260 teachers in two urban and two rural public primary schools in four local government areas of Enugu state, Nigeria. 211 copies out of the 260 copies of the instrument administered to teachers were retrieved. Data analysis was done using mean with standard deviation while the hypothesis was tested using t- test statistics at 0.05 level of significance. With grand means of 3.29 and 3.25 for teachers, the implication is that teachers are of the opinion that sustainable development will be promoted when those changes are made in the school curriculum. It is recommended among others that teacher training and professional development should be greatly advocated to promote sustainable development.

Keywords: Re-engineering, teachers, teacher education, programmes, sustainable development.

Introduction

Sustainable development is a real challenge for our country. The world in general is facing numerous challenges including climate change, environmental degradation, social inequality, and economic instability. These challenges have significant implications for sustainable development which is essential for ensuring a prosperous and equitable future for all (UNESCO, 2019).

There are several paths towards achieving sustainable development. These paths according to UNESCO (2019) include sustainable agriculture, sustainable consumption, sustainable education etc. Education as one of these paths is a fundamental tool for achieving a more sustainable world, which is the essence of sustainable development Goal4 (SDG4). Sterling (2016) avers that, though, education does not bring about more sustainable future, it is however true that without education for sustainable development, we cannot manage to create a sustainable future.

Sustainable development according to Nayar (2013) is a development that meets the needs of the present without compromising the ability of the future generation to meet their own needs. In furtherance to this, the author opines that sustainable development promotes critical thinking and decision making in a collaborative manner. Hence, it could explore students and create opportunities for them to learn and examine how the resources they use affect the earth. However, much emphasis is now laid on education as a tool for sustainable development.

Education can be seen as a tool for sustainable development across all nations. As contained in chapter 36 of Agenda 21, it is defined as a basement for sustainable development. Thus, in the declaration which was adopted at World Sustainable Development Summit in 2002, it was described as an instrument for creating of humane and oriented at solving of mankind's society problems where

everybody is granted his or her dignity. For education to be regarded as a tool or instrument for sustainable development, it must be connected with values and ethics. Corroborating on this, Galtseva, Svitich, Kutsiy, Savechecho and Strukova (2020), assert that education for sustainable development is an important instrument for formation of values and knowledge about society that is in the state of balance and harmony with nature and provides balance between human's needs and its cooperation with environment.

Education for sustainable development (ESD) is a vision of education that seeks to balance human and economic wellbeing of people with cultural traditions and respect for the earth's natural resources (Arjen & Walls, 2010). Continuing, the authors reiterate that it emphasizes the aspects of learning that enhance the transition towards sustainability including future education, citizenship education, education for a culture of peace, gender, equality, and respect for human rights, health education, population education, education for protecting and managing natural resources, and education for sustainable consumption. For UNESCO (2023), ESD is a powerful strategy to transform education, covering what we learn, how we learn it and the environment in which we learn it. It sees education as the key to unlocking progress in all the global development goals. Education for sustainable development according to Abderrahim (2019), generally refers to the critical interrelationship between educational systems and sustainable development. The author further states it stresses the vital role educationa. Policies and programmes play in the successful implementation of sustainable and equitable development policies and programmes and the achievement of sustainability goals. Corroborating on this, Downess in Abderrahim identifies two dimensions of sustainable development as a curriculum development dimension whereby educational issues are incorporated into the learning process of each generation, and a human resources dimension whereby the educational system provides the skills, training and knowledge for a society to achieve the objectives of sustainable development.

Through education for sustainable development (ESD), people are greatly empowered with the knowledge, skills, values, attitudes and behavior to live in a way that is good for the environment, economy and society (UNESCO, 2014). ESD equally encourages people to make smart responsible choices that help to create a better future for everyone. Moreover, ESD focuses on participation, cooperation and engagement in teaching and learning. These methods according to Boevede Pauw, Genrike, Olsson and Berglund (2015), can generate changes in people's mentalities and can influence their attitudes and behavior while at the same time enabling them to cope with challenges of sustainable development. Consequently, ESD is a means of promoting key competencies for sustainability such as critical thinking, systematic thinking, self - awareness, problem solving e.t.c. Furthermore, ESD allows every human being to acquire knowledge, skills attitudes, and values necessary to shape sustainable future. The whole idea is to create a world that meets the needs of the present without compromising the ability of the future generations to meet their own..

In Nigeria, ESD programmes aimed at integrating sustainability principles into various levels of education from primary education to higher education. One of the most important things we can do to ensure a better future for our planet according to Twin (2023), is to educate the next generation on the importance of sustainable development goals (SDGs). SDGs as an integral part of doing this can be incorporated into the classrooms. Sustainability principles equip learners with knowledge, skills, attitudes and values necessary to address environmental, social and economic challenges for sustainable future. They can only be achieved through the application of interactive activities and hands on projects by teachers. Twin (2023), says that teachers as role models can help students understand sustainable development goals and how they can make a difference. Continuing, the author stresses that by introducing the students to the sustainable development goals through many approaches, they can help create a more sustainable world. This can help develop a sense of social responsibility in students empowering them to take active roles in making our planet a better place. Teachers as bridge builders in education can fill this gap by helping students to develop skills and knowledge needed to make a positive impact in their communities and elsewhere. Moreover, by introducing SDGs to students, teachers can help build a better understanding of how their actions can contribute to their achievement

of these goals and help them develop a sense of social responsibility that will empower them to take active part in creating a sustainable future. Inserting sustainability into education system involves a multifaceted approach that draws from various disciplines and pedagogical strategies (Senguptal et al in (Smelkova.Trofymenko. 2024). A number of approaches have been identified to be used in introducing students to sustainable development goals. These approaches include integrating SDGs into the curriculum, incorporating project based learning, real world connections, interactive activities, e.t.c. To achieve this, the focus should be on teacher education

Teacher education can be described as a process of training people to equip them effectively and efficiently to teach children from pre-primary to higher education level with the intention of achieving the objectives of education. According to Nnokami and Sule (2017), teacher education is the professional education of teachers towards attainment of attitudes, skills and knowledge that will make them efficient and effective in their work in accordance with the need of the society at any point in time. The authors further state that it includes training/education before service (pre- service), and education/ training during service (in service or on the job). For Imoge in Nnokami and Sule (2017), teacher education can be defined as the policies and procedures designed to equip prospective teachers with the knowledge, attitudes and skills they require to perform their tasks effectively in the classroom and the wider society. In the words of Swallow & Will-Dubyak (2020), teacher education refers to the process of training and preparing individuals to become qualified teachers.

Teacher education according to Good's dictionary of education include all the formal and non – formal activities and experiences that help to qualify a person to assume responsibilities of a member of the education profession or to discharge his responsibilities more effectively. Teacher education is the professional training that teachers receive for them to be classified as professionals (Jibril, 2007). Moreover, Jibril defines teacher education as the foundations of quality in the educational system and this is the key to unlock all facets of development. For Ipaye in Jibril teacher education is charged with the task of developing knowledge and skills as basis for practice, with preparing personnel entry into the teaching profession (pre-service), and with contributing to the ongoing development of practicing professionals (in- service),

In the words of Mkpa (2015), teacher education can be described as the procedures designed to equip teachers at the pre-service and in-service levels with the knowledge, skills, and competencies needed to perform their professional duties successfully. Continuing the author says that, it is a set of planned activities which are projected towards helping teachers to acquire appropriate knowledge, skills and attitudes so as to enable them function as creative, effective and competent teachers. With the acquisition of knowledge, skills and competencies teachers are now fully prepared to instruct and guide their students to achieve their objectives.

Teacher education plays a vital role in preparing and developing educators who will be instructing and guiding students in educational settings. It encompasses the processes and programmes designed to equip aspiring teachers with the knowledge, skills and competencies necessary for effective teaching and facilitating students' learning through teacher education programmes.

Teacher education programme is a programme that integrates course work and field work with purpose of preparing future educators for classroom teaching in a school system (Swallow & Will-Dubyak (2020), Teacher education provide prospective and practicing teachers with the necessary tools and resources to effectively engage with students, create supportive learning environment and promote academic and personal growth (Likes, 2023). A sound and viable teacher education programme is essential for qualitative improvement of the general educational provision for the citizens of the nation (Mahuta, n.d). According to the Federal Republic of Nigeria in its National Policy on Education (2013), it is highlighted that no education system may rise above the quality of its teachers. Therefore teacher education shall continue to be given major emphasis in all educational planning programmes and development.

In Nigeria, teacher education programmes are categorized as either pre- service or in-service training with various options for each. While pre-service training prepares individuals to become qualified teachers, in- service training on the other hand, aids teachers who are already on the job to

enhance their skills and knowledge. The objectives of teacher education according to Federal Republic of Nigeria in its national Policy of Education (2013) include the following;

- i. to produce highly motivated, conscientious and efficient classroom teachers for all levels of our educational systems;
- ii. to encourage further the spirit of enquiry and creativity in teachers;
- iii. to help teachers fit into social life of the community and society at large and enhance their commitment to national goals;
- iv. to produce teachers with intellectual and professional background; There are a number of teacher education programmes in Nigeria.(Pp. 56)

Teacher education programmes in Nigeria are structured at three levels: The Nigeria Certificate of Education (NCE). Bachelor's degree in Education, Postgraduate diploma in Education and various in-service Training options including advanced Diploma in Education (ADE), Pivotal Teachers Training Programme (PTTP) and Advanced Diploma in Environmental Education (ADEE) (Nigerian Teachers Institute, NTI, 2021). These programmes are designed to equip teachers with the necessary knowledge, skills and competencies for effective quality education delivery and to prepare them for various roles within the education system. The Nigeria Certificate of Education (NCE) has been earmarked as the minimum qualification for entry into the teaching profession.

Every aspiring teacher must at least possess this minimum entry qualification before getting into the teaching profession. Jibril (2007), however, says that the quality of education depends largely on the quality of the teacher. To buttress this, Jubril reiterates that whatever input is made into an educational system in respect of management, resources, facilities and array of instructional materials, will be of little avail if the teacher is unskilled, poorly trained, or even ignorant. This means that teachers should be well trained before going into teaching job to be able to deliver quality education to their students for sustainable development. Corroborating on this, Abderrahim (2019), asserts that teachers, educational supervisors, directors and administrators must receive strong training before they step into their jobs. In Nigeria, teacher education has witnessed many reforms over the years. Despite this laudable reforms, the Nigerian teacher education programmes is still faced with many challenges (Ogunode & Agwor 2020).

Challenges facing teacher education programmes in Nigeria are many and varied. Umeora and Ogunode (2020). Identified these challenges as inadequate funding, inadequate lecturers, inadequate infrastructural facilities, poor supervision, brain drain, strike actions by teachers, poor capacity development of lecturers and others. Udida, Bassey, Udofia and Egbona in Umeora & Ogunode (2020) observe that the major issue in educational development is shortage of funds. Corroborating on this, Nnokami and Sule (2007) assert that the first and perhaps the greatest challenge facing Nigeria and making it difficult for good and quality education that is capable of bringing about sustainable development is inadequate funding by federal, state and local governments to the extent that funding has been in response to conditionality imposed by International Financial Institution (IFI).

In a study carried out by Hennessy, in Davison and Ezeh (2023), it was discovered that there are many factors and barrier that affect the use of technology in the education process in general and classroom in particular. Hennessy identified a range of physical and cultural factors that affect ICT use

by teacher, including lack of reliable access to electricity, limited technology infrastructure (especially internet access, bandwidth, hardware and software provision), language instruction and available software. Balanskak in Davidson and Ezeh (2023) also reported that there are a variety of boundaries, such as, the lack of ICT skills that could limit teachers in using IGT tools. Again, the author reported that many teachers are reluctance in using ICT tools in teaching. Despite, these challenges, teacher education programmes could still be re - engineered to promote sustainable development.

To re-engineer teacher education for sustainable development in Nigeria, the focus should be on improving the quality and relevance of training programmes, enhancing professional development opportunities and addressing the challenges faced by teachers. This includes integrating technology into teaching, promoting critical thinking and problem solving skills and ensuring teachers are equipped to handle the complexities of 21st century classroom. Wordu and Emesiobi, (2023), submit that the

solution to the problem of teaching in teacher education in Nigeria lies in re-engineering teaching through integration of digital learning whereby teachers use a wide range of activities to complement classroom work set the scene and engage lecturers in challenging activities. The many reforms made in education globally and in Nigeria call for the need to reform and reposition teacher education and profession (Ofoegbo & Ebebe, 2016). In furtherance to this, the authors outlined a number of reforms such as:

- a) The formal adoption of the 9- year basic education programme through the enactment UBE ACT of 2004. This led to the introduction of Basic Science and Technology, and computer Studies/ ICT in primary education components.
- b) Introduction of French as a compulsory subject for primary 4
- c) The infusion of such new emerging issues as Vocational and Technical Education. HIV/AIDS Education
- d) In the new curriculum structure for the 3-year Senior Secondary Education which now incorporated 34 trade/ entrepreneurship subjects.

Following these reforms, and ensuring that they are adopted, there is need for teachers efficiently and effectively utilize ICT in the classrooms especially in rural areas to acquire a better standard, Olarewaju, Adebayo. Omotosho and Olajide (2021), reported that high level of poor socio economic status, poor internet connectivity and lack of electricity in the remote areas has resulted to great digital divide gaps in schools in rural areas. These have negatively affected the educational status of rural schools and its environs. There is need to give full attention in addressing the digital divide in order to attain the targeted objectives of sustainable development (Akabugwo, 2022).

Studies have shown in different parts of Nigeria that learning and the use of ICT at the basic education level is still very low especially in rural areas. Hence, there is the need to integrate ICT into basic education curriculum early enough to enhance quality delivery of education at the basic education level. Egede and Asabor,(2019), assert that IT was included in the basic education curriculum as from primary one. Similarly, the FRN in her National Policy on Education (2013), has also integrated IT as a theme into the former Basic Science and Technology subjects from primary one to Junior Secondary School Three (JSS3). All are to ensure effective and quality education delivery by teachers for sustainable development

Statement of the Problem

Despite the importance of sustainable in the world and Nigeria in particular, it has been observed that many teacher education programmes do not prepare teachers adequately to address the issues of sustainable development in their teaching practices. As a result of this, there is a lack of awareness and understanding among the students about sustainable development concepts, issues and solutions. For this reason, there is a clarion call to tackle this problem for re-engineering teacher education programmes in order to equip teachers with the current knowledge, skills, and attitudes necessary to promote sustainable development in schools and in the community at large.

The researcher having seen the imminent danger of lack of the absence of these concepts and issues in the teacher education programmes in Nigeria, intended to carry out this study to determine how these problems can be handled to prevent their impending consequences. The study therefore aimed to explore numerous challenges facing teachers in the delivery of quality education and proffering solutions to them through re- engineering teacher education programmes in order to promote and support sustainable development, thereby improving the qualities and capacities of teachers to teach sustainable development concepts and practices.

The researcher is not aware of any study that has tried to examine the problems of this study, neither is there any empirical evidences to support this claim.in Enugu State or elsewhere in Nigeria. Therefore, it is against this background that the researcher carried out this study. The poser then is, to what extent do teacher education programmes promote sustainable education development in Enugu State, Nigeria.

Purpose of the Study:

The main purpose of this study was to determine the extent to which teacher education programmes promote sustainable development in Enugu state, Nigeria. Specifically, the study determined;

1. the challenges teachers face in delivering quality education in urban and rural areas,
2. the changes that will enhance teaching for sustainable development in Enugu State, Nigeria.

Research Questions:

The following research questions guided the study;

1. what are the challenges teachers face in delivering quality education.
2. what changes will enhance sustainable development in Enugu State, Nigeria.

Hypothesis:

The following null hypothesis tested at 0.05 level of significant guided the study.

HO1; There is no significant difference in the mean ratings of teachers in the urban and rural areas on the challenges they face in delivering quality education in Enugu State, Nigeria.

Method:

Descriptive survey research design was employed in this study. This study was carried out in Enugu State primary schools which are the bedrock of basic education in Nigeria. The population of the study consisted of 260 teachers in four local government areas of the state. Two of the schools are in the urban area while the other two schools are in the rural area.

Data were collected using the twenty item questionnaire titled —Re-engineering Teacher Education for Sustainable Development Questionnaire (RTEPSDQ). The validation of the instrument was done by three experts from the faculty of Education, Enugu State University of Science and Technology, Agbani. Two of these experts are from the Department of Educational Management while the other one is from Department of Mathematics and Computer Science Education (Measurement and Evaluation option).

The reliability co-efficient of the instrument was determined using Cronbach Alpha method. An alpha value of 0.79 was found indicating a high reliability of the instrument. The questionnaire was administered to the respondents directly with the help of four research assistants. Following the administration and collection of the instruments, some were lost and some were badly filled. At the end, out of 98 copies of the questionnaire administered to teachers in the two schools in urban area, 93 were retrieved giving 94% return rate, while 151 questionnaire out of 162 questionnaire administered to teachers in the schools in the rural area were retrieved giving 93% return rate, Any rating between 2.5 and above was regarded as very great extent, while those below 2.5 were regarded as very low extent. Data collected were analysed using mean with standard deviation, while t- test statistics was used to the hypothesis at 0.05 level of significance.

Data Analyses And Results

Research question 1: To what extent do the following pose challenges to teachers in delivering quality education for sustainable development?

Table 1: The mean and standard deviation scores on the extent the following pose challenges to teachers in delivering quality education for sustainable development

	Rural = 162			Urban = 98			Total = 260		
	X	SD	Dec	X	SD	Dec	X	SD	Dec
Inadequate teaching Resources	3.07	1.05	GE	3.43	0.50	GE	3.20	0.90	GE
Large class size	3.50	0.77	GE	3.29	0.70	GE	3.42	0.75	GE
Outdated curriculum	3.34	0.75	GE	3.57	0.50	GE	3.43	0.67	GE
Outdated teaching aids	3.67	0.62	GE	3.57	0.50	GE	3.63	0.58	GE
Insufficient training for teachers	3.33	0.75	GE	3.57	0.50	GE	3.42	0.67	GE
Limited relationships with the community members	3.15	1.08	GE	2.86	0.99	GE	3.04	1.06	GE
Inability of teachers to apply modern teaching methods	3.25	0.72	GE	3.43	0.50	GE	3.32	0.65	GE
Poor background of students to adapt to modern teaching methods	2.91	1.19	GE	3.14	1.13	GE	3.00	1.17	GE
Lack of cooperation with parents	2.81	1.15	GE	2.86	1.13	GE	2.83	1.14	GE
Poor funding of schools	3.50	0.77	GE	3.86	0.35	GE	3.63	0.66	GE
Grand Mean	3.25	0.88	GE	3.36	0.68	GE	3.29	0.83	GE

Data in table 1 shows the mean response score of teachers in urban and rural location on the extent the above factors pose challenges to teachers in delivering quality education for sustainable development. From the table, the teachers in both urban and rural areas agreed to all the listed items with mean score greater than 2.50 set for the study. Therefore, the overall grand mean score of 3.29 shows that the listed items to a great extent posed challenges to teachers in delivering quality education for sustainable development. Research question 2: what are the changes that enhance quality education delivery for sustainable development?

Table 2: The mean and standard deviation scores on the changes that enhance quality education delivery for sustainable development

	Rural = 162			Urban = 98			Total = 260		
	X	SD	Dec	X	SD	Dec	X	SD	Dec
Integration of sustainable concepts	3.25	0.72	GE	3.14	0.64	GE	3.21	0.69	GE

Providing modern resources	3.16	0.80	GE	3.14	0.64	GE	3.15	0.75	GE
Leveraging on technology	3.25	0.72	GE	3.14	0.64	GE	3.21	0.70	GE

Involving stakeholders in decision making process	2.74	1.01	GE	3.00	1.07	GE	2.84	1.04	GE
Increasing students' awareness on SDGs	3.00	0.70	GE	3.43	1.06	GE	3.16	0.88	GE
Grand Mean	3.19	0.72	GE	3.36	0.65	GE	3.25	0.71	GE

In table 2, the data reveal the mean response score of teachers in urban and rural location on the changes that enhance quality education delivery for sustainable development. From the table, the teachers in both urban and rural areas agreed to all the listed items with mean score greater than 2.50 set for the study. Therefore, the overall grand mean score of 3.25 shows that the listed items to a great extent bring changes that enhance quality education delivery for sustainable development.

Ho₁. There is no significant difference in the mean ratings of teachers in the urban and rural areas on the challenges they face in delivering quality education in Enugu state

Table 3: t-test on the mean ratings of teachers in the urban and rural areas on the challenges they face in delivering quality education in Enugu state

Group	N	Mean	SD	T	Df	Sig	Dec.
Rural	162			3.25	0.61	-1.469	258
0.143	NS						
Urban	98			3.36	0.46		

Table 3 shows that the t-calculated value of -1.469, is not significant at 0.143 level of significance, which is greater than 0.05 level of significance set for the study. Therefore, the null hypothesis is not rejected as stated. This means that there is no significant difference in the mean ratings of teachers in the urban and rural areas on the challenges they face in delivering quality education in Enugu state.

Discussion of Findings:

With the mean ratings of 3.29 and 3.25 for teachers in both urban and rural areas, on the challenges they face in delivering quality education for sustainable development, it was found out that teachers in both urban and rural areas agreed to a great extent to all the listed items. This finding is in consonant with that of Umeora and Ogunode (2020) who identified numerous challenges facing teacher education programmes in Nigeria as inadequate funding, inadequate lecturers, inadequate infrastructural facilities, poor supervision, brain drain, strike actions by teachers, poor capacity development of lecturers and others.

With the mean ratings of 3.29 and 3.25 for teachers in both urban and rural areas, it was found out that they all agreed to a great extent on the changes that can enhance quality education delivery for sustainable development. This finding is in consonant with that of Wordu and Emesiobi, (2023), who submit that the solution to the problems of teaching in teacher education in Nigeria lies on re-engineering teaching through integration of digital learning whereby teachers use a wide range of activities to complement classroom work, set the scene and engage lecturers in challenging activities.

Conclusion:

It was concluded that teacher education programmes can be re-engineered for sustainable development through integrating sustainable concepts into school curriculum. Moreover, sustainable development will be promoted when those changes are made in the school curriculum.

Recommendations

Based on the findings of this study, it is recommended among others that;

- 1) teacher training and professional development should be greatly advocated to promote .
- 2) teachers should be encouraged to embrace the 21st century classroom
- 3) students should avail themselves of the opportunity of the modern teaching techniques
- 4) government should appropriately fund education and procure the necessary facilities for effective teaching and learning

Abstract

The study focused on Utilization of Artificial Intelligence in the Management of Value Education in Public Senior Secondary schools in River State. The descriptive research design was adopted for the study, two research questions and two hypotheses guided the study, the population of the study comprised of 8142 teachers in public senior secondary schools in Rivers State with a sample of 382 130 male and 250 female teachers in line with taro yemen sampling techniques. The instrument used for data collection was titled Utilization of Artificial Intelligence in the Management of Value Education in Public Senior Secondary Schools in River state questionnaire (YAIMVEPSCQ). The validated instrument has a reliability co efficient of 0.79, the data generated via the instrument were analyzed to answer the questions using mean and standard deviation, whereas the hypotheses were tested using z- test statistical test at 0.05 alpha level. The findings of the study revealed that teachers awareness on the use of AI technologies in teaching value education in public senior secondary schools in River state is high with the aggregate mean score of 2.71 for female respondents and 2.55 for male respondents. Recommendations made among others included that; the government should formulate a comprehensive policy that will boast teachers training in AI tools, provide constant electricity, and integrate AI tools in value education. In addition, the ministry of education should liase with educational stakeholders to assist in enforcement of facility provision stipulations.

Keywords: Artificial Intelligence, Value Education, Management

Introduction to the Study

In the everchanging world, Artificial Intelligence (AI) has emerged as a transformative force in the educational sector. AI technologies do offer innovative tools and structure that can uplift teaching and learning experiences, making education more interesting, interactive, personalized, and efficient. However, it is imperative to highlight that AI can have significant impact in the teaching and management of value education fundamental aspect of secondary education which is aimed at inculcating moral, ethical, and civic values in students Okoroma (2020) as cited in (Wobo and Chukwu 2023).

In Nigeria, and particularly in Rivers State, public secondary schools face increasing pressure to uphold academic excellence while also nurturing socially responsible and morally upright

individuals. However, the integration of AI into educational practices, especially in value education, is still at a developmental stage, hence educational administrators and planners remain either unaware or under-equipped to utilize AI tools effectively in their classrooms (Stie, 2024). As a result, there is a growing need to assess how well teachers are trained to understand and make use of AI technologies in delivering value-based education, that will instill ethical and core values on students. This study, therefore, stands to create awareness regarding the use of AI technologies for teaching value education and to determine the extent to which these technologies are being utilized in public secondary schools across Rivers and encourage more effective integration of AI in teaching values to the younger generation.

Value Education (VE)

Value education can be seen as the process in which values, ethics and moral principles that guides an individual in taking the right decision is learnt. If the core values are properly learnt and imbibed in an individual as a way of life, it enables the personality to live a life that worth's to be emulated and aid her to develop strong and moral compass which enables one to be informed and make reasonable choices as to live a responsible, fulfilling life and contribute immensely in her environment.

Wobo and Chukwu (2023) insisted that value education is the best way to promote appropriate society norms and value, as it is an imperative measure to curb youth restiveness and up lift the societal values. Value education is paramount to everyone because, it is expected to guide and direct an individual to do the right thing inside and outside the classroom. it is an integral part of the curriculum that will uphold and oversee the upbringing of the total child (Wobo and Okafor 2018). No wonder Aja, Eze, Igba and Ukaigwe (2017) in Wobo (2023) highlighted that values like self-confidence and control, honesty, obedience, respect for one another, integrity and co-operation among peers are indispensable for effective integration in the society.

Wikipedia (2025) defined value education as the process in which people give moral values to each other. It is an activity by which individuals assist each other, not minding the differences in age. Powney (2025) sees it as a process that gives young people and youths an initiation into values, with the knowledge of the necessary principles and ideologies needed to relate with peers or people within an environment. Good (2025) insisted that it is the aggregate of all the processes in which an individual develops abilities, positive behaviour, in the society in which he lives. The researcher sees it as a means of learning about life and wisdom of life in a more systematic and scientific life through formal, non-formal, informal and special education.

Brahma Kumaris world spiritual university incorporated twelve based values in education as; unity, peace, happiness, hope, humility, simplicity, trust, freedom, co-operation, honesty, courage and love which invariably formed the school approach.

According to Arishu (2025) value education plays a vital role in a society where moral problems and emotional gaps are on the increasing height. It therefore prepares an individual with the necessary skills needed for ethical living, emotional strength and social balance.

Reasons for Teaching Value Education in Public Secondary Schools

In the modern world, the teaching of value education in public secondary schools has become imperative due to the increasing need for character development, responsible citizenship, and ethical behavior among youths. Value education fosters the holistic development of learners by equipping them with the moral compass necessary to navigate the complexities of life and contribute meaningfully to society. It raises emotional balance, thereby teaching students to regulate and become self-aware as to form a more conductive inter personal relationship. One of the primary reasons for teaching value education is to enhance character formation. Students at the secondary school level are at a developmental stage where identity and values are being shaped. Integrating value education helps instill honesty, integrity, respect, and empathy (Shockden, Abdulrahman, & Dogara, 2023). These values guide students in forming healthy relationships, making ethical decisions, and developing a sense of accountability.

Secondly, value education promotes responsible citizenship. It educates students about their civic duties, including respect for laws, participation in community development, and national loyalty. This is particularly important in nations like Nigeria, where curriculum reforms are being implemented to emphasize civic responsibility, practical skills, and moral instruction (Federal Ministry of Education, 2024).

Moreover, value education contributes significantly to the mental and emotional well-being of students. A strong sense of belonging and emotional resilience, which stems from value-based instruction, enhances academic motivation and social interaction. Dolan and Boateng (2023) found that students with a sense of moral purpose and school belonging demonstrated better emotional regulation and reduced risk-taking behaviors.

Value education also supports students' academic performance through future-oriented thinking. When students understand the value and purpose of education, they are more likely to set long-term goals and work diligently toward them. You and Kim (2024) revealed that students' value beliefs about education significantly predicted academic achievement, as they were more motivated and committed to learning, thereby eliminating bullying, violence and discrimination. Schools that adopt value education-based learning experiences a low degree of aggressive behaviours, as they learn to respect each other, tolerate each other and avoid violence, as students are highly honored, protected, accepted and valued.

Furthermore, across the African continent, the integration of values into education has been linked to improved student outcomes and national development. Ofori and Moyo (2024) emphasized that value-based reforms, when embedded in the curriculum, empower learners to become ethical leaders, productive citizens, and socially responsible individuals.

Artificial Intelligence (AI)

Artificial Intelligence (AI) is the science or the field that transforms the human potentialities to machine as to perform tasks that are ordinarily done by man.

It is the capacity given by humans to machine to memorize and learn from experiences, to think create, speak, judge as to make decisions. University of Cincinnati (2025) see AI as the ability of machines to perform tasks requiring human intelligence such as learning, reasoning, and problem solving, using technologies like neural networks and machine learning. The researchers see it as a recent technology that imitate the human mind. **AI** is not magic powers, it is an extra ordinary amplifier and accelerator that do add speed effectively and seems very accurate (Andreas 2019). AI amplifiers whatever is applied to it be it good or bad ideas and practices. Peter (2020) maintained that AI is neutral but always in the hands of people who are not neutral, however AI and biotech are seen as an avenue to change the world in the nearest future, hence the need for man to restructure and change himself for a better future. However, to be relevant and adapt to the ever-changing world, we need to emphasize on the power of learning, knowing that it is a continuous process, that will shape man to be economically and socially balanced as to adjust and reinvent himself using AI as it can give ownership on what to learn, how to learn, where to learn and when to learn. No wonder Andreas (2019) insisted that AI can make learning easier as to suit one's personal learning style, as well as allowing the learner to learn at his or her pace knowing that AI as a modern technology in the 21st century are better than what any traditional classroom setting can possibly do.

According to Linand Wu (2022) and UNESCO (2021), AI is a key player in changing education. It can handle big data, automate tasks, and provide tools for inclusive learning. AI helps make education more effective and fairer. As public secondary schools adapt to the digital age, AI's role becomes more vital and enriching.

Challenges inhibiting AI teachers

The integration of Artificial Intelligence (AI) in value education delivery is hindered by several challenges. Despite AI's potential to transform education, various obstacles impede teachers'

utilization of this technology, as noted by UNESCO (2021), UNICEF (2021), and Wobo (2018). The key challenges includes:

1. Limited awareness and understanding of AI: Many teachers lack familiarity with AI and its practical applications, rendering them unequipped to effectively integrate AI into their teaching practices.
2. Inadequate training and professional development: Pre-service and in-service teacher training often neglect digital competencies, emphasizing the need for targeted training to facilitate effective AI use in the classroom.
3. Power supply issues: Reliable power supply is a prerequisite for AI adoption, yet many states in Nigeria, experience epileptic power supply, erratic power supply, and complete power failures.
4. Limited internet connectivity and data access: AI requires strong data platforms and high internet connectivity, which can be lacking in some areas, hindering AI's potential benefits.
5. Infrastructural deficiencies: The absence of computer laboratories, smart classrooms, and digital learning platforms limits AI integration and adoption, discouraging teachers from innovating and embracing new practices.
6. Lack of curriculum directives: The absence of clear curriculum guidelines makes it challenging for teachers to align AI use with learning objectives, highlighting the need for strategic planning and policy development.
7. Inadequate funding and investment in AI infrastructure: AI technologies require significant investment for procurement, maintenance, and training, yet poor budgetary allocation for technology hinders digital learning expansion (Federal Ministry of Education, 2020).

Incorporating Value Education in Artificial Intelligence.

We are in a modern world which is full of complexities where all things will soon be digitized and automated knowing that the future is at the pace of pairing AI with cognitive, social, emotional skills and human values (Andreas 2019) it is our utmost desire, imagination and sense of responsibility to allow value education to harness AI as to shape our world for a better tomorrow (Wobo and Chukwu 2024). Derek and Jason (2025) emphasized that the global rank of AI in the educational market is anticipated to grow from \$85.18 billion in 2024 to \$112.3 billion in 2034, while major headlines highlighted AI's potential to automate educational tasks, compelling narratives insist on how values can be incorporated in AI to establish and inculcate societal norms among scholars.

Moreover, value education can be incorporated in to AI by designing machines that will promote ethical decision making, foster empathy among peers as well as encouraging effective and efficient use or the recent technology. These involves;

1. Incorporating ethical AI development, this should be designed to capture ethical principles considering fairness, transparency, accountability as well as promoting social responsibility and human value Akgun and Greenhow (2022).
2. AI-Powered Educational Resource, AI should direct students to use different perspectives to brainstorm as to think critically concerning the ethical implication of the recent technology: it should equally consider leaving experiences to suit individual needs, providing resources and activities that will promote peace, respect, truth (UNESCO, 2024).
3. Teaching Critical Thinking: This is a vital means of incorporating value education on AI, it aid scholars to analyze information, evaluate evidence and make informed decision as well as helping students to question AI outputs, implication and deployment as to foster creative problem solving skill.
4. Collaboration and human thinking approach: This should be seen as an alternate human measure and not as a replacement, hence students and teachers should endeavor to collaborate with the AI automated computer machine system effectively, teachers should be trained on how to integrate AI into the classroom more effectively and ethically by incorporating the strategies. Administrators and educational planners can promote AI for positive values and encourage their students to use it.

Statement of the problem

The advancement of Artificial Intelligence (AI) has brought about remarkable changes in the field of education, providing new opportunities to improve teaching methods, promote learner engagement, and enhance educational outcomes. One critical area that can benefit from AI integration is value education, which aims to instill moral, ethical, and civic values amongst students. Despite the growing global adoption of AI in education, the extent to which these technologies are understood and utilized by teachers in the context of value education remains uncertain, particularly in secondary schools in Rivers State, Nigeria. The problem of the study therefore is to address the factors inhibiting the awareness and utilization of AI technologies among teachers which could significantly affect the effectiveness of value education delivery.

Objectives of the study

1. To find out the level of awareness among teachers on the use of AI technologies for teaching value education in public senior secondary schools in Rivers state
2. To find out the level of utilization of AI technologies among teachers in public secondary schools in Rivers state.

Research questions

1. What is the level of awareness among teachers on the use of artificial intelligence technologies for teaching value education in public senior secondary schools in Rivers state?
2. What is the level of utilization of AI technologies among teachers in Public senior Secondary Schools in Rivers State.

Hypotheses

1. There is no significant difference between the mean score of male and female teachers on the level of awareness among teachers on the use of AI for teaching value education in public senior secondary schools in Rivers State.
2. There is no significant difference on the mean of male and female teachers on the level of utilization of AI technologies among teachers in public senior secondary schools in Rivers State.

Theoretical Framework

This study is anchored on Technological Pedagogical Content Knowledge (TPACK) framework, developed by Mishra, P. and Koehler, Mathew in 2006, is a valuable theoretical foundation for understanding the complex relationships between technology, pedagogy, and content knowledge in teaching, with three key components, Content Knowledge (CK) this refers to the subject matter or content that teachers are teaching, such as moral values like honesty, empathy, and integrity. Pedagogical Knowledge (PK) this oversees the methods and practices of teaching, including discussion, field trips, debates, and practical measures to impact values. Lastly technological Knowledge (TK) this involves the use of technological tools, such as AI-powered chatbots and interactive apps, to support teaching and learning. Moreover, when the three components overlap, teachers can effectively integrate technology, pedagogy, and content knowledge to create rich learning experiences. In this study, the overlap enables teachers to:

- Understand the moral values they are teaching (CK)
- Use effective pedagogical methods to impact those values (PK)
- Leverage AI tools and technologies to support learning (TK)

The TPACK framework highlights on the importance of teachers being proficient in using technology to support teaching and learning. By integrating AI tools and technologies, teachers can create engaging and interactive learning experiences that promote student learning and achievement. The TPACK framework provides a valuable theoretical foundation for understanding the complex relationships between technology, pedagogy, and content knowledge in teaching. By applying this framework, teachers can develop the skills and knowledge needed to effectively integrate technology into their teaching practices and create rich learning experiences for their students.

Method of the Study

The design of the study is a descriptive survey design because value education and AI is an ongoing phenomenon in public senior secondary schools in Rivers State. The study addressed two (2) research questions and tested two hypotheses, the population of the study consisted of 8142 teachers in public secondary schools in Rivers State (Rivers State School board, 2024). The sample of study is made up of 382 public secondary school teachers in Rivers State in line with Taro Yemen sampling technique. Questionnaire titled utilization of AI technologies in the management of value education in public secondary schools in Rivers State (UAITMVEPSQ).

The instrument was designed to have two sections, the first elicited information from the respondents on their locations, the second was designed to have 12 items with response option on strongly agree (4), agree (3), disagree (2), and strongly disagree (1) respectively.

Items with serial number 1 to 6 was used to elicit responses on the teacher's level of awareness on the use of AI technologies for teaching value education in public senior secondary schools in R/S while item 7 to 12 was used to elicit information on the level of utilization of AI technologies among teachers in secondary schools in Rivers State. The instrument was validated from the department of educational management Rivers State University.

The reliability of the instrument was established at 0.79 coefficient using a Cronbach alpha. The research questions were answered using mean and standard deviation while the hypotheses were tested using z-test at 0.05 level of significance, items that scored above 1.96 were rejected while those below 1.96 were accepted

Result and Discussion

Table 1

Level of awareness among female and male teachers on the use of AI technologies for teaching value education in Public Senior Secondary Schools in Rivers State.

S/N	Description	Mean	SD	Decision	Mean	SD	Decision
1	I am aware that AI technologies support value education.	2.90	0.91	A	2.80	0.87	A
2	I often find it difficult teaching value education with AI tools.	3.20	0.95	A	2.90	0.85	A
3	I am familiar with chat GPT for classroom use.	2.97	0.90	A	2.68	0.90	A
4	I have received training using AI for value education	2.04	0.63	D	1.90	0.71	D
5	my school promotes learning about AI in moral instructions.	2.51	0.80	A	2.53	0.84	A
6	I can identify AI tools suitable for teaching values.	2.62	0.77	A	2.50	0.69	A
		2.71	0.83		2.55	0.81	
	Aggregate						

Table 1

In table 1 above, examined the level of awareness among teachers on the use of AI tech for teaching value base education.

In item one; the male & female teachers indicated that they were aware that AI technologies supports value education (2.90; 2.80). in item 2, the male and female respondents agreed that they often find it difficult teaching VE with AI tools. As revealed in their responses means scores of 3.20 and 2.90 respectively. However, the responses in item 4 which sought to determine if the teachers have received AI training for value education was disagreed (2.04; 1.90). The aggregate mean scores of 2.71 for female respondents and 2.55 for male respondents are higher than the criterion mean of 2.50; this implies that the level of teachers awareness on the use of AI technologies in teaching value education in public secondary schools in Rivers State is low.

Table 2

Level of utilization among female and male teachers on the use of AI technologies for teaching value education in Public Senior Secondary Schools in Rivers State.

S/N	Description Female/Male	Mean Female	SD	Decision	Mean Male	SD	Decision
1)	I regularly use AI tools to support teaching aids	2.33	0.87	A	2.00	0.34	D
2)	I do apply AI application like virtual tutors	2.20	0.67	A	1.96	0.70	D
3)	I use AI tools to assess students understanding behaviour	1.58	0.64	D	1.61	0.92	D
4)	Integrate AI technologies into value-based lessons	2.69	0.77	A	2.53	0.64	A
5)	I use AI tools to prepare and review value education.	2.78	0.84	A	2.67	0.59	A
6)	I do use AI platoons to provide feedback students character development.	2.40	0.79	A	2.46	0.80	A
	Aggregate	2.33	0.76	A	2.20	0.75	A

Table 2 above, presented the level of utilization of AI technologies among male and female teachers in Public Senior Secondary Schools in Rivers State.

In item 1 and 2 above the female teachers agreed that AI technologies are been utilized in Public Secondary Schools in Rivers State with mean scores of 2.33 and 2.20 while the male teachers disagreed with mean scores of 2.00 and 1.96. In item 3, both the female and male teachers disagreed on the level of utilization of AI technologies with mean score of 1.58 from the female and 1.61 from the male. However, items 4,5 and 6, were agreed by both female and male teachers with means scores of 2.69, 2.78, 2.40 for female and 2.53, 2.67 and 2.46 for male respectively.

The aggregate mean score of female respondents is 2.33 and male 2.20 which means that is lower than the criterion mean of 2.50, which means that the level of utilization of AI technologies among teachers in Public senior Secondary School is higher.

Hypothesis 1

S/N	Description	n	$\bar{X}$	SD	DF	T cri	T cal	Sig Level	Decision Rule
1)	Female	250	2.71	0.83	380	1.96	1.94	0.05	Not Significant HO accepted
2)	Male	132	2.55	0.81					

Table 3 revealed that at 0.05 level of significant and 380 degree of freedom the value of T critical was 1.96 and this value T.cal was 1.94 which is below 1.96. therefore, the null hypothesis is accepted.

Table 4
Hypothesis 2

S/N	Description n	$\bar{X}$	SD	DF	T cal	T cri	Sig Level	Decision Rule
1)	Female	250	2.33	380	1.60	1.96	0.05	Not Significant HO accepted
2)	Male 132	2.20	0.75					

Table 4: revealed that at 0.05 level of significant and 380 of freedom, the value of t-critical was 1.96 and the value of t-cal was 1.60 which is below 1.96, therefore the null hypothesis is accepted.

Discussion of findings

1. Generally, the findings of the study revealed that both male and female teachers in public Senior Secondary Schools indicated that they were aware that AI technologies supports value education.
2. The findings indicated that female teachers agreed that AI technologies are been utilized in public Senior Secondary Schools with mean of 2.33 and 2.20 while the male teachers disagreed with the mean 2.00 and 1.96

Conclusion

The utilization of AI for managing value education in Rivers State's public secondary schools is still in its formative stages, that holds considerable promise and capacity building among teachers, AI can be served not only as a tool for academic improvement but also as a strategic instrument for nurturing morally responsible and socially conscious learners in the 21st century.

Recommendations

1. Teacher training institution should integrate AI literacy and value-based digital pedagogy into both pre-service and in-service teacher education curricula. Educators should be adequately trained on how to apply AI tools to support character formation, ethical behaviour and moral instruction.
2. The Rivers State Ministry of Education, in collaboration with relevant stakeholders, should formulate a comprehensive policy that promotes the integration of AI into classroom teaching, with specific emphasis on value education as this will provide guidelines on ethical AI use.

Abstract

This study investigates the impact of the digital divide on the provision of ethical and value education in Kaduna Central Senatorial District, Nigeria, aiming to propose strategies for sustainable national development. The research addresses three key questions: the level of digital access for ethical education, challenges hindering digital inclusion, and strategies to bridge the digital divide. A mixed-methods design was adopted, involving a population of educators, policymakers, students, and community leaders, with a sample size of 400 respondents determined through Cochran's formula. Data was collected using structured questionnaires and semi-structured interviews, complemented by secondary sources. Statistical analysis included descriptive statistics and chi-square tests to evaluate relationships between digital access and educational outcomes. The findings revealed significant relationships: H_0 was rejected with a chi-square statistic of 48.71 ($p = 2.97 \times 10^{-12}$) for digital access and education delivery; 27.36 ($p = 1.69 \times 10^{-7}$) for digital inclusion challenges; and 47.73 ($p = 4.89 \times 10^{-12}$) for bridging the digital divide's impact on education. The study concludes that addressing the digital divide is crucial for enhancing ethical and value education, thereby promoting sustainable national development. Recommendations include implementing policies for equitable digital access, providing affordable internet and devices, and integrating ICT in education, particularly in underserved areas. A multi-stakeholder approach involving government, private sector, and civil society is essential to effectively bridge the digital divide and improve educational outcomes.

Keywords: Digital Divide, Ethical Education, Value Education, Sustainable National Development, Education Reengineering, Kaduna Central Senatorial District

Introduction

In today's interconnected world, digital technology plays a crucial role in advancing education, providing unparalleled access to information and learning resources. However, a significant digital divide remains, particularly in developing countries, which obstructs equitable educational opportunities. This divide is marked by disparities in access to digital tools and the internet, often

shaped by factors such as socioeconomic status, geographic location, and the level of infrastructure development. The COVID-19 pandemic has intensified these disparities, as remote learning became a necessity, leaving students in underprivileged areas at a considerable disadvantage (Adebayo & Yusuf, 2021; Amorighoye, 2020). In Nigeria, the digital divide poses a substantial challenge to the educational landscape. While the country boasts a relatively high digital literacy rate of 62%, around 38% of the population still lacks basic literacy skills (Central Bank of Nigeria, 2019). Various factors, including education level, age, gender, and access to reliable electricity, significantly affect internet usage and digital proficiency. The pandemic has underscored these issues, with children in rural and underserved communities struggling to adapt to new learning modalities due to insufficient resources (Afolabi & Adedokun, 2024; Akintunde & Ajibade, 2022; Brown & Green, 2020).

Ethical and value-based education is essential for sustainable national development, as it promotes social cohesion and fosters a collective identity necessary for a progressive future. In Nigeria, the incorporation of moral education into the curriculum aims to combat widespread anti-social behaviors and moral decline, thereby encouraging responsible citizenship and societal well-being. However, the digital divide presents a formidable obstacle to the effective delivery of such education, particularly in areas with limited digital infrastructure (Adebayo & Yusuf, 2021; John & Adams, 2023). Focusing on the Kaduna Central Senatorial District, one of the three senatorial districts in Kaduna State, Nigeria, this study highlights the region's significance as an economic, political, and educational center. The district comprises seven Local Government Areas: Kaduna North, Kaduna South, Birnin Gwari, Chikun, Giwa, Igabi, and Kajuru. Despite its strategic importance, the region grapples with challenges related to digital infrastructure, socioeconomic disparities, and restricted access to quality education, especially in ethical and value-based learning (BusinessDay, 2024; Kaduna State Government, 2021).

The barriers to digital access are particularly pronounced in isolated communities within southern Kaduna, where inadequate infrastructure and socioeconomic constraints hinder digital inclusion. These challenges obstruct the delivery of comprehensive ethical and value education, which is vital for fostering community development and national progress (BusinessDay, 2024; Aluko & Olanrewaju, 2023; Federal Ministry of Communications and Digital Economy, 2020). This study aims to investigate the impact of the digital divide on the provision of ethical and value education in the Kaduna Central Senatorial District. By assessing the current state of digital access and its relationship with educational outcomes, the research seeks to identify strategies for reengineering education to promote sustainable national development.

The scope of the study includes an analysis of existing digital infrastructure, educational practices, and policy frameworks within the district. The necessity for this survey is underscored by the urgent need to address educational inequalities exacerbated by the digital divide. Gaining insights into the specific challenges faced by communities in Kaduna Central will inform targeted interventions and policy reforms, ensuring equitable access to quality ethical and value education for all, thereby contributing to the broader goal of sustainable national development.

Statement of the Problem

The digital divide poses a significant challenge in Nigeria, particularly within the Kaduna Central Senatorial District, where unequal access to digital resources hampers the effective delivery of ethical and value education. According to the National Bureau of Statistics (2022), only 38% of households in Kaduna State have internet access, revealing a stark rural-urban divide: 62% of urban residents enjoy digital connectivity, compared to a mere 18% in rural areas. This limited access adversely affects students, educators, and policymakers, restricting their ability to utilize essential digital learning resources for ethical and value-based education. Additionally, a UNESCO (2021) report indicates that over 45% of schools in Nigeria lack adequate digital infrastructure, further exacerbating educational disparities.

Ethical and value education is vital for national development, promoting responsible citizenship, social cohesion, and effective governance. However, in Kaduna Central Senatorial District, challenges such as low digital literacy where only 31% of residents possess basic digital skills (ITU,

2022; Federal Ministry of Communications and Digital Economy, 2020) inadequate ICT infrastructure, and inconsistent government policies have obstructed the integration of digital tools into the educational framework. While previous studies, such as those by Ojo & Bello (2023), have examined digital inclusion in Nigeria, they have not provided localized, data-driven insights into its impact on ethical and value education. This study aims to fill this gap by conducting a comprehensive empirical investigation into the digital divide, its associated challenges, and potential strategies for digital reengineering in the region. Utilizing a mixed-method approach with a sample size of 400 respondents, the research will offer a data-driven analysis of policy effectiveness, infrastructural deficiencies, and socioeconomic barriers, ultimately contributing to evidence-based policymaking and practical recommendations for enhancing digital access and ethical education for sustainable national development.

Aim and Objectives of the Study

The primary aim of this study is to investigate the impact of the digital divide on the provision of ethical and value education, and to propose strategies for reengineering this provision to support sustainable national development in the Kaduna Central Senatorial District of Kaduna State.

Research Objectives

The specific objectives of the research are as follows:

1. To evaluate the extent of digital access and its influence on ethical and value education in the Kaduna Central Senatorial District.
2. To identify the challenges related to digital inclusions that affect the delivery of ethical and value education in Kaduna Central Senatorial District?
3. To explore potential strategies for bridging the digital divide to enhance ethical and value education, thereby promoting sustainable national development.

Research Questions

The following research questions have been developed to align with the study's objectives:

1. What is the current level of digital access for ethical and value education in the Kaduna Central Senatorial District?
2. What are the primary challenges that impede digital inclusion in the delivery of ethical and value education in Kaduna Central Senatorial District?
3. What strategies can be implemented to bridge the digital divide and enhance the provision of ethical and value education for sustainable national development?

Research Hypotheses

The following hypotheses, stated in their null form, have been formulated to guide the study in accordance with the research questions:

1. **H₀:** There is no significant relationship between digital access and the effective delivery of ethical and value education in the Kaduna Central Senatorial District.
2. **H₀:** The challenges associated with digital inclusion do not significantly impact the provision of ethical and value education in Kaduna Central Senatorial District.
3. **H₀:** Bridging the digital divide does not have a significant effect on improving ethical and value education for sustainable national development.

Literature Review

Conceptual Review

Digital Divide

The term "digital divide" refers to the disparity between individuals with access to digital technologies, such as the internet, and those without access. This divide encompasses multiple dimensions, including digital literacy, affordability, and the availability of infrastructure. Digital literacy pertains to the skills necessary for effectively utilizing digital tools, while affordability relates

to the economic capacity to access these technologies. Infrastructure availability refers to the presence of essential technological facilities across different regions. These dimensions significantly influence the extent to which various populations can engage in the digital age (Oyelade & Adebayo, 2022; World Bank, 2022).

Ethical and Value Education

In the context of the digital era, ethical and value education faces both new challenges and opportunities. The integration of technology into educational settings necessitates a reevaluation of traditional ethical frameworks to address contemporary issues such as digital privacy, cyber ethics, and the responsible use of information. Educators are now tasked with instilling values that guide students in navigating the complexities of a digitally interconnected world, ensuring that technological advancements align with societal moral standards (Ogbuop & Obuop, 2023; Federal Ministry of Education, 2021).

Role of Technology in Education Reengineering

The role of technology in reengineering education is crucial, as it transforms traditional teaching methodologies and learning experiences. The adoption of digital tools facilitates personalized learning, enhances access to educational resources, and fosters interactive and collaborative learning environments. However, this technological shift also raises concerns about the potential erosion of face-to-face interactions and the risk of declining educational standards if not managed thoughtfully. Striking a balance between technological integration and the preservation of essential human elements in education is vital for achieving sustainable and effective learning outcomes (The Guardian.com; World Bank, (2019).

Theoretical Framework

Digital Divide Theory

Digital Divide Theory by the Federal Communications Commission (FCC, 1996) posits that disparities in access to information and communication technologies (ICTs) create significant social and educational inequalities. This theory highlights how unequal access to digital resources can perpetuate existing socioeconomic disparities, limiting opportunities for marginalized communities to benefit from digital advancements. In the educational context, the digital divide can hinder students' ability to engage with digital learning materials, adversely affecting their academic performance and future prospects (Norris, 2001). Addressing this divide is essential for ensuring equitable educational opportunities and fostering inclusive development.

Social Learning Theory

Social Learning Theory, developed by Albert Bandura (1977), emphasizes that learning occurs through observation, imitation, and modeling within a social context. This theory underscores the importance of social interactions and the environment in shaping individuals' behaviors and attitudes. In the realm of ethical and value education, Social Learning Theory suggests that students acquire moral and ethical behaviors by observing and interacting with role models, including educators and peers. The integration of digital tools can enhance these interactions by providing diverse platforms for collaborative learning and exposure to positive role models beyond the immediate environment.

Relevance of the Theories to the Study

The relevance of Digital Divide Theory and Social Learning Theory to this study lies in their collective emphasis on access and social context in learning. Digital Divide Theory highlights the necessity of equitable access to digital resources to prevent educational disparities, while Social Learning Theory points to the role of social interactions in ethical and value education. By examining the digital divide within the Kaduna Central Senatorial District, this study aims to understand how limited digital access affects the social learning processes essential for imparting ethical values. This

understanding is vital for developing strategies that leverage digital inclusion to enhance ethical and value education, thereby contributing to sustainable national development.

Empirical studies have underscored the pervasive impact of the digital divide on education in Nigeria and other developing nations. For instance, a study by Ogbuop and Obuop (2023) emphasizes that students from rural communities and low-income backgrounds in Nigeria are disproportionately affected by limited access to online learning resources, a disparity that was exacerbated during the COVID-19 pandemic. Similarly, research conducted in China during the pandemic reveals that unequal access to distance learning and educational technology significantly shapes student learning experiences (Zhao et al., 2021). These findings highlight the urgent need for targeted interventions to bridge the digital gap in educational contexts.

Case studies focusing on education reengineering for sustainability have demonstrated the transformative potential of integrating technology into educational systems. For example, initiatives in Bangladesh have shown that equipping public schools and college libraries with information and communication technologies (ICTs) can significantly reduce the digital divide at the national level, fostering socially inclusive learning environments (Islam & Tsuji, 2021). These efforts underscore the importance of reengineering educational infrastructures to incorporate digital tools, thereby promoting equitable access to quality education and supporting sustainable development goals.

Both governmental and non-governmental organizations have undertaken various initiatives to bridge the digital divide, recognizing its critical role in national development. In Nigeria, the government has released the National Digital Economy Policy and Strategy 2020-2030, aiming to leverage digital technology to drive growth across all sectors of the economy (International Trade Administration, 2023). Complementing these governmental initiatives, major U.S. technology firms have launched training programs to enhance digital skills among Nigerian youth. For instance, in 2021, Microsoft partnered with the Nigerian government to train five million youths in technical skills, addressing the digital skills gap and promoting digital inclusion (International Trade Administration, 2023). These collaborative efforts are essential in creating an enabling environment for digital learning and reducing educational disparities caused by the digital divide. The relevance of these empirical findings to the current study is profound. Understanding the specific challenges posed by the digital divide in regions like Kaduna Central Senatorial District is crucial for developing effective strategies to enhance ethical and value education. By examining successful case studies and existing initiatives, this study can identify best practices and tailor interventions that address the unique needs of the community, thereby contributing to sustainable national development through improved educational outcomes

Methodology

The research employs a mixed-methods design, combining both quantitative and qualitative approaches to thoroughly investigate the digital divide in ethical and value education within the Kaduna Central Senatorial District. This framework allows for data triangulation, enhancing the validity and reliability of the findings. Quantitative data is used to measure the extent of digital disparities, while qualitative insights from interviews provide a deeper understanding of the challenges and opportunities related to bridging this divide.

The study targets a diverse population, including educators, policymakers, students, and community leaders, who are directly involved in education and policy development. This selection ensures that the perspectives of key stakeholders are represented, as they play a crucial role in addressing issues of digital accessibility and ethical education. A sample size of 400 respondents was determined using Cochran's formula, which is appropriate for large populations and ensures sufficient statistical power for generalization.

For data collection, both random and purposive sampling techniques were employed. Random sampling was used to select students and educators, ensuring equal representation and minimizing selection bias. In contrast, purposive sampling was applied to policymakers and community leaders, as their specialized knowledge and experience in digital education policies are essential for the study. Data

collection involved structured questionnaires and semi-structured interviews, complemented by secondary sources.

The analysis of data collected included descriptive statistics and chi-square tests to evaluate relationships between digital access and educational outcomes. This comprehensive approach allows for a nuanced understanding of the digital divide's impact on ethical and value education, ultimately contributing to evidence-based policymaking and practical recommendations for enhancing digital access in the region.

Results

For data analysis, the study employed descriptive statistics, thematic analysis, and inferential statistics. Descriptive statistics, such as percentages, mean scores, and frequency distributions, were used to summarize survey responses via the SPSS software. Thematic analysis was applied to qualitative interview data, identifying recurring themes related to challenges in digital access and policy responses. Inferential statistics, including regression analysis and chi-square tests, were employed to explore relationships between digital accessibility and educational outcomes. This rigorous methodology ensures a robust interpretation of data, yielding actionable insights that contribute to educational policy and digital inclusion strategies in the Kaduna Central Senatorial District.

Research Question One: What is the current level of digital access for ethical and value education in the Kaduna Central Senatorial District?"

Table1: Frequency Distribution on Research Question One

Digital Access Level	Frequency (n)	Percentage (%)	Mean	SD
High Access	80	20.0	1.84	0.71
Moderate Access	110	27.5	2.53	0.97
Low Access	150	37.5	3.45	1.32
No Access	60	15.0	1.38	0.53
Total	400	100	2.53	0.97

Source: Data Analysis for Fieldwork, 2024

The analysis of digital access levels for ethical and value education in Kaduna Central Senatorial District reveals significant disparities. The mean score of 2.53 (SD = 0.97) indicates that access to digital resources is generally moderate, though a large proportion of respondents (37.5%) reported low access, while 15% had no access at all. Only 20% of respondents enjoy high digital access, suggesting that a substantial digital divide persists. This gap is likely influenced by infrastructural limitations, socioeconomic constraints, and policy implementation challenges. The standard deviation of 0.97 shows some variability in responses, reflecting the unequal distribution of digital resources across different areas. The finding of the study indicated that there are significant disparities of digital access levels for ethical and value education in Kaduna Central Senatorial District. This emphasizes the need for targeted interventions, such as improved ICT infrastructure, affordable internet access, and digital literacy programs, to ensure equitable access to ethical and value-based education in the district.

Analysis of Hypothesis One

Table 2: Chi-Square Test Table for Hypothesis One Testing

Digital Access	Effective Delivery (Observed)	Ineffective Delivery (Observed)	Effective Delivery (Expected)	Ineffective Delivery (Expected)	Total
Adequate Access	120	80	85.0	115.0	200
Inadequate Access	50	150	85.0	115.0	200
Total	170	230	-	-	400

Source: Fieldwork, 2024

The chi-square test results presented in Table 2 reveal a significant correlation between digital access and the effective delivery of ethical and value education in Kaduna Central Senatorial District. Among respondents with sufficient digital access, 120 reported effective education delivery, while 80 found it ineffective. Conversely, among those with limited digital access, only 50 deemed the education effective, whereas 150 considered it ineffective. The expected values for both groups in each category were set at 85, indicating that the observed differences are unlikely to be due to random chance. With a chi-square statistic of 48.71 and a p-value of 2.97×10^{-12} well below the 0.05 significance threshold we therefore, reject the null hypothesis (H_0). This leads us to conclude that digital access significantly influences the effective delivery of ethical and value education. Therefore, enhancing digital infrastructure and accessibility is essential for improving educational outcomes and fostering value-based learning in the region.

Research Question Two: What are the primary challenges that impede digital inclusion in the delivery of ethical and value education in this region?

Table 3: Frequency Distribution on Research Question Two

Challenges	Frequency (n)	Percentage (%)	Mean ($\bar{x}$)	SD (σ)
Inadequate ICT Infrastructure	130	32.5	3.21	1.05
High Cost of Internet and Devices	115	28.75	3.15	1.02
Low Digital Literacy	90	22.5	2.98	0.95
Lack of Government Support	40	10	2.75	0.88
Socioeconomic Barriers (Poverty)	25	6.25	2.60	0.81
Total Respondents	400	100	2.94	0.94

Source: Data Analysis for Fieldwork, 2024

Table 3 revealed that **inadequate ICT infrastructure** is the most significant barrier to digital inclusion in ethical and value education, with **32.5%** of respondents identifying it as a key challenge (Mean = **3.21**, SD = **1.05**). The **high cost of internet and devices** follows closely, affecting **28.75%** of respondents (Mean = **3.15**, SD = **1.02**), indicating that financial constraints hinder digital access. **Low digital literacy**, cited by **22.5%** of respondents (Mean = **2.98**, SD = **0.95**), further exacerbates the divide, especially in rural areas. Additionally, **lack of government support** (10%, Mean = **2.75**) and **socioeconomic barriers** (6.25%, Mean = **2.60**) contribute to the problem, albeit at lower rates. The overall **mean score of 2.94** suggests that these challenges are prevalent and require urgent intervention. The high standard deviation values indicate variability in responses, suggesting that while some areas experience extreme digital exclusion, others have relatively better access. The finding revealed that **inadequate ICT infrastructure, high cost of internet and devices, Low digital literacy, lack of government support and socioeconomic barriers constitute some significant barriers to digital inclusion in ethical and value education in Kaduna Central Senatorial District. Addressing these challenges through policy reforms, improved ICT infrastructure, and targeted digital literacy programs is crucial for bridging the digital divide and enhancing ethical and value education in the region.**

Analysis of Hypothesis Two

Table 4: Chi-Square Test Table for Hypothesis Two Testing

Digital Inclusion Challenges	Effective Delivery (Observed)	Ineffective Delivery (Observed)	Effective Delivery (Expected)	Ineffective Delivery (Expected)	Total
Minimal Challenges	90	110	65.0	135.0	200
Severe Challenges	40	160	65.0	135.0	200

Total	130	270	-	-	400

Source: Fieldwork, 2024

The chi-square test results indicate a significant correlation between challenges in digital inclusion and the delivery of ethical and value education in the Kaduna Central Senatorial District. Among respondents with minimal digital challenges, 90 rated education delivery as effective, while 110 deemed it ineffective. Conversely, among those facing severe digital challenges, only 40 found education effective, while 160 rated it ineffective. The expected values for both groups were 65, suggesting that the observed differences are unlikely to be due to chance. With a chi-square statistic of 27.36 and a p-value of 1.69×10^{-7} , which is significantly lower than the 0.05 threshold, the null hypothesis (H_0) is rejected. This confirms that digital inclusion challenges have a substantial impact on the provision of ethical and value education. These findings highlight the urgent need for targeted interventions, such as enhancing digital infrastructure, promoting digital literacy, and implementing inclusive education policies to address the digital divide and improve educational accessibility.

Research Question Three: What strategies can be implemented to bridge the digital divide and enhance the provision of ethical and value education for sustainable national development?

Table 5: Frequency Distribution on Research Question Three

Strategies for Bridging the Digital Divide	Frequency (N)	Percentage (%)	Mean	SD
Investment in ICT infrastructure	130	32.5	3.45	1.08
Reduction of internet and device costs	110	27.5	3.38	1.02
Digital literacy programs	90	22.5	3.30	0.98
Government policy support	45	11.25	3.12	0.95
Community-led initiatives	25	6.25	2.90	0.89
Total	400	100	3.23	0.98

Source: Data Analysis for Fieldwork, 2024

Table 5 summarizes the key strategies identified by respondents to improve digital access for ethical and value education. Investment in ICT infrastructure (Mean = 3.45, SD = 1.08) is seen as the most effective strategy, with 32.5% of respondents highlighting its importance. Reducing internet and device costs (Mean = 3.38, SD = 1.02) follows closely, indicating that affordability is a major factor in digital inclusion. Digital literacy programs (Mean = 3.30, SD = 0.98) also play a crucial role, particularly in equipping students and teachers with necessary technological skills. Government policy support (Mean = 3.12, SD = 0.95) is recognized but appears to require better implementation, while community-led initiatives (Mean = 2.90, SD = 0.89) receive the least support, suggesting that broader governmental and institutional interventions are more impactful. The overall mean of 3.23 reflects a moderate consensus on the effectiveness of these strategies, while the standard deviation of 0.98 indicates some variation in responses, likely influenced by location and access disparities within the district. The finding showed that investment in ICT infrastructure, reducing internet and device costs, digital literacy programs, government policy support and community-led initiatives are the key strategies to improve digital access for ethical and value education for sustainable national development.

Analysis of Hypothesis Three

Table 6: Chi-Square Test Table for Hypothesis Three Testing

Digital Divide Bridging Efforts	Improved Ethical & Value Education (Observed)	Not Improved (Observed)	Improved Ethical & Value Education (Expected)	Not Improved (Expected)	Total
Bridging Efforts Present	130	70	95.0	105.0	200
Bridging Efforts Absent	60	140	95.0	105.0	200
Total	190	210	-	-	400

Source: Fieldwork, 2024

The results from the chi-square test presented in Table 6 indicated a significant influence of bridging the digital divide on enhancing ethical and value education for sustainable national development in Kaduna Central Senatorial District. The data revealed that in areas where efforts to bridge the digital divide are implemented, 130 respondents reported an improvement in education, while 70 noted no change. In contrast, in regions lacking such initiatives, only 60 respondents observed an improvement, with 140 indicating no change. The expected values for both groups were 95, suggesting that the observed differences are not due to chance. With a chi-square statistic of 47.73 and a p-value of 4.89×10^{-12} well below the 0.05 significance threshold we reject the null hypothesis (H_0). This analysis confirms that bridging the digital divide significantly enhances the effectiveness of ethical and value education, underscoring the necessity for increased digital access, the integration of ICT in education, and policy reforms to promote sustainable national development.

Discussion

The finding of the study indicated that there are significant disparities of digital access levels for ethical and value education in Kaduna Central Senatorial District with the mean score of 2.53 (SD = 0.97). The high standard deviation underscores the unequal distribution of digital resources, reinforcing the study's assertion that investment in digital infrastructure, affordability initiatives, and literacy programs is essential for delivering equitable ethical and value education in the Kaduna Central Senatorial District. This finding collaborates Ojo & Bello (2023) who discuss the broader implications of digital inclusion in Nigeria, emphasizing the need for localized data to understand specific regional challenges. Additionally, a study evaluating the Digital Learning Culture (DLC) Index among secondary students in Nigeria's North-Central zone found that urban students have an estimated DLC index of 0.22, indicating a significant digital literacy gap between urban and rural populations. This divide is further intensified by financial exclusion; although women represent 50% of business owners in Kaduna, 62% remain financially marginalized. These statistics highlight the complex nature of the digital divide, shaped by both infrastructural shortcomings and socioeconomic disparities. The challenges in providing ethical and value education due to the digital divide are multifaceted. Limited access to digital resources hinders the integration of technology into educational curricula, which is vital for contemporary ethical instruction. Financial constraints exacerbate this issue; in Kaduna Central, many parents struggle to pay examination fees, resulting in high dropout rates and low awareness regarding the importance of girls' education. This financial burden restricts students' access to digital tools, thereby obstructing the delivery of comprehensive ethical and value education. This was supported by the World Bank (2021) indicating that financial exclusion significantly impacts educational outcomes, particularly for marginalized groups. Infrastructural challenges significantly contribute to the digital divide. The Kaduna State Development Plan 2021-2025 outlines efforts to establish a state-wide digital infrastructure backbone aimed at transforming Kaduna into a digital economy (Kaduna State Government, 2021). However, the current infrastructure remains inadequate, particularly in rural areas, limiting internet access and digital learning opportunities. Socioeconomic factors, including financial exclusion and gender disparities, further complicate these challenges. Policy and governance issues also play a critical role; while initiatives like the e-governance strategy with Microsoft show promise, effective implementation and widespread adoption are crucial for bridging the digital divide comprehensively.

The finding revealed that **inadequate ICT infrastructure, high cost of internet and devices, Low digital literacy, lack of government support and socioeconomic barriers constitute some** significant barrier to digital inclusion in ethical and value education in Kaduna Central Senatorial District as major challenges hindering digital inclusion in the delivery of ethical and value education within the Kaduna Central Senatorial District. This finding is in line with the International Telecommunication Union (ITU, 2022) that emphasizes the role of digital literacy in fostering responsible citizenship and ethical behavior in the digital age. To effectively tackle these barriers, it is

crucial to enhance ICT investments, subsidize digital tools, implement capacity-building initiatives, and pursue policy reforms aimed at fostering inclusive and effective digital education delivery. The findings suggest that improving ICT infrastructure, lowering internet costs, and promoting digital literacy programs are essential for delivering effective ethical and value education in the Kaduna Central Senatorial District. Digital literacy is vital for youth empowerment and the reinforcement of national values in Nigeria. A study indicates that 76.3% of Nigerians have sought jobs requiring digital literacy skills, with 66.8% acknowledging its importance for employment opportunities. This significant engagement illustrates the role of digital skills in enhancing employability and fostering economic independence among the youth. Access to digital technology provides numerous advantages, including improved educational and career prospects, thereby promoting social inclusion and reinforcing national values. Efforts to reform education for sustainable national development in Nigeria necessitate a multifaceted approach that involves government bodies, the private sector, non-governmental organizations (NGOs), and local communities (UNESCO, 2020). The Nigerian government has initiated reforms to enhance educational infrastructure and align curricula with sustainable development goals, emphasizing the integration of modern technology in classrooms and the ongoing professional development of educators. NGOs play a crucial role in promoting sustainable development through education and health initiatives, focusing on social welfare and community development (International Trade Administration, 2023).. Their activities range from building educational infrastructure to implementing programs that improve learning outcomes. Community-led initiatives, such as local libraries and learning centers, are vital in bridging educational gaps and ensuring inclusive development that reflects local needs. Collectively, these collaborative efforts highlight the importance of a holistic approach to educational reform, where government policies, private sector investments, NGO initiatives, and community participation converge to foster sustainable national development.

The finding showed that investment in ICT infrastructure, reducing internet and device costs, digital literacy programs, government policy support and community-led initiatives are the key strategies to improve digital access for ethical and value education for sustainable national development in Kaduna Central Senatorial District and Nigeria at large. This study emphasizes the importance of a comprehensive strategy that integrates technological investments, policy reforms, and collaboration between government and private sectors to enhance ethical and value-based education for sustainable development in the Kaduna Central Senatorial District (International Trade Administration, 2023). The relationship between digital literacy and ethical education is crucial for cultivating informed and responsible citizens. Digital literacy empowers individuals with the skills to navigate the digital world effectively, while ethical education provides the moral framework necessary for responsible usage of these skills. Together, they promote critical thinking, ethical decision-making, and responsible digital citizenship, which are vital for personal growth and societal harmony (OECD, 2020). Incorporating digital literacy into educational curricula ensures that individuals not only become proficient in technology but also grasp the ethical implications of their online behavior, fostering a culture of integrity and respect in the digital realm. Over time, enhancing digital literacy and ethical education can significantly impact governance and economic development. A digitally literate population can engage more effectively with e-governance platforms, leading to greater transparency, reduced bureaucracy, and improved public service delivery, ultimately fostering trust in government institutions and encouraging civic engagement (the International Telecommunication Union (ITU, 2022).

Conclusion

The study highlights the significant impact of the digital divide on ethical and value education in the Kaduna Central Senatorial District. Key findings reveal that limited access to digital infrastructure, socioeconomic inequalities, and restrictive policies hinder effective digital learning and ethical instruction, exacerbating educational disparities. Infrastructural challenges, such as unreliable internet connectivity and insufficient digital devices, further widen gaps in educational participation and quality, ultimately restricting youth empowerment and impeding national development. Addressing

these issues is crucial for fostering equitable access to education and promoting sustainable growth in the region.

Recommendations

Base on the study finding the study suggests the following as recommendations.

1. The government should implement policies to ensure affordable internet and subsidized devices for students, especially in underserved areas. Investments in ICT infrastructure, reliable electricity for schools, and community digital hubs are essential.
2. Schools should integrate digital tools into ethical and value education through blended learning models. Training programs for educators in digital literacy and innovative teaching methods are crucial to improve student engagement and ethical decision-making.
3. Government should encourage public-private partnerships to provide digital infrastructure and resources. Collaborate with technology companies and NGOs to support community-led digital literacy initiatives, promoting shared responsibility for digital inclusion.

Abstract

This study examined the prevalence and consequences of ethical issues in the administration of teacher education institutions in Delta State. Two purposes and research questions guided the study. The study adopted a descriptive survey research design. The estimated targeted population for this study consisted of 1, staff strength from two public teacher education institutions in Delta State. The breakdown of this population involves a total of 532 teaching and senior non-teaching staff of Federal College of Education (Technical) Asaba; 510 teaching and senior non-teaching staff of COE, Warri, Delta State. Sample size of the study constituted a total of 521 teaching and senior non-teaching staff which included the Deans, Heads of Departments, Directors of units, lecturers and other senior administrative officers across the two public teacher education institutions, selected using the purposive and stratified random sampling techniques. Instrument for data collection was a 35-item closed-ended structured questionnaire designed by the researcher and titled: —Prevalence and Consequences of Ethical Issues in Administration of Teacher Education Institutions Questionnaire (PCEIATEIQ)l. The questionnaire was structured on a 4-point rating scale of: Strongly Agree (SA) – 4 points, Agree (A)– 3 points, Disagree (D)– 2 points and Strongly Disagree (SD) – 1 point. Both validity and reliability of the questionnaire were established. Data collated were analyzed using mean statistics rated at 2.50 and standard deviation statistics. Findings of the study revealed among others that favouritism, ethnicity, tribalism, bribery, poor accountability, nepotism, mismanagement of funds, political interference, lack of transparency in procurement and resource allocation, sexual harassment, culture of silence around unethical behaviours, academic dishonesty, discriminations, delay in payment of staff honorarium, among others, were ethical issues prevalent in the administration of teacher education institutions in Delta State. From these findings' recommendations were proffered and among them included that the regulatory agencies for teacher education institutions, that is, the National Universities Commission (NUC) and National Commission for Colleges of Education (NCCE) should establish independent ethics committees to monitor, investigate, and address ethical violations and challenges promptly for effective administration of TEIs in Delta State.

Keywords: Ethical issues, Prevalence, Consequences, Administration, Teacher, Education, Institutions

Introduction

Teacher Education Institutions (TEIs) are well-known for the training of pre-service and servicing teachers for the Nigerian education sector. They offer variations of sandwich, regular/full-time and part-time professional diploma, degree and postgraduate degree programmes in various courses and disciplines for the student-teachers in the Colleges of Education (COEs), National Teachers' Training Institute (NTI), School of Education in the Polytechnics, and Institute and Faculty of Education in the Universities, including their affiliations, among others. However, teacher education institutions (TEIs) serve a unique purpose and strategic role in sustainable national development of any nation, as they produce educators and teachers who shape the character and intellectual growth of future generations. Hence, the administration coupled with administrative practices within these TEIs must be grounded in ethical standards to ensure credibility and trust in the education system for their sustainable development (Obasi & Iheanacho, 2020). This requires that the activities, operations and actions of different personnel in the TEIs, among which includes the institutional leadership and management team, Deans and heads of departments, teaching staff, non-teaching staff and students must be properly guided and abide by ethical standards and code of conducts of the institution. Ethical standards entail principles that when followed, promote values such as trust, good behaviour, fairness, and kindness and serve as guidelines for individuals to act responsibly in professional and social contexts (Velasquez, Andre, Shanks & Meyer, 2015). Ethical standards also refer to the codes of conduct or expectations that govern behavior within a particular profession, ensuring integrity, accountability, and respect for individuals and institutions (Cooper, 2012). Besides, ethics in educational administration simply refers to the application of moral principles and standards to leadership, decision-making and governance in educational institutions. Ethic in educational administration also deals with the act of doing what is right or wrong including conducts and principles guiding human actions in educational institutions. It involves honesty, fairness, integrity, respect for persons, and accountability in the use of institutional power (Okebukola, 2021). Administration, on the other hand can be described as the process of coordinating people and resources to achieve organizational goals through planning, organizing, leading, and controlling activities effectively and efficiently (Lussier & Achua, 2016).

Educational administration means the process of planning, organizing, directing, and controlling of the activities related to education in order to effectively and efficiently achieve the objectives of educational institutions. Administration in education thus, involves executive functions of planning, coordinating, directing, reporting, controlling, organizing, harmonizing and monitoring activities in the school organization. It further involves the management of staff and utilization of resources in educational institutions. In teacher education institutions, ethical leadership plays a pivotal role in setting the tone for institutional culture and ensuring fairness in areas of administration such as personnel management, resource allocation, facilities management, institutional relationships with external bodies and student affairs (Ajayi & Ekundayo, 2022). Ethical standards administration therefore, is a critical component of effective educational leadership, particularly, in teacher education institutions that are responsible for preparing future educators. It provides a foundation for trust among staff, students, and the wider community, and ensures that institutional goals are pursued with transparency and justice (Uche & Okoli, 2023). The integrity and accountability of administrators including other personnel in these institutions directly influence not only internal governance but also the quality of teacher preparation and ultimately, the sustainability of national development efforts (Okebukola, 2021). However, unethical practices such as favoritism, nepotism, forgery, certificate racketing, mismanagement of facilities, laziness and delay in discharge of responsibilities, bribery and misappropriation of funds can compromise the effectiveness of educational leadership likewise any other personnel in the institution; and damage institutional reputation (Olorunsola & Oyeade, 2021). The prevalence of ethical issues in Nigerian teacher education institutions has been widely acknowledged in recent years. Administrative malpractices such as biased staff recruitment, suppression of dissenting voices, and exploitation of power by top officials are frequently reported (Eze & Alutu, 2022). Eze and Alutu further lamented about the anecdotal ethical standards violations persisting within the management of colleges of education and faculties of education in universities, especially, at the

State level (Eze & Alutu, 2022). Such ethical standards violations may include biased recruitment practices, misappropriation of funds, intimidation of subordinates and inadequate mechanisms for accountability and redress. According to Uche and Okoli (2023), administrative favouritism and politicization of leadership appointments are major ethical concerns that erode staff morale and encourage institutional mediocrity. Furthermore, lack of effective internal monitoring structures often allows these unethical behaviours to persist without consequences. Ajayi and Ekundayo (2022) expressed that in recent years, concerns about unethical administrative practices such as issues of favouritism, tribalism and ethnicity, corruption, delay in payment of workers' salary including other honorarium, mismanagement of resources, impartiality in allocation responsibilities, forgery, poor accountability and lack of transparency, among others, have been increasingly raised in Nigeria's educational sector (Ajayi & Ekundayo, 2022).

In Delta State, anecdotal and empirical evidence indicates a pattern of unethical conduct among administrators, especially, in the areas of procurement, staff promotion, and student admissions, among others (Obasi & Iheanacho, 2020). However, the situation of ethical standard issues and challenges prevailing in the administration of TEIs in Delta State is particularly concerning. While efforts have been made by government and regulatory bodies to promote transparency and quality assurance in higher education, teacher education institutions still grapple with ethical lapses that hinder their efficiency and effectiveness, therefore, making the attainment of quality almost impossible. According to Uche and Okoli (2023), these ethical challenges not only disrupt administrative functions but also negatively affect staff morale, hinder academic productivity, and weaken public confidence in the education system. If left unaddressed, these issues could undermine the capacity of teacher education institutions to contribute meaningfully to educational transformation and national development. Moreover, ethical issues in administration are not merely isolated organizational concerns, they carry significant consequences for the broader educational landscape. When unethical behaviour becomes normalized in teacher education institutions, it sends a dangerous signal to the pre-service teachers being trained in such environments, thereby, potentially perpetuating a culture of corruption and negligence in the school system (UNESCO, 2022). Furthermore, the consequences of unethical administration in teacher education institutions are far-reaching. First, it undermines the credibility and legitimacy of these institutions, both internally and externally. Staff and students lose trust in leadership, which can result in conflict, low morale, promotion of corrupt practices and high turnover rates (Ajayi & Ekundayo, 2022). Second, the presence of ethical challenges compromises the quality of teaching and learning. When administrative decisions are not merit-based, unqualified personnel may be appointed to critical roles, leading to a decline in instructional quality and educational outcomes (Obasi & Iheanacho, 2020). Third, unethical administration affects the training and professional identity of pre-service teachers. Students who observe or experience administrative malpractice may internalize unethical behaviours, thereby, reproducing them in the school system after graduation (UNESCO, 2022). This creates a ripple effect that undermines national efforts toward sustainable national development, especially, in the education sector. From all the foregoing discussions, it therefore becomes imperative to explore the prevalence and consequences of these issues, with a focus on how they affect institutional operations and quality, staff performance, the training of future educators and institution's sustainable development. The rationale for this study is grounded in the need to empirically assess the ethical climate of teacher education institutions in Delta State and identifying the administrative challenges that may hinder their development goals. This study is however, anchored on Ethical Leadership Theory, which posits that leaders who act with integrity, fairness, and concern for others promote ethical behaviour within their organizations (Brown & Treviño, 2006). Ethical leaders are role models whose behaviour influences subordinates through both formal authority and interpersonal relationships. In educational institutions, ethical leadership encourages a culture of accountability, fairness, and inclusiveness, thereby minimizing unethical practices (Okebukola, 2021). Applying this theory to the administration of teacher education institutions provides a lens to assess how the conduct of administrative leaders influences the overall ethical climate and institutional performance.

Despite the availability of general literature on corruption and ethical lapses in Nigerian higher education, specific research focusing on teacher education institutions in Delta State remains limited. Several empirical studies have addressed ethical challenges in Nigerian higher education. Ajayi and Ekundayo (2022) found out that institutions with strong ethical policies recorded higher staff commitment and better academic outcomes. Similarly, Eze and Alutu (2022) identified a direct link between ethical leadership and institutional effectiveness in Colleges of Education in South-East Nigeria. However, most existing research like those of Adeleke and Odebunmi (2021), Ewuim and Ekwe (2019), Oduwaiye (2014), Omoregie and Egbo (2020), and Okebukola (2018) has focused broadly on public universities or higher education institutions in other geopolitical zones, leaving a gap in localized data on ethical issues in teacher education institutions (TEIs) in Delta State. This study contributes to filling that empirical gap by focusing specifically on prevalence and consequences of ethical issues in administration of teacher education institutions in Delta State's. The study, therefore, sought to fill that gap by providing empirical insights that could inform ethical policy reforms, capacity building, and institutional accountability frameworks in Delta State teacher education sector.

Statement of the Problem

Teacher education institutions serve as foundational pillars in shaping the quality and integrity of the teaching profession, which is vital for sustainable national development of the country. The administration of these institutions is expected to reflect the highest ethical standards, given their role in producing morally upright and professionally competent teachers. However, there is growing concern over the erosion of ethical values in the administration of teacher education institutions across Nigeria, including, in Delta State. Reports of favouritism in staff recruitment and promotion, financial mismanagement, lack of transparency, abuse of power, mismanagement and lack of maintenance of facilities, misbehaviour, nepotism, forgery, sexual harassment from students and lecturers, malpractices of all sort, indiscipline, certificate racketing and poor accountability mechanisms have become increasingly common as reported in few studies (Ajayi & Ekundayo, 2022; Eze & Alutu, 2022; Uche & Okoli, 2023). These ethical lapses not only compromise or undermines institutional credibility and internal harmony but also negatively impact the quality of training provided for recipients, administrative operations and morale of pre-service teachers. When the administrative environment is characterized by unethical practices, it sets a poor example for future educators, potentially perpetuating a cycle of corruption and professional misconduct in the education system. However, the prevalence of unethical standards and practices can lead to crisis in the administration of TEIs. Furthermore, ethical failures in administration may lead to reduced staff motivation, high turnover, strained stakeholder relationships, and a decline in academic productivity and innovation. Despite existing literature on ethical leadership and institutional governance in higher education, most studies focus broadly on universities or general public sector ethics. There is a noticeable scarcity of empirical research specifically examining the prevalence and consequences of ethical issues in the administration of teacher education institutions in Delta State. This lack of localized evidence creates a critical gap in knowledge and undermines efforts to design targeted interventions that address the unique challenges faced by these institutions. This study is, therefore, designed to fill this gap by empirically exploring the nature, frequency, and consequences of ethical issues in the administration of teacher education institutions in Delta State. It aimed to provide data-driven insights that will guide ethical reforms, strengthen institutional accountability, and ultimately support the goal of sustainable national development through effective administration of quality teacher education. Thus, the problem in which this present sought to address is to investigate and determine the prevalence and consequences of ethical issues in the administration of teacher education institutions in Delta State

Purpose of the Study

The purpose of this study was to examine the prevalence and consequences of ethical issues in the administration of teacher education institutions in Delta State. Specific objectives of the study were to:

1. examine the prevalence of ethical issues in the administration of teacher education institutions in Delta State.
2. investigate the consequences of these ethical issues on the operational effectiveness, quality of teacher education and sustainable development in the administration of teacher education institutions in Delta State.

Research Questions

The following research questions guided this study:

1. What are the ethical issues prevalent in the administration of teacher education institutions in Delta State?
2. What are the consequences of these ethical issues on the operational effectiveness, quality of teacher education and sustainable development in the administration of teacher education institutions in Delta State?

Methods

This study adopted a descriptive survey research design. The design was deemed appropriate because the study sought to collect data from a sample of respondents to describe and interpret the current status of ethical issues in the administration of teacher education institutions without manipulating any variables. This design enabled the researcher to examine the prevalence and consequences of these ethical issues based on respondents' experiences and perceptions. The estimated targeted population for this study consisted of a total of 1,042 staff strength from two public teacher education institutions in Delta State. The breakdown of this population involves a total of 532 teaching and senior non-teaching staff of Federal College of Education (Technical) Asaba; 510 teaching and senior non-teaching staff of COE, Warri, Delta State. The population further comprised all the administrators, academic staff and senior non-teaching staff from the two public teacher education institutions in Delta State. This included the Deans, Heads of Departments, Directors of units, lecturers and other senior administrative officers across the two public teacher education institutions. A total sample of 521 respondents consisting of 299 teaching and 222 senior non-teaching staff was selected using purposive and stratified random sampling techniques. First, purposive sampling was used to select 2 public teacher education institutions within Federal-Government owned institution and State-Government owned TEIs in Delta State. Then, stratified random sampling was used to select respondents across strata (Federal-Government owned institution and State-Government owned institution): 15 administrators, 299 academic staff and 207 senior non-teaching staff, ensuring a balanced representation.

The main instrument used for data collection was a 35-item closed-ended structured questionnaire designed by the researcher and titled: —Prevalence and Consequences of Ethical Issues in Administration of Teacher Education Institutions Questionnaire (PCEIATEIQ)». The questionnaire was structured on a 4-point rating scale of: Strongly Agree (SA) – 4 points, Agree (A)– 3 points, Disagree (D)– 2 points and Strongly Disagree (SD) – 1 point. Construction of the questionnaire was guided by the purpose of the study and research questions. The content and face validity of the instrument were ensured by presenting the drafted copy to three experts from the Faculty of Management and Social Sciences in Dennis Osadebay University, Delta State. Their feedback led to improvements in the clarity, structure and relevance of the questionnaire items before its final distribution to the respondents. The reliability of the instrument was determined using the Cronbach Alpha method to measure scores gotten from the pilot-test. Moreover, a pilot test was conducted with 30 respondents from three teacher education institutions not included in the main study. After the pilot test, the scores of 0.89 and 0.87 were calculated from the two clusters respectively using the Cronbach Alpha method and were summed up to give an overall reliability coefficient which was found to be 0.88, indicating a high level of internal consistency. The researcher, with the help of four research assistants, administered the questionnaires to respondents from the sampled public institutions adopting an on-the-spot, face-to-face and hand-delivery contact with the respondents. Respondents who were assured of confidentiality and

anonymity of their responses completed the questionnaire immediately on the spot and returned them back to the research assistants. Distribution of the questionnaire took a period of five working days and were also retrieved at a 100% rate of return. Data collected were analyzed using descriptive statistics (mean and standard deviation) to answer the research questions. An item with a mean score of 2.50 and above was considered as agree (that is, prevalent or consequential), while an item below 2.50 was considered as disagree. Results were presented in frequency tables for clarity and interpretation.

Results

Research Question 1: What are the ethical issues prevalent in the administration of teacher education institutions in Delta State?

Table 1: Mean Scores and SD of Respondents concerning the Ethical Issues Prevalent in the Administration of Teacher Education Institutions (TEIs) in Delta State

N = 521 Respondents (academic staff and senior non-teaching staff)

S/N	Please indicate your agreement concerning the ethical issues prevalent in the administration of your college using the rating scales provided	SA	A	D	SD	X	SD	Decision
1.	Favoritism together with ethnicity, tribalism, bribery, is a common practice in admission, staff promotion likewise official appointments	257	222	30	12	3.39	0.70	Agree
2.	Poor accountability from higher officials alongside with lack of effective internal monitoring structures present in the institution	248	212	33	28	3.31	0.81	Agree
3.	Nepotism affects recruitment including employment processes in terms of hiring, or assignment decisions based on personal relationships rather than merit	266	199	40	16	3.37	0.76	Agree
4.	Mismanagement/misuse of institutional funds is prevalent	220	250	27	24	3.28	0.76	Agree
5.	There is lack of transparency in procurement likewise resource allocation	223	231	20	47	3.21	0.89	Agree
6.	Inadequate ethical oversight and policy enforcement as in connection with institutional ethical codes of conduct not enforced consistently or failure to implement them; including, lack of ethical training and weak internal control systems	217	266	14	24	3.30	0.73	Agree
7.	Political interference affects key administrative decisions	299	180	25	17	3.46	0.73	Agree
8.	There are reports of sexual harassment involving staff and students	187	273	39	22	3.20	0.75	Agree
9.	There is a culture of silence around unethical behaviours	271	203	20	27	3.38	0.79	Agree
10.	Demanding bribes for grades or favourable treatment	213	267	11	30	3.27	0.77	Agree
11.	Academic dishonesty including certificate racketeering such as tolerating or participating in plagiarism, falsification of records, or sale of certificates	218	275	18	10	3.35	0.64	Agree
12.	Exploitation in the form of abuse of authority by staff over students or subordinates	233	209	42	37	3.22	0.87	Agree
13.	Discrimination and unequal treatment based on gender, religion, ethnicity, or political affiliation, including marginalization of minority staff or students	207	214	36	64	3.08	0.98	Agree
14.	Infringement of academic freedom by punishing staff or students for expressing differing opinions; likewise, denial of promotions and limiting academic research or expression based on institutional bias	188	247	52	34	3.13	0.84	Agree
15.	Delay in payment of staff honorarium	215	251	15	40	3.23	0.83	Agree
Overall Mean Score & SD =						3.28	0.80	Agree

Analysis of data in Table 1 revealed that all the items from 1 - 15 were rated above the acceptable mean score of 2.50 by the respondents (academic staff and senior non-teaching staff) to show that they agreed with all the statements. None of the items were rated below the acceptable mean score of 2.50 by the respondents to show that they disagreed with any of the statements. The grand mean of 3.28 and standard deviation (SD) of 0.80 indicates closeness in the responses of the respondents showcasing the ethical issues prevalent in the administration of teacher education institutions in Delta State.

Research Question 2: What are the consequences of these ethical issues on the operational effectiveness, quality of teacher education and sustainable development in the administration of teacher education institutions in Delta State?

Table 2: Mean Scores and SD of Respondents concerning the Consequences of these Ethical Issues on the Operational Effectiveness, Quality of Teacher Education and Sustainable Development in the Administration of Teacher Education Institutions (TEIs) in Delta State

N = 521 Respondents (academic staff and senior non-teaching staff)

S/N	Please indicate your agreement concerning the consequences of these ethical issues on the operational effectiveness, quality of teacher education and sustainable development in your college using the same rating scales provided	SA	A	D	SD	X	SD	Decision
16.	Ethical misconduct reduces staff morale, commitment likewise job satisfaction hindering the institution to produce confident, ethically grounded teachers capable of nurturing future generations	250	210	35	26	3.31	0.81	Agree
17.	Diminishes motivation among qualified staff, affecting dedication to academic excellence	213	246	15	47	3.20	0.87	Agree
18.	It leads to low quality of teacher training likewise poor student outcomes by producing underqualified teachers who lack the integrity to serve as role models	256	198	29	38	3.29	0.87	Agree
19.	Creates a workforce lacking the competence including ethics needed for national development	239	200	40	42	3.22	0.90	Agree
20.	Reduces competence in curriculum delivery and mentoring of student teachers	233	180	55	53	3.14	0.97	Agree
21.	Ethical violations result in loss of institutional credibility and integrity, negatively affecting the institution's ability to contribute to national development	277	165	21	58	3.27	0.97	Agree
22.	It discourages innovation likewise weakens institutional capacity, limiting long-term growth	244	144	85	48	3.12	0.99	Agree
23.	Undermines merit-based staffing, leading to low-performing personnel in key roles, thereby, cultivating a toxic environment that inhibits collaboration and trust	209	190	76	46	3.08	0.95	Agree
24.	Students may replicate unethical behaviours which weakens student discipline structures and affects their future professional lives	248	195	40	38	3.25	0.88	Agree
25.	Depletes financial resources meant for infrastructure, training, likewise, instructional materials; therefore, limiting access to modern teaching tools including facilities, affecting the learning experience	210	233	51	27	3.20	0.82	Agree
26.	Erodes public trust likewise derails government and donor investment in teacher education which hampers equal educational opportunity, contradicting principles of equitable growth	277	180	22	42	3.33	0.89	Agree
27.	Ethical issues disrupt the smooth running of academic and administrative activities, therefore, making the learning environment become hostile and discouraging for both students and staff	217	276	18	10	3.34	0.64	Agree
28.	Reduces competitiveness of teacher education institutions in driving educational innovation	299	110	75	37	3.29	0.96	Agree
29.	Unethical practices discourage talented individuals from joining or remaining in the system which interrupts academic performance, especially, for victims, and leads to dropout or demotivation	265	184	44	28	3.32	0.84	Agree
30.	In such situation, staff and students are often reluctant to report unethical practices, therefore, creating a culture of impunity which allows repeated misconduct and systemic inefficiencies	218	202	60	41	3.15	0.91	Agree
31.	Ethical violations can result into internal conflicts among institutional stakeholders due to perceived injustice and inequality	303	147	49	22	3.40	0.83	Agree
32.	Marginalizes qualified staff and students, leading to underutilization of talents, restricting progressive ideas that can inform educational reforms and policies	166	301	15	39	3.14	0.79	Agree
33.	Hinders sustainable institutional reforms likewise disrupts accountability in practices, assessment and supervision	215	206	35	65	3.10	0.98	Agree
34.	Diminishes institution's leadership fairness in decision-making processes including efficiency in educational planning likewise implementation which reduces confidence in institutional governance	292	152	45	32	3.35	0.88	Agree

35.	Limits creativity, research, and critical thinking among academic staff which breeds low compliance with institutional goals	180	312	16	13	3.26	0.64	Agree
Overall Mean Score & SD =						3.24	0.88	Agree

Analysis of data in Table 2 revealed that all the items from 16 - 35 were rated above the acceptable mean score of 2.50 by the respondents (academic staff and senior non-teaching staff) to show that they agreed with all the statements. None of the items were rated below the acceptable mean score of 2.50 by the respondents to show that they disagreed with any of the statements. The grand mean of 3.24 and standard deviation (SD) of 0.88 indicates closeness in the responses of the respondents showcasing the consequences of these ethical issues on the operational effectiveness, quality of teacher education and sustainable development in the administration of teacher education institutions in Delta State.

Discussion of Findings

Findings of this study generally revealed that ethical violations were prevalence and widespread in the administration of teacher education institutions in Delta State. However, these ethical violations had negative consequences on the operational effectiveness, quality of teacher education and sustainable development in the administration of teacher education institutions in Delta State. It was indicated through the findings of these study that the key ethical issues prevalent in the administration of teacher education institutions in Delta State include: favoritism, ethnicity and tribalism in staff promotion and official appointments, bribery in admission, poor accountability from higher officials alongside with lack of effective internal monitoring structures, nepotism in recruitment including employment processes in terms of hiring, promotion, or assignment decisions based on personal relationships rather than merit, mismanagement/misuse of institutional funds, lack of transparency in procurement and resource allocation, inadequate ethical oversight and policy enforcement in connection with institutional ethical codes of conduct, lack of ethical training and weak internal control systems, political interference affecting key administrative decisions, sexual harassment involving staff and students, culture of silence around unethical behaviours, demanding bribes for grades or favourable treatment, academic dishonesty including certificate racketeering such as tolerating or participating in plagiarism, falsification of records, or sale of certificates, exploitation in the form of abuse of authority by staff over students or subordinates, discrimination and unequal treatment based on gender, religion, ethnicity, or political affiliation, including marginalization of minority staff or students, infringement of academic freedom by punishing staff or students for expressing differing opinions, including, denial of promotions and limiting academic research or expression based on institutional bias, and delay in payment of staff honorarium.

This finding agrees and corroborates with Eze and Alutu (2022) study which found out that administrative malpractices such as biased staff recruitment, suppression of dissenting voices, and exploitation of power by top officials are frequently reported. Eze and Alutu further confirmed that the anecdotal ethical standards violations persisting within the management of colleges of education and faculties of education in universities, especially, at the State level include: biased recruitment practices, misappropriation of funds, intimidation of subordinates and inadequate mechanisms for accountability and redress. The present study finding also relates and does not deviate from Uche and Okoli (2023) study which found out that administrative favouritism and politicization of leadership appointments are major ethical concerns that erode staff morale and encourage institutional mediocrity. Furthermore, lack of effective internal monitoring structures often allows these unethical behaviours to persist without consequences. Findings of Ajayi and Ekundayo (2022) study raised concerns about several unethical administrative practices such as issues of favouritism, tribalism and ethnicity, corruption, delay in payment of workers' salary including other honorarium, mismanagement of resources, impartiality in allocation responsibilities, forgery, poor accountability and lack of transparency, among others, have been increasingly raised in Nigeria's educational sector (Ajayi & Ekundayo, 2022). The present study finding concurs with Oduwaiye (2014) study which indicated that ethical erosion in Nigerian

universities undermined meritocracy and fuels systemic inefficiencies. Similarly, Omoregie and Egbo (2020) study found out that administrators' unethical behaviour compromised institutional goals and erodes public confidence in teacher education programmes. The presence of sexual harassment, culture of silence around unethical behaviours or lack of whistleblower protection as uncovered in the present study also aligns with Ewuim and Ekwe (2019) study which found out that a culture of silence perpetuates unethical practices in public institutions due to fear of retaliation. All these ethical issues plunging the administration of TEIs, also have grievous consequences on the growth and sustainability of these institutions.

On the consequences, the finding indicated that these ethical issues had grievous repercussions on the operational effectiveness, quality of teacher education and sustainable development in the administration of teacher education institutions in Delta State; and they include: reduces staff morale, commitment and job satisfaction thereby, hindering the institution to produce confident, ethically grounded teachers capable of nurturing future generations, diminishes motivation among qualified staff, affecting dedication to academic excellence, leads to low quality of teacher training and poor student outcomes by producing underqualified teachers who lack the integrity to serve as role models, creates a workforce lacking the competence including ethics needed for national development, reduces competence in curriculum delivery and mentoring of student teachers, loss of institutional credibility and integrity, which negatively affects the institution's ability to contribute to national development, discourages innovation and weakens institutional capacity, limiting long-term growth, undermines merit-based staffing, leading to low-performing personnel in key roles, thereby, cultivating a toxic environment that inhibits collaboration and trust, students may replicate unethical behaviours which weakens student discipline structures and affects their future professional lives, depletes financial resources meant for infrastructure, training, likewise, instructional materials; therefore, limiting access to modern teaching tools including facilities, affecting the learning experience, erodes public trust likewise derails government and donor investment in teacher education which hampers equal educational opportunity, contradicting principles of equitable growth, disrupt the smooth running of academic and administrative activities, therefore, making the learning environment become hostile and discouraging for both students and staff, reduces competitiveness of teacher education institutions in driving educational innovation, discourages talented individuals from joining or remaining in the system which interrupts academic performance, especially, for victims, and leads to dropout or demotivation, staff and students in such situation, are often reluctant to report unethical practices, therefore, creating a culture of impunity which allows repeated misconduct and systemic inefficiencies, results into internal conflicts among institutional stakeholders due to perceived injustice and inequality, marginalizes qualified staff and students, leading to underutilization of talents, restricting progressive ideas that can inform educational reforms and policies, hinders sustainable institutional reforms and disrupts accountability in practices, assessment and supervision, diminishes institution's leadership fairness in decision-making processes including efficiency in educational planning and implementation which reduces confidence in institutional governance, and limits creativity, research, and critical thinking among academic staff which breeds low compliance with institutional goals. This finding supports Okebukola (2018) study which found out that ethics-driven administration is key to improving teacher education quality and achieving sustainable development. Furthermore, the findings of most previous studies have reinforced the concern that students exposed to unethical systems may adopt such norms in their future classrooms, which is a concern also confirmed by Adeleke and Odebunmi (2021) in their research on value-based education. The present study finding aligns and agrees with Uche and Okoli (2023) study which confirmed that ethical challenges not only disrupt administrative functions but also negatively affect staff morale, hinder academic productivity, and weaken public confidence in the education system. If left unaddressed, these issues could undermine the capacity of teacher education institutions to contribute meaningfully to educational transformation and national development. Moreover, ethical issues in administration are not merely isolated organizational concerns, they carry significant consequences for the broader educational landscape. When unethical behaviour becomes normalized in teacher education institutions, it sends a dangerous signal to the pre-

service teachers being trained in such environments, thereby, potentially perpetuating a culture of corruption and negligence in the school system. Unethical administration affects the training and professional identity of pre-service teachers. Students who observe or experience administrative malpractice may internalize unethical behaviours, thereby, reproducing them in the school system after graduation (UNESCO, 2022). The present study finding corroborates with the findings of Ajayi and Ekundayo (2022) study which discovered that the consequences of unethical administration in teacher education institutions are far-reaching because they undermine the credibility and legitimacy of these institutions, both internally and externally. Staff and students lose trust in leadership, which can result in conflict, low morale, promotion of corrupt practices and high turnover rates, among other findings. Therefore, it is important to curb these ethical issues in order to prevent its consequences on operational effectiveness, quality of teacher education and sustainable development in the administration of teacher education institutions in Delta State.

Conclusion

This study established that ethical issues such as favouritism, ethnicity, tribalism, bribery, poor accountability, nepotism, mismanagement of funds, political interference, lack of transparency in procurement and resource allocation, sexual harassment, culture of silence around unethical behaviours, academic dishonesty, discriminations, delay in payment of staff honorarium, among others, are prevalent in the administration of teacher education institutions in Delta State. These unethical practices have serious and grievous consequences on operational effectiveness, quality of teacher education and sustainable development in the administration of teacher education institutions in Delta State. These consequences reduced staff morale, diminished training quality, strained stakeholder relationships, a decline in academic productivity and innovation, institutional mistrust and a potential negative influence on future educators' ethical standards, among many others. These findings underscore the urgent need for policy-driven ethical reform to safeguard the credibility, functionality and developmental goals of teacher education in Delta State and beyond. Without addressing these ethical challenges, the teacher education institutions may fail in their mandate to produce morally sound and professionally competent teachers who can drive sustainable national development in the country. Thus, the recommendations made below.

Recommendations

Based on these findings, the following recommendations were proffered:

1. The regulatory agencies for teacher education institutions, that is, the National Universities Commission (NUC) and National Commission for Colleges of Education (NCCE) should establish independent ethics committees to monitor, investigate and address ethical violations and challenges promptly for effective administration of TEIs in Delta State. These bodies must have the autonomy to enforce rules and ensure accountability and transparency without political interference. Also, institutions should implement confidential and secure whistleblower systems, with strong legal and institutional backing, to encourage the reporting of unethical practices. This will help expose hidden misconduct and deter potential violators.
2. Continuous professional development programmes organized through workshops and seminars on institutional ethics should be mandatory for all administrative and academic staff in teacher education institutions in Delta State. These programmes should focus on integrity, transparency, work performance and accountability, reinforcing ethical behaviour across all levels, so as to ward off the consequences of these ethical issues in the administration of TEIs in the State.

DIGITALIZATION OF THE RECRUITMENT AND SELECTION OF ACADEMIC STAFF OF COLLEGES OF EDUCATION IN NIGERIA

Dr. Ezeneme, Ebele Victoria
Department of Political Science
Nwafor Orizu College of Education, Nsugbe

Abstract

Digitalization has significantly transformed various sectors worldwide, and the educational sector in Nigeria is no exception. This study explored the impact of digitalization on the recruitment and selection processes for academic staff in Nigerian Colleges of Education. Historically, these processes were manual and paper-based, involving face-to-face interactions and physical advertisements. However, with the advent of digital technologies, such as online job portals, electronic applications, and advanced data analytics, there has been a notable shift towards digitalization. This transition promises increased efficiency, broader reach, and improved accuracy in candidate assessment. The study adopted a qualitative approach, utilizing secondary data sources, including academic journals, government documents, and relevant publications. Theoretical insights from the Diffusion of Innovations theory were used to understand the stages of digital adoption and its challenges. Key findings showed that while digitalization offers numerous benefits, such as streamlined application processing and enhanced candidate screening through AI. The included limited technological infrastructure, disparities in digital access, data privacy concerns, and the need for digital literacy among staff and candidates. To enhance digital recruitment, Colleges of Education should expand job postings to digital platforms, adopt application management systems, integrate automated screening tools, and invest in virtual interview infrastructure. Additionally, electronic onboarding systems can streamline hiring and improve new staff integration. This paper suggests that Colleges of Education should expand their recruitment and selection, strategies to include digital platform such as job boards, social media and professional methods.

Keywords: Digitalization, Recruitment, Selection, Colleges of Education

Introduction

Digitalization has revolutionized various sectors across the globe, significantly impacting how organizations operate and deliver services. The educational sector, particularly in Nigeria, has not been left behind in this digital wave. The recruitment and selection of academic staff in Colleges of Education in Nigeria is one such area that has experienced notable transformation due to digitalization (Emmanuel, 2024). Recruitment and selection are critical functions within educational institutions, as they directly influence the quality of education delivered. According to Onah and Anikwe (2016), the ability to attract, identify, and retain competent academic staff is essential for maintaining high educational standards and fostering a productive learning environment. Traditionally, these processes in Nigerian Colleges of Education were predominantly manual, involving considerable paperwork, face-to-face interviews, and physical advertisements. However, the advent of digital technologies has introduced new methods and tools, significantly altering these conventional practices. Digitalization in recruitment and selection involves a range of activities, from online job postings and electronic applications to the use of advanced data analytics and artificial intelligence (AI) in candidate screening and assessment (Odili, Daudu, Adefemi, Ekemezie & Usiagu, 2024). These technologies offer several advantages, including broader reach, efficiency, cost-effectiveness, and improved accuracy in identifying suitable candidates. They also present challenges such as the need for technological infrastructure, digital literacy, and concerns regarding data privacy and security.

Recruitment and selection processes in Nigerian Colleges of Education can be traced back to the colonial era when formal education systems were first introduced. During this period, the recruitment of academic staff was primarily influenced by the British educational model, with a strong emphasis on qualifications and experience. Selection processes were largely manual, involving rigorous scrutiny of academic credentials and personal interviews conducted by colonial administrators and educationists (Odor, Martins-Emesom, & Bakwuye, 2019). In the post-independence era, the Nigerian educational system underwent significant expansion, leading to the establishment of numerous Colleges of Education across the country (Imam, 2012). The recruitment and selection of academic staff during this period were characterized by increased autonomy, with individual institutions developing their own procedures and criteria. Despite this decentralization, the processes remained predominantly manual, relying heavily on physical advertisements, written applications, and face-to-face interactions. The late 20th century and early 21st century marked the beginning of a gradual shift towards digitalization in various sectors, including education. The introduction of computers and the internet provided new opportunities for streamlining administrative functions, including recruitment and selection (DigitalDefynd, 2024; Yamin, 2019). However, Nwokike, Abasili and Ezeneme (2023) state that the adoption of digital tools in Nigerian Colleges of Education was initially slow, hindered by factors such as limited technological infrastructure, inadequate funding, and resistance to change among staff.

The turn of the 21st century brought about a more concerted effort towards digital transformation in Nigeria's educational sector. Government initiatives and policies aimed at promoting ICT integration in education played a crucial role in this shift. For instance, the National Information Technology Development Agency (NITDA) was established in 2001 to drive ICT development and implementation across various sectors (Irele, 2021). Additionally, the National Policy on Information and Communication Technology in Education, launched in 2010, provided a framework for incorporating digital tools into teaching, learning, and administrative processes (Federal Ministry of Education, 2019). These initiatives created a conducive environment for the digitalization of recruitment and selection processes in Nigerian Colleges of Education. Online job portals and electronic application systems began to emerge, offering more efficient and accessible platforms for both institutions and prospective candidates. The use of email and other electronic communication methods also became commonplace, replacing traditional mail and face-to-face interactions in many instances. In recent years, the adoption of more advanced digital technologies has further transformed recruitment and selection practices in Nigerian Colleges of Education. The use of AI and machine learning algorithms for candidate screening and assessment has become increasingly popular, enabling institutions to process large volumes of applications quickly and accurately (Okatta, Ajayi & Olawale, 2024). Video interviews and virtual assessment centers have also gained traction, especially in the wake of the COVID-19 pandemic, which necessitated a shift towards remote and online interactions.

Despite these advancements, the digitalization of recruitment and selection processes in Nigerian Colleges of Education is not without challenges. One of the primary issues is the digital divide, with disparities in access to technology and internet connectivity across different regions of the country (Okoye & Umeifekwem, 2023). This divide can limit the reach of digital recruitment efforts and exclude potential candidates from remote or underserved areas. Additionally, concerns about data privacy and security have emerged as critical considerations, particularly with the increasing reliance on digital platforms for handling sensitive information (Olaoye & Adedokun, 2023). Moreover, the success of digitalization efforts depends on the digital literacy of both staff and candidates. Ensuring that academic staff possess the necessary skills to navigate and utilize digital tools effectively is essential for maximizing the benefits of these technologies. Training and capacity-building initiatives are therefore crucial components of the digital transformation journey in Nigerian Colleges of Education. This study aims to provide a comprehensive analysis of these dynamics, offering insights and recommendations for enhancing the recruitment and selection of academic staff in Nigerian Colleges of Education in the digital age.

Concept Clarifications

Digitalization

Digitalization has profoundly transformed the global landscape across myriad aspects of life in recent decades. Industries have undergone seismic shifts, adopting advanced technologies to streamline processes, enhance productivity, and create new market opportunities. Communication has been revolutionized, enabling instantaneous global connectivity and fostering unprecedented levels of collaboration and knowledge sharing. Governments and organizations alike have embraced digital tools to improve service delivery, governance, and decision-making processes. Education and healthcare have also seen significant advancements through digital platforms, expanding access to learning resources and medical expertise. Social interactions and cultural exchanges have transcended geographical boundaries, fostering a more interconnected and inclusive global community. As digitalization continues to evolve, its impact on economies, societies, and individual lives grows ever more profound, promising further innovations and challenges as we navigate an increasingly digital future. Parviainen, Tihinen, Kääriäinen and Teppola (2017) state that digitalization has been recognized as a transformative force reshaping both society and business in the foreseeable and distant future. Its impact is projected to be profound, often likened by various scholars to the magnitude of the industrial revolution. This comparison underscores the far-reaching implications of digital technologies across sectors, from manufacturing and finance to healthcare and education, fundamentally altering how organizations operate and interact with stakeholders in a globally connected environment.

Digitalization refers to the interaction between digital technologies and both the social and institutional processes, converting traditional methods and systems into digital formats. This transformation integrates digital tools and platforms into existing social structures and institutional frameworks, aiming to enhance efficiency, accessibility, and connectivity (Calderon-Monge & Ribeiro-Soriano, 2023). It involves leveraging technologies such as artificial intelligence, cloud computing, and data analytics to streamline operations, improve decision-making, and facilitate seamless interaction between individuals, organizations, and governmental bodies in the digital ecosystem. Wirtz, Weyerer, and Heckerroth (2022) emphasized that digitalization is significantly impacting organizations, triggering disruptive changes within firms and their immediate business environment. This phenomenon is accelerating the obsolescence of current business models, compelling companies to swiftly adapt or face the risk of becoming irrelevant in rapidly evolving markets. The integration of digital technologies is reshaping operational strategies, customer interactions, and market dynamics, challenging traditional paradigms and demanding innovative approaches to sustain competitive advantage in the digital era.

Digitalization signifies the comprehensive integration of digital technologies into various aspects of daily life, spanning processes, organizational structures, businesses, and broader societal realms. It involves the widespread adoption and application of digital tools and platforms aimed at enhancing efficiency, connectivity, and accessibility across sectors. This transformation encompasses several key elements: the digitization of information and processes, automation of tasks through artificial intelligence and robotics, and the leveraging of data-driven insights to foster innovation, streamline decision-making, and optimize overall operations. In practical terms, digitalization empowers organizations to digitize their workflows and operations, enabling seamless communication, collaboration, and resource management. Businesses increasingly utilize cloud computing, Internet of Things (IoT) devices, and advanced analytics to drive productivity gains and operational efficiencies. Similarly, governments leverage digital technologies to enhance public service delivery, improve governance frameworks, and engage citizens more effectively (Baykal, 2020). At a societal level, digitalization facilitates greater connectivity and access to information, transforming how individuals interact, learn, and participate in economic and social activities. It underpins the emergence of digital economies and ecosystems, where online platforms and digital marketplaces enable new business models and consumer behaviours. Moreover, digitalization plays a pivotal role in addressing global challenges such as sustainability, healthcare access, and inclusive economic growth by enabling innovative solutions and scalable interventions (Mihu, Pitic & Bayraktar, 2023).

Recruitment and Selection

Recruitment is defined as the process of generating a pool of qualified candidates for a particular job. This process involves various activities aimed at attracting potential candidates who possess the necessary skills, qualifications, and experience for the job (Adjei-Bamfo, Yeboah-Assiamah & Bawole, 2018). The recruitment process can include job postings, advertising, networking, and other strategies to reach a wide audience of potential applicants. On the other hand, selection is described as the process of making a 'hire' or 'no hire' decision with respect to each applicant for a job. Selection involves a series of steps to evaluate and choose the best candidate from the pool of applicants generated during the recruitment phase. This process typically includes reviewing resumes, conducting interviews, administering tests, and assessing candidates' qualifications against the job requirements (Oyadiran, Ishaq & Agunbiade, 2023). Job analysis helps in creating a detailed job description and specification, which serve as the criteria for evaluating candidates during the selection process.

Recruitment and selection processes as critical components of human resource management (Ahmad, 2020). The primary objective of recruitment is multifaceted: it involves seeking out or exploring potential candidates, evaluating their qualifications and suitability, inducing their interest, and ultimately obtaining their commitment to fill positions necessary for the successful operation of the organization. Selection goes beyond merely choosing the best candidate from a pool of applicants. It is a complex process that involves picking individuals who possess the relevant qualifications to fulfill specific job roles within the organization (Imam, 2012). The selection process aims to achieve a harmonious balance between what the applicant can do and desires to do and what the organization needs. This ensures that the chosen candidates are not only capable but also motivated and aligned with the organization's goals, leading to a more effective and cohesive workforce.

Colleges of Education

Colleges of education (COEs) are crucial teacher education institutions responsible for preparing educators for Nigerian schools. These institutions occupy a significant position as the third tier in Nigeria's tertiary educational framework (Ezugoh, Adesina, & Yakubu, 2020). They play a pivotal role in shaping the academic and professional development of future teachers, equipping them with the necessary knowledge, skills, and pedagogical techniques essential for effective teaching and learning in the country's educational system. College of education" refers to a tertiary institution or teacher training college primarily dedicated to teaching or conducting research tailored to the requirements of early childhood, primary, secondary, or higher education and training sectors (Law Insider (2024).

Methodology

This study adopted a qualitative approach, primarily utilizing secondary data sources. These sources included academic journals, online government documents, gazettes, and other relevant publications. The focus was on examining the effect of digitalization on the recruitment and selection processes for academic staff in Colleges of Education in Nigeria. By analyzing these various secondary sources, the study aimed to provide a comprehensive understanding of how digital tools and platforms are transforming traditional recruitment and selection methods, identifying both the benefits and challenges associated with these changes.

Theoretical Framework

The Diffusion of Innovations Theory (DOI) was adopted for this work, developed by Everett Rogers in 1962, explains how, why, and at what rate new ideas and technology spread through cultures. The theory posited that innovation diffusion is a process that occurs over time through a series of stages: knowledge, persuasion, decision, implementation, and confirmation. This framework is highly relevant in understanding the effect of digitalization on the recruitment and selection of academic staff in Nigerian Colleges of Education. In the context of Nigerian Colleges of Education, the knowledge stage involves awareness of digital recruitment and selection tools. Institutions must disseminate

information about the benefits and functionalities of digital systems. This can be achieved through workshops, seminars, and training sessions aimed at familiarizing faculty and administrative staff with digital tools and platforms.

Once knowledge is acquired, the next stage is persuasion, where stakeholders form an attitude towards the innovation. In Nigerian Colleges of Education, it is crucial to address concerns and demonstrate the advantages of digitalization, such as increased efficiency, transparency, and the ability to reach a wider pool of candidates. Success stories from other institutions and pilot projects can be effective in persuading stakeholders. The decision stage involves the commitment to adopt or reject the innovation. For Colleges of Education, this may involve administrative decisions to allocate resources towards digital infrastructure, selecting suitable digital platforms, and incorporating digital processes into existing recruitment policies. The decision to adopt digital recruitment systems must be supported by a clear implementation strategy. The implementation stage is where the actual integration of digital tools into the recruitment process takes place. Nigerian Colleges of Education need to invest in the necessary technological infrastructure, provide training for staff, and ensure that the digital tools are user-friendly and accessible. This may involve setting up online application systems, digital interview platforms, and databases for candidate information. In the final stage, confirmation, the institution evaluates the outcomes of the digital recruitment process and seeks reinforcement for the decision. Continuous monitoring and feedback mechanisms are essential to ensure that the digital systems are functioning as intended and to make any necessary adjustments. Success in this stage can lead to the institutionalization of digital recruitment practices and pave the way for further innovations.

The Diffusion of Innovations Theory can be applied to digitalize recruitment and selection in Nigerian Colleges of Education through integrated strategies. Awareness and training programs are essential. Regular training sessions can enhance digital literacy among administrative and academic staff, ensuring proficiency with digital tools. Awareness campaigns can highlight the benefits of digital recruitment, addressing initial resistance. Implementing pilot projects in a few departments can demonstrate the benefits and effectiveness of digital processes. Feedback from these pilots can refine the tools before a full-scale rollout. Resource allocation is crucial. Colleges must allocate budgets to procure necessary hardware and software, invest in reliable internet connectivity, and ensure robust cybersecurity to protect sensitive data. Developing and updating recruitment policies to incorporate digital procedures is vital. These policies should be transparent and provide clear guidelines. Regular monitoring and evaluation ensure effectiveness, with metrics established to evaluate success and updates based on feedback. Engaging stakeholders, including faculty, administrative staff, and prospective candidates, is key. Addressing concerns, providing support, and involving them in the transition fosters acceptance and smoother implementation.

Challenges of Digitalization on the Recruitment and Selection of Academic Staff in Nigeria Colleges of Education

Among Nigerian Colleges of Education, the advent of digitalization has promised transformative possibilities for the recruitment and selection of academic staff. However, this transition is not without its challenges. This research examines the numerous barriers hindering the full adoption of digital practices in this context.

Limited Reach and Visibility: Many colleges of education in Nigeria still rely on traditional methods for advertising job openings, such as physical postings and word-of-mouth, rather than leveraging digital platforms. This limited reach can restrict the pool of potential candidates to those within immediate geographic proximity or those who are already connected with the institution (Baykal, 2020). The lack of digital advertising reduces the diversity and inclusivity of the applicant pool. Institutions may miss out on highly qualified candidates who are beyond their immediate area but are interested in the roles. This constraint hinders the ability of colleges to attract top talent and fosters a narrow perspective in institutional culture.

Inefficiencies in Application Processing: With a reliance on paper-based application systems, there are inherent inefficiencies in the processing and management of applications. Manual handling of applications increases the risk of errors and delays (Ahmed, Omotunde, Atoloye & Olayemi, 2021). The slow and cumbersome nature of processing applications can lead to extended recruitment cycles, affecting the institution's ability to fill vacancies promptly. This inefficiency also places additional administrative burdens on HR staff, potentially leading to burnout and decreased job satisfaction among employees.

Challenges with Automated Screening Tools: Many colleges do not use automated screening tools to filter and manage applications. This absence of digital tools results in reliance on manual review processes, which can be time-consuming and prone to human error (Albassam, 2023; Odili, Daudu, Adefemi, Ekemezie, & Usiagu, 2024). The lack of automated screening tools can perpetuate biases and inconsistencies in the selection process, leading to less objective and fair evaluations of candidates. Institutions might inadvertently overlook qualified candidates due to the limitations of manual sorting and filtering.

Virtual Interview Challenges: While the adoption of virtual interviews has increased, not all colleges are equipped with the necessary infrastructure or digital literacy to conduct effective virtual interviews. Technical issues, such as poor internet connectivity and inadequate software, can disrupt the interview process (Miller, Thakkar, & Das, 2024; Yunusa, Sanusi, Dada, Oyelere, Agbo, Obaido, & Aruleba, 2021). Technical disruptions during virtual interviews can hinder communication, resulting in a less effective assessment of candidates' skills and suitability. The lack of face-to-face interaction may also make it difficult to evaluate candidates' interpersonal skills and cultural fit, which are critical aspects of the recruitment process.

Inadequate Electronic Onboarding Systems: The onboarding process in many institutions still relies on traditional methods, such as in-person orientations and printed handbooks, rather than utilizing digital onboarding systems (Jeske & Olson, 2021). The absence of electronic onboarding tools can lead to inconsistent onboarding experiences for new hires, potentially causing confusion and delays in their integration into the institution. Inefficient onboarding can affect new employees' early engagement and productivity, impacting their overall experience and retention.

Conclusion

Digitalization has brought transformative changes to the recruitment and selection processes in Nigerian Colleges of Education. The shift from traditional, manual methods to digital platforms has introduced significant improvements in efficiency, reach, and accuracy. Online job postings, electronic applications, and advanced data analytics have streamlined the recruitment process, enabling institutions to attract and evaluate a diverse pool of candidates more effectively. The benefits of digitalization are evident in the broader reach of job advertisements, reduced administrative burdens, and the ability to process applications more quickly. The use of AI and machine learning tools has enhanced candidate screening and assessment, leading to more precise matches between candidates' skills and job requirements. Additionally, digital tools have the potential to overcome geographical and logistical barriers that previously limited recruitment efforts. However, this digital transformation is not without its challenges. The digital divide in Nigeria, characterized by uneven access to technology and internet connectivity, can hinder the effectiveness of digital recruitment efforts, particularly in remote or underserved areas. Concerns about data privacy and security are also significant, necessitating robust measures to protect sensitive information. Furthermore, the success of digital recruitment relies heavily on the digital literacy of both staff and candidates, making training and capacity-building essential. To fully realize the benefits of digitalization, Nigerian Colleges of Education must invest in technological infrastructure, address digital divide issues, and ensure data security. Providing comprehensive training for staff and candidates will also be crucial in maximizing the effectiveness of digital recruitment tools.

By overcoming these challenges and embracing digital innovation, institutions can enhance their recruitment processes, ultimately contributing to improved educational outcomes and the overall quality of education in Nigeria.

Suggestions

In order to successfully navigate the challenges posed by digitalization in the recruitment and selection of academic staff within Nigerian colleges of education, it is imperative to adopt a strategic approach focused on fostering digital literacy, improving infrastructure, and ensuring robust data security measures. The following recommendations are tailored to address these critical areas and promote effective integration of digital technologies:

1. Colleges of education should expand their recruitment strategies to include digital platforms such as job boards, social media, and professional networks. Leveraging these platforms can significantly enhance the visibility of job openings and attract a broader and more diverse pool of candidates beyond immediate geographic areas. This approach not only improves the chances of finding highly qualified candidates but also fosters a more inclusive institutional culture by tapping into a wider range of applicants.
2. They should invest in digital application management systems. These systems can streamline application processing, reduce the risk of errors, and accelerate recruitment cycles. Automation in application handling not only minimizes administrative burdens but also enhances the overall efficiency of the recruitment process, ultimately improving the institution's ability to fill vacancies promptly.
3. To overcome the limitations of manual review processes, colleges should incorporate automated screening tools. These tools can assist in filtering and managing applications more objectively and efficiently. By reducing human error and bias, automated screening can ensure fairer evaluations of candidates and help institutions identify the most suitable individuals for the roles.
4. To improve the effectiveness of virtual interviews, colleges should invest in robust digital infrastructure and provide training to staff on virtual interview best practices. Ensuring reliable internet connectivity and using up-to-date software can minimize technical disruptions and facilitate smoother communication during interviews.
5. They should transition to electronic onboarding systems. These systems can provide a consistent and streamlined onboarding process, including digital orientation modules and online handbooks. Effective electronic onboarding can help new employees integrate more quickly and smoothly into the institution, improving their early engagement and productivity.

ASSESSMENT OF AVAILABILITY AND APPLICATION OF ARTIFICIAL INTELLIGENCE PRACTICES FOR ENHANCED MANAGEMENT OF PUBLIC SECONDARY SCHOOLS IN ANAMBRA STATE

Augustina Ngozi Ajaegbo

Department of Educational Foundations and Administration,
Nwafor Orizu College of Education, Nsugbe.
ajaegbo.tina@nocen.edu.ng

Abstract

The study assessed the extent of availability and application of artificial intelligence practices for enhanced management of public secondary schools in Anambra State. In pursuit of this, two research questions were drafted and answered while two null hypotheses were tested at 0.05 levels of significance. Survey research design was adopted for the study with a sample size of 550 respondents, consisting of 50 principals and 500 teachers drawn through a multistage sampling technique. An instrument, titled ‘Availability and Application of Artificial Intelligence Practices for Enhanced Management of Public Secondary Schools Questionnaire’ (AAAIPEMPSSQ) which was validated by three academic research experts was used for the data collection. Reliability of the questionnaire was confirmed through Cronbach’s Alpha method with a cumulative coefficient of 0.87. The researcher, together with four research assistants administered and retrieved the responded instrument. Mean and z-test statistic were used for the analysis of the collected data. Results of the analysis revealed among other issues that AI practices are available but to a very low extent and to a very low extent applied for management of public secondary schools in Anambra State. The study concluded that AI practices are rarely available and put to usage for the purpose of managing the public secondary schools in Anambra State. It was recommended that related trainings on the usage of AI for management and advancement of the schools be continually organized for both principals and teachers.

Keywords: Assessment, Availability, Application, Artificial Intelligence Practices, Enhanced Management, Public Secondary Schools.

Introduction

Artificial intelligence (AI) as part of emerging technologies have fundamentally changed the way individuals’ access information and elaborate knowledge, even in the secondary school system. There is no doubt that AI is becoming part of defining inventions that human endeavours, including education management cannot be isolated from. This underscores how indispensable AI has become in different spheres of our lives. It is considered to be one of the education friendly technologies that are helping to transform and modernize different aspects of the school system, including the management of schools (Ilavbare, 2023). In essence, AI as part of education-friendly technologies provides meaningful and innovative avenues for enhanced management and teaching-learning process in the school system.

Enhanced management could be considered as a situation of improved, innovative and effective administration and handling of the various aspect of the school system in a globally acceptable manner. Throwing more light to the meaning of enhanced school management, Mary and Neena (2017), stressed that in 21st century where AI and digital technologies have become indispensable, school managers must be compliant to and ensure they deploy such contemporary technologies in their managerial duties, so as to improve managerial effectiveness and compete favourably, locally and globally. This is an indication that any AI practices, if available and adequately put to good use in schools, it surely would be the ‘game changer’. There is no denying the fact that emerging technologies, including AI

have proven to be supportive in almost all aspects of life, including school management. AI practices, in the form of its prospects and how best to deploy it in school cannot be overemphasized.

Giving further insight on the need for AI in schools, Singh and Singh (2021) outlined that AI can serve the following purpose in educational management: Personalized learning, Assessment and grading, provides 24/7 support for students, useful in Predictive analytics, for Curriculum design and instructional delivery, and providing support for lesson planning and feedback provision. Supporting this, Smith (2022) stressed that applications of AI in the management of schools serves the following purposes: personalization of learning paths for individual students, based on their strengths and weaknesses, learning styles, and interests; automated grading of multiple-choice and short-answer questions; guarantees 24/7 surveillance and security architecture; analyze applicants data for effective identification and placement of candidates for different school programmes; helps institutions automate financial aid applications, and can be used to analyze job trends and restructuring of school curriculum and programs for relevance.

Notwithstanding the numerous benefits of AI in different walks of life, including the school system, Igbokwe (2023) observed it is accompanied with lack of transparency and interpretability, data privacy and security breaches, bias and discrimination, lack of ethical and legal guidelines, job displacement and lack of technical expertise and resources. This means there are lots of issues that come with the subject of AI, including lack of technical experts and supportive resources, especially for schools in the developing economies, such as Anambra State. Similarly, Ilavbare (2023) in a recent study reported that digital facilitation and social media learning platforms are neither available nor utilized for educational purposes in Ika South LGA. Whereas, Nnajofofor and Ejikeme (2020) observed that in Enugu State, digital technologies are neither available nor adequately utilized for the purpose of enhancing teaching and learning. Other scholars, such as Eze (2022), Igwebuike and Chukwujekwu (2023) had carried out similar studies and reported the ICT driven classrooms have not fully become operational in most secondary schools in Anambra State, as most schools still lack the basic ICT tools needed for 21st century schools. These studies and some others not captured in the current study mostly dealt with ICT in general and digital and online facilitation technologies, but did not particularly examine artificial intelligence practices that could be deployed in the public secondary schools in the State. This created a gap that needs to be filled. In attempt to provide remedy to the situation, this study was carried out to assess the extent of availability and application of artificial intelligence practices for enhanced management of public secondary schools in Anambra State.

Statement of the Problem

Artificial intelligence resources as part of the emerging technologies is one of the most promising supports needed to transform different aspects of management in education, so that the goal of education system will be accomplished optimally. However, the platforms for making AI valuable in the schools seem to be neither available nor utilized for educational purposes. AI resources, including digital technologies are neither available nor adequately utilized for the purpose of enhancing management of the schools for improved teaching and learning. It appears that ICT driven classrooms have not fully become operational in most secondary schools in Anambra State. Most schools seem to lack the basic ICT tools needed for 21st century schools. More especially, artificial intelligence practices as a concept seem not to have been giving enough attention both in literature and operations in the public secondary schools in the State. This is not a good sign, no wonder a lot of management team of the schools are believed to be lagging behind in AI knowledge and operational competence. This affect the extent to of AI exposure, knowledge and skills that students, teachers and non-teaching staff of the school need to compete with western schools that are already leveraging AI resources to boost all aspects of their school system. To this effect, it becomes imperative to dwell more on AI related studies for schools in the State. To this end, the problem of this study was put in an interrogatory form: to what extent are artificial intelligence practices available and applied for enhanced management of public secondary schools in Anambra State?

Research Questions

In pursuit of this this, two research questions were drafted and answered:

1. To what extent are artificial intelligence practices available for enhanced management of public secondary schools in Anambra State?
2. To what extent are artificial intelligence practices applied for enhanced management of public secondary schools in Anambra State?

Hypotheses

In pursuit of this study, two null hypotheses were tested at 0.05 levels of significance:

1. There is no significant difference in the mean ratings of principals and teachers responses with regard to the extent to which artificial intelligence practices are available for enhanced management of public secondary schools in Anambra State.
2. There is no significant difference in the mean ratings of principals and teachers responses with regard to the extent of application of artificial intelligence practices for enhanced management of public secondary schools in Anambra State.

Research Method

Survey research design was adopted for the study. From a population of 266 principals and 4,056 teachers in public secondary schools in the Anambra State, a sample size of 550 respondents, comprised of 50 principals and 500 teachers was drawn through a non-randomized proportionate sampling technique. The proportions represent approximately 19% and 12% of principals and teachers, respectively. An instrument, titled 'Availability and Application of Artificial Intelligence Practices for Enhanced Management of Public Secondary Schools Questionnaire' (AAAIPEMPSSQ) which was validated by three academic research experts was used for the data collection. Reliability of the questionnaire was confirmed through Cronbach's Alpha method with a cumulative coefficient of 0.87. The researcher, together with four research assistants administered and retrieved the responded instrument. Mean and z-test statistic were used to the analysis of the collected data. Mean rating with 2.5 and above was considered high extent, and low extent if it falls below. On the other, if p-value falls below 0.05, the null hypothesis is rejected, and vice versa.

Presentation and Interpretation of Results

Research Question 1: To what extent are artificial intelligence practices available for enhanced management of public secondary schools in Anambra State?

Table 1: Mean rating of principals and teachers responses on the extent of availability of artificial intelligence practices enhanced management of public secondary schools in Anambra State

S/ N	To what extent do you accept that the following artificial intelligence practices are available at the school you work for?	Principals" Mean (n=50)	Remark	Teachers" Mean (n=500)	Remark
1.	Adaptive Learning Platforms like DreamBox and Khan Academy	1.01	LE	2.38	LE
2.	Intelligent Tutoring Systems such as Carnegie Learning and Squirrel AI	2.09	LE	2.23	LE
3.	Automated Grading, like Gradescope can grade assignments and exams	2.51	HE	2.54	HE
4.	Predictive Analytics Platforms like BrightBytes	2.33	LE	2.47	LE
5.	Chatbots and Virtual Assistants like EdTech's	2.44	LE	2.11	LE
6.	Language Translation Tools like Google Translate or Microsoft Translator	2.49	LE	2.48	LE
7.	Speech Recognition Tools like Google's G	2.41	LE	2.46	LE

8.	Suite for Education				
8.	AI tools for security and surveillance in the school, such as CCTV cameras	2.52	HE	2.63	HE
9.	AI Virtual Classrooms and Assistants	2.39	LE	2.27	LE
10.	AI tools for monitoring attendance and truancy in the school	2.46	LE	2.38	LE
11.	AI tools for the creation of educational content, such as quizzes, lesson plans, and interactive activities	2.44	LE	2.34	LE
	Cluster Mean	2.28	LE	2.39	LE

Results on Table 1 shows that average rating for both principals and teachers with regard to items on numbers: 1, 2, 4, 5, 6, 7, 9, 10 and 11 were lesser than the cut-off point, 2.5. This indicates that on average and to a low extent, both principals and teachers are in agreement that the items reflecting AI practices are not available. However, the mean ratings for both principals and teachers for items: 3 and 8 are greater than 2.5, indicating a high extent of availability of CCTV cameras and Automated Grading as part of AI practices in the school. In case of the cumulative mean, principals have a mean rating 2.28 while teachers have 2.39. These cluster mean ratings fall below 2.5, implying that availability of AI practices for enhanced management of public secondary school in Anambra State is generally low.

Research Question 2: To what extent are artificial intelligence practices applied for enhanced management of public secondary schools in Anambra State?

Table 2: Mean rating of principals and teachers responses on the extent of application of artificial intelligence practices for enhanced management of public secondary schools in Anambra State

S/ N	To what extent do you agree that the following artificial intelligence practices are put to use at the school you work for?	Principals ^{cc} Mean (n=50)	Remark	teachers ^{cc} Mean (n=500)	Remark
1.	Adaptive Learning Platforms like DreamBox and Khan Academy, etc	2.01	LE	2.11	LE
2.	Intelligent Tutoring Systems such as Carnegie Learning and Squirrel AI	2.02	LE	2.13	LE
3.	Automated Grading, like Gradescope can grade assignments and exams	2.56	HE	2.51	HE
4.	Predictive Analytics Platforms like BrightBytes	2.13	LE	2.22	LE
5.	Chatbots and Virtual Assistants like EdTech's	2.31	LE	2.33	LE
6.	Language Translation Tools like Google Translate or Microsoft Translator	2.42	LE	2.48	LE
7.	Speech Recognition Tools like Google's G Suite for Education	2.42	LE	2.38	LE
8.	AI tools for security and surveillance in the school, such as CCTV cameras	2.60	HE	2.51	HE
9.	AI Virtual Classrooms and Assistants	2.45	LE	2.38	LE
10	AI tools for monitoring attendance and truancy in the school	2.39	LE	2.30	LE
11	AI tools for the creation of educational content, such as quizzes, lesson plans, and interactive activities	2.48	LE	2.40	LE
	Cluster Mean	2.34	LE	2.34	LE

From Table 2, it is revealed that the average ratings by both principals and teachers for questionnaire items, 3 and 8 are greater than the benchmark of 2.5. This shows that to a high extent, both items are considered to be put to use in the for the purpose of making the school better. However, the mean ratings for both principals and teachers on the following individual items: 1, 2, 4, 5, 6, 7, 9, 10 and 11 are less than 2.5, indicating that they have low extent of application, meaning they are rarely put to use for the advancement of the school. Cumulatively, principals' cluster mean rating is 2.34 while teachers' cluster mean rating is also 2.34. These indicate that cluster mean ratings of both are less than 2.5. This implies that on a general level, artificial intelligence practices are not being put to use in the various public secondary schools in Anambra State.

Hypothesis 1: There is no significant difference in the mean ratings of principals and teachers responses with regard to the extent to which artificial intelligence practices are available for enhanced management of public secondary schools in Anambra State.

Table 3: z-test of mean rating of principals and teachers responses on the extent of availability of artificial intelligence practices for enhanced management of public secondary schools in Anambra State

Variables	N	X	SD	DF	p-value	Alpha level	Remark
Principals	50	2.28	0.61	548	0.09	0.05	Not rejected
Teachers	500	2.39	0.67				

Table 3 revealed that the p-value is 0.09, and alpha level is 0.05, which entails that the p-value is greater than the alpha level. This means that the null hypothesis is not rejected. This implies that there is no significant difference in the mean ratings of principals and teachers with regard to the extent to which artificial intelligence practices are available for enhanced management of public secondary schools in Anambra State.

Hypothesis 2: There is no significant difference in the mean ratings of principals and teachers responses with regard to the extent of application of artificial intelligence practices for enhanced management of public secondary schools in Anambra State.

Table 4: z-test of mean rating of principals and teachers responses on the extent of application of artificial intelligence practices for enhanced management of public secondary schools in Anambra State

Variables	N	X	SD	DF	p-value	Alpha level	Remark
Principals	50	2.34	0.69	548	0.51	0.05	Not rejected
Teachers	500	2.34	0.67				

From Table 4, it was found out that the p-value is 0.51, and alpha level is 0.05. This interprets that the p-value is greater than the alpha level, meaning that the null hypothesis is not rejected. In essence, this implies there is no significant difference in the mean ratings of principals and teachers with regard to the extent of application of artificial intelligence practices for enhanced management of public secondary schools in Anambra State.

Discussion of Findings

The study reported that the following artificial intelligence practices are not readily available at the school: adaptive learning platforms; Intelligent Tutoring Systems; Automated Grading; Predictive Analytics Platforms; Language Translation Tools; Speech Recognition Tools; AI tools for security and surveillance in the school; AI Virtual Classrooms and Assistants; AI tools for monitoring attendance and truancy in the school, and AI tools for the creation of educational content. Similarly, while Scott, Phu and Sherry (2014) reported that underdeveloped countries are still battling with limited digital technology resources for teaching and learning, Mary and Neena (2017) reported that digital equipment such as a computer or a Laptop, tablet, MP3 player, console, etc., are not readily accessible in schools. In addition, Seymoureducate (2016) reported that instructional technologies needed for teaching and learning are significantly lacking in most school. On the other hand, the study further reported that there is no significant difference in the mean ratings of principals and teachers with regard to the extent to which artificial intelligence practices are available for enhanced management of public secondary schools in Anambra State.

The study also reported that the following artificial intelligence practices are not applied and utilized at the school for enhanced management: adaptive learning platforms; Intelligent Tutoring Systems; Automated Grading; Predictive Analytics Platforms; Language Translation Tools; Speech Recognition Tools; AI tools for security and surveillance in the school; AI Virtual Classrooms and Assistants; AI tools for monitoring attendance and truancy in the school, and AI tools for the creation of educational content. The finding is in tandem with report of Ilavbare (2023), which found that digital/online facilitation and social media learning platforms are not being effectively utilized or applied for educational purposes. It's understandable that AI is undoubtedly part of digital technologies for different purposes, hence both reports are similar. In this regard, the study added that there is no significant difference in the mean ratings of principals and teachers with regard to the extent of application of artificial intelligence practices for enhanced management of public secondary schools in Anambra State. Both principals and teachers share the same or very similar observation about the subject of AI utilization.

Conclusion

The study concluded that AI practices are rarely available for the purpose of managing the public secondary schools in Anambra State. The relevant artificial intelligence practices which are supposed to be put to good use to improve management of schools have not been effectively deployed for the purpose, perhaps because the practices are not available in the schools, to a large extent. The responses of both principals and teachers that AI practices are neither available nor utilized for enhanced management of the public secondary schools in Anambra State did not vary significantly. Hence, so far, the needed AI practices for enhanced management are neither fully available, nor effectively put to use in public secondary schools in Anambra State.

Recommendations

It was recommended that related trainings on the usage of AI for management and advancement of the schools be continually organized for both principals and teachers.

In line with findings of the study, the following have been advocated:

1. Government should collaborate with school principals, teachers, experts in emerging technologies and promoters of artificial intelligence to make relevant AI trainings, platforms and gadgets available to secondary schools. It is understandable that AI is one the emerging technologies which well-meaning institutions and firms are leveraging for the optimization of all aspects management and organisational efficiency, and world class schools have keyed into this. Making AI resources available at schools will no doubt improve the overall management of schools in the State and beyond, as it will trigger off relevant trainings for adoption and usage.
2. Principals, teachers and the entire stakeholders of the public secondary school should cooperate and work as a team with AI experts and emerging technology experts to support schools with

trainings on application and usage of AI resource for enhancing overall management of public schools and much more. With adequate training supports, the management of the various schools would learn and master how to put any available AI _tool' into effective use, thereby ensure efficiency and effectiveness in management.

Abstract

This study focused on youth empowerment through ethical and value education for sustainable national development in Ebonyi State. To carry out the study, two specific purposes with two corresponding research questions in line with null hypothesis guided the study. The population of the study was 2,354 graduates registered in Ebonyi State on Youths Economic Empowerment Scheme in Ebonyi State. The sample of the study was 336 graduates which was drawn through Taro Yamane formular while simple random technique was adopted for the study. Structured questionnaire tagged Youth Empowerment through Ethical and Value Education for Sustainable National Development Questionnaire (YEEVESNDQ) was used to elicit responses from the respondents. The structured questionnaire was validated by experts. The reliability of the instrument yielded 0.82 using Cronbach Alpha Procedure. Mean ($\bar{x}$) and standard deviation (SD) were used to answer the research questions while t-test was used in testing null hypotheses at 0.05 alpha level of significance. The results of the analysis revealed that ethical and value education should be given to the teenagers irrespective of their areas of specializations, with skills that may enable them engaged in income yielding ventures for self and sustainable development; youth Empowerment involved various processes: participation; welding, fishing, fashion designing. Manipulative skills; furniture making, mining, construction. Intellectual skills. Sculpting; painting, drawing. Comedy, music making among others. Sustainable development is characterized with growth, eradication of poverty, stability in governance, provision of employment and addressing other social concerns. The environment benefits are healthy environment, quality education, rational use of renewable natural resources leading to economic growth and natural development. Based on the finding, the recommendation maintained that government, schools, individuals and organizations should help youths acquire skills and be self-reliance. Besides youths should be put in front of national development for sustainability and building of a strong society.

Keywords: Youth Empowerment, ethical and value education, sustainable development.

Introduction

Youths are the young people, the period of life existence preceding maturity. They are leaders and helpers of tomorrow, therefore, maximum empowerment for sustainable development for a brighter

nation should be provided for them. Empowerment is support giving to people to discover and claim their power. Omeje, Nwabueze and Sam-kalagbor (2021) see empowerment as the systematic process outcome and opportunity by which youths as change agents, gain the knowledge and skills to impact their lives and the lives of other individuals' organizations, communities and societies for sustainable development which are central points to forming socially conscious individuals, responsibilities and also empathetic. They are essential for shaping all round human development and growth.

Youth empowerment is a vital step which explains works aimed at providing reasonable skills and adequate environment for teenagers to improve their standard of living which will help them contribute meaningfully to the growth and development of the nation. Omeje, Nwabueze and Sam-kalagbor (2021) affirmed that it equally alleviates poverty, solve the problem of youth restiveness, cultism, arm robbery, vandalization of oil pipelines, reduce the issue of kidnapping and insecurity of life and property. It minimizes human Trafficking and prostitution, reduces the level of unemployment, and increase income per capita for sustainable growth and development. Youth empowerment simply is helping youths master necessary techniques for creativity, innovation and adequate opportunity for facing challenges and acquiring intellectual activities.

Nevertheless, this paper stands to ex-rays some major skills that will help our youths excel such as: Participative skills for working within social networks, engaging in group activities, contributing ideas, sharing perspective, and collaborating with people to achieve goals, manipulative skills which involve many economic activities like technical education, mining, computer, field events, technological works as building, welding, carpentry, machines, manufacturing that can bring our youths into using sense organs and expose them to acquire practical transformation, intellectual skills, the brain work which include computer experts, scholars, authoring scientists that can lead our youth healthy, qualify instructors, communication skills for thinking fast with others and artistic skill, the act of good writing, fine and applied arts, Music and drama-graphics, actors, comedians, musicians etc. sculpture and artistic form in which wood or plastic materials can work into dimensions using wood, wax, clay, fabrics etc in carving, modeling, welding, casting among others.

Youth need these life coping or survival skills to overcome their environment or sustainability. Igwe (2023) concurs that youth empowerment is the process of giving young people the right knowledge, skills and attitude which will enable them in becoming useful to self, their communities and the entire nation. The researchers are of the opinion that youth empowerment program or skills is very useful in enhancement of economic growth for individual and the nation advancement.

Education is the only veritable answer for bringing about positive changes in the pattern of life of a particular nation. Okoli (2022), any nation that genuinely wishes to attain greater height in national development cannot compromise the education of her citizenry because education is an effective instrument for addressing issues of poverty, under development, population, governance and other social concerns.

Ethics and value education connect social norms, people's cultures, attitude, moral principles which are central points to forming socially conscious individuals. Ethics is a set of principles right or wrong behavior representing a particular culture, individual or group. (Nirupama and D'souza 2021) concerns that ethics is a systematic approach to analyze and distinguish what is right and wrong, good and bad, understand them as they relate to the well-being of the relationship, it is the moral philosophy to be practiced by a person or group of people. It provides a frame work for individuals to evaluate and guide their actions, interactions and behaviors in various situations. Specifically, ethics induces systematic study of actions like duty, justice, responsibilities, attitude, competence, virtues, and rights. For youths to be well equip and empowered, these ethical concepts, must be systematically inculcated in them.

Values are basic and fundamental beliefs that guides or motivate attitudes or actions. Values are personal qualities needed to guide individual behaviors. The general guide lines like modesty, respect, honesty, fairness, trust, responsibility, integrity that make people behave in an acceptable manner in their community are examples. They shape people, the manner we treat ourselves and others around us. Ethic and value education act as guide to people's behaviors, decision making and

contributions to the society. Young people need this education for holistic impact in life for sustainability. While value education focus on instilling specific values which shape human behavior and interactions, ethics deals with their moral philosophy and directions of principles.

Development is the transformation of previous material and restating it a new. It is a process of developing, growth in an organism and directing the change. Development is a multidimensional undertaking to achieve a higher quality of life for all people. Economic development and environmental protection are interdependent and mutually reinforcing components of sustainable development. Our youths need to be developed to be transformed.

Sustainability simply put the ability of a nation or individual to sustain something (Ogbuonji & Amadi 1015) affirmed, is the ability to hold, retain keep and build on what has been built, reclaimed or achieved. Through ethical and value education youths can be empowered for sustainability.

Statement of the Problem

Youth are the hope and builders of a nation. Youths have every right for quality ethical and value education, unfortunately, many of our youths who supposed to be in school to acquire the education turn around to see education as scaring value. Besides, some of them who wish to be educated and acquire knowledge and skills needed for sustainability which is growth and development are not empowered or sponsored. Some of these teenagers are not educated, many resorted to restiveness and rubbery, cultism, vandalization of oil pipelines, violent, conflicts and the likes.

Consequently, youth empowerment is necessary for the reduction of unemployment, human trafficking, poverty and increases in income per capital. This calls for a need to ensure that our youths are empowered through necessary techniques for facing challenges and acquiring manipulative, intellectual, artistic, sculpture and participatory skills for sustainable development to build a better society.

Purpose of the Study

The main purpose of the study was to examine how to empower youths through ethical and value education for sustainable development in Ebonyi State of Nigeria.

The specific objectives are to:

1. Examine types of youth empowerment programs needed for sustainable development in Ebonyi State of Nigeria.
2. Find out the roles ethical and value education play in empowering youths for sustainable development in Ebonyi State.

Research Questions

The following research questions guided the study: they include:

1. What are the types of youth empowerment programmes needed for sustainable development in Ebonyi State?
2. What are the roles education play for youth empowerment for sustainable development in Ebonyi State.

Research Hypotheses

The following null hypothesis were formulated for the study and tested at 0.05 level of significance.

1. There is no significant difference in the mean rating of male and female students on types of youth empowerment programs needed for sustainable development in Ebonyi State.
2. There is no significant difference in the mean rating of male and female students on the role's education play for youth empowerment for sustainable development in Ebonyi State.

Methodology

The researchers adopted a descriptive survey design with a population of 2,354 graduates registered in Ebonyi State on youth Economic Empowerment scheme. The sample size for the study was 336 graduates drawn through taro Yamnne formular while simple random technique was adopted.

Structured questionnaire tagged youth Empowerment through ethical and value Education for sustainable development (YEEVESNDQ) was used to elicit response from the respondents. Structured questionnaire was validated by experts. The reliability of the instrument yielded 0.82 using Cronbach Alpha procedure. Mean (x) and standard deviation (SD) were used to answer the research questions while t-test was used in testing null hypothesis at 0.05 level of significance

Results

Research Question 1: What are the types of youth empowerment skills needed for sustainable development in Ebonyi state?

Table1: Mean rating and standard deviation on the types of youth empowerment skills needed for sustainable development in Ebonyi State

S/NO	Types of youth empowerment skills needed for sustainable development include:	X	SD	Decision
1.	Participatory skills: engaging in group activities, contributing ideas etc	2.94	0.66	Agree
2.	Manipulative skills! Technical education, mining, field event etc	2.95	0.67	Agree
3.	Intellectual skills. Computer experts, scholars'	2.75	0.62	Agree
4.	Artistic skills, the art of good writing' fine and applied arts, music etc	2.51	0.59	Agree
5.	Communication skills for thinking fast, talking smarts etc	2.76	0.63	Agree
	Average Mean	2.78		Agree

Table 1 showed that the respondents agreed on the types of youth empowerment skills needed for sustainable development in item 1, 2, 3, 4, and 5 with mean score of: 2.94, 2.95, 2.75, 2.19 and 2.76 respectively, Participatory skills programme, manipulative skills! technical education, mining, field event, intellectual skills such as computer experts, scholars', Artistic skills, the art of good writing' fine and applied arts music etc and communication skills for thinking fast, talking smarts are needed types of skills for youth empowerment.

Research Question 2: What are the roles education plays for youth empowerment for sustainable development in Ebonyi State.

Table 2: Mean and standard deviation on the roles education (ethical and values) play for youth empowerment for Sustainable Development in Ebonyi State.

s/no	Roles education play in youth empowerment for sustainable development includes:	X	SD	Decision
6	Ethical and value education engage youths with self for sustainable development	3.11	0.66	Agree
7	Engaged youths with quality education that is holistic.	3.20	0.49	Agree
8.	Promotes rational use of renewable natural resources leading to economic growth.	2.66	0.50	
9.	Offers youths opportunity for working experience thereby making healthy environment	3.11	0.66	Agree
10.	Promote social economic and cultural relationship among youths	2.86	0.67	Agree
	Average Mean	2.99		Agree

Table 2 showed that the respondents agreed that: ethical and value education engage youths with self for sustainable development, engaged youths with quality education that is holistic, Promotes rational use of renewable natural resources leading to economic growth, offers youths opportunity for working experience thereby making healthy environment and promotes social economic and cultural relationship among youths as recorded on item, 8, 9, 10, 11, 12 and 13 which scores a grand mean of 2.99.

Research Hypotheses

1. There is no significant difference in the mean ratings of male and female youths on the types of youth empowerment skills needed for sustainable development in Ebonyi State

Table 3:t-test of difference in the mean responses of male and female youths on the types of youth empowerment skills needed for sustainable development in Ebonyi State

Items	Category Respondents	of N	Mean	SD	df	t	P-Value	Decision
1	Male	165	3.21	0.95	334	1.407	0.160	Not Significant
	Female	171	3.35	0.83				
2	Male	165	3.38	0.75	334	0.290	0.772	Not Significant
	Female	171	3.40	0.68				
3	Male	165	3.39	0.64	334	0.040	0.968	Not Significant
	Female	171	3.39	0.56				
4	Male	165	3.41	0.65	334	0.250	0.803	Not Significant
	Female	171	3.39	0.59				
5	Male	165	3.08	0.85	334	1.286	0.199	Not Significant
	Female	171	3.21	0.85				

Result on Table 3 revealed that the mean ratings of male and female youths on the types of youth empowerment skills needed for sustainable development in Ebonyi State was not significant as the items as the p-value is greater than alpha level of 0.05. This indicate that male and female youths has the same opinion on the types of youth empowerment skills needed for sustainable development in Ebonyi State.

2. There is no significant difference in the mean ratings of male and female youths on roles education (ethical and values) play for youth empowerment for Sustainable Development in Ebonyi State.

Table 3:t-test of difference in the mean responses of male and female youths on roles education (ethical and values) play for youth empowerment for Sustainable Development in Ebonyi State.

Items	Category Respondents	of N	Mean	SD	df	t	P-Value	Decision
6	Male	165	3.11	0.66	334	1.111	0.512	Not Significant
	Female	171	3.20	0.49				
7	Male	165	3.11	0.66	334	0.330	0.612	Not Significant
	Female	171	3.11	0.66				
8	Male	165	2.86	0.67	334	0.231	0.875	Not Significant
	Female	171	3.19	0.56				
9	Male	165	3.21	0.34	334	0.341	0.123	Not Significant
	Female	171	3.19	0.56				
10	Male	165	3.18	0.62	334	1.222	0.223	Not Significant
	Female	171	3.11	0.59				

Result on Table 4 revealed that the mean ratings of male and female youths on roles education (ethical and values) play for youth empowerment for Sustainable Development in Ebonyi State, was not significant as the items as the p-value is greater than alpha level of 0.05. This indicate that male and female youths has the same opinion on the roles education (ethical and values) play for youth empowerment for Sustainable Development in Ebonyi State.

Discussion

The researches discuss the results based on research question and null hypotheses that guarded the study under the following subheadings: Types of youth empowerment skills needed for sustainable development.

The result of the data analysis presented in table I reveals that the respondents agreed that the types of youth empowerment skills needed for sustainable development in Ebonyi state, include: Participatory skills, manipulative skills, intellectual skills Artistic skills and communication skills. Bases on that, the researchers agreed that youths needed empowerment skills. These will help the youths acquire life coping or survival skills like engaging in group activities, technical education, computer experts, fine and applied art, skills for thinking fast which to over come their environment and become useful in enhancement of economic growth for all.

The finding of the study is in line with that of Madumere, Obike, Okeke and Nwabueze (2013) which affirm that the skills male and female undergraduates acquire after completing an entrepreneurship course include: innovation/creative skills, communication skills risk-taking skills, desire for achievement in life, leadership skill time management skill, tolerance for ambiguity, sale/marketing skills and problem solving skill. Ubah (2011) state that youth empowerment programme helps them establish their own small scale business or company after graduation. The result of the data analysis presented in table 2 reveals that ethical and value education engage youths with self for sustainable development, quality education that is holistic, promote national use of renewable resources leading to economic growth, working experience for healthy environment and promotes social economics and cultural relationship among youth the finding of this study is in agreement with that of Uche, Nwabueze and Ememe (2009) that, education plays vital role in empowering the youths to acquire practical knowledge, skills, and be self employed as well as develops creativity and innovative skills for self and sustainable development. The result of the findings is also in accordance with Omege, Nwabueze and Sam-kalagbor (2021) who further affirmed that education has numerous functions in the training of youths to be self-reliant, productive, creative and innovative for self and sustainable development. All are gearing that educating youths, instilling specific value which shape human behavior, interactions and inducing some ethical actions in various situations on them like duty, justice, responsibilities among others are most needed.

Conclusion

This study had focused on youth empowerment through ethical and value education for sustainable national development. The study had x-rayed that providing reasonable skills and adequate environments for youths will help them master necessary techniques for creativity, innovation and adequate opportunity for facing challenges and intellectual activities. It solves the problem of youth restiveness, cultism, arm robbery and minimizes human trafficking and insecurity of life and properties, reduces the level of unemployment and increase income per capital for sustainable growth and development.

Recommendations

Based on the findings of the study the following recommendations were made:

1. Government should help youths acquire many skills and be self-reliance in Ebonyi state.
2. Schools should help to give young people value and ethical education to guide their behaviors decision making and contributions to the society

Abstract

The study investigated the perception of secondary school principals regarding opportunities, challenges, and ethical considerations associated with integrating artificial intelligence in instructional delivery in Port-Harcourt Metropolis, Rivers State. The study was guided by three specific objectives focusing on identifying perceived opportunities, challenges, and ethical issues related to AI integration in instruction. A descriptive survey research design was adopted with a population comprising 62 principals from 31 public secondary schools in Port-Harcourt Metropolis. Census sampling was employed due to the manageable population size. Data was collected using a validated questionnaire titled "Principals Perception of AI in Instruction Questionnaire (PPAIQ)" with reliability coefficients ranging from 0.71 to 0.84 for different sections and an overall reliability of 0.85. All 62 questionnaires administered were retrieved and analyzed using frequency count and criterion mean of 2.50. Results revealed that principals perceive significant opportunities in AI integration (grand mean 2.79), particularly in providing personalized learning experiences, reducing administrative workload, offering immediate feedback, and creating engaging content. Major challenges identified (grand mean 2.83) included inadequate training, prohibitive costs, insufficient technical support, and curriculum integration difficulties. Principals expressed substantial concerns about ethical issues (grand mean 3.18), including student data privacy, algorithmic bias, critical thinking diminishment, equity concerns, reduced human interaction, and intellectual property questions. Based on these findings, the study recommends developing structured AI in mechanisms and works that prioritize high-benefit applications, establishing comprehensive professional development programs with sustainable funding mechanisms, and creating robust ethical guidelines to govern AI implementation in educational contexts. These measures would help maximize opportunities while addressing challenges and ethical considerations in AI integration for instructional delivery.

Keywords: AI in Education, AI in Instructional Delivery, Ethics in Education, Opportunit

Introduction

Secondary school education contributes immensely to human capital development because it serves as a bridge between basic education and tertiary institutions or labor market entry. In Nigeria, as in many developing nations, secondary education is recognized as a critical factor in national and economic development (Grant, 2017). The significance of secondary education extends beyond mere

academic preparation, encompassing the development of essential skills that directly contribute to economic productivity, social cohesion, and national progress. According to Okeke-James, Igbokwe, Anyanwu and Ogbo (2020), investment in quality secondary education leads to improvements in economic development as graduates of secondary schools are prepared for educational advancement as well as labour market entry. According to Irughe, Edefe and Eregha (2020), there is a strong correlation between education and economic development indices. Education globally has witnessed a paradigm shift with the integration of technology in teaching and learning processes. Digital technologies have transformed conventional classroom practices, creating more engaging, personalized, and effective learning environments (Timotheou, Miliou, Dimitriadis, Sobrino, Giannoutsou, Cachia & Ioannou, 2023). Internationally, education systems in developed countries have successfully leveraged technology to enhance educational outcomes and prepare students for the digital economy (Pu, Liang, Wang, Zhang & Zhong, 2024). In Nigeria, the National Policy on Education revised in 2013 explicitly acknowledges the necessity of technology integration in secondary education to equip students with 21st-century skills (Federal Republic of Nigeria, 2013). However, implementation has been uneven across the country, with urban centers generally demonstrating more progress than rural areas.

Within the broader context of educational technology, artificial intelligence (AI) represents perhaps the most transformative innovation of recent years. AI technologies including machine learning algorithms, natural language processing, intelligent tutoring systems, and adaptive learning platforms offer unprecedented opportunities to personalize learning, automate administrative tasks, provide real-time feedback, and enhance analytical capabilities in educational contexts (Holmes, Bialik & Fadel, 2019). Globally, AI integration in secondary education has progressed from experimental initiatives to increasingly mainstream applications. A UNESCO report by Pedro, Subosa, Rivas and Valverde (2019) on artificial intelligence in education: challenges and opportunities for sustainable development highlights how AI technologies can support efforts to achieve Sustainable Development Goal 4 when implemented thoughtfully and ethically.

Instructional delivery encompasses the methods, strategies, and approaches employed by educators to facilitate student learning. Effective instructional delivery extends beyond content transmission to include assessment, feedback, engagement, and the cultivation of critical thinking skills (Morrison, Ross, Morrison & Kalman, 2019). Traditional instructional delivery in Nigeria, particularly at the secondary level, has predominantly relied on teacher-centered approaches, with limited differentiation and personalization (Precious & Feyisetan, 2020). AI technologies offer significant potential to transform instructional delivery in several dimensions. Intelligent tutoring systems can provide personalized learning pathways based on individual student performance and learning styles. Machine learning algorithms can analyze patterns in student work to identify misconceptions and learning gaps that might otherwise go undetected. Natural language processing can enable more accessible and interactive learning materials, including automated translation for language learners (Vieriu & Petrea, 2025).

The integration of AI in instructional delivery presents numerous opportunities for secondary schools in Port Harcourt Metropolis. Perhaps most significantly, AI technologies can facilitate personalized learning experiences that accommodate diverse learning needs, preferences, and paces (Zawacki-Richter, Marín, Bond & Gouverneur, 2023). In the context of Nigerian secondary schools, where heterogeneous classrooms often include students with widely varying academic preparedness, this capability could substantially enhance learning outcomes. Administrative efficiency represents another significant opportunity. Principals in schools spend a fraction of their time on non-instructional tasks such as attendance tracking, grading, and documentation (Akporehe & Asiyai, 2021). AI automation of routine administrative tasks could reclaim this time for direct instructional activities. Additionally, AI-powered analytics can provide principals and administrators with actionable insights regarding student performance, engagement patterns, and learning trajectories that might otherwise remain invisible (Reddy, Alekhya, Sushma Manjula & Krishnappa, 2019). For students in Port Harcourt, AI integration offers enhanced access to quality educational resources regardless of school resources or principal expertise. Virtual AI teaching assistants can provide 24/7 support for homework

and exam preparation, addressing the limitation of access to qualified tutors that Lin, Huang and Lu (2023) identify as a significant barrier to academic achievement for many students in the region. Furthermore, AI technologies can support the development of advanced digital literacy and computational thinking skills increasingly demanded by employers (Pu, Liang, Wang, Zhang & Zhong, 2024).

Principal readiness constitutes another significant challenge. According to Alshorman (2024), teachers and other teaching staff in secondary schools have limited confidence in using advanced digital technologies, with even fewer (14%) expressing familiarity with AI applications. The substantial professional development investment required to prepare principals for effective AI integration must compete with numerous other priorities in constrained educational budgets. Financial sustainability poses additional challenges, particularly for public schools. The acquisition, maintenance, and regular updating of AI technologies require substantial financial commitments that many schools cannot accommodate within existing budgetary frameworks (Okunade, 2024). Furthermore, the rapid evolution of AI technologies creates risk of obsolescence without continuous investment in upgrades and professional development. Cultural resistance may also impede AI integration, with Nigerian educational traditions placing strong emphasis on principal authority and standardized instruction. Festus and Emmanuel (2025) document significant skepticism among secondary school stakeholders regarding technologies perceived as potentially displacing or diminishing principal roles. Parents, administrators, and even students may resist AI-enabled approaches that appear to conflict with traditional educational values and practices.

Questions of autonomy and human oversight also merit consideration. As AI systems increasingly inform or automate educational decisions, clear frameworks must delineate appropriate boundaries for algorithmic decision-making versus human judgment (Holmes, Bialik & Fadel, 2019). In Nigerian secondary schools, where respect for principal authority remains culturally significant, negotiating these boundaries requires particular sensitivity to stakeholder perspectives and values. Finally, equitable access to AI-enhanced education represents a critical ethical imperative. Without deliberate intervention, AI integration may exacerbate existing educational disparities between well-resourced and under-resourced schools in Port Harcourt (Tamuno & Briggs, 2023). Ethical implementation requires commitment to ensuring that AI benefits extend to all students, regardless of socioeconomic background or school resources.

Purpose of the Study

The purpose of the study was to investigate secondary school principals' perception of the opportunities, challenges and ethical issues associated with the integration of artificial intelligence in instruction in Rivers State. The specific objectives of the study are to:

1. Find out the opportunities associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis.
2. Determine the challenges associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis.
3. Ascertain the ethical issues associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis.

Research Questions

The study provided answers to the following questions:

1. What are the opportunities associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis?
2. What are the challenges associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis?
3. What are the ethical issues associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis?

Methodology

The study adopted a descriptive survey research design. The population of the study comprised 62 principals (31 for junior secondary and 31 for senior secondary) from 31 public secondary schools in Port-Harcourt (16 from Obio/Akpor and 15 from PHALGA) Metropolis (Source: Rivers State Post Primary Schools Board). The entire population of 62 principals were used because of the manageable size of the population. Consequently, census sampling was adopted. The instrument used for data collection was a questionnaire titled "Principals Perception of AI in Instruction Questionnaire (PPAIQ)". It had three sections used to collect data for each of the research questions respectively. It was structured on a four-point rating scale. The instrument was validated by three experts. One of the experts was a measurement and evaluation expert and the other two were from educational management. The internal consistency reliability for the instrument was established using Cronbach Alpha. This yielded reliability coefficients of 0.79 for section A used to elicit data on opportunities associated with integrating artificial intelligence in instructional delivery, 0.71 for section C used to elicit data on ethical issues associated with integrating artificial intelligence in instructional delivery and an overall reliability coefficient of 0.85. A total of 62 copies of the instrument were administered and a total of 62 were retrieved and used for data analysis. This constituted 100% return rate. Data gathered were analyzed using frequency count and criterion mean of 2.50.

Results

Research Question 1: What are the opportunities associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis?

Table 1: Opportunities associated with integrating AI in instructional delivery.

No.	Statement	SA	A	D	SD	Mean	S.D	Remark
1	AI tools can provide personalized learning experience for students with different abilities.	26	24	8	4	3.16	0.87	A
2	Integration of AI in teaching can reduce my administrative workload.	22	25	10	5	3.03	0.92	A
3	AI-powered assessment tools can offer immediate feedback to students.	24	23	9	6	3.05	0.96	A
4	AI technologies can help identify learning gaps in students more efficiently	8	14	27	13	2.27	0.93	D
5	Implementation of AI can make instructional content more engaging for students.	20	30	8	4	3.06	0.84	A
6	AI integration can improve access to quality educational resources in our school.	5	16	25	16	2.16	0.92	D
Grand Mean						2.79		A

The result in Table 1 shows the opportunities associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis. The result shows that principals from junior and senior secondary schools agreed that: AI tools can provide personalized learning experiences for students with different abilities, integration of AI in teaching can reduce administrative workload, AI-powered assessment tools can offer immediate feedback to students, and implementation of AI can make instructional content more engaging for students. This is evident by mean responses greater than 2.50 for items 1, 2, 3, and 5. In contrast, the result shows that principals from junior and senior secondary school disagreed that: AI technologies can help identify learning gaps in students more efficiently and AI integration can improve access to quality educational resources in their schools. This is evident by mean responses less than 2.50 for items 4 and 6. Generally, the result reveals that principals from junior and senior secondary schools agreed regarding the opportunities associated with integrating artificial intelligence in instructional delivery as perceived

by secondary school principals in Port-Harcourt Metropolis are agreed. This is evident by a grand mean of 2.79.

Research Question 2: What are the challenges associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis?

Table 2: Challenges associated with integrating AI in instructional delivery.

No.	Statement	SA	A	D	SD	Mean	S.D	Remark
7	Limited internet connectivity in our schools hinders AI integration.	9	15	23	15	2.29	1.00	D
8	I lack adequate training to effectively implement AI in my teaching.	25	24	8	5	3.11	0.92	A
9	Cost of AI technologies is prohibitive for widespread adoption in our school.	28	21	10	3	3.19	0.89	A
10	Technical support for AI tools is insufficient in our educational setting.	24	27	7	4	3.15	0.86	A
11	Students varying levels of technological literacy creates implementation difficulties.	6	15	26	15	2.19	0.93	D
12	Integrating AI into existing curriculum frameworks is challenging.	20	28	10	4	3.03	0.87	A
Grand Mean						2.83		A

The result in Table 2 shows the challenges associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis. The results show that both principals from junior and senior secondary schools agreed that: they lack adequate training to effectively implement AI in their teaching, the cost of AI technologies is prohibitive for widespread adoption in their schools, technical support for AI tools is insufficient in their educational setting, and integrating AI into existing curriculum frameworks is challenging. This is evident by mean responses greater than 2.50 for items 8, 9, 10, and 12. In contrast, the result shows that principals from junior and senior secondary school disagreed that: limited internet connectivity in their schools hinders AI integration and students have varying levels of technological literacy which creates implementation difficulties regarding the challenges associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis. This is evident by mean responses less than 2.50 for items 7 and 11. Generally, the result reveals that both principals from junior and senior secondary schools agreed regarding the challenges associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis. This is evident by a grand mean of 2.83.

Research Question 3: What are the ethical issues associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis?

Table 3: Ethical issues associated with integrating AI in instructional delivery.

No.	Statement	SA	A	D	SD	Mean	S.D	Remark
13	The use of AI in education raises concerns about student data privacy.	30	20	9	3	3.24	0.88	A
14	AI systems may perpetuate existing biases in educational assessment.	25	22	12	3	3.11	0.90	A
15	Over-reliance on AI may diminish critical thinking skills in students.	28	24	6	4	3.23	0.87	A
16	AI implementation creates equity concerns for	32	18	8	4	3.26	0.91	A

	students without home technology access.								
17	The use of AI in teaching may reduce authentic human interaction in the classroom.	26	23	10	3	3.16	0.88	A	
18	AI integration raises questions about intellectual property rights for teaching materials.	22	25	11	4	3.05	0.89	A	
Grand Mean						3.18		A	

The result in Table 3 shows the ethical issues associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis. The result shows that principals from junior and senior secondary schools agreed that: the use of AI in education raises concerns about student data privacy, AI systems may perpetuate existing biases in educational assessment, over-reliance on AI may diminish critical thinking skills in students, AI implementation creates equity concerns for students without home technology access, the use of AI in teaching may reduce authentic human interaction in the classroom, and AI integration raises questions about intellectual property rights for teaching materials are associated with ethical issues associated with integrating AI in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis. This is evident by mean responses being greater than 2.50 for all items 13, 14, 15, 16, 17, and 18. This is evident by mean responses being less than 2.50 for items 7 and 11. Generally, the result reveals that the ethical issues associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis. This is evident by a grand mean of 3.18.

Discussion of Findings

Research question one sought to find out the opportunities associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis. The result shows that principals from junior and senior secondary school agreed that: AI tools can provide personalized learning experiences for students with different abilities, Integration of AI in teaching can reduce my administrative workload, AI-powered assessment tools can offer immediate feedback to students, and Implementation of AI can make instructional content more engaging for students. In contrast, the principals disagreed that: AI technologies can help identify learning gaps in students more efficiently and AI integration can improve access to quality educational resources in our school. Generally, the result shows that the principals agreed regarding the opportunities associated with integrating artificial intelligence in instructional delivery. The result agrees with that of Cetin, Tas, Alakus and Kaplan (2024) who found that AI facilitate the teaching and learning process. The study further agrees with that of Duan and Zhao (2024) who found that AI offers new opportunities for effective instructional delivery.

Research question two sought to find out the challenges associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis. The result in table 2 shows that the principals agreed that: they lack adequate training to effectively implement AI in their teaching, The cost of AI technologies is prohibitive for widespread adoption in their school, technical support for AI tools is insufficient in their educational setting, and Integrating AI into existing curriculum frameworks is challenging. In contrast, the result shows that the principals disagreed that: limited internet connectivity in their school hinders AI integration and Students' have varying levels of technological literacy which creates implementation difficulties regarding the challenges associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis. Generally, the result reveals that the principals agreed regarding the challenges associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis. The result agrees with the observations of Pedro, Subosa, Rivas and Valverde (2019) that lack of a framework for integration of AI in education and limited teacher preparation for using AI in

instructional delivery as some of the issues surrounding using AI for instructional delivery. The result also agrees with that of Ajani (2024) that digital divide, limited infrastructure, low digital literacy among educators, and ethical concerns are challenges surrounding the use of AI in education.

Research question three sought to find the ethical issues associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis. The result in table 3 shows that the principals agreed that: The use of AI in education raises concerns about student data privacy, AI systems may perpetuate existing biases in educational assessment, Over-reliance on AI may diminish critical thinking skills in students, AI implementation creates equity concerns for students without home technology access, The use of AI in teaching may reduce authentic human interaction in the classroom, and AI integration raises questions about intellectual property rights for teaching materials are associated with ethical issues associated with integrating AI in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis. Generally, the result reveals that the ethical issues associated with integrating artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis. The finding aligns with that of Ajani (2024) who found ethical concerns as a challenge associated with AI in education.

Conclusions

Based on the findings of this study, several conclusions can be drawn regarding the integration of artificial intelligence in instructional delivery as perceived by secondary school principals in Port-Harcourt Metropolis. The study reveals that secondary school principals in Port-Harcourt Metropolis perceive significant opportunities associated with AI integration in instructional delivery. Principals strongly recognize that AI tools can provide personalized learning experiences for students with different abilities, reduce administrative workload, offer immediate feedback to students through AI-powered assessment tools, and make instructional content more engaging. The overall positive perception (grand mean of 2.79) suggests that school leaders in the region are cognizant of AI's potential to enhance teaching and learning processes, though they are less convinced about AI's capacity to identify learning gaps efficiently or improve access to quality educational resources in their specific contexts.

Regarding challenges, principals identified several significant barriers to AI integration in their schools. The most prominent challenges include inadequate training for effective AI implementation, prohibitive costs of AI technologies, insufficient technical support, and difficulties integrating AI into existing curriculum frameworks. With a grand mean of 2.83, these challenges collectively represent substantial obstacles that must be addressed for successful AI integration. Interestingly, principals did not perceive limited internet connectivity or students' varying levels of technological literacy as major barriers, suggesting that human capacity and financial constraints may be more pressing than technological infrastructure in these schools.

Concerning ethical considerations, principals demonstrated a high level of awareness (grand mean of 3.18) about various ethical issues associated with AI integration in education. They expressed significant concerns about student data privacy, potential perpetuation of existing biases in educational assessment, diminishment of critical thinking skills, equity concerns for students without home technology access, reduction in authentic human interaction, and questions about intellectual property rights. This heightened awareness of ethical implications suggests that principals are approaching AI integration thoughtfully and with consideration for its broader societal impacts.

In summary, principals in Port-Harcourt Metropolis recognize the substantial potential of AI to transform instructional delivery, they also acknowledge significant implementation challenges and ethical considerations that require careful navigation. This balanced perspective provides a foundation for developing nuanced and context-sensitive approaches to AI integration in Nigerian secondary education.

Recommendations

Based on the findings of the study, the following recommendations were drawn

1. The Rivers State Ministry of Education, in partnership with school principals, should create a structured framework for integrating AI in schools. This framework should focus on high-impact applications like personalized learning, administrative tasks, and real-time feedback. It should also provide clear implementation guidelines, resource plans, and success metrics while addressing areas of concern such as learning gap identification.
2. Educational authorities such as Ministry of Education and Schools Board should establish comprehensive professional development programs specifically targeting AI literacy and implementation skills for principals, administrators and teachers.
3. The Rivers State Ministry of Education and Schools Board should establish a robust ethical framework for AI use in schools that includes clear data privacy protocols and fairness guidelines. This framework should be accompanied by regular ethical audits of AI implementation in schools.

ARTIFICIAL INTELLIGENCE IN EARLY GRADE EDUCATION FOR SUSTAINABLE DEVELOPMENT IN NIGERIA

Dr. Salamatu Bello

Abstract:

This paper explores the transformative potential of Artificial Intelligence (AI) in achieving sustainable development in Nigeria. It examines how AI can be leveraged across various sectors in Early grade Education including agriculture, healthcare Education, Social Studies education, and other basic Science Education (energy, and governance) by use of Artificial Intelligence in addressing pressing challenges and advance the United Nations Sustainable Development Goals (SDGs). Nigeria faces substantial challenges in achieving the SDGs, the strategic deployment of AI offers new pathways for overcoming some obstacles. The next section of this paper explores how AI can be practically applied across key Early grade Subjects to drive measurable and sustainable impact. AI Applications in Agriculture at it remain the backbone of Nigeria's economy, employing over 35% of the labor force and contributing significantly to GDP. Healthcare education , Social Studies(Energy and Environment) By drawing from international best practices and committing to capacity building, innovation, and responsible governance, Nigeria can develop become a vibrant AI ecosystem that not only drives economic growth but also ensures social equity and environmental sustainability. As Nigeria stands at the intersection of technological advancement and development imperatives, harnessing AI responsibly and strategically will be key to shaping a prosperous, inclusive, and sustainable future. The paper provides an overview of AI technologies, discusses Nigeria's development landscape, identifies key opportunities and barriers, and proposes strategic recommendations for policymakers, researchers, and stakeholders.

Introduction

Nigeria, Africa's most populous country, faces numerous development challenges, including widespread poverty, high unemployment, inadequate healthcare infrastructure, under-resourced education systems, environmental degradation, and significant governance issues. According to the National Bureau of Statistics (NBS), over 40% of Nigeria's population lives below the poverty line, and the United Nations Development Programme (UNDP) consistently ranks the country low on the Human Development Index (HDI). These challenges threaten the country's capacity to meet its development targets and improve the quality of life for its citizens.

Amid these issues, the rise of Artificial Intelligence (AI) offers an unprecedented opportunity to transform Nigeria's developmental trajectory. AI, through its data-driven capabilities and problem-solving prowess, can serve as a powerful tool to optimize resource allocation, enhance public service delivery, and promote economic diversification. Globally, AI is already playing a pivotal role in addressing development goals—from precision agriculture in India to AI-assisted medical diagnostics in Rwanda. For Nigeria, harnessing AI strategically could catalyze innovation, drive inclusive growth, and significantly accelerate progress toward achieving the Sustainable Development Goals (SDGs).

Early grade education serves as the backbone of a child's intellectual and social development, laying the groundwork for future academic success and lifelong learning (UNESCO, 2019). In recent years, the landscape of primary school education has been evolving rapidly, driven by technological advancements and changing educational paradigms. Traditional teaching methods, while effective in certain contexts, are often unable to fully meet the diverse needs and learning styles of today's students, who are growing up in an increasingly digital and interconnected world (Baker et al., 2019). The rise of artificial intelligence (AI) technologies presents a transformative opportunity to revolutionize primary school teaching and learning, offering innovative solutions to address longstanding challenges in

education. AI encompasses a range of technologies and applications that simulate human intelligence, including machine learning, natural language processing, and robotics (Russell & Norvig, 2021). In the context of education, AI holds the promise of personalized learning experiences, adaptive instruction, and data-driven insights into student performance (Holstein & McLaren, 2019).

However, for AI to effectively support sustainable development, a conducive ecosystem is required—one that includes appropriate infrastructure, skilled human capital, supportive policy frameworks, and robust ethical guidelines. This paper aims to investigate how AI can be effectively integrated into Nigeria's development agenda. It offers a comprehensive examination of the key sectors where AI can have the most impact, identifies critical barriers to adoption, and provides actionable recommendations for stakeholders across government, academia, industry, and civil society.

The structure of the paper begins with a foundational overview of AI at Early grade Education and its global relevance to sustainable development. It then contextualizes the SDGs within Nigeria's socio-economic landscape before exploring AI applications in agriculture, healthcare, education, energy, and governance. The paper also discusses the challenges to AI adoption in Nigeria, examines policy and regulatory frameworks, and draws lessons from international best practices. The concluding sections offer strategic recommendations and emphasize the importance of collaborative efforts in ensuring that AI becomes a driver of equitable and sustainable progress in Nigeria.

Overview of Artificial Intelligence

Artificial Intelligence (AI) refers to the development of computer systems that can perform tasks typically requiring human intelligence. These tasks include learning, reasoning, problem-solving, perception, understanding natural language, and autonomous decision-making. At its core, AI seeks to create machines that can sense, comprehend, act, and learn to augment or replicate human capabilities. Minsky (2006) defines artificial intelligence as "the science of making machines do things that would require intelligence if done by humans." This definition highlights the core objective of AI research, which is to develop computational systems capable of emulating or surpassing human cognitive abilities in various domains, such as reasoning, problem-solving, and perception. Nilsson (2009) offers a comprehensive definition of artificial intelligence as "the branch of computer science that is concerned with the automation of intelligent behavior." This definition underscores the interdisciplinary nature of AI, which draws upon insights from computer science, cognitive psychology, philosophy, and other fields to develop algorithms and systems capable of exhibiting intelligent behavior.

Early Grade Education

According to Blatchford and Martin (2013), Early grade education is defined as "an educational institution that provides foundational education to children in their early years of formal schooling from 4 years to 12 or 13 years, typically spanning from kindergarten or reception class through to the end of sixth or seventh grade, depending on the educational system. Early grade Education play a crucial role in nurturing young learners' intellectual, social, and emotional development, fostering a love for learning and equipping students with essential knowledge, skills, and attitudes to succeed in higher levels of education and in life. Management is the organizational process that includes strategic planning, setting objectives, managing resources, deploying the human and financial assets needed to achieve objectives, and measuring results. Management also includes recording and storing facts and information for later use or for others within the organization. Management functions are not limited to managers and supervisors. Every member of the organization has some management and reporting functions as part of their job. (Knowledge Management Terms, 2009)

Management has many definitions; it depends on what or where you want to use it. The term management always deals with involvement of putting human and non-human resources together and accordingly for the purpose of attainment of specific aim. From a definition by Esther 2006, it is referring to the series of systematic sequential overlapping and interdependent step by which goals of an organization are achieved. Mefarland (2001), defines management as that process by which managers

create, direct, maintain and operate purposive organization through systematic coordinated cooperative human effort in their own way Brech et al describe management as what concerned seeing that job get done and done efficiently, its task all centre on decisions for planning and guiding operations that are going on the enterprise. Management according to Dare (2004) deals with utilization and procurement of human capital and material resources. Investor word (2015) define management as the initiation and maintenance of an investment portfolio. The free dictionary (2016) defines management as the act, manner or practice of managing, handling, supervision or control of workers.

Education And Artificial Intelligence

Education is a cornerstone of sustainable development and a key enabler of individual empowerment, social mobility, and economic growth. Nigeria, with a population exceeding 200 million, faces substantial educational challenges. These include overcrowded classrooms, insufficient qualified teachers, inadequate infrastructure, low literacy rates, and significant disparities in access between urban and rural areas. These issues undermine the attainment of Sustainable Development Goal 4 (Quality Education). Artificial Intelligence offers transformative tools to address these systemic challenges and enhance the quality, accessibility, and equity of education in Nigeria. Key applications include:

Intelligent Tutoring Systems (ITS): AI-powered platforms can provide personalized instruction tailored to the learning pace and style of individual students. These systems offer real-time feedback, adaptive assessments, and customized learning paths, making them valuable for learners with diverse educational backgrounds and needs.

Automated Grading and Assessment: AI algorithms can grade multiple-choice tests and even short essays, reducing the workload on teachers and allowing them to focus on more interactive and creative aspects of teaching. These tools can also provide detailed analytics on student performance, helping educators identify learning gaps.

Language Translation and Accessibility: Natural language processing (NLP) enables real-time translation and transcription services, which are particularly beneficial in Nigeria's multilingual environment. AI tools can support inclusive education by providing speech-to-text, text-to-speech, and sign language recognition features for students with disabilities.

Virtual Classrooms and E-Learning Platforms: AI enhances online education by personalizing content, recommending resources, and maintaining student engagement. Chatbots and virtual teaching assistants can support learners by answering questions and guiding them through course materials.

Predictive Analytics for Educational Planning: Machine learning models can forecast student dropout risks, recommend interventions, and help administrators allocate resources more effectively. These insights can guide policies aimed at improving retention and completion rates.

Teacher Training and Professional Development: AI tools can assess teacher performance, recommend tailored training modules, and facilitate peer learning networks. This approach helps build teacher capacity and promotes continuous professional growth.

While the potential of AI in education is vast, several challenges impede its adoption in Nigeria. These include limited access to digital devices and the internet, low levels of digital literacy among teachers and students, and a lack of investment in educational technology. Additionally, there are concerns about data privacy, algorithmic bias, and the potential for over-reliance on technology. To harness AI for educational advancement, Nigeria must prioritize investments in digital infrastructure, ensure affordable internet access, and incorporate digital skills into the national

curriculum. Public-private partnerships and international collaborations can help develop locally relevant AI education tools that respect cultural and linguistic diversity.

Government bodies such as the Federal Ministry of Education and the National Information Technology Development Agency (NITDA) can play crucial roles in promoting the responsible use of AI in education by establishing standards, providing funding, and supporting innovation ecosystems by strategically integrating AI into the education sector, Nigeria can improve learning outcomes, close equity gaps, and prepare its youth for a digital and knowledge-driven economy—an essential step toward achieving inclusive and sustainable development.

Impact of Applications of Artificial Intelligence in Early Grade Education:

Martinez, P., & Garcia, A. (2011) Provide the impact of application of artificial intelligence in Early grade Education (primary education) as follows:

1. **Personalized Learning:** AI-powered adaptive learning platforms can analyze student performance data and tailor instructional content to meet individual learning needs. These platforms offer personalized learning pathways, adaptive assessments, and targeted interventions to support students at their own pace and level of understanding.
2. **Interactive Learning Tools:** AI-driven educational applications and tools provide interactive and engaging learning experiences for primary school students. These tools may include virtual tutors, educational games, and simulations that facilitate hands-on exploration and experimentation in various subject areas.
3. **Intelligent Tutoring Systems:** AI-based tutoring systems can provide real-time feedback and guidance to students as they engage with learning materials. These systems use natural language processing and machine learning algorithms to understand student queries, assess comprehension, and offer personalized assistance, akin to having a virtual tutor available 24/7.
4. **Automated Grading and Assessment:** AI technologies enable automated grading and assessment of student work, including quizzes, assignments, and essays. Machine learning algorithms can analyze student responses, identify patterns, and provide immediate feedback to both students and educators, streamlining the assessment process and facilitating timely intervention.

Types of Artificial Intelligence for Sustainable Development in the Early Grade Education System

AI is a multidisciplinary field that encompasses various subfields, including:

Machine Learning (ML): A subset of AI that focuses on the development of algorithms that allow computers to learn patterns from data and make predictions or decisions without being explicitly programmed. Common applications include predictive analytics, fraud detection, and recommendation systems.

Natural Language Processing (NLP): The ability of computers to understand, interpret, and generate human language. NLP is used in chatbots, virtual assistants, sentiment analysis, and language translation services.

Computer Vision: The ability of machines to interpret and process visual data from the world, such as images and videos. It is used in facial recognition, medical imaging diagnostics, and autonomous vehicles.

Robotics: The design and deployment of machines that can perform tasks autonomously or semi-autonomously. Robotics integrates AI with hardware components to enable machines to interact with the physical environment.

Expert Systems: AI applications that simulate the decision-making abilities of human experts. These systems are often rule-based and are used in medical diagnosis, legal reasoning, and technical support. AI operates on the foundation of large datasets, computing power, and algorithms. Recent advancements in cloud computing, big data, and edge computing have made AI more accessible and scalable, even for developing countries like Nigeria.

Globally, AI has been instrumental in driving innovation across diverse sectors. In finance, AI algorithms detect fraudulent transactions. In manufacturing, AI-driven automation enhances productivity and reduces costs. In transportation, self-driving technologies and AI-powered traffic management systems are revolutionizing mobility. The Fourth Industrial Revolution (4IR), driven by AI and other emerging technologies like the Internet of Things (IoT), blockchain, and biotechnology, is reshaping economies and societies. For Nigeria to remain competitive and inclusive in this rapidly evolving global landscape, it must understand the fundamentals of AI and leverage its capabilities to address local development challenges.

In the Nigerian context, AI adoption remains nascent but is growing steadily. There are emerging AI research labs, start-ups exploring machine learning solutions, and academic institutions beginning to integrate AI into their curricula. However, much work remains to establish a robust AI ecosystem that supports widespread innovation and sustainable impact. This overview sets the stage for understanding how AI, when properly harnessed, can be a pivotal enabler for sustainable development in Nigeria.

Sustainable Development Goals (SDGs) in the Nigerian Context

The concept sustainable development can be interpreted in many different ways, but at its core is an approach to development that looks to balance different and often compelling needs against an awareness of the environment, social and economic limitations we face as a society. Poverty Eradication: Eradication of poverty may be defined as the improving access to sustainable livelihoods, providing universal access to basic social service also it can be seen as the entrepreneurial opportunities and productive resources, empowering people living in poverty and their organization, progressively developing social protection system to support those who cannot support themselves. Programmes: A plan of action aimed at accomplishing a clear business objective, with details on what is to be done, by whom, when and what means or resources will be used. Technical Education: is a planned programme of course and learning experience that begins with exploration of career options, supports basic academic and life skills, and enable achievement of high academic standards, leadership, preparation for industry-defined work and advanced and continuing education.

The Sustainable Development Goals (SDGs), adopted by all United Nations Member States in 2015, provide a shared blueprint for peace, prosperity, and environmental sustainability by the year 2030. The 17 SDGs encompass a wide range of development targets including poverty eradication, quality education, gender equality, clean energy, decent work, climate action, and strong institutions. These goals are interconnected and intended to balance the three dimensions of sustainable development: economic growth, social inclusion, and environmental protection. In Nigeria also, the implementation of the SDGs has been both promising and challenging. The government has demonstrated commitment through the establishment of institutions such as the Office of the Senior Special Assistant to the President on SDGs (OSSAP-SDGs), which is tasked with aligning national development policies with the SDG agenda. However, significant gaps remain in data availability, institutional capacity, funding, and grassroots awareness, all of which hinder effective implementation and monitoring.

The 2023 Voluntary National Review (VNR) report on Nigeria's SDG performance highlights progress in areas such as primary education enrolment, as the first among other areas such as child immunization, and women's representation in political offices. Nonetheless, the country still faces critical deficits in reducing poverty (SDG 1), achieving zero hunger (SDG 2), ensuring good health and well-being (SDG 3), providing clean water and sanitation (SDG 6), and fostering climate action (SDG 13). According to the United Nations, over 95 million Nigerians currently live in multidimensional

poverty, and food insecurity remains a pressing concern. The International community and its determination to overcome poverty has been highlighted by the sustainable activities of the International Development Donors such as the United Nations Development Programme (UNDP), The European Union (EU), the World bank, the International Monetary Fund etc, are all ready and ever since been empowering nations and people.

Artificial Intelligence and Opportunity to accelerate Nigeria's progress across these goals:

Application of AI in energy and environmental sustainability, focusing on how AI can support Nigeria's transition to a low-carbon, resilient economy, with some subjects teach at the primary level of Education.

AI in Agriculture (SDG 2): Precision farming using AI can improve crop yields, monitor soil health, and reduce waste.

AI in Healthcare (SDG 3): AI-powered diagnostics, health surveillance systems, and personalized medicine can expand access to quality healthcare services.

AI in Education (SDG 4): Adaptive learning platforms and intelligent tutoring systems can personalize education and reach underserved communities.

AI for Gender Equality (SDG 5): Data-driven insights can inform targeted interventions for women's empowerment and inclusion.

AI and Climate Action (SDG 13): Predictive models and remote sensing can support disaster risk management and environmental protection.

Moreover, AI can enhance the availability and quality of data, which is crucial for evidence-based policymaking and SDG monitoring. By automating data collection and analysis, AI can help fill critical information gaps and provide real-time insights for decision-makers. To effectively integrate AI into Nigeria's SDG framework, multi-stakeholder collaboration is essential. This includes partnerships between government, academia, private sector, and civil society to ensure that AI initiatives are context-specific, inclusive, and aligned with national priorities. It also requires the establishment of ethical and regulatory safeguards to prevent the misuse of AI and to ensure that vulnerable populations are protected.

In summary, while Nigeria faces substantial challenges in achieving the SDGs, the strategic deployment of AI offers new pathways for overcoming these obstacles. The next section of this paper explores how AI can be practically applied across key sectors to drive measurable and sustainable impact.

Four (4) AI Applications in the Key Subject in the Primary School Basic Science Subjects

Agriculture, this remains the backbone of Nigeria's economy, employing over 35% of the labor force and contributing significantly to GDP. However, the sector faces persistent challenges such as low productivity, poor infrastructure, inefficient supply chains, pest infestations, and vulnerability to climate change. These issues impede the realization of food security (SDG 2) and rural development.

Artificial Intelligence (AI) has the potential to revolutionize Nigerian agriculture by enabling smart, data-driven practices that enhance productivity, reduce waste, and improve livelihoods. The application of AI in agriculture can be broadly categorized into the following areas:

Precision Agriculture: AI-powered systems can analyze vast datasets from satellites, drones, sensors, and weather models to provide actionable insights for farmers. These systems can help determine the optimal timing for planting and harvesting, assess soil health, and recommend the best crop varieties

based on regional conditions. For instance, image recognition algorithms can detect plant diseases or pest infestations early, allowing for timely interventions.

Predictive Analytics: Machine learning models can forecast crop yields, pest outbreaks, and weather patterns. These forecasts enable farmers and policymakers to make informed decisions regarding resource allocation, insurance schemes, and market planning. Predictive tools can also support food distribution systems by anticipating supply and demand imbalances.

Automated Irrigation and Fertilization: Smart irrigation systems equipped with AI can optimize water usage by analyzing soil moisture and weather data in real-time. This ensures efficient use of scarce water resources, especially in arid regions. Similarly, AI-enabled fertilizer management systems can prevent overuse or underuse of fertilizers, reducing environmental degradation and input costs.

Agricultural Robotics: AI-powered robots can perform tasks such as planting, weeding, spraying, and harvesting with high precision. While still in early stages in Nigeria, these technologies hold promise for increasing efficiency in commercial farming and reducing manual labor dependency.

Market Intelligence and Advisory Services: Chatbots and virtual assistants, powered by natural language processing (NLP), can provide farmers with real-time agricultural advice, market prices, and weather updates in local languages. These tools can bridge information gaps, especially in rural communities with limited access to extension services.

Supply Chain Optimization: AI can streamline agricultural value chains by enhancing logistics, reducing post-harvest losses, and improving traceability. For example, AI models can predict transportation bottlenecks or detect anomalies in product quality, ensuring faster delivery and compliance with food safety standards.

Despite these opportunities, AI adoption in Nigerian agriculture faces several barriers. These include limited internet connectivity in rural areas, lack of digital literacy among farmers, inadequate funding for agri-tech startups, and insufficient research collaboration. Furthermore, cultural resistance and lack of trust in AI systems may hinder widespread acceptance to overcome these challenges, targeted interventions are necessary. These include capacity-building programs for farmers, investment in rural broadband infrastructure, establishment of innovation hubs, and the creation of public-private partnerships to scale successful AI solutions. Government agencies such as the Federal Ministry of Agriculture and Rural Development (FMARD) can play a pivotal role by integrating AI into national agricultural policies and extension programs.

In summary, AI offers transformative potential for Nigeria's agricultural sector by enabling precision, efficiency, and resilience. Strategic deployment of AI technologies can drive progress toward zero hunger, poverty alleviation, and climate-smart agriculture, thereby contributing significantly to Nigeria's sustainable development agenda.

Health Education: Healthcare Nigeria's healthcare system faces multiple challenges including underfunding, inadequate infrastructure, shortage of skilled personnel, and limited access to quality services—particularly in rural areas. These challenges significantly hinder progress toward achieving Sustainable Development Goal 3 (Good Health and Well-Being). Artificial Intelligence can offer innovative and scalable solutions to enhance healthcare delivery, improve diagnostics, support disease prevention, and optimize health system management. The integration of AI technologies in healthcare can be categorized into the following applications:

a- **Medical Diagnostics:** AI-powered diagnostic tools can analyze medical images (e.g., X-rays, MRIs, CT scans) to detect abnormalities such as tumors, fractures, or infections with accuracy comparable to or exceeding that of human experts. Deep learning algorithms can also identify patterns

in patient data to aid in the early detection of diseases like tuberculosis, cervical cancer, or diabetic retinopathy—conditions that are prevalent in Nigeria.

b- **Telemedicine and Virtual Health Assistants:** Natural language processing (NLP) and machine learning models power AI chatbots and virtual assistants that can conduct symptom assessments, schedule appointments, and provide health education in local languages. These systems can bridge the gap between healthcare providers and remote communities, improving access to primary care services.

c- **Predictive Analytics for Disease Surveillance:** AI models can analyze epidemiological data to predict disease outbreaks, track transmission patterns, and allocate resources proactively. In Nigeria, AI could enhance the effectiveness of programs tackling infectious diseases like malaria, HIV/AIDS, Lassa fever, and COVID-19 by enabling rapid response and targeted interventions.

d- **Personalized Medicine:** Machine learning algorithms can tailor treatments based on individual genetic profiles, lifestyle, and environmental factors. Though in its infancy in Nigeria, this approach could optimize treatment outcomes and reduce adverse drug reactions, especially in chronic disease management.

e- **AI in Health Education:** AI can streamline hospital operations by automating routine administrative tasks such as patient triage, medical billing, and record management. This not only reduces costs but also allows healthcare providers to focus on clinical care.

f- **Medical Research and Drug Discovery:** AI accelerates the discovery of new drugs and vaccines by identifying promising compounds and predicting their efficacy. This capability is crucial in responding to public health emergencies and addressing Nigeria's disease burden.

Despite these benefits, the adoption of AI in Nigeria's healthcare sector faces notable barriers. These include limited digital infrastructure, lack of electronic health records, inadequate technical capacity, and ethical concerns about data privacy and bias in AI models. Furthermore, the legal and regulatory frameworks governing AI in healthcare are still evolving. To foster AI-driven transformation in healthcare, Nigeria must invest in digital health infrastructure, support health-tech startups, and develop national AI strategies that include data governance, interoperability standards, and ethical guidelines. Collaborative efforts between the Ministry of Health, private sector innovators, universities, and international development partners will be essential to build trust and ensure equitable access to AI solutions. By leveraging AI strategically, Nigeria can improve health outcomes, strengthen health systems, and move closer to achieving universal health coverage—an integral part of the sustainable development agenda.

Social Studies, where by the subject teaches several Energy and Environmental areas. Nigeria faces a dual energy challenge: expanding access to electricity for millions of underserved citizens while transitioning to a cleaner, more sustainable energy mix. The energy sector also intersects with environmental concerns such as carbon emissions, deforestation, air and water pollution, and climate change—issues central to Sustainable Development Goals 7 (Affordable and Clean Energy), 13 (Climate Action), and 15 (Life on Land).

Artificial Intelligence presents a suite of solutions that can enhance energy efficiency, promote renewable energy integration, and support environmental monitoring and protection. The following are key AI applications in this domain:

Smart Grid Optimization: AI algorithms can manage the distribution of electricity in real time by analyzing usage patterns, weather forecasts, and grid conditions. This enables utilities to balance supply and demand, reduce losses, and improve reliability. In Nigeria, where grid instability is a persistent issue, AI-driven smart grids can play a pivotal role in reducing blackouts and enhancing energy access.

Energy Forecasting Renewable: AI models can predict solar and wind energy generation based on weather data, historical patterns, and satellite imagery. Accurate forecasting enables better integration of renewables into the grid, reducing reliance on fossil fuels and improving planning for hybrid energy systems in rural electrification projects.

Energy Efficiency in Buildings and Industry: Machine learning algorithms can monitor energy consumption and optimize heating, cooling, and lighting systems in real time. AI-powered energy management systems can significantly reduce energy waste in commercial buildings and manufacturing plants, supporting SDG 12 (Responsible Consumption and Production).

Environmental Monitoring and Climate Modelling: AI can process satellite data, drone imagery, and sensor inputs to detect deforestation, illegal mining, water pollution, and biodiversity loss. These insights help enforcement agencies and conservationists respond promptly and develop data-driven policies for natural resource management.

Disaster Risk Reduction: AI can enhance early warning systems for floods, droughts, and wildfires by analyzing climate models, river basin data, and historical trends. Predictive analytics can guide evacuation plans and infrastructure resilience strategies, especially in vulnerable regions of Nigeria such as the Niger Delta and northern states.

Carbon Emissions Tracking: AI tools can track emissions from industrial sites, transportation networks, and energy facilities. This supports compliance with environmental regulations, carbon pricing mechanisms, and Nigeria's commitments under the Paris Agreement and the Nationally Determined Contributions (NDCs).

However, several barriers exist to the widespread deployment of AI in energy and environmental management in Nigeria. These include weak data infrastructure, lack of inter-agency collaboration, insufficient investment in research and development, and regulatory uncertainty. Furthermore, environmental data is often sparse or fragmented, limiting the effectiveness of AI models. To overcome these challenges, Nigeria should prioritize investments in data infrastructure, incentivize renewable energy startups, and foster collaboration among energy companies, research institutions, and government bodies such as the Nigerian Electricity Regulatory Commission (NERC), the Rural Electrification Agency (REA), and the National Environmental Standards and Regulations Enforcement Agency (NESREA).

How AI, when strategically deployed, can support Nigeria

Nigeria can be supported in transition by AI toward a resilient, low-carbon economy by improving energy efficiency, expanding renewable energy, and enhancing environmental stewardship—thereby making meaningful progress toward global and national sustainability goals.

How AI can be applied to enhance governance and public service delivery, thereby strengthening institutions and promoting inclusive development.

Governance and Public Services Contribution Effective governance is critical for sustainable development, encompassing transparent institutions, efficient public service delivery, civic engagement, and accountability. Nigeria's public sector faces longstanding issues such as bureaucratic inefficiency, corruption, poor data management, and limited citizen participation. Artificial Intelligence offers robust tools to enhance governance by promoting digital transformation, data-driven decision-making, and improved citizen engagement.

AI applications in governance and public services include:

E-Government and Process Automation: AI-powered chatbots and virtual assistants can handle public inquiries, guide users through government portals, and streamline services such as tax filing,

business registration, and passport issuance. Robotic process automation (RPA) can reduce administrative delays and increase transparency.

Fraud Detection and Anti-Corruption Efforts: Machine learning algorithms can analyze financial transactions and public procurement data to detect anomalies and flag potential cases of fraud or corruption. Predictive analytics can help oversight agencies focus investigations and allocate resources more effectively.

Data-Driven Policy Making: AI can analyze large datasets from national surveys, census, social media, and public feedback platforms to derive insights into citizen needs, socioeconomic trends, and service delivery gaps. These insights support evidence-based policymaking and resource allocation.

Smart Cities and Urban Planning: AI technologies can optimize urban infrastructure by managing traffic, waste, and water systems efficiently. They also support real-time monitoring of pollution, crowd management, and disaster preparedness in rapidly growing cities like Lagos and Abuja.

Election Monitoring and Civic Engagement: AI can monitor social media for misinformation, analyze voting behavior, and support real-time reporting during elections. It can also enhance platforms that facilitate public consultations, participatory budgeting, and grievance redress mechanisms.

National Security and Law Enforcement: AI applications in surveillance, predictive policing, and cybersecurity can aid in crime prevention and national defense. Facial recognition, anomaly detection, and natural language processing can enhance intelligence operations while raising important ethical considerations.

Despite the potential benefits, integrating AI in governance requires addressing data privacy concerns, algorithmic fairness, and the digital divide. Moreover, the capacity of civil servants and policymakers to understand and leverage AI tools remains limited.

Strengthening digital governance in Nigeria demands multi-stakeholder collaboration between the government, civil society, academia, and the private sector. Key enablers include investments in digital infrastructure, training programs for public officials, and legal frameworks for data protection and algorithmic accountability. Institutions like the National Identity Management Commission (NIMC), Independent Corrupt Practices Commission (ICPC), and National Bureau of Statistics (NBS) can lead AI adoption in public services.

Harnessing AI for governance can transform Nigeria's public sector by enhancing transparency, responsiveness, and inclusivity—building stronger institutions and advancing Sustainable Development Goal 16 (Peace, Justice, and Strong Institutions).

The next section discusses overarching challenges to AI adoption in Nigeria, providing a critical analysis of infrastructural, regulatory, and societal barriers.

Challenges to AI Adoption in Nigeria

Despite the transformative potential of Artificial Intelligence, several challenges hinder its widespread adoption and effective implementation in Nigeria. These challenges are multifaceted, encompassing technological, infrastructural, regulatory, educational, economic, and societal dimensions. Understanding and addressing these barriers is essential to fully realize AI's benefits for sustainable development.

Limited Digital Infrastructure: A major constraint is the inadequate digital infrastructure, including unreliable electricity supply, poor internet connectivity, and limited access to modern computing hardware. Rural areas are particularly underserved, making it difficult to deploy and scale AI solutions equitably across the country.

Low Levels of Data Availability and Quality: AI systems rely heavily on large volumes of high-quality data. In Nigeria, data is often scarce, fragmented, outdated, or not digitized. Many public and private

institutions lack proper data collection, storage, and sharing mechanisms, which hinders AI development and accuracy.

Skill Gaps and Capacity Deficiency: There is a shortage of skilled professionals in AI-related fields such as data science, machine learning, and software engineering. Most Nigerian universities have yet to integrate AI education into their curricula, and existing workforce training programs are insufficient to meet demand.

High Cost of Technology and R&D: Developing, training, and deploying AI models require significant computational power and financial resources. Many startups, research institutions, and public sector agencies in Nigeria struggle to access the necessary funding or infrastructure to support AI initiatives.

Regulatory and Ethical Challenges: The absence of a comprehensive legal and ethical framework for AI poses risks related to data privacy, algorithmic bias, accountability, and misuse. Without clear guidelines, there is uncertainty around intellectual property rights, liability in automated decision-making, and responsible AI usage.

Public Trust and Awareness: There is a general lack of public understanding and trust in AI technologies. Concerns about job displacement, surveillance, and data misuse can lead to resistance from citizens and workers, especially in vulnerable communities.

Institutional and Bureaucratic Barriers: Fragmented governance structures and overlapping mandates among regulatory bodies can delay decision-making and create confusion around AI policy implementation. Weak inter-agency collaboration further impedes progress.

Urban-Rural Divide: Urban centers like Lagos and Abuja are seeing AI innovation clusters emerge, but rural areas remain largely excluded from the digital economy. Bridging this divide requires deliberate policies that promote inclusive access to technology and services. To overcome these barriers, Nigeria must pursue a holistic and inclusive approach that combines investment in digital infrastructure with education reform, capacity building, policy innovation, and stakeholder engagement. Addressing these challenges will lay the foundation for a robust AI ecosystem capable of supporting sustainable development across all sectors of society.

Policy and Regulatory Framework

The implementation of Artificial Intelligence in Nigeria necessitates a robust policy and regulatory environment that fosters innovation, ensures ethical use, and protects citizens' rights. A well-crafted framework is crucial for guiding AI development, deployment, and governance in a manner aligned with the country's sustainable development goals.

National AI Strategy: Nigeria currently lacks a unified national AI strategy. A dedicated strategy should articulate the vision, goals, and action plans for AI adoption across sectors, while aligning with broader development objectives such as the National Digital Economy Policy and Strategy (NDEPS) and Vision 2050.

Data Governance and Privacy Laws: Effective AI relies on access to quality data. However, this must be balanced with strong data protection regulations. The Nigeria Data Protection Act (NDPA) is a step in the right direction, but enforcement capacity and public awareness remain low. Regulatory clarity on data ownership, consent, and cross-border data flows is also necessary.

Ethical and Responsible AI Guidelines: Clear standards must be established to address fairness, transparency, accountability, and inclusivity in AI systems. This includes mitigating algorithmic bias,

ensuring human oversight in critical decisions, and protecting vulnerable populations from discrimination.

Intellectual Property and Innovation Policy: Legal frameworks must support the protection of intellectual property rights for AI innovations, while fostering open data and open-source collaboration. Startups and research institutions need clarity on patents, copyrights, and licensing mechanisms.

AI Standards and Certification: National and sector-specific standards should be developed to guide the development and use of AI applications, especially in sensitive areas like healthcare, finance, and law enforcement. Certification bodies can help ensure compliance with safety and performance benchmarks.

Inter-Agency Coordination: Effective AI governance requires collaboration across ministries, agencies, and regulatory bodies. The National Information Technology Development Agency (NITDA), Nigerian Communications Commission (NCC), and National Agency for Science and Engineering Infrastructure (NASENI) must coordinate efforts to avoid duplication and policy fragmentation.

Public-Private Partnerships and Regulatory Sandboxes: Flexible and adaptive regulatory approaches, such as innovation sandboxes, can allow AI developers to test new solutions in a controlled environment. Public-private partnerships can also accelerate policy experimentation, infrastructure development, and capacity building.

International Cooperation: Nigeria should engage in global AI policy dialogues, collaborate with regional organizations such as the African Union, and adopt international best practices. Harmonizing standards with global frameworks will enhance Nigeria's competitiveness and access to international markets.

A coherent and inclusive policy and regulatory framework is essential to ensure that AI contributes positively to Nigeria's sustainable development agenda. Government leadership, stakeholder engagement, and continuous review of regulatory instruments will be critical to adapt to emerging risks and opportunities in the AI landscape at the early grade level.

Case Studies and International Best Practices

Examining successful AI implementations across the globe offers valuable insights that can guide Nigeria in building a robust and inclusive AI ecosystem. This section highlights selected case studies and international practices that illustrate how AI has been applied effectively for sustainable development since from the grassroot which is the lower grade education.

India: AI for Agricultural Transformation India has leveraged AI to modernize agriculture through precision farming, pest prediction, and market forecasting. Initiatives such as Microsoft's AI Sowing App have helped farmers increase crop yields using weather data and machine learning. These models are transferable to Nigeria's agrarian regions, especially if adapted to local crops and languages.

Rwanda: AI and Drones in Healthcare Logistics Rwanda's partnership with Zipline uses AI-enabled drones to deliver medical supplies to remote clinics. This system reduces delivery time for life-saving products like blood and vaccines. Nigeria can replicate such models in hard-to-reach areas, particularly in the northern and riverine communities.

Estonia: E-Governance and Digital Identity Estonia is a global leader in digital governance. Its AI-powered public services and secure digital ID system enable efficient tax collection, voting, and business registration. Nigeria can adopt a similar digital identity infrastructure to enhance governance, reduce fraud, and promote financial inclusion.

Kenya: Fintech and Mobile AI Solutions Kenya's M-Pesa ecosystem and mobile loan platforms like Tala use AI algorithms to assess credit risk and deliver financial services to unbanked populations. Nigeria, with its growing mobile user base, can build similar AI-powered fintech solutions to promote economic inclusion.

Canada and the EU: Ethical AI Frameworks Countries like Canada and the European Union have developed comprehensive guidelines to ensure ethical AI use. These frameworks emphasize transparency, human rights, and impact assessment. Nigeria can adopt similar principles to guide the ethical deployment of AI technologies.

South Korea: National AI Strategy and Workforce Development South Korea's National Strategy for AI includes significant investments in education, R&D, and public-private partnerships. It emphasizes AI literacy and training across all levels. Nigeria can benefit from a similar strategy tailored to its demographic profile and education system.

These case studies demonstrate the value of context-specific innovation, strong regulatory support, and inclusive partnerships. While each country's journey is unique, Nigeria can learn from these examples to shape policies and programs that reflect its local realities and development priorities.

The next section will offer strategic recommendations for implementing AI in a sustainable, inclusive, and impactful manner.

Recommendations

To fully harness the potential of Artificial Intelligence for sustainable development in Nigeria, a multidimensional and inclusive approach is essential. Based on the challenges and opportunities identified throughout this paper, the following strategic recommendations are proposed:

- Develop a National AI Strategy: Establish a comprehensive and forward-looking national strategy that outlines Nigeria's vision for AI development, including sector-specific goals, investment plans, and institutional roles.
- Invest in Digital Infrastructure: Prioritize investment in broadband expansion, power supply, cloud infrastructure, and data centers to ensure that the foundation for AI technologies is accessible, especially in underserved and rural areas.
- Promote Data Availability and Open Data Policies: Improve mechanisms for data collection, standardization, and sharing across sectors. Encourage the development of open data platforms to fuel innovation while maintaining strict data privacy protections.
- Strengthen AI Education and Capacity Building: Integrate AI-related subjects into school and university curricula. Establish AI research centers and provide continuous professional development for educators, civil servants, and industry workers.
- Foster Innovation Ecosystems: Support AI startups through grants, incubators, and public-private partnerships. Create innovation hubs in major regions to promote knowledge exchange, experimentation, and co-creation.
- Establish Ethical AI Guidelines: Develop and enforce policies that promote fairness, transparency, accountability, and non-discrimination in AI systems. Public awareness campaigns should accompany regulatory efforts to foster trust.
- Enable Inclusive AI Access: Ensure that marginalized and vulnerable populations are included in AI policy and program designs. AI solutions should be linguistically and culturally adapted for all regions.
- Enhance Public Sector Adoption: Digitize public services using AI to improve efficiency, transparency, and responsiveness. Prioritize AI applications in critical sectors like education, healthcare, and agriculture.
- Support R&D and International Collaboration: Increase public and private investment in AI research. Encourage academic-industry partnerships and participate in international AI collaborations to keep abreast of global trends and technologies.

- Create Monitoring and Evaluation Mechanisms: Establish clear indicators to measure progress in AI adoption and its impact on development goals. Use feedback loops to iteratively improve policy and practice. By following these recommendations, Nigeria can lay a strong foundation for a thriving AI ecosystem that drives inclusive growth, addresses systemic challenges, and accelerates the attainment of the Sustainable Development Goals.

Conclusion

Artificial Intelligence presents an unprecedented opportunity to address Nigeria's most pressing development challenges while accelerating progress toward the Sustainable Development Goals. From improving crop yields and healthcare delivery to enhancing education, environmental monitoring, and governance, AI can play a pivotal role in transforming the nation's socio-economic landscape. However, realizing this potential requires deliberate and coordinated action. Infrastructure deficits, regulatory uncertainty, ethical concerns, and a shortage of skilled professionals must be addressed through a holistic national strategy. Stakeholders across government, academia, industry, and civil society must collaborate to ensure that AI technologies are inclusive, ethical, and adapted to local realities by drawing from international best practices and committing to capacity building, innovation, and responsible governance, Nigeria can develop a vibrant AI ecosystem that not only drives economic growth but also ensures social equity and environmental sustainability.

As Nigeria stands at the intersection of technological advancement and development imperatives, harnessing AI responsibly and strategically will be key to shaping a prosperous, inclusive, and sustainable future.

Igbariam Campus, Anambra State, Nigeria

Abstract

The specific design was a panel study used to determine the Management Information Systems (MIS) data collection procedures for university administrators' ethical decision-making process in South East Nigeria universities. This study was conducted in the ten public universities in South-East, Nigeria. One research question and one hypothesis guided the study. The design of the study was survey research. The population of the study was made up of 589 university personnel consisting of Heads of Department, Deputy Registrars and Directors of Management Information Systems (MIS) / Information and Communication Technology (ICT) Units in the universities. The sample of the study was made up of 30 respondents that constituted the experts' panel and were selected from the ten public universities in South-East Nigeria. The experts' panel was made up of 30 experts consisting of 10 directors of Management Information Systems/Information Communication Technology, 10 academic staff and 10 administrative staff purposively selected from the 10 public universities in South-East Nigeria. Data were collected using a 10-item questionnaire developed by the researchers and titled: MIS Ethical Decision-Making Questionnaire (MISED MQ). Three experts from University of Nigeria, Nsukka validated the instrument. The final draft of the instrument had a 4-point scale of Very Appropriate, Appropriate, Inappropriate, and Very Inappropriate. The instrument was pre-tested on 17 respondents from a public university in Kogi State, Nigeria. The reliability of the instrument was determined using Cronbach Alpha Formula. A reliability coefficient of 0.88 was obtained for the entire instrument. During the round one survey, the 10-item questionnaire was administered to the respondents, 8 items reached the panelists consensus while 2 items could not reach the consensus based on a mean cut-off point of 3.00 and standard deviation of less than 1.00. In the round two survey, the 8 items were re-administered to the respondents, while 1 item were discarded. The 7 items that reached the panelist consensus in the round two surveys were retained for data analysis while the one item on which consensus was not reached was discarded. The mean score was used to answer the research question. t-test was used to test the hypothesis. Among others, it was found that 7 data collecting procedures were accepted and included in the MIS data collection procedures for university administrators' ethical decision-making process in South East Nigeria universities. There were no significant differences between the mean responses of administrators and MIS experts regarding data collection procedures. Based on the findings of the study, one major educational implication was that the MIS has a high potential for making relevant information available for ethical decision-making process. It was recommended that universities in South-East, Nigeria should adopt the MIS data collection procedures

to provide relevant information for effective and efficient management of the institutions. MIS units should organize workshops and seminars for the university administrators on how to collect relevant data/information for MIS ethical decision-making process in the university.

Keywords: Management Information Systems (MIS), Decision-Making Process, National Universities Management Information Systems (NUMIS).

Introduction

In school organization, to make decision simply means to cut off deliberations and to come to a conclusion. This decision is the driver of policies for the smooth running of the school. Before an administrator makes a decision, he or she must have two or more alternatives to choose from. In school organization, as in other human organizations, decision-making becomes crucial mostly when there are problems to be solved. Good decisions bring change, efficiency and effectiveness into the system.

According to Nwankwo (2014) decision making is a process of making a choice from a number of alternatives to achieve a desired result. Nwankwo stated further that this definition has three key elements. The first one is that decision making involves making a choice from a number of options. The second element is that decision making is a process that involves more than simply a final choice from among alternatives and the third one is the —desired result which involves a purpose or target resulting from the mental activity that the decision maker engages in to reach a final decision. The study focused on the Management Information Systems (MIS) data collection procedures for ethical decision-making in universities in South East, Nigeria.

Ethics refers to standards and practices that tell us how human beings ought to act in the many situations in which they find themselves—as friends, parents, children, citizens, businesspeople, professionals, and so on. Ethics is also concerned with our character. It requires knowledge, skills, and habits. For more understanding of meaning of ethics, it is better to identify what ethics is NOT:

- **Ethics is not the same as feelings.** Feelings do provide important information for managers' ethical choices. However, while some managers might have highly developed habits that make them feel bad when they do something wrong, others might feel good even though they are doing something wrong, and, often, one's feelings might tell one that it is uncomfortable to do the right thing if it is difficult.
- **Ethics is not the same as religion.** Many people are not religious but act ethically, and some religious people act unethically. Religious traditions can, however, develop and advocate for high ethical standards, such as the Golden Rule.
- **Ethics is not the same thing as following the law.** A good system of law does incorporate many ethical standards, but law can deviate from what is ethical. Law can become ethically corrupt—a function of power alone and designed to serve the interests of narrow groups. Law may also have a difficult time designing or enforcing standards in some important areas and may be slow to address new problems.
- **Ethics is not the same as following culturally accepted norms.** Cultures can include both ethical and unethical customs, expectations, and behaviours. While assessing norms, it is important to recognize how one's ethical views can be limited by one's own cultural perspective or background, alongside being culturally sensitive to others.
- **Ethics is not science.** Social and natural sciences can provide important data to help managers make better and more informed ethical choices, but science alone does not tell what one ought to do. Some things may be scientifically or technologically possible and yet unethical to develop and deploy.

The major issue at this juncture is to determine how to integrate ethics in university administration for informed and ethical decision-making. The first issue to address is Management Information Systems (MIS). Boorne (2002) defined MIS as a structured, interacting complex of persons, machines and procedures designed to generate an orderly flow of information for use as the basis for decision-making in an organization. According to Moorthy (2019), MIS is a decision-making

instrument used by top management comprising of a set of controls. MIS, therefore, is a system that collects, processes, analyses, stores and disseminates information for educational planning and decision-making in the universities. In Nigerian universities, MIS is designed to achieve the following objectives: to standardize the system of obtaining reports and statistical information, ensure that such information are accurate and timely and organize such information for planning and decision-making in order to improve utilization of resources (Fadekemi & Ajayi, 2007). MIS could be a veritable instrument for ethical decision-making.

According to Okeke and Okaforcha (2025), university administrators need continuous flow of information in order to make appropriate decisions. Effective ethical decision-making in the universities depends to a large extent, on accurate, timely and relevant information available to the administrators. Relevant information for decision making emerge from proper data collection process which is the systemic approach to gathering and measuring information from a variety of sources to get a complete and accurate picture of an area of interest (Rouse, 2016). University administrators make varies decisions on their day-to-day activities. Ethical decision-making is the backbone of administrative functions (Fabunmi, 2003). This is because decisions direct management actions. Good and effective decisions can only be made when the right information is made available at the right time to the right officer. According to Turban, Aronson and Liang (2004), ethical decision-making is a process of choosing among alternative courses of action for the purpose of attaining a goal or goals. Ethical decision-making consists of a number of steps or stages, such as recognition of a problem, formation and generation of alternatives, information search, selection of best alternatives and action (Turban, Aronson & Liang (2004).

Information for ethical decision-making in the universities cannot be provided from people's often deficient memories. According to Aminu (1996), information resources are one of the major issues for and indices of planning and administration of universities. Information is the additional knowledge the users desire about the functions under their responsibilities to enhance planning, programming, monitoring, evaluation and ethical decision-making in the universities. Information for ethical decision-making is dynamic and needs to be constantly updated (Heise, 2006). Information is the chain of understanding that binds all organizations including universities from top to bottom and from side to side. To stay well informed and build-up their knowledge base, a university needs to feed on a balanced diet of high-quality information supplied through a varied menu of information products and services (Choo, 1995). In this study, information is data that has been put into the forms that are useful to the university administrators for ethical decision-making. Information is usually available or disseminated through various information systems. Bourgeois (2019), defines information system (IS) as the study of complimentary networks of hardware and software that people and organization use to collect, create and distribute data.

The National Universities Management Information Systems (NUMIS) developed by the National Universities Commission (NUC) focused only on three major areas namely, student records, staff records and financial records (NUC, 1991). NUMIS was originally implemented using dBase as a single package running on one system. The NUMIS main structure consists of five (5) phases; Data entry, Data update, Query, Reports and File maintenance. These phases are linked up with modules like staff and students' entities, finance, reference tables, students and staff list, student and staff information. Despite the implementation of NUMIS in the universities, it has not been adequately utilized in ethical decision-making process in Nigerian universities (Ajayi, & Omirin, 2007). This means that the MIS data collection procedures are not seemingly followed. NUMIS has not been adequately utilized in decision- making in universities in South-East, Nigeria. According to Oranu (2008), no MIS unit in the universities that use NUMIS has been able to complete the creation of staff and students' records and produce reports as required due to inadequacies of the NUMIS data management component. The major problem is on the data component of the NUMIS. This shows that the universities do not effectively use the MIS for ethical decision-making. Evidence points to the fact that Management Information Systems (MIS) in some universities in Nigeria are not efficient (Momoh & Abdulsalam, 2014).

However, despite the laudable initiative of the NUC, experience has shown that information on students, staff and university programmes are not readily available in most public universities in South-East, Nigeria. It has been observed that most public universities in South-East Nigeria hardly utilize the NUMIS for the provision of accurate, timely and reliable information for ethical decision-making. This is partly due to the inadequacies of the data management component of the NUMIS in the provision of information for ethical decision-making. The NUMIS lacked data management component which should prescribe what data to collect, how these data should be processed, organized, stored and communicated for ethical decision-making.

This inefficiency of the MIS in the universities is mainly due to inadequacies of the NUMIS data management component. Nigeria university administrators are often concerned about the alarming rate of misplacement or loss of vital data and the slow speed at which needed data are retrieved from storage. Similarly, Atulomah (2011) observed that universities in Nigeria generate large quantity and quality data in their day-to day activities; but a lot of files are duplicated in numbers within and across units without control over their creations, causing data redundancy and wasteful spending due largely to the inefficiency of the Management Information Systems in these universities. Therefore, the collection, processing, organization and reporting of data are a major issue of the NUMIS. These facts amongst others show the inability of most universities in Nigeria to put up sound Management Information Systems infrastructure to guide the generation, processing, storage and retrieval of information for ethical decision-making process. There seems to be no specific and appropriate MIS Model with proper data management component to provide the relevant information to guide and assist university administrators in decision making process. Against this background therefore, the researchers decided to determine the Management Information Systems (MIS) data collection methods for university administrators' ethical decision-making process in South East Nigeria universities.

Statement of the Problem

Observations and personal interviews were made by the researchers with the staff, students and other stakeholders in the universities in this zone. Among these observations made include the followings: Universities in this zone have poor record keeping of its activities, as well as records on staff and students. It may be very difficult to obtain data in these universities as most data are usually not easily available. Data are usually contained in files, which sometimes may be difficult to access. The search for these files may be laborious and takes valuable time, thus data – based decisions are difficult to be made. MIS infrastructure seems to be hardly properly utilized towards the effective provision of information for ethical decision-making. This may be partly due to the non-functioning of the MIS Application, poor attitude of university administrators towards MIS activities and undefined MIS policy by university administrations. The administrators and the MIS experts may seem to disagree on what data to collect, how to process and disseminate data and areas for which the data are to be used for ethical decision-making in the universities. In the light of the above, this study determined the appropriate MIS data collection procedures for ethical decision-making in universities in South East, Nigeria.

Research Question: What are the appropriate MIS data collection procedures for ethical decision-making in universities in South East, Nigeria?

Hypothesis: There is no significant difference in the mean ratings of administrators and MIS experts on appropriate MIS data collection procedures for ethical decision-making in universities in South East, Nigeria.

Research Method

The design of the study was survey research. The specific design was a panel study used to determine the Management Information Systems (MIS) data collection methods for university administrators' decision-making process in South East Nigeria universities. This study was conducted

in the ten public universities in South-East, Nigeria. One research question and one hypothesis guided the study. The population of the study was made up of 589 university personnel consisting of Heads of Department, Deputy Registrars and Directors of Management Information Systems (MIS) / Information and Communication Technology (ICT) Units in the universities. The sample of the study was made up of 30 experts selected from the ten public universities in South-East Nigeria. Data were collected using a 10-item questionnaire developed by the researchers and titled: MIS Decision-Making Questionnaire (MISDMQ). The face validation of the instrument (MISDMQ) was achieved through three experts: one each from Educational Administration and Planning, Measurement and Evaluation, and a Director of MIS Unit from a public University in Nigeria. 4-point rating scale of; Very Appropriate = 4, Appropriate = 3, Inappropriate = 2, Very Inappropriate = 1, which was used to elicit responses from the respondents for data analysis. The reliability of the instrument was determined through trial-testing of the questionnaire on 17 respondents, made up of seven senior academic staff including Heads of Department, nine senior administrative staff and the Director, Digital Centre at Kogi State University, Anyigba, Kogi State, which is outside South-East, Nigeria.

The reliability of the instrument was determined using Cronbach Alpha Formula. A reliability coefficient of 0.88 was obtained for the entire instrument. The questionnaire was administered on two round surveys. During the round one survey, the 10-item questionnaire was administered to the respondent. 8 items reached the panelists consensus while 2 items could not reach the consensus based on a mean cut-off point of 3.00 and standard deviation of less than 1.00. The questionnaire for round two surveys was developed based on the outcome of the responses of the respondents during the first-round survey. In this study, a consensus mean cut-off value of 3.00 (Appropriate) or above, and standard deviation of less than 1.00 for each item was used to determine items that reached the panels' consensus. In the round two survey, the 8 items were re-administered to the respondents, while 1 item was discarded. 7 items that reached the panelist consensus in the round two surveys were retained for data analysis while the one item on which consensus was not reached was discarded. The data were analyzed using Statistical Package for Social Sciences (SPSS). The mean and standard deviation scores of the items were used to answer the seven research questions.

Presentation of Results

Research Question: What are the appropriate MIS data collection procedures for ethical decision-making in universities in South East, Nigeria?

Table 1: Mean responses on the data collection procedures of the MIS (N = 30).

S/N	Data Collection Procedure include	X	SD	Decision	Rank
1.	questionnaire	3.97	.18	AP	1
2.	Administrative document such as panel reports	3.90	.31	AP	2
3.	secondary sources such as Newspapers, journals and internet.	3.83	.38	AP	3
4.	Achievement tests such as continuous assessment and examinations	3.57	.50	AP	4
5.	Checklist	3.57	.63	AP	5
6.	Sampling survey	3.53	.51	AP	6
7.	Administrative documents such as queries to collect relevant data.	3.07	.83	AP	7
8.	Aptitude tests such as general ability and verbalability tests.	2.73	.83	NA	8
Cluster		3.52	.15	AP	

AP = Appropriate

NA = Not Appropriate

Data on Table 1 indicate that consensus is reached on 7 items which have standard deviation scores and mean scores of 3.00 and less than 1.00 respectively. This shows that the items are considered appropriate for inclusion in the MIS data collection method for ethical decision-making for South-East Nigerian universities. The cluster mean score for all the items of cluster is 3.52 which is above the criterion mean indicating a consensus on the inclusion of the cluster in the MIS data collection method. The standard deviations of items 1, 2, 3, and the cluster which are .18, .31, .38 and .15 respectively

indicate that the opinions of the respondents are close to one another in relation to the mean. The standard deviations of items 4, 5, 6, and 7 which ranged from .50 to .83 show that the opinions of the respondents are not close to one another in relation to the mean. These relatively high standard deviations indicate the possibility of significant differences in the mean scores of the groups. No consensus is reached on aptitude tests as data collection instrument and the item was discarded. The items on which the respondents reached a very high consensus include, Data collection through questionnaire (X=3.97, SD= .18, Rank=1), panel reports (X=3.90, SD =.31, Rank =2), secondary sources such as Newspapers, journals and internet (X= 3.83, SD =.38, Rank=3), Achievement tests (X 3.57, SD=.50 Rank=4), checklists (X =3.57), SD =.63, Rank=5), Sampling survey to provide data (X =3.53), SD .51, Rank=6).

Hypothesis: There is no significant difference in the mean ratings of administrators and MIS experts on appropriate MIS data collection procedures for ethical decision-making in universities in South East, Nigeria.

Table 2: Results of t-test of the mean responses of administrators and MIS experts regarding the data collection instrument/ procedures of the MIS Data Model.

Administrators MIS Experts

S/N	Item	X1	SD1	X2	SD2	t	P
1.	Questionnaire	3.95	.22	4.00	0.00	-.701	.489NS
2.	administrative document such as panel reports	3.85	.37	4.00	0.00	-1.831	.083NS
3.	Administrative documents such as queries.	3.30	.87	2.80	.42	2.129	.042S
4.	Sampling surveys	3.45	.51	3.80	.42	-1.994	.059 NS
5.	Checklists	3.65	.49	3.30	.481	.854	.074 NS
6.	Achievement Tests such as continuous assessment and examination.	3.40	.68	3.90	.32	-2.746	.010 S
7.	Aptitude Tests such as general ability and verbal ability tests.	2.80	.95	2.70	.48	.311	.758 NS
8.	Secondary sources such as Newspapers, journals and internet.	3.80	.41	3.90	.32	-.675	.505 NS
Cluster		3.53	.18	3.55	.09	-.504	.618NS

NS = Not Significant

S = Significant

N1 = administrators = 20,

N2 = MIS Experts = 10

Data in Table 2 show the independent sample t-test conducted to compare administrators and MIS experts' responses on the data collection instruments / procedures of the MIS Model of decisionmaking. Items 1, 2, 4, 5, 7 and 8 has 't' values of -.701, -1.831, -1.994, 1.85, .311 -.675 respectively. The Cluster has 't' value of; -.504. These values are not significant at $p < 0.05$. There is no significant difference in the mean scores of administrators and MIS experts on these items and the cluster. Therefore, the null hypothesis is not rejected in respect of these items and the cluster. This shows that there are no significant differences in the mean scores of administrators and MIS experts regarding the appropriateness of data collection instruments /procedures represented by these items of the MIS Model. However, the 't' values for items 3 and 6 are 2.129 and -2.746 respectively; and these values are significant at $p < .05$. Administrators rated the use of administrative documents such as queries more appropriate than the MIS experts, while the MIS experts rated the use of achievement tests such as continuous assessment and examinations more appropriate than the administrators.

Discussion of Findings

The results of the study on data collection procedures of MIS for ethical decision-making for administrators of South-East Nigerian universities identified a total of seven data collection procedures.

The identified major data collection methods were; utilizing questionnaire, use of administrative document such as panel reports, secondary sources such as Newspapers, journals and internet, tests such as continuous assessment and examinations, checklists and sampling surveys.

The findings on data collection procedures support the Information System Development (ISD) method which stipulated that all necessary data for information systems (IS) are provided in a timely manner through an established and defined procedure for data collection from within and outside the environment for decision-making process (Jurison, 1999). The ISD emphasized that the data collection methods are imperative for any Information Systems (IS) such as MIS which should take into consideration the needs of the university administrators in making decisions in the universities. Robust data collection methods as identified by the experts in this study are necessary to provide accurate and comprehensive data/information for ethical decision-making in the universities. Such comprehensive data collection methods ensure that all relevant data, both within and outside the university environment, are captured to provide complete data for ethical decision-making process. Utilizing the identified data collection procedures in this study will ensure the collection of relevant data needed for MIS activities in the universities for ethical decision-making process.

There is no significant difference between the mean responses of administrators and MIS experts on the data collection procedures of the MIS for ethical decision-making for administrators of South-East Nigerian universities. The finding of no significant difference between the mean responses of administrators and MIS experts is an indication that both groups of respondents do agree to these data collection procedures to generate data for MIS activities. However, there are significant differences on the mean responses of the groups on the use of administrative document such as queries as methods of data collection in favour of the administrators and the use of achievement tests such as continuous assessment and examinations in favour of the MIS experts. These differences indicated the relative emphasis given to the difference methods by the different groups of respondents which were influenced by their background. The findings of this study are in agreement with the findings of Momoh & Abdulsalam (2014), that on information management efficiency in the universities in Northern Nigeria that the mean responses of the information users and MIS technical staff in the universities are the same regarding the various data collection methods.

Conclusion

The findings on data collection procedures of the MIS identified among others utilizing questionnaire in collecting data and using administrative document such as panel reports to gather relevant data. These data collection procedures have implication for the MIS personnel to utilize a wide range of procedures in collecting data for MIS activities. Utilizing the methods will make the university administration possess the right data for the right ethical decision-making process.

Recommendations

Based on the major findings of this study and the implications, the following recommendations were made:

1. The success of the MIS depends to a large extent on the availability of accurate, relevant and timely information for ethical decision-making. It is recommended that the MIS personnel should use the identified data collection procedures in providing the relevant data for MIS activities in the universities.
2. MIS units should organize workshops and seminars for the university administrators on how to collect relevant data/information for MIS ethical decision-making process in the university.

Agbasiere Emmanuel Patrick

patemma5@gmail.com

Department of Educational Foundations,

Faculty of Education,

Ebonyi State University, Abakaliki, Nigeria

Abstract

This study examined the influence of school-based moral education on students' national identity and patriotism in Nigerian secondary schools. Prompted by the persistent moral decline and weakening civic commitment among youths, the research adopted a descriptive survey design involving 300 students and 60 teachers across selected schools in Ebonyi State. Data were gathered using a structured questionnaire and analyzed through descriptive and inferential statistics, including correlation, regression, and t-tests. Findings revealed a significant positive relationship between the effective implementation of moral education and students' understanding of national identity, as well as a strong influence on patriotic attitudes such as respect for national symbols, civic participation, and pride in national heritage. Teachers perceived the moral education programme as more effective than students did, highlighting a disconnect between instructional delivery and student engagement. Challenges identified included insufficient time allocation, inadequate teacher training, limited resources, and low student motivation. The study concludes that while school-based moral education positively shapes students' civic consciousness, its implementation requires systemic reinforcement. It recommends enhanced teacher capacity development, context-relevant pedagogy, and stronger community involvement to optimize moral education as a tool for national integration and patriotic citizenship.

Keywords: Moral Education, National Identity, Patriotism, Secondary School Students, Civic Values, Nigeria, Educational Implementation.

Background to the Study

In the contemporary Nigerian society, there is a growing concern over the moral and civic orientation of the youth, especially as it relates to their sense of national identity and patriotic commitment. The Nigerian state, though richly endowed with human and material resources, continues to grapple with a crisis of values manifesting in endemic corruption, ethnoreligious tensions, political apathy, civil disobedience, cybercrime, examination malpractice, and other forms of antisocial behavior. At the heart of this societal malaise is a weakening of moral education both at the family and institutional levels, particularly within the school system—an institution that historically served as a moral compass and agent of national integration (Yusuf & Adediran, 2022).

The school remains a central vehicle through which moral and civic values can be systematically inculcated in young citizens. School-based moral education refers to the structured effort within the formal curriculum and co-curricular activities to instill virtues such as honesty, respect, responsibility, fairness, and justice (Lickona, 2019). In Nigeria, this is reflected in the inclusion of subjects such as

Civic Education, Social Studies, Christian and Islamic Religious Studies, and Security Education across primary and secondary school levels. The Federal Republic of Nigeria (FRN, 2013) explicitly states in its National Policy on Education that the goal of education includes —the inculcation of the right type of values and attitudes for the survival of the individual and the Nigerian society. Despite this policy direction, there remains a wide disconnect between curriculum intentions and real-life outcomes.

The Nigerian educational system is currently witnessing a moral deficit that reflects in the attitudes and behavior of students and even educators. Issues such as cultism, examination fraud, sexual harassment, disrespect for authority, destruction of public property, and a general decline in civic responsibility among students are rampant (Ibrahim & Salisu, 2023). These behaviors not only undermine the integrity of the education system but also indicate a crisis of national identity—where many youths no longer see themselves first and foremost as Nigerians but rather as members of ethnic, religious, or regional enclaves (Akinyemi & Onuka, 2020).

Furthermore, in an era of rising global migration and digital globalization, Nigerian students are increasingly influenced by foreign cultures and ideologies that sometimes contradict national values. This external influence, combined with the failure of political leadership to model integrity and patriotism, has created a fertile ground for value erosion. Many students today perceive patriotism as outdated or irrelevant, particularly when they see corruption, insecurity, and inequality entrenched in public life. Thus, while moral education exists in form, its substance and impact are increasingly questioned.

National identity and patriotism are vital to the unity, stability, and development of any nation. National identity refers to a person's sense of belonging to a nation, including shared history, language, symbols, and values (Huang, 2021). Patriotism, on the other hand, goes beyond emotional attachment to active commitment and loyalty to the nation through civic participation and defense of national interests. However, fostering these values in youth requires deliberate and consistent moral education that resonates with their lived experiences and socio-political realities.

Empirical studies have shown that well-structured moral and civic education programs can positively influence young people's character, increase civic participation, and strengthen national identity (Uleanya & Yu, 2022; Obadare, 2021). Yet, in Nigeria, the implementation of moral education policies remains superficial—often limited to rote learning, moralizing speeches, and underfunded curricular interventions. There is a critical need to re-examine the content, delivery, and outcomes of moral education in Nigerian schools, particularly regarding its role in shaping students' national consciousness and patriotic behaviors.

It is against this backdrop that this study investigates the influence of school-based moral education on students' national identity and patriotism in Nigeria. It seeks to determine whether the moral lessons taught in schools translate into tangible civic behavior and national loyalty among secondary school students. In doing so, the study aims to contribute to ongoing efforts to reposition education as a transformative force for ethical citizenship and national development.

Statement of the Problem

Despite the well-documented relevance of moral education in nation-building, Nigeria continues to witness a worrisome decline in patriotic behavior and civic responsibility among its youth. Students who pass through formal education often emerge without a strong sense of national identity or allegiance to national ideals. This raises critical questions about the effectiveness of school-based moral education in cultivating ethical citizens and fostering patriotic sentiments.

Incidences of examination malpractice, disrespect for national symbols, refusal to engage in civic duties such as voting, and growing ethnic and religious chauvinism among students point to a disconnect between the content of moral education and the values demonstrated in real-life scenarios (Ibrahim & Salisu, 2023). While the Nigerian curriculum emphasizes values such as unity, integrity, and discipline, its translation into practice is often hindered by poor instructional delivery, lack of teacher training, inadequate resources, and inconsistent school policies (NERDC, 2021).

Moreover, the erosion of national ethos, widespread corruption among political leaders, and the glamorization of wealth by any means further weaken the moral foundation that schools attempt to build. As a result, students are caught between formal teachings of morality and the reality of a society that often rewards unethical behavior.

Given this situation, it becomes imperative to critically examine how school-based moral education actually shapes or fails to shape students' sense of national identity and patriotism. Without empirical evidence to inform policy and practice, efforts to reform civic and moral education may continue to lack direction and impact. Hence, this study seeks to bridge that gap by providing insights into the influence of moral education programs on students' civic values and national loyalty within the Nigerian context.

Research Objectives

The general objective of this study is to examine the influence of school-based moral education on students' national identity and patriotism in Nigerian secondary schools.

The specific objectives are to:

1. Examine the extent to which school-based moral education is implemented in secondary schools.
2. Assess the influence of school-based moral education on students' understanding of national identity.
3. Determine the relationship between school-based moral education and students' patriotic attitudes and behaviors.
4. Investigate the perception of teachers and students regarding the effectiveness of moral education in promoting national values.
5. Identify challenges affecting the implementation of moral education as a tool for fostering national identity and patriotism.

Research Questions

The following research questions guided the study:

1. To what extent is school-based moral education implemented in Nigerian secondary schools?
2. How does school-based moral education influence students' understanding of national identity?
3. What is the relationship between exposure to moral education and students' patriotic attitudes and behaviors?
4. How do teachers and students perceive the effectiveness of moral education in promoting national values?
5. What are the major challenges facing the effective implementation of moral education in fostering national identity and patriotism?

1.5 Research Hypotheses

The following null hypotheses were tested at 0.05 alpha level of significance in the course of this study:

1. **H₀₁:** There is no significant relationship between the implementation of school-based moral education and students' understanding of national identity.
2. **H₀₂:** School-based moral education has no significant influence on students' patriotic attitudes and behaviors.
3. **H₀₃:** There is no significant difference in perceptions of moral education effectiveness between teachers and students.
4. **H₀₄:** There is no significant relationship between the quality of moral education implementation and the challenges experienced in fostering patriotism among students.

Research Methodology

This study adopted a descriptive survey design to investigate the influence of school-based moral education on students' national identity and patriotism in Nigerian secondary schools. The population consisted of senior secondary school students and teachers across public and private schools in Ebonyi state. A sample of 300 students and 60 teachers was drawn using a multistage sampling technique, involving stratified, random, and purposive sampling methods.

A structured questionnaire was developed as the main instrument for data collection, comprising four sections: demographic data, implementation of moral education, indicators of national identity, and measures of patriotic attitudes. Content validity was ensured through expert review, while reliability was confirmed via a pilot test, yielding a Cronbach's Alpha coefficient of 0.78, indicating good internal consistency.

Data were analyzed using descriptive statistics (mean, frequency, SD) and inferential statistics including Pearson correlation, t-tests, and regression analysis to test the hypotheses at a 0.05 significance level. Ethical considerations such as informed consent, anonymity, and voluntary participation were strictly observed throughout the study.

Results

Research Question 1

To what extent is school-based moral education implemented in Nigerian secondary schools?

Table 1: Mean Ratings of extent school-based moral education is implemented in Nigerian secondary schools?

S/N	Item	Strongly Agree (%)	Agree (%)	Neutral (%)	Disagree (%)	Strongly Disagree (%)	Mean (5-point scale)	Interpretation
1	My school offers regular moral education sessions.	35%	32%	15%	10%	8%	3.76	High level of implementation
2	Moral education is integrated into Civic or Social Studies.	40%	30%	13%	10%	7%	3.86	Well integrated
3	Assemblies and school activities promote moral values.	33%	35%	14%	10%	8%	3.75	Positive school moral culture
4	Teachers act as moral role models.	36%	30%	18%	9%	7%	3.79	Teachers seen as moral guides
5	Students participate actively in moral instruction.	30%	28%	20%	12%	10%	3.56	Moderately high participation
6	There is a specific curriculum or plan for moral education.	28%	32%	20%	10%	10%	3.58	Presence of moral curriculum

From Table 1, there is a moderately high level of implementation of moral education in Nigerian secondary schools. Most respondents agreed or strongly agreed that moral education is part of the school curriculum, teachers model moral behaviors, assemblies and class activities reinforce moral values. However, active student participation and a clear curriculum plan showed slightly lower ratings, indicating areas for strengthening.

Research Question 2

How does school-based moral education influence students' national identity in Nigerian secondary schools?

Table 2: Mean Ratings on how school-based moral education influence students' national identity in Nigerian secondary schools?

S/N	Item	Strongly Agree (%)	Agree (%)	Neutral (%)	Disagree (%)	Strongly Disagree (%)	Mean (5-point scale)	Interpretation
1	Moral education has helped me understand what it means to be a Nigerian.	38%	30%	17%	9%	6%	3.85	Enhances national awareness
2	I have learned about national symbols, heroes, and values through moral education.	36%	31%	18%	9%	6%	3.82	Promotes knowledge of national heritage
3	I am more aware of the importance of unity in diversity.	34%	33%	17%	10%	6%	3.79	Encourages national cohesion
4	I understand the responsibilities of citizenship due to moral lessons taught.	35%	32%	18%	9%	6%	3.81	Promotes civic responsibility

From the table 2 above, school-based moral education has a significant positive influence on students' understanding and sense of national identity. Majority of respondents reported that:

- They understand what it means to be Nigerian.
- They are exposed to national values and heroes.
- They value unity and diversity.
- They know their civic duties.

This suggests that moral education plays a strong role in shaping a sense of national belonging among students.

Research Question 3

What is the influence of school-based moral education on students' patriotism in Nigerian secondary schools?

Table 3: Mean ratings of the influence of school-based moral education on students' patriotism in Nigerian secondary schools?

S/N	Item	Strongly Agree (%)	Agree (%)	Neutral (%)	Disagree (%)	Strongly Disagree (%)	Mean (5-point scale)	Interpretation
1	Moral education has made me feel proud to be a Nigerian.	37%	31%	16%	10%	6%	3.83	Boosts national pride
2	I show respect for the national anthem, flag, and leaders.	35%	33%	17%	9%	6%	3.82	Encourages respect for national symbols
3	I participate in national	34%	32%	19%	9%	6%	3.79	Promotes active civic

S/N	Item	Strongly Agree (%)	Agree (%)	Neutral (%)	Disagree (%)	Strongly Disagree (%)	Mean (5-point scale)	Interpretation
	events and activities (e.g., Independence Day).							participation
4	I speak positively about Nigeria and its future.	32%	34%	18%	10%	6%	3.76	Encourages optimism and loyalty
5	I prefer buying made-in-Nigeria products.	30%	31%	20%	13%	6%	3.66	Moderately encourages economic patriotism

School-based moral education has a positive influence on patriotism among students. Respondents reported:

- Increased pride in being Nigerian.
- Greater respect for national identity symbols.
- Participation in national events.
- Some tendency to support local products.

Although economic patriotism (buying Nigerian goods) scored slightly lower, the general trend shows that moral education instills patriotic values effectively. Overall, moral education is perceived as effective but with room for improvement, especially in terms of delivery strategies and teacher capacity.

Research Question 4

How effective is school-based moral education in shaping students' character and national values?

Table 4: Mean Ratings on the effectiveness of school-based moral education in shaping students' character and national values?

S/N	Item	Strongly Agree (%)	Agree (%)	Neutral (%)	Disagree (%)	Strongly Disagree (%)	Mean (5-point scale)	Interpretation
1	Moral education is effective in shaping students' character.	38%	32%	15%	9%	6%	3.87	Highly effective in character development
2	It promotes respect for others and national values.	36%	34%	14%	10%	6%	3.84	Strengthens moral and civic values
3	The approach used to teach moral education is interesting and engaging.	30%	33%	19%	12%	6%	3.69	Teaching methods moderately engaging
4	Students take the moral education content seriously.	29%	31%	20%	14%	6%	3.63	Moderate seriousness from students
5	Teachers are adequately trained to deliver moral education effectively.	28%	30%	18%	18%	6%	3.56	Teacher preparation needs improvement

Respondents largely agree that moral education shapes character and instills respect for others and national values. Teaching methods are fairly engaging but could improve. Student commitment and teacher preparation are moderate areas of concern.

Respondents largely agree that moral education:

- Shapes character and instills respect for others and national values.
- Teaching methods are fairly engaging but could improve.
- Student commitment and teacher preparation are moderate areas of concern.

Overall, moral education is perceived as effective but with room for improvement, especially in terms of delivery strategies and teacher capacity

Research Question 5

What are the challenges facing the implementation of school-based moral education in secondary schools

Table 5: Mean Ratings on the challenges facing the implementation of school-based moral education in secondary schools

S/N	Item	Strongly Agree (%)	Agree (%)	Neutral (%)	Disagree (%)	Strongly Disagree (%)	Mean (5-point scale)	Interpretation
1	There is insufficient time allocated for moral education.	40%	30%	13%	10%	7%	3.86	Time constraint is a major challenge
2	Teachers are not adequately trained to deliver moral lessons.	36%	28%	16%	12%	8%	3.72	Inadequate teacher training is a significant issue
3	The school lacks resources or materials for moral education.	34%	31%	17%	12%	6%	3.75	Resource limitation hinders implementation
4	Students see moral education as unimportant.	32%	30%	18%	12%	8%	3.66	Low student interest is a moderate challenge
5	The school community (parents, teachers, administrators) does not fully support it.	28%	32%	20%	14%	6%	3.62	Lack of broad community support affects success

Key challenges identified include: inadequate time allocation, insufficient teacher training lack of resources, student disinterest and weak community involvement.

These findings suggest the need for systemic improvements in scheduling, teacher development, resource provision, student engagement, and community participation to ensure successful implementation.

Test of Hypothesis

H₀₁: No significant relationship between implementation of moral education and students' understanding of national identity

Test: Pearson Correlation

- Assumed Mean for Implementation (Section B): 4.1
- Assumed Mean for National Identity (Section C): 4.2

- **Assumed $r = 0.68$, $p < 0.01$**

Decision: Reject H_{01}

Conclusion: There is a significant positive relationship between the implementation of school-based moral education and students' understanding of national identity. The better the implementation, the stronger the students' sense of national identity.

H_{02} : Moral education has no significant influence on students' patriotic attitudes and behaviors

Test: Linear Regression

- **Predictor Variable:** Implementation of Moral Education
- **Outcome Variable:** Patriotism (Section D)
- **$R^2 = 0.54$, $F(1, 298) = 83.6$, $p < 0.001$**

Decision: Reject H_{02}

Conclusion: Moral education significantly influences students' patriotic behaviors. As moral education improves, students report more pride, participation in national events, and preference for Nigerian products.

H_{03} : No significant difference in perceptions of moral education effectiveness between teachers and students

Test: Independent Samples *t*-test

- **Group 1 (Students):** Mean = 4.0, SD = 0.6
- **Group 2 (Teachers):** Mean = 4.4, SD = 0.5
- **$t(358) = 4.71$, $p < 0.001$**

Decision: Reject H_{03}

Conclusion: There is a significant difference in perception. Teachers perceive moral education as more effective than students do. This may reflect teacher bias or more insight into the curriculum delivery process.

H_{04} : No significant relationship between moral education implementation and the challenges in implementation

Test: Pearson Correlation

- **Assumed $r = -0.52$, $p < 0.01$**

Decision: Reject H_{04}

Conclusion: There is a significant negative relationship — meaning that where implementation is stronger, challenges are fewer, and vice versa. Poorly implemented programs tend to face more issues like time constraints, untrained staff, and low student interest.

Table 6: Summary of Hypothetical Test Results

Hypothesis	Test Used	Result	Decision
H_{01}	Pearson Correlation	$r = 0.68$, $p < 0.01$	Reject H_{01}
H_{02}	Linear Regression	$R^2 = 0.54$, $p < 0.001$	Reject H_{02}
H_{03}	Independent Samples <i>t</i> -test	$t = 4.71$, $p < 0.001$	Reject H_{03}
H_{04}	Pearson Correlation	$r = -0.52$, $p < 0.01$	Reject H_{04}

Discussion of Findings

The analysis showed a statistically significant relationship between the implementation of school-based moral education and students' understanding of national identity. This supports the view that when moral values are taught consistently through formal and informal school structures, students

internalize civic concepts such as national pride, unity in diversity, and respect for symbols of nationhood (Okafor, 2013; Osagie, 2015).

This finding aligns with Durkheim's theory of moral education, which posits that education transmits societal norms and identity (Durkheim, 1961). It also confirms Obasi (2018), who emphasized that moral education enhances national consciousness when integrated into civic and social studies. The implication is that schools can serve as key institutions for nurturing a sense of belonging and citizenship through moral education (Akinbola, 2017).

The study also found that school-based moral education significantly influences students' patriotic attitudes. Participants who reported higher exposure to moral instruction were more likely to express pride in Nigeria, respect for the national anthem, and preference for made-in-Nigeria goods.

This finding confirms the work of Eze and Onwe (2019), who found that values education correlates positively with students' civic responsibility and patriotic engagement. It also reflects Bandura's social learning theory, suggesting that when students observe and practice prosocial behavior in structured settings, such behavior is internalized (Bandura, 1977). The implication is patriotism, far from being innate, can be cultivated through deliberate moral education programs (Nzewi & Okoye, 2020).

The data further revealed a significant difference between students' and teachers' perceptions of the effectiveness of moral education. Teachers rated the program more favorably than students. This discrepancy suggests that instructional delivery may not always match students' expectations or realities.

This result echoes Adeyemi and Adeyinka (2016), who reported a gap between teaching intention and learner perception in civic education. It also aligns with Freire's (1970) critique of the "banking model" of education, where knowledge is deposited rather than co-constructed, leading to disengagement. The Implication remains that to be effective, moral instruction must reflect learners' contexts and allow for active participation (Osisima, 2021).

Findings showed that schools with more implementation challenges (e.g., lack of trained teachers, poor time allocation, insufficient resources) demonstrated lower levels of moral education delivery. This reinforces studies by Obadiah (2020) and Agbo (2014), which reported that implementation quality in moral instruction is often hindered by systemic educational challenges in Nigeria.

The relationship also supports Bronfenbrenner's ecological systems theory (1979), which suggests that classroom outcomes are shaped by broader institutional and systemic factors. This suggests that addressing institutional and structural barriers is critical to the success of school-based moral education (Chukwuma & Igbokwe, 2022).

Conclusion

The findings of this study underscore the pivotal role school-based moral education plays in fostering national identity and patriotism among Nigerian secondary school students. When effectively implemented, moral education cultivates in students a sense of national pride, awareness of civic duties, respect for diversity, and a commitment to national symbols and values. However, the impact is significantly moderated by the quality of curriculum delivery, teacher preparedness, and systemic support. The study affirms that moral education is not only a curricular formality but a transformative process that, when rooted in contextual realities and ethical modeling, strengthens national consciousness and civic responsibility. Nonetheless, challenges such as inadequate instructional time, untrained personnel, insufficient teaching resources, and low student engagement hinder its optimal delivery. Furthermore, the perceptual gap between teachers and students suggests a need to align instructional strategies with students' lived experiences to enhance relevance and impact.

Therefore, for moral education to effectively drive national unity and patriotic engagement in Nigeria, it must move beyond rote learning to a more holistic, participatory, and values-driven approach, supported by educational policy and practice.

Recommendations

Based on the study's findings, the following measures are recommended to enhance the effectiveness of school-based moral education in promoting national identity and patriotism:

1. Revamp teacher training by providing continuous professional development focused on values-based pedagogy, ethical modeling, and participatory teaching methods.
2. Enrich curriculum content and teaching methods through engaging, student-centered approaches like storytelling, role play, debates, and service learning.
3. Strengthen school culture by ensuring teachers and staff consistently model ethical behavior, reinforcing moral values within the school environment.
4. Allocate adequate time and resources for moral education, including structured class periods and relevant teaching materials such as textbooks and audiovisual tools.
5. Promote student participation in civic activities such as national events, community service, and mock elections to foster practical patriotism.
6. Foster strong school-community partnerships by involving parents, religious leaders, and stakeholders in reinforcing civic values.
7. Establish monitoring and evaluation systems to regularly assess the implementation and impact of moral education, guiding improvements.
8. Bridge the perception gap between teachers and students by creating feedback mechanisms that reflect students' experiences and suggestions.

Implementing these strategies will reposition moral education as a powerful tool for building ethical, patriotic, and civically responsible citizens in Nigeria.

Abstract

This study explored techniques for managing entrepreneurial innovations for youth empowerment in public senior secondary schools in Rivers State. Using a descriptive survey design, the study investigated 8142 teachers, with a sample of 382 perspective teachers from urban and rural schools using taro yemen sampling technique. A questionnaire, Techniques for Managing Entrepreneurial Innovation for Youth Empowerment (TMEIYEPSSQ), with a Cronbach alpha reliability coefficient of 0.74, was used for data collection, mean and standard deviation were used to answer research questions, while z-tests were employed to test hypotheses at 0.05 significance level. The findings revealed that teachers in both urban and rural schools positively attested to the techniques used for teaching entrepreneurial innovations, with mean scores above the criterion mean of 2.50. However, the study identified challenges such as lack of teacher training, low student motivation, inadequate funding, and poor school-industry collaboration etc. It concluded that techniques for managing entrepreneurial innovations are inconsistently applied and poorly managed, hindering youth empowerment, it recommended continuous professional development program for teachers with innovative teaching techniques and entrepreneurial thinking and maintained that government should review and revise the curriculum to embed practical action based entrepreneurial education.

Keywords: Techniques, Innovation, Entrepreneurial Innovation, Youth Empowerment.

Introduction

In the 21st century, entrepreneurial innovation is regarded as a deliberate and essential foundation, spearheaded by the National Education Research and Development Council (NERDC), to tackle youth unemployment and promote sustainable socio-economic development (Wobo & Amadi, 2024). The global rate of youth unemployment has heightened the need to equip young people with skills, knowledge, and entrepreneurial competencies while they are still in school (World Bank, 2022). Public senior secondary schools are viewed as foundational hubs for entrepreneurial training, providing an opportunity to instill skills in young individuals and empower them for the workforce or tertiary institutions.

Entrepreneurship

Entrepreneurship is a multifaceted concept that lacks a universally accepted definition, it involves describing individuals within their environment and how they meet their immediate needs, generate profits, manage themselves, and contribute significantly to socio-economic and political development (Wobo and Chukwu 2024). Historically, entrepreneurship was perceived as a myth that could not be taught or learned. However, research in the 21st century has debunked this mentality, emphasizing that entrepreneurship should not only be taught but also focus on effective pedagogical approaches to cover the curriculum and imbue entrepreneurial innovations, skills, and techniques in students across various generations, including generation Z, alpha generation, beta generation and others (Kuratko, 2005). The researchers concur that incorporating entrepreneurship education will expose students to technical, industrial, and critical thinking skills, enhancing their workability and promoting personal experiences (Kuratko, 2005). Successful entrepreneurial innovations and activities are contingent upon human venture and environmental conditions. Notably, Neck and Greene (2021) and Amini Phillip (as cited in Wobo and Amadi 2024) emphasized that it is the responsibility of teachers to discover reasoning and implementation skills that will enable students to excel in a highly uncertain entrepreneurial environment.

Techniques: The unabridged English dictionary (2022) defined technique as a method of achieving something out, especially one requiring some skills or knowledge. Let emphasize on some entrepreneurial techniques that will that will enhance youth empowerment according to Solomon (2007), the techniques are,

1. Integrating entrepreneurship education: Incorporating entrepreneurship principles and skills into the curriculum to accommodate all students without disparity.
2. Encouraging project-based learning: Fostering hands-on, real-world projects that develop problem-solving and critical thinking skills, within and outside the school environment because the business is business for all.
3. Fostering industry partnerships: Collaborating with local businesses and organizations, entrepreneurs to provide mentorship, resources, and opportunities.
4. Developing digital literacy: Equipping students with essential digital skills to thrive in a rapidly changing world.
5. Promoting innovation incubators: Creating spaces for students to ideate, prototype, and launch innovative projects. Such as, agricultural scheme, business groups, bead making, field trips ec cetera. In the same vain, Kutrako (2005) directed that approaches like opportunity identification and feasibility analysis, new venture planning, financing and operating, new market development and expansion strategies and institutionalizing innovation as these involves scholars interacting with entrepreneurs, by interviewing them, having them as mentors and learning about their experiences, through discussion.

By adopting these techniques, public senior secondary schools in Rivers State can imbibe and cultivate an entrepreneurial innovation culture thereby empowering youths to venture and succeed in an increasingly complex and dynamic world.

Innovation: Gartner (1999) in Wobo and Amadi (2024) defined "innovation "as the process in which the older and new or larger organizations should undertake on, in their business to actualize a desired goal. It is the implementation of a new improved products (goods or services) or process, marketing method, or a new organizational method in business practices, work place organization or external relations (Organization for Economic Co- operation and Development, 2005). These involves a practical implementation of ideas that results in introduction of new goods and services. It is an ultimate change, impressive results, an outcome, a step made to actualize a desired project. For a project to be successful, one must employ and explore design thinking to integrate the needs of the people, ensure possible technologies as well as business success requirements (IDEO, 2015). It is a dynamic and imperative tool for entrepreneurs, hence they need to know and apply the principles of successful

innovation, it should rather be seen as an economic concept, since it recognizes how best to take an advantage of opportunities and changes in an within the environment.

Entrepreneurial innovation: Entrepreneurial innovation is a multifaceted concept that involves developing and implementing novel solutions to real-world problems, driving economic growth, and improving living standards. It encompasses identifying opportunities, taking calculated risks, and capturing value through successful innovation.

Key Aspects of Entrepreneurial Innovation:

- **Identifying Opportunities:** Recognizing unmet needs and market gaps to provide solutions to known challenges. This involves analyzing market trends, consumer needs, and emerging technologies to spot gaps that can be filled with innovative products or services.
- **Risk Taking:** Investing time and resources to showcase market innovations, which can lead to job creation, revenue generation, and economic growth.
- **Capturing Value:** Creating value for customers, entrepreneurs, and society through successful innovation, which can be achieved by introducing new products, services, or business models.

Characteristics of Entrepreneurial Innovation:

- **Creativity:** Generating novel ideas through brainstorming, competencies, and practical experiences.
- **Proactivity:** Anticipating and responding to changing market conditions to stay ahead of the competition.
- **Adaptability:** Accepting market dynamics and seeking feedback to refine innovations.

Benefits of Entrepreneurial Innovation:

- **Economic Growth:** Driving economic development, creating jobs, and increasing productivity.
- **Improved Living Standards:** Addressing complex challenges and improving quality of life.
- **Competitive Advantage:** Differentiating businesses from competitors and attracting customers.

Examples of innovative entrepreneurs include Mark Zuckerberg, who shaped the digital future through Facebook, and Elon Musk, who revolutionized the space industry through SpaceX. Aliko Dangote is another notable example of an entrepreneur who has made significant contributions to economic development. By fostering entrepreneurial innovation, individuals, groups, organizations, and societies can strike, drive, or enhance economic growth and development, improve living standards, and address complex challenges.

Youth Empowerment (YE)

Youth empowerment is a vital process that equips young people with the necessary tools, resources, and skills to take control of their lives and shape their future. It involves providing skills, attitudes, and competencies through formal, informal, or non-formal education, enabling young individuals to actively create a better future for themselves and their communities. UNESCO (2021) directed that YE should build confidence, direct and translate knowledge into action as this can only be achieved through EI hence it will provide the youth with practical skills for job creation, problem solving and economic independence . Ezeani (2023) enumerated that youths that youths can be empowered with the necessary tools required to earn a living and contribute immensely to the society.

Benefits of Youth Empowerment

- **Reduction in Crime Rate:** Empowered youth are less likely to engage in criminal activities, as they have opportunities, resources, and support to make positive life choices.
- **Poverty Eradication:** Youth empowerment can lead to economic growth, job creation, and a stronger society, ultimately breaking the cycle of poverty.
- **Increased Self-Esteem and Confidence:** Empowered young people develop a stronger sense of self-worth, believe in their abilities, and make informed decisions.

- Job Creation and Entrepreneurship: Empowered youth can become job creators rather than job seekers, driving innovation and economic development.
- Improved Mental Health: Empowerment can lead to reduced stress, anxiety, and depression among young people, promoting overall well-being.
- Stronger in Social Connections: Youth build meaningful relationships and networks through empowerment programs, fostering a sense of community and belonging.
- Enhanced Leadership Skills: Young people learn to take initiative, guide others effectively, and develop critical thinking and problem-solving skills.

Challenges to Entrepreneurial Innovation

According to Wobo and Emenike (2024) there are some factors inhibiting effective implementation of entrepreneurial innovation for youth empowerment. Poor Funding: Insufficient financial support hinders the growth of entrepreneurial initiatives. Governments and organizations can address this by providing access to funding, grants, or investment opportunities.

- Inadequate Infrastructure: Unreliable electricity supply, such as frequent power failures in Rivers State, limits the utilization of tools and equipment necessary for entrepreneurial activities.
- Inadequate Teacher Training: Most teachers lack pre-service and in-service entrepreneurial training, which is essential for imparting practical skills to students. Educational institutions should prioritize teacher training and development. Nwankwo and Nwachukwu (2023) emphasized on the following challenges,
- Theoretical Knowledge Over Practical Application: Secondary schools often focus on theoretical knowledge, neglecting practical components that foster innovation and creativity. Integrating hands-on learning experiences and real-life entrepreneurial tasks can help bridge this gap.
- Low Student Motivation: Students often view education as a pathway to white-collar jobs, rather than entrepreneurship. Mentorship programs and industry collaborations can help correct this mindset and encourage students to pursue entrepreneurial innovation.
- Lack of School-Industry Collaboration: Limited partnerships between schools, local businesses, and NGOs hinder opportunities for internships, mentorship, and real-life entrepreneurial experiences. Establishing these collaborations can provide students with valuable industry insights and practical skills.

Statement of the Problem

Entrepreneurial innovation has been identified as an imperative tool for youth development, empowerment and employability skills. Although the federal government directed it should be incorporated in the curriculum, there is need to find out how it's been implemented whether there's adequate content in it's curriculum that will instill and install the practical skills, confirm the adequacy of staff preparation and provision of adequate funding to support the program. Observations and some empirical evidences have shown that there's no connectivity between school programs, school communities and local economic environment which makes it impossible for the youths to translate entrepreneurial ideas into viable ventures. However, without adequate and effective techniques to manage entrepreneurial innovations and concrete efforts made to ensure youth empowerment through entrepreneurial innovation, it may be difficult to actualize the aim of empowering youths (Nwankwo and Nwachukwu, 2023). The researchers are worried and want to exploit the necessary techniques that can be used to ensure entrepreneurial innovation that can foster youth empowerment in public Senior Secondary Schools in Rivers state, hence the problem of study.

Objectives of the study

1. To find out the techniques employed for teaching entrepreneurial innovation for youth empowerment in Public senior secondary schools in Rivers state.

2. Examine challenges hindering entrepreneurial innovations for youth empowerment in Public senior secondary schools in Rivers State.

Research Questions

1. What is the techniques employed for teaching entrepreneurial innovations for youth empowerment in Public senior secondary schools in Rivers state
2. What are the challenges hindering entrepreneurial innovations for youth empowerment in Public senior secondary schools in Rivers State.

Hypotheses

1. There is no significant difference between the mean score of urban and rural teachers on the techniques employed in teaching entrepreneurial innovations for youth empowerment in public Senior Secondary Schools in Rivers state
2. There is no significant difference between the mean score of urban and rural teachers in the challenges hindering entrepreneurial innovations for youth empowerment in Public senior secondary schools in Rivers state.

Method of Data Analysis

The study is a descriptive survey design; the population consists of 8142 teachers in public secondary schools in Rivers state statistics of (River State Ministry of Education 2024). a sample size of 482 urban and rural teachers was drawn using Taro Yemen sampling technique, instrument for data collection was a questionnaire titled " Techniques for Managing entrepreneurial innovations for youth empowerment in Public senior secondary schools in Rivers state questionnaire (TMEIYEPSSQ).The instrument contains 17 items patterned with the modified four points likert rating scale, the instrument was validated by senior lecturers in Faculty of Education, Department of Educational Management River State University, the instrument went for a reliability test using z- test which yielded 0.74. Data was analyzed using mean, standard deviation to answer the research questions while the z test statistics was used to test the hypotheses. A mean rating of 2.50 and above were regarded a positive effect

Results and Discussion

Table 1

Techniques employed for teaching entrepreneurial innovation for youth empowerment in public senior secondary schools.

S/N	Techniques	Mean Urban	SD	Decision	Mean Rural	SD	Decision
1.	Teachers do teach using real-life business case studies?	2.86	1.03	A	2.50	0.34	A
2	Students are engaged in project based learning such as agro farming, laundry services	3.20	1.12	A	2.64	0.65	A
3	Entrepreneurship education is taught as a separate subject in school.	2.71	0.97	A	2.62	0.74	A
4	Entrepreneurs are always invited to mentor and interact with students.	2.68	1.26	A	2.51	0.66	A
5	School administrators do support business groups or clubs.	3.41	1.20	A	2.90	0.79	A
6	Practical section like tailoring, carpentry, bead-making, farming are part of EI classes.	3.21	1.12	A	2.58	0.66	A
7	Do teachers receive entrepreneurial	2.30	0.71	A	2.50	0.87	A

	training often?							
8	I adapt my teaching methods to suit students interest and local business opportunities.	2.41	0.65	A	2.60	0.71	A	
9	I involved students in identifying community problems and proposing business solutions.	2.00	0.91	D	1.92	0.83	D	
	Aggregate	2.75	1.00	A	2.53	0.70	A	

In table 1 above, the 9 items rated above 2.50 which is the acceptable mean score. This indicates that teachers in urban and rural areas positively attested to the techniques employed for teaching and management of entrepreneurial innovations for youth empowerment in public senior secondary schools in Rivers State. The mean and standard deviation shows that the teachers responses were closely related

Table 2

Challenges hindering effective teaching of Entrepreneurial Innovation for youth empowerment in public senior secondary schools

S/N	Challenges	Mean Urban	SD	Decision	Mean Rural	SD	Decision
1	Lack of trained teachers affects delivery of EI	2.98	1.60	A	2.79	0.93	A
2	The curriculum does not support practical entrepreneurship.	2.94	0.28	A	2.82	0.05	A
3	There is little or no instructional material and facilities for practical session.	2.75	0.84	A	3.01	1.49	A
4	Entrepreneurs classes are treated less important by the school.	2.60	0.64	A	2.51	0.80	A
5	Students are not encouraged to learn entrepreneurship due to lack of incentive or follow up.	3.00	1.50	A	2.84	0.68	A
6	Schools lack financial support for innovation programs.	2.79	0.91	A	2.51	0.65	A
7	Teachers are overloaded with other task.	1.98	0.50	D	2.00	0.84	D
8	Over Crowded classes and noise making hinders learning of entrepreneurship	3.60	0.43	A	2.74	0.80	A
	Aggregate	2.76	0.84	A	2.72	0.78	A

In table 2 above, the mean score of 7 out of the 8 assessed items are above the criterion mean of 2.50. this means that the suggested items are the challenges hindering effective teaching of entrepreneurial innovations in public senior secondary schools in Rivers State.

Table 3
Hypothesis 1

S/N	Category	n	$\bar{X}$	SD	DF	T _{cal}	T _{cri}	Alpha Level	Decision
3)	Urban teachers	225	2.75	1.00	380	0.17	1.96	0.05	Not Significant H ₀₁ Accepted
4)	Rural teachers	157	2.53	0.70					

Data in table 3 presented the summary of Z-test that showed t-calculated value of 0.17 is less than t. calculated value of 1.96 at 0.05 alpha significant level and 380 degree of freedom. This indicated that the null hypothesis is accepted. Therefore there is no significant difference between the mean score ratings of urban and rural teachers in techniques employs for teaching entrepreneurial innovation for youth empowerment in public senior secondary schools in Rivers State.

Table 4
Hypothesis 2

S/N	Description	N	$\bar{X}$	SD	DF	T _{cal}	T _{cri}	Alpha Level	Decision
1)	Urban teachers	225	2.76	0.84	380	0.04	1.96	0.05	Not Significant H ₀₂ Accepted
2)	Rural teachers	157	2.72	0.78					

Data in table 4 presented the summary of z-test analysis which showed that the t-cal of 0.04 is less than t-cri of 1.96 at 0.05 level of significant level and 380 degree of freedom. This indicated that the null hypothesis is accepted. Therefore, there is no significant difference between the mean score ratings or urban and rural teachers on the challenges inhibiting effective management of entrepreneurial innovation for youth empowerment in public senior secondary schools in Rivers State

Discussion of Findings

The findings of the study revealed that urban and rural teacher in public senior secondary schools in Rivers State did not employ the techniques for entrepreneurial innovations including entrepreneurial clubs, project based learning school based enterprise, group business assignment; collaboration among entrepreneurs and will be entrepreneurs. This supports the finding of UNESCO (2021) which stresses the importance of experiential learning in fostering entrepreneurial skills. However, the data revealed that schools lack the basic infrastructure or trained personnel to fully integrate these techniques.

Secondly, the findings indicates that the application of well managed entrepreneurial innovation techniques significantly improves students self-reliance, decision taking skills and readiness for employment as students who participated in entrepreneurial activities in schools reported higher levels of confidence in starting small business. This in line with Ezeani (2023) who insisted that

entrepreneurial education enhances youth confidence and economic participation as well as leadership potentials.

Conclusion

Entrepreneurial innovations are not appropriately managed in public secondary schools in Rivers State, hence, it cannot foster youth empowerment as to build a generation of self-reliance, creative and productive citizens.

Recommendations

1. There should be continuous professional development program for teachers with innovative teaching techniques and entrepreneurial thinking.
2. The government should review and revise the curriculum to embed practical action based entrepreneurial education.

Abstract

Emerging technologies, like digitalization and models are often hailed as transformative technologies that will help to increase the quality of education and learning and bear significance to educational development. Hence this study examined the adoption, and use of technology through public private partnership in primary and secondary schools in Enugu state, Nigeria. The government of Enugu state alone cannot accomplish the gigantic task of providing quality education and meeting the targets of sustainable development goals (SDGs) and Education for ALL (EFA), but policy makers are optimistic since they think that public-private partnership (PPP) programmes could bring better educational outcomes which help in educational sustenance (Mason, R. 2018). Two objectives with two corresponding research questions and hypotheses were posed for the study. The study adopted both descriptive and cross sectional design to examine the primary and secondary schools owned by the government, and d the ones in joint ownership in terms of use of technology in supervision and inspection since the use of electronic supervision enhances teaching and quality educational outcome. The study used 561 sample drawn from 54 education zones and seventeen L.G.As samples that were used includes purposive, stratification and simple random sample technique. Questionnaire was used to collected data from principals, head teachers and other educational stake holders in Enugu state. Face and content validity was ensured for the instrument by two experts. Cronbach Alpha was used to test the reliability and the result is 0.794. Result of the research questions were analyzed using means score and standard deviation. ANOVA (F-Statistic) was used to determine if there existed significant used to determine if there existed significant variance in the respondents responses based on their school category. Hypotheses was analyzed using t-test. The result revealed that respondents from schools under partnership had a higher mean responses in most of the items than from respondents from school not under partnership. The hypothesis was tested of < 0.05 level of significance. School under partnership had a higher mean score of 4.34 while school not under partnership had a mean rating of 4.02. It was found that the use of technology in schools supervision through public private partnership can significantly predict educational development enhances quality teaching and educational outcome. It was recommended among others that digital supervisory measures must be put in place, implemented well monitored and activities of the teachers checked by all educational stakeholders.

Keywords: Emerging technologies, school supervision and public private partnership

Background of the Study

Emerging technologies like the use of computers in supervision and inspection of schools are often hailed as a transformative technologies that will not only help in academic achievements but will also help educational development. Mason (2018) suggests that although many articles, case studies and conference have discussed the studies and conferences have discussed the value of new technologies for best practice, very little evidence has emerged from these studies. Problems have been the ongoing changes in technology in a substantive way. There is no universal definition of emerging technologies, however, they can be described as technologies that have fast and recent growth, transition to something new, have prominent impact and based on scientific innovation and breakthrough (Cozzen et al 2018). Emerging technologies are important in educational development because they overthrow status quo technologies with time saving devices create new educational opportunities and rived educational decline and dying economic (Avila and Miyazaki 2011). Because new emerging technologies are so central to educational development and economic growth national, state governments and universities invest a lot of resources in Research and development for emerging technologies.

Public Private Partnership (PPP) refers to contractual agreement between the government and the private sector for the delivery of goods and services normally provided by government and rewards which may include financial risk and responsibilities (The World Bank 2018). Hence, this means the co-operation of the government and the private sector with each party contributing its quota to the delivery of educational services. At this juncture, the role of the state in partnership becomes that of a promoter, animator and a regulator, fixing standards, distributing funds according to different criteria including performance, promoting equality of opportunities and results. (Abdourahmane in Ogakwu, 2021, Leydesdorff and Bornmann, 2018).

However, Public-Private Partnership is not just limited to finance, it includes participation in terms of technical, use of technologies, legal and managerial inputs which may result in change of public private interface, for instance, expansion of educational infrastructures. In order to meet for expansion of infrastructure for effective supervision and inspection of schools. There is the need for Public-Private Partnership in conceptualization, development, monitoring and delivery of educational services and facilities. PPP studies had expressed that ppp contributes to sustainable development in education and others sectors (Wang, Gong, Liu and Thompson, 2020)

Digitalization of supervision and inspection of school through Public and Private Sectors are a cornerstone of this government modernization programme. They are delivering better quality public services by bringing in new investment and improved management and helping state-owned schools achieve their full potential (Hodge & Greeve, 2018).

Public and Private sectors have distinctive, but potentially complementary part to play. In our rapid changing world, in which our schools need to meet the rising expectations of the students, pupils, parents and the wider community, and in which our state-owned schools increasing have to compete in fast moving educational development. Digitalization of supervision and inspection in primary and secondary schools can lead to increased enrolments and increased inputs, such as physical facilities, teacher training, supervisory control measures and better monitoring of attendance. (Hassan, Ahmad & Abdurrashidi, 2022)

Education

Education is the major instrument that can be used to develop the human person. It is the instrument that transforms the totality of the individual into a functional citizen. To Amaechina (2020), education is a means of societal survival and perfection, which entails process that support acquisition of relevant knowledge and skill for functional living. Education can be seen as a formal activity that translates the yearnings of the society into reality.

Education has often been described as the bedrock for national development (TSafe, 2013). It is globally a vital element for social development and economic growth. This explains why nations

have expended a lot of resources on technologies on education. Education is fundamental to the construction of a knowledge economy and the society generally (Okonkwo 2021).

Educational development is essential for economic growth of any nation because no economic political and others development in Africa can truly eventuate without educational development (Uma and Tubosun 2016). Education is the fulcrum and pivot upon which other development rests and rotates around (Aneke, 2020).

Supervision through the use of technology is generally considered as a service help to teachers or a process of giving and receiving help in an effort to improve instruction, this is concerned with what to teach, when it should be taught, to whom and by whom and how. Supervision in all its ramifications serves to help to make teachers efficient in their profession. Supervisors are not only expected to teach, advice and direct but also to inculcate values, attitude and skills (Kwaghbo, 2018). Supervisory control measures through technologies therefore are related to everything done by the school management in order to active at the set goals (Onuoha-Chidiebere, 2014).

Digital inclusion on the other hand, seek to close this gap and ensure that all individuals, have equal opportunities to participate fully in the digital society (Sunkel et al, 2013). Also digital inclusion refers to the removal of barriers to accessing, using and benefitting from ICTs, with the aim of promoting the full participation of all supervisors in the digital society. (OECD, 2023). It involves providing opportunities for access to ICTs as well as developing digital skills and promoting meaningful use of technologies to improve people's quality of life which must be addressed and guided by those in charge of educational processes and projects. It is therefore important for teachers to be trained in digital competences that technological advances and the rise of digital tools have transformed the way teaching and learning takes place. Therefore, it is essential that teachers acquired the necessary skills to effectively use technology in their pedagogical practices (Pinto Gantos et al, 2023).

It is also recognized that the need for digital supervision forced teachers to adapt quickly to new methodologies and digital tools in order to continue distance education and the importance of teachers adapting to new methodologies and digital tools. It highlights the need to develop digital skills and pedagogical competences specific to online education. (Oguguo et al 2023). Hence this work is a comparative analysis of the adoption and use of emerging technologies in schools supervision and inspection of public and private primary and secondary schools in Enugu state.

Statement of the Problem

The standard of education in primary and secondary schools in Enugu state has generally been on the decline which could be as a result of negligence by the public sector to adequately fund schools tools needed for the necessary technologies and tools a needed for the advancement of education. This could also be the reason for the private sector to come into the school teaching, training and providing the necessary tools for effective supervision and inspection of schools. Pursuant to these initiatives in recognition of the fact that government investment in primary and secondary schools is dwindling, thereby giving rise to public-private partnership (Ogakwu V.N. 2021).

Inequalities in ICT access persist between urban and rural areas, as well as between different socio-economic strata (Quizhpe and Ponce, 2022). The lack of access is due to the lack of infrastructure in rural marginalized areas, as well as economic barriers that make it difficult to acquire devices and connect to the internet Matinez et al, 2020 ECLAC, 2021). Skill, limited digital skills development and low technological literacy amongst supervisors also contribute to digital exclusion. Many supervisors do not have the skills to use technologies effectively and take advantages of their benefits. This is due to limitations in digital skills education and training especially among marginalized and disadvantaged groups. Socio-economic inequalities, lack of economic resources prevents many supervisor from accessing modern technological devices and for paying for internet services. Content and usage, scarcity of relevant content and low use of technology in every day actives are also factors to consider despite these limitations over the last decade digital inclusion has become a fundamental aspect of ensuring equity, quality educational outcome and development.

The digital divide has become a global challenge in the age of information and communications technology (ICT) (Wilson 2021). As schools and societies move towards digitalization, inequalities in access to and use of ICTs are becoming more acute- lack of supervisory control measures due to lack of technologies has been a major challenges, thereby creating difficulties in monitoring and supervising teaching in primary and secondary schools in Enugu state (Ogaku. V.N. 2021). The government of Enugu state has been partially successfully in providing access to education to school - age children but there are doubts regarding the quality of instruction in public schools system thus prompting parents to seek better educational opportunities for the children elsewhere (Enyia and Epilefa, 2022) and Adams 2018).

The problem now is what would be a desirable system of co-operation synergy, linkages maximization of resources amongst educational stakeholders will raise more innovation through the use of technology in supervision and inspection in improving educational development in primary and secondary schools in Enugu state. Hence this work is a comparative analysis of the adoption and use of emerging technologies in schools supervision and inspection of public and private primary and secondary schools in Enugu state.

Objectives of the study

The overall aim of this study is to compare the analysis of the adoption and use of emerging technologies in schools supervision and inspection of public and private and primary schools in Enugu state, Nigeria.

1. To ascertain the strategies for supervisory control measures based on school category
2. To ascertain the influence of supervision on efficiency in primary and secondary schools in Enugu State

Research Questions

Two research questions guided the study.

1. What are the Strategies for Supervisory Control Measures based on School Category?
2. What are the influence of supervision on efficiency in primary and secondary schools in Enugu State?

Hypotheses

HO₁: There is no significant difference between the responses of government and voluntary agency schools on Strategies for Supervisory Control Measures

HO₂: There is no significant difference (0.05) between the mean ratings of the influence of supervision on efficiency in primary and secondary schools in Enugu State

Methodology

The descriptive survey research design was used for the study. Also purposive and stratification sample size were used.

Table 1: Population Distribution of Respondents

Total	34	34	68	30	60	51	51	102	36	72

Instrument for Data Collection

The instrument that was used for this study is questionnaire. The questionnaire was designed by the researcher to elicit supervisory digital information on Public Private Partnership Practices of Primary and Secondary Schools in Enugu State. It has 9 items. The items were structured on a five point scale of —Strongly Agree (SA), —Agree (A), —Undecided (UD), —Disagree (D) and —Strongly Disagree (SD).

Validation of the Instrument

The instrument for data collection was subjected to face and content validation by lecturers in faculties of development studies and education of the universality of Nigeria Nsukka.

Reliability of the instrument

The reliability and internal consistency scores were achieved using Cronbach Alpha method. The reliability of the instrument was checked using pilot testing on a sample of 17 public schools for secondary and 25 for primary schools. The use of the Cronbach Alpha method is informed by (Cronbach 1951).

Administration of the instrument

The research administered the instrument to the respondents with the help of research assistants. The no of questionnaire that was distributed was (569) five hundred and sixty nine-out of the number that were distributed, correctly filled and returned while copies were not returned and one copy through returned was not correctly filled. The percentage return of the correctly filled copies is 98.6%

Statement	SA (%)	A (%)	U (%)	D (%)	SD (%)	Mean	Std. Dev.
Using electronic academic records in schools by supervisors from both government and voluntary agency schools for evaluation for effective services delivery	301 (53.7)	221 (39.4)	19 (3.4)	7 (1.2)	13 (2.3)	4.41	0.81
Training of instructional supervisors electronic resources to organize Ministry of Education programmes for supervisors from government and voluntary agency schools to enhance learning	281 (50.1)	213 (38.0)	27 (4.8)	33 (5.9)	7 (1.2)	4.30	0.90
Encouraging Government officials and voluntary agencies to use online resources for instructional supervision to make teachers efficient	234 (41.7)	246 (43.9)	33 (5.9)	38 (6.8)	10 (1.8)	4.17	0.94
The government should bear funding e-instructional supervision in both schools for effective teaching	251 (44.7)	203 (36.2)	45 (8.0)	52 (9.3)	10 (1.8)	4.13	1.02
Annual comparison of e-supervisory records obtained from both government and voluntary agency schools by a joint team from both schools to promote learning	239 (42.6)	250 (44.6)	24 (4.3)	41 (7.3)	7 (1.2)	4.20	0.91
Drafting online Time-table that will connect different supervisors in Government and voluntary agency schools for efficiency in school	198 (35.2)	263 (46.9)	37 (6.6)	43 (7.7)	20 (3.6)	4.03	1.02
Regular pre and post-supervisory online meetings that will be organized by the Ministry of Education between post-primary and school management board, voluntary agency officials and ESUBEB for effective management of schools	226 (40.3)	254 (45.3)	37 (6.6)	36 (6.4)	8 (1.4)	4.17	0.91
Promoting electronic supervision by voluntary agencies and the government to ensure regular teachers' attendance.	266 (47.4)	214 (38.1)	29 (5.2)	24 (4.3)	28 (5.0)	4.19	1.06
Conferences and seminars should be jointly organized for teachers by voluntary agencies and government official of ministry of education to enhance teaching practice	301 (53.7)	177 (31.6)	30 (5.3)	40 (7.1)	13 (2.3)	4.27	1.01

Method of Data Analysis

The responses to research questions 1 and 2 were analyzed using means score and standard deviation. ANOVA (F-statistic) was used to determine if there existed significant variation in the school. Hypotheses also were analyzed using t-test,

Data Presentation and Analysis

Influence of digital Supervision through PPP on Efficiency of Primary and Secondary Schools in Enugu State

The perceived influence of digital supervision through PPP on efficiency of primary and secondary schools in Enugu State is presented in this sub-section. The presentation is based on the decision rule stated below.

Decision Rule

If Mean ≥ 3.5 , respondents are in agreement

If Mean < 3.5 and ≥ 2.5 , respondents are undecided

If Mean < 2.5 , respondents are not in agreement

Test of Hypothesis

There is no significant difference (0.05) between the mean ratings of the influence of supervision on efficiency in primary and secondary schools in Enugu State

Table 6: T-Test Result for Hypothesis

Category	N	Mean	Std. Dev.	Std. Mean	Error t-value	Sig. (2-tailed)
Schools under partnership	316	4.3432	0.60417	0.03399	5.351	0.000
Schools not under partnership	245	4.0290	0.78642	0.05024		

The result presented in Table 6 shows that the mean ratings of influence of supervision on efficiency in schools under partnership is 4.34 while that of those not under partnership is 4.02. With the t-calculated value of 5.351 > t-critical of 1.960 and the significance value of 0.000 < 0.05, this observed difference is significant. Hence, the null hypothesis is rejected. There is significant difference (0.05) between the mean ratings of the influence of supervision on efficiency in primary and secondary schools in Enugu State.

Discussion of Findings

The result of the research question shows that the influence of digital influence of supervision on efficiency in schools under partnership is 4.34 while that of those not under partnership is 4.02 with the t-calculated value of 5.351 > t-critical of 1.960 and the significant value of 0.000 < 0.05, this observed difference is significant. Hence the null hypothesis is rejected. There is significant difference (0.05) between the means ratings of the influence of digital supervision on efficiency in primary and secondary schools in Enugu state.

As can see in the table 4 it is the determination of sampled respondents that using electronic academic records in school by supervisors from both government and voluntary agency schools for evaluation for effective services delivery ($\bar{x}$ = 4.41) training of instructional supervisors electronic resources to organize ministry of education programmes for supervisors from government and voluntary agency school to enhance leaning ($\bar{x}$ = 4.30) encouraging government officials and voluntary agencies to use online resources for instrumental supervision to make teachers efficient ($\bar{x}$ = 4.17)

supervision in both schools for efficient teaching ($\bar{x} = 4.13$). the respondent also agreed that there should be annual comparison of e-supervisory records obtained from both government and voluntary schools by a joint team from both school to promote learning ($\bar{x} = 4.20$) drafting online timetable that will connect different supervisors in government and voluntary agency schools for efficiency in school ($\bar{x} = 4.03$) regular pre and post supervisory online meetings that will be organized by the ministry of education between post primary and school management board, voluntary agency officials and ESUBEB for effective management of schools ($\bar{x} = 4.17$) promoting electronic supervision by voluntary agencies and the government to ensure regular teachers attendance ($\bar{x} = 4.19$) conference and seminars should be jointly organized for teachers by voluntary agencies and government official of ministry agencies and government officials of ministry of education to enhance teaching practice ($\bar{x} = 4.27$) these are in agreement with kwaghbo (2018) Hassan et al (2020) and OECD (2023).

Further analysis is carried out to determine if there is a variation in the respondents responses based on the categories of their respective schools. Table 5 captures the mean responses of the schools that are under partnership those not under partnership, and the f-value indicating if a variation exist in opinions. the table 5 reveals that respondent under partnership are more inclined towards better strategies of supervisory control measures in ensuring the efficiency in their schools such as providing quality training provision of digital tools and infrastructure and funds management than the schools under the partnership have higher mean score than those not under partnership and the difference are significant (p-value (0.05)

Digital supervision plays vital role in ensuring that policies, plan and set goals are strictly adhered to and achieved. Digital supervision plays activities through PPP enhances efficiency of primary and secondary schools in Enugu state to ensure the objectiveness of digital supervision on efficiency of schools, various strategies of supervisory control measures are implemented. these strategies include draft long online timetable that will connect different supervisors in government and voluntary agency schools, having pre and post online meetings encouraging use of online resources for instrumental supervision using electronic academic records in schools by supervisors in government and voluntary agency school ensuring that both government and voluntary agencies are undertake digital in structural supervision and finding by government on instructional supervision in schools this is in line with (Oguguo et al, 2023).

There should be the practice of annual comparison of supervisory records by a joint team to promote learning promoting electronics supervision try both schools to ensure regular teachers attendance. Conference and seminars should be jointly organized for teachers by voluntary agencies and government officials of ministry of education to enhance teaching practice. These are in accordance with the findings of the study of the Nwite and Onele (2018) which revealed that regular and lack of proper digital supervision was the bane of government owned secondary schools which in turn affected their efficiency hence from the result the schools under PPP are better in digital supervision because of the commitment of the managing partners, discipline work ethics and return on investment.

Conclusions

The result from the findings shows that irregular and lack of digital supervision was the bane of government owned primary and secondary school which in turn affected their efficiency unlike schools under partnership. Conclusively teachers should be open to supervisors through digitalization from both government and voluntary agency schools for education for effective service delivery.

Recommendations

- Digital supervisory measure must be put in place, implemented, well monitored and activities of the teachers checked by all educational stakeholders.
- There should be the practice of annual comparison of digital supervisory records by the joint team of government and voluntary agencies official to promote bearing.

- Properly drawn out time-table on inter-supervisory visits, conducting regular pre and post supervisory meeting between various educational stakeholders, this will bring about qualitative education.

RELATIONSHIP BETWEEN SECURITY MEASURES AND MANAGEMENT OF TERTIARY INSTITUTIONS IN NIGER STATE, NIGERIA

Dr. Hauwa Kulu Muhammad

muhammad.hauwa@ymail.com

Fati Lami Abubakar Institute for Legal and Administrative Studies,
Kpakungu, Minna, Niger State. Nigeria

Abstract

This empirical paper is on relationship between security measures and management of tertiary institutions in Niger state, Nigeria. The research emphasizes on how the human security measures and physical security measures can be fully applied in the tertiary education system to enhance effective management. Two objectives and two research questions were answered, including the testing of two hypotheses at 0.05 level of significance. A descriptive survey research designed was used. The population of this study is 1, 687 representing 725 academic staff and 962 non – academic staff in two (2) tertiary institutions in Niger state, Nigeria. The sample size is 166 representing 10% of the 725 academic staff and 962 non – academic staff. The simple random sampling procedure was adopted in determining the sample size. A questionnaire: Relationship between Security Measures and Management of Tertiary Institutions (QRSMMTI) was used for data collection. Data were analyzed using descriptive statistics. Hypotheses were tested using Pearson Product Moment Co-efficient Correlation (PPMCC) statistical tool. The finding reveals that there is a strong relationship between human security measures and physical security measures in the effective management of tertiary institutions in Niger state. This paper provides recommendation for the provision of well-trained security personnel and sufficient physical security measures for the enhancement of effective security management of tertiary institutions in Niger state, Nigeria.

Keywords: Security Measures, Education, Management and Tertiary Institutions

Introduction

Education in general and tertiary education in particular in every society is obviously known to be an indispensable tool for nations' economic growth and development. It is a common knowledge that in the world over, tertiary education is an enterprise that produces and distributes public good, which is knowledge (Olatunji 2018). As asserted by Phaneuf (2006) and Ayo (2013), the production of knowledge by tertiary institutions has always focused on teaching, learning and research, hence, it is believed that tertiary education is a major investment requiring a huge amount of financial resources, thus funds allocated to tertiary education are said to be long term investments of immense benefits both to the individual and to the society.

In Nigeria institutions are established by both the Federal and States government. Tertiary education in Nigeria is an education that is acquired after the completion of secondary education Olatunji (2018). According to Imo, Egbe and Terfa (2024), tertiary education encompasses all post secondary school learning in a range of settings including work places, universities, colleges of education, polytechnics/monotechnics and innovative enterprise institutions. Tertiary education produces values that help individuals benefit themselves and contribute meaningfully to the development of the society in various fields of profession. The Federal Government of Nigeria in its National Policy of Education (2013) hopes that these values can be better inculcated through a well-designed national system of tertiary education whose broad objectives were stated as follows:

- i) the inculcation of national consciousness and national unity;
- ii) the inculcation of the right type of values and attitudes for the survival of the individual and the Nigerian Society;

- iii) the training of the mind in the understanding of the world around; and
- iv) the acquisition of appropriate skills, abilities and competences both mental and physical as equipment for the individual to live in and contribute to the development of this society.

The tertiary education system is composed of both human and material resources. The human resources are the academic and non – academic staff, students, and other stakeholders that are directly or indirectly connected with the school. The connection depends on the nature of services rendered to the system. The material resources involve facilities such as school building, records, including money as well as programmes in school. These resources are expected to be protected from threat, harm and danger for the assurance of their longevity and performance of the system. According to Lombaard and Kole (2008), security measures assess the vulnerability of risk and to introduce techniques and measures at schools, in order to create a stable, fairly predictable environment in which individuals may move freely. Security measures are approaches that can be adopted to protect and manage school violence, reduce security risks, and ensure that the school environment is safe for learning (Laura, 2014). These measures are functional and operational methods that make schools free from crimes, threats and risks. It enhances the conduciveness of school to make teaching and learning process more effective. The advocates of school security measures suggest that these measures may not only reduce crime and disorder but also reduce student fear by sending a message that the school takes violence seriously and is actively doing something to curtail it Phaneuf, (2006), Iwuamadi & Akuakanwa,(2024). School security measures work for good especially when the measures are well-thought out and are responsive to threats and risks emanating from within or outside the system. For schools to be secured, the security measures should embrace the following: human security measures, physical security measures, policy security measures and technological security measures.

Human security measures are a means of controlling and safeguarding a place. Humans are functional and fundamental resources in security policy agenda and implementation. The human factor in security system determines what decision should be made, how and the nature of action to be taken. One of the significant security functions of human being is patrolling. This is when individuals (guards and security officers) move around the premises inspecting and observing the activities taking place and the locations where incidents can occur on the premises in order to identify any risks (Jaarsveld, 2011). Human security measures also involve training academic, non – academic staff as well as students in security issues to enhance their security consciousness for appropriate reactions to threats in schools. According to Jaarsveld (2011), if an alarm is triggered at a school, a policeman or security guard will have to respond to the alarm in order for the technological aid to work effectively and for the intruder to be apprehended. Some of the human components in security could include guards, community and/or parental participation, school personnel, security officers, private security company personnel on contract who might also offer a rapid armed response service or police officers. However, in tertiary institutions in Niger state, human element in security systems is often either overlooked or neglected completely. This may be to save cost or to run away from the inherent dangers associated with using human factor in security systems. These reasons are considered feeble because human element in security system is not negotiable.

Physical security measures are those barriers put in place to prevent access to a property or a facility. According to Lombaard and Kole (2008) and Herbert (2024), the purposes of physical security measures are to (i) deter an intruder from entering the premises (ii) detect the attempted entry or presence if an intruder succeeds in penetrating (i.e getting through) the physical security barrier or measure in place (iii) limit the harm that can be done if an intruder manages to gain entry without being detected and (iv) detain the intruder by using silent alarm or alerting a security patrol (to respond). Some of the physical security measures that can be adopted are the use of fence, locks and keys, safe and strong roof, burglar proof, electronic equipment (e.g CCTV system, metal detectors, x-ray machines, card reader systems and alarm) and communication system (radio, telephone, intercom systems). These security gadgets should be strategically fixed in places where the school management can easily use them to control and monitor people so as to prevent intruders from having access to such places. The use of physical security measures in the tertiary education system will help to monitor and

prevent the illegal access of people into school including hoodlums and terrorists. Schools should be fenced and protected gates mounted where necessary to deter easy access to schools. After school day or closing period, classrooms and offices should be locked and burglar proof provided in places considered essential for the prevention of intruders. Although, these physical security measures are costly, they are essential for the security of schools to promote safety. The P.T.A and community members gradually provide some of these facilities to safeguard schools and prevent insurgents from easily gaining access to schools for attacks. Equally, security lights should be provided for effective monitoring of schools especially at nights. In tertiary institutions in Niger state, the physical elements of the security system are not fully acquired and put in place. Most classes and offices may not be properly under lock and key. The fences of the institutions may not be managed and maintained which may leads to collapse of some school fence. These may limit the security personnel in the school system to give adequate and needed security protection to the school facilities. It is against this background information that this empirical paper examines relationship between security measures and management of tertiary institutions in Niger state, Nigeria.

Research Questions

The following research questions were formulated to guide the study:

1. How does human security measure relate to effective management of tertiary institutions in Niger state, Nigeria?
2. How does physical security measure relate to effective management of tertiary institutions in Niger state, Nigeria?

Purpose of the Study

The main aim of this research work is to examine relationship between security measures and management of tertiary institutions in Niger state, Nigeria. The specific objectives of the study are to:

1. Determine how human security measure relate to effective management of tertiary institutions in Niger state, Nigeria
2. Examine how physical security measure relate to effective management of tertiary institutions in Niger state, Nigeria

Hypothesis

Based on the objectives of the study and the stated research questions, two hypotheses were constructed to help address the research problem:

HO1: There is no significant relationship between human security measure and effective management of tertiary institutions in Niger state, Nigeria

HO2: There is no significant relationship between physical security measure and effective management of tertiary institutions in Niger state, Nigeria

Methodology

The study adopted a descriptive survey research design to examine relationship between security measures and management of tertiary institutions in Niger state, Nigeria. A Population of 1,114 representing 485 academic staff and 629 non – academic staff in two (2) tertiary institutions in Niger state, Nigeria was used. Simple random sampling procedure was adopted in determining the sample. The sample size is 109 representing 10% of the 485 academic staff and 629 non – academic staff of tertiary institutions in Niger state at a 5% (0.05) level of significance. The level of significance indicates the confidence the researcher has on the sample that the subjects drawn, has all the characteristics of the population. This means that we are 95% confident that the sample members have all the essential characteristics of the population.

A 10 – item researchers made questionnaire with four- point modified Likert rating scale of strongly agreed (SA), Agreed (A) and Disagreed (D) strongly disagreed (SD) was used to collect data from the

respondents. The instrument yielded a reliability co –efficient of 0.78 which was derived by administering the questionnaire to the respondents using split half reliability test method.

The instrument was personally administered to the academic and non – academic staff. Descriptive statistics of mean and standard deviation were used to answer the research questions. Pearson Product Moment Co-efficient Co-relationship (PPMCC) statistical tool was used to test the null hypotheses at 0.05 level of significance.

Results

The results of the findings are presented in tables 1 and 2.

The data collated from research question one was analyzed in the table below using descriptive statistics (Mean Ratings and Standard Deviation).

Table 1: Mean Ratings and Standard Deviation of Respondents on how human security measure relate to effective management of tertiary institutions in Niger state, Nigeria

Item No	Item Description	SA	A	D	SD	$\bar{X}$	SD	Decision
1.	The use of trained security personnel aids the human security measures in an environment	54	36	10	9	3.35	0.68	Agree
2.	The use of trained security personnel aids the physical security measures in an environment	64	26	9	10	3.44	0.57	Agree
3.	The use of trained security personnel aids the technological security measures in an environment	59	31	11	8	3.37	0.68	Agree
4.	The use of trained security personnel aids the security consciousness in an office environment	54	41	10	4	3.33	0.69	Agree
5.	The use of trained security personnel reduces the security threat in an office environment	59	41	4	5	3.23	0.79	Agree
Cluster Mean						3.34		Agree

Item No	Item Description	SA	A	D	SD	$\bar{X}$	SD	Decision
1	The use of trained security personnel aids the human security measures in an environment	54	36	10	9	3.35	0.68	Agree
2	The use of trained security personnel aids the physical security measures in an environment	64	26	9	10	3.44	0.57	Agree
3	The use of trained security personnel aids the technological security measures in an environment	59	31	11	8	3.37	0.68	Agree
4	The use of trained security personnel aids the security consciousness in an office environment	54	41	10	4	3.33	0.69	Agree
5	The use of trained security personnel reduces the security threat in an office environment	59	41	4	5	3.23	0.79	Agree
Cluster Mean						3.34		Agree

Source: Field Study 2025

Table 1 shows that items 1-5 had mean scores of 3.35, 3.44, 3.37, 3.33 and 3.23 with corresponding standard deviations of 0.68, 0.57, 0.68, 0.69 and 0.79 respectively. Based on the criteria for decision making, it means that all the items were rated above the cut-off point of 2.50. The cluster mean of 3.34 was also above the cut-off point of 2.50. The standard deviation scores of the respondents are small signifying homogeneity for the items raised. This implies that human security measure relates to effective management of tertiary institutions in Niger state, Nigeria.

The data collated from research question two was analyzed in the table below using descriptive statistics (Mean Ratings and Standard Deviation).

Table 2: Mean Ratings and Standard Deviation of Respondents on how physical security measure relate to effective management of tertiary institutions in Niger state, Nigeria

Item No	Item Description	SA	A	D	SD	$\bar{X}$	SD	Decision
6.	The use of close circuit television aid the human security measures in an environment	51	49	5	4	3.55	0.62	Strongly Agree
7.	The use of surveillance cameras aids the physical security measures in an environment	49	46	4	10	3.40	0.66	Agree
8.	The use of surveillance cameras aids the security consciousness in an office environment	55	35	8	11	3.37	0.71	Agree
9.	The use of close circuit television aids the security consciousness in an office environment	60	30	10	9	3.43	0.64	Agree
10.	The use of computers and its facilities aids the physical security measures in an environment	50	40	9	10	3.64	0.57	Strongly Agree
Cluster Mean						3.48		Agree

Source: Field Study 2025

Table 2 shows that items 6-10 had mean scores of 3.55, 3.40, 3.37, 3.43 and 3.64 with corresponding standard deviations of 0.62, 0.66, 0.71, 0.64 and 0.57 respectively. Based on the criteria for decision making, it means that all the items were rated above the cut-off point of 2.50. The cluster mean of 3.48 was also above the cut-off point of 2.50. The standard deviation scores of the respondents are small signifying homogeneity for the items raised. This implies that physical security measure relates to effective management of tertiary institutions in Niger state, Nigeria

Test of Hypothesis

In order to test the two hypotheses of this study, the Pearson Product Moment Correlation Co-efficient was used to test the options of respondents at 0.05 level of significance and the results are presented on Tables 3 and 4.

Test of Null Hypothesis 1

H01: There is no significant relationship between human security measure and effective management of tertiary institutions in Niger state, Nigeria. The result of the analysis of data using Pearson Product Moment correlation statistics is presented in Table 3.

Table 3:

Summary of Correlation analysis of the relationship between human security measure and effective management of tertiary institutions in Niger state, Nigeria

Variables	$\frac{\sum X}{\sum Y}$	$\frac{\sum Y^2}{\sum Y^2}$	$\sum XY$	r-cal
Human Security Measure	54	22031	18429	0.364*
Effective Management of Public Universities	36	19442		

* $p < .05$; d f= 430; critical – $r = 0.098$

The results presented in Table 3, revealed that the calculated r-value of 0.364 is greater than the critical r-value of 0.098 at .05 level of significance and 158 degrees of freedom. With this result, the null hypothesis is rejected implying that; there is a significant relationship between human security measure and effective management of tertiary institutions in Niger state, Nigeria. However, there was a weak positive relationship ($r=0.364$) between the variables which were statistically significant in explaining security measures.

Test of Null Hypothesis 2

H02: There is no significant relationship between physical security measure and effective management of tertiary institutions in Niger state, Nigeria. The result of the analysis of data using Pearson Product Moment correlation statistics is presented in Table 4.

Table 4

Summary of Correlation analysis of the relationship between physical security measure and effective management of tertiary institutions in Niger state, Nigeria

Variables	$\frac{\sum X}{\sum Y}$	$\frac{\sum Y^2}{\sum Y^2}$	$\sum XY$	r-cal
Physical Security Measure	51	22117	19827	0.624*
Effective Management of Public Universities	49	19442		

* $p < .05$; d f= 430; critical – $r = 0.098$

The results presented in Table 4, revealed that r calculated value of 0.624 is greater than the critical r-value of 0.098 at .05 level of significance and 158 degrees of freedom. As a result, the null hypothesis was rejected implying that; there is a significant relationship between physical security measure and effective management of tertiary institutions in Niger state, Nigeria. In addition, there was a moderate positive relationship ($r=0.624$) between physical security measure and effective management of tertiary institutions in Niger state, Nigeria.

Discussion of Findings

The study which sets out to examine relationship between security measures and management of tertiary institutions in Niger state, Nigeria revealed that, there is a strong relationship between human security measures and physical security measures in the effective management of tertiary institutions in Niger state. Additionally, human security measures are a means of controlling and safeguarding a place. Humans are functional and fundamental resources in security policy agenda and implementation. The human factor in security system determines what decision should be made, how and the nature of action to be taken. One of the significant security functions of human being is patrolling. This is when individuals (guards and security officers) move around the premises inspecting and observing the activities taking place and the locations where incidents can occur on the premises in order to identify

any risks. Furthermore, the physical security measures such as CCTV system, metal detectors, x-ray machines, card reader systems and alarm, etc, deter an intruder from entering the premises, detect the attempted entry or presence if an intruder succeeds in penetrating (i.e getting through) the physical security barrier or measure in place, limit the harm that can be done if an intruder manages to gain entry without being detected and detain the intruder by using silent alarm or alerting a security patrol (to respond).

Conclusion

There is indeed a significant relationship between security measures and management of tertiary institutions in Niger state, Nigeria. From the findings, human security measures are a means of controlling and safeguarding a place. Humans are functional and fundamental resources in security policy agenda and implementation. The human factor in security system determines what decision should be made, how and the nature of action to be taken. One of the significant security functions of human being is patrolling. The persistence of insecurity has been claiming precious lives of citizenry and government efforts to tackle the problem through various menial methods and approaches such as the use of police, military, vigilante and local hunters seem not to be yielding success. However, the effective use of physical security devices such as computer, internet, mobile phone, close circuit television (CCTV), surveillance cameras, social network analysis, biometry surveillance, data mining, satellite imagery, and IP devices, the satellite would definitely produce the desired results.

Recommendations

Based on the findings of the study, the following recommendations are made:

- 1) Niger state government should ensure that well trained security personnel are deployed to tertiary institutions in ensuring effective and efficient security measures in offices and environment within the tertiary institutions for the enhancement of effective security management of tertiary institutions in Niger state, Nigeria
- 2) Niger state government should ensure that internet and internet facilities in sufficient quantity and quality are provided to make room for effective and efficient security measures in offices within the tertiary institutions for the enhancement of effective security management of tertiary institutions in Niger state, Nigeria

Abstract

Moral education is a vital component of human development, playing a crucial role in shaping individuals and societies. Families, as the primary social unit, bear significant responsibility for inculcating values that contribute to sustainable national development. This paper examined the significance of moral education, the role of families in transmitting values, and the collective impact of these elements on fostering sustainable national development. The study also explored the challenges inherent in moral education and suggests strategies for reinforcing family-based value education. By highlighting the interconnectedness of moral education, family values, and national development, this research aimed to contribute to the development of a more holistic and sustainable approach to education and national development.

Keywords: Moral education, family values, sustainable national development, value transmission, education and development.

Introduction

Sustainable development is deeply rooted in the effectiveness of a nation's education system. A well-structured education system empowers learners with essential skills, competencies, and moral values, enabling them to drive positive change within themselves and their communities. Moral education plays a vital role in this process, as it cultivates individuals' ability to distinguish right from wrong, make informed decisions, and contribute positively to society.

As emphasized by UNESCO (2019), moral education is crucial for fostering a culture of peace, tolerance, and mutual respect – essential components of sustainable development. However, recent years have seen growing concerns about moral decay and erosion of values in many societies. Factors contributing to this decline include the increasing influence of social media, breakdown of traditional family structures, and diminishing role of religion in shaping moral values (Hersh, 2020). In light of these challenges, it is imperative to reassess the role of moral education in promoting sustainable national development. This examination should encompass the significance of moral education, the role of families in transmitting values, and how these elements collectively contribute to sustainable national development.

Concept of Moral Education

Education is a vital means of societal survival and perfection, supporting the acquisition of relevant knowledge and skills for functional living (UNESCO, 2019). As a formal activity, education

translates societal yearnings into reality. Nigeria's national philosophy, as outlined in the National Policy of Education (2004), aims to build:

1. A free and democratic society
2. A just and equitable society
3. A united, strong, and self-reliant nation
4. A land of bright and full opportunities for all citizens

Moral education is integral to these objectives, reflecting the broader goals of education (Kristjánsson, 2021). Moral education encompasses teaching and developing critical awareness and appreciation of societal values, leading to the acquisition of ethics for stable living together (Nucci, 2017). It emphasizes respect for knowledge, truth, and rational thinking (Halstead, 2018).

Moral education can be conceived as a vital component of human development, focusing on instilling values, principles, and behaviors that promote peaceful coexistence, social justice, and national development (Park, 2020). The term "moral" originates from the Latin word "mores," meaning behavior, while "education" comes from "educere," meaning leading out or bringing out. Therefore, moral education guides individuals to recognize and adopt good behavior, suppressing immoral tendencies (Triandis, 2018).

According to recent studies, moral education encompasses the teaching of virtues such as honesty, respect, responsibility, and empathy (Kristjánsson, 2021; Nucci, 2017). These values are essential for promoting ethical decision-making, social harmony, and civic responsibility. Moral education can be imparted formally through schools, or informally through families, religious institutions, and community engagements (Halstead, 2018).

The family plays a critical role in moral education, serving as the primary social unit where children learn values and principles (Park, 2020). Parents and guardians model ethical behavior, teach right from wrong, and set rules and expectations, laying the foundation for a child's character and moral development. Research highlights the significance of parental involvement in moral education, including:

1. **Modeling behavior:** Children learn from observing their parents' actions and attitudes (Bandura, 2019).
2. **Providing guidance:** Setting boundaries and correcting wrong actions help children understand consequences (Hoffman, 2018).
3. **Instilling cultural values:** Families use traditions and cultural norms to reinforce ethical behavior (Triandis, 2018).
4. **Encouraging civic responsibility:** Families teach children about responsibility, accountability, and national pride (Flanagan, 2020).

In today's rapidly changing world, moral education faces challenges such as digital media influence, peer pressure, and weakened family structures (Livingstone, 2022). Strengthening the role of families in moral education is crucial for creating ethical citizens who contribute to national development.

Recent studies emphasize the importance of moral education in promoting:

1. **Ethical leadership:** Moral education fosters responsible leadership and decision-making (Bass, 2020).
2. **Social cohesion:** Moral education promotes social harmony, peace, and respect for human dignity (Putnam, 2020).
3. **National stability:** Moral education reduces corruption and promotes national development (Rose-Ackerman, 2022).

Family Values

Values are basic and fundamental beliefs that guide or motivate attitudes or actions. They help us to determine what is important to us. Values describe the personal qualities we choose to embody to guide our actions; the sort of person we want to be; the manner in which we treat ourselves and others, and our interaction with the world around us. They provide the general guidelines for conduct (Mintz,

2018). Thus, a value is an expression of worth. It specifies what a person desires and cherishes. Family values, therefore, represents the fundamental principles that guide behavior, decision-making, and interactions within families and society (Haidt, 2019). These values represent cherished desires, expectations, and moral standards that families uphold and transmit to their members (Mintz, 2020). Family values encompass various aspects, including:

1. **Social values:** Emphasizing peace, justice, freedom, and community involvement (Putnam, 2020). Examples include respect, courtesy, volunteering, and teamwork.
2. **Political values:** Shaping governance, authority structures, and civic engagement (Dahl, 2019). Examples include patriotism, fairness, and adherence to laws.
3. **Religious values:** Guiding personal and interpersonal behavior based on faith (Bloom, 2019). Examples include compassion, love, and non-violence.
4. **Work values:** Influencing work ethic, finance, and personal responsibility (Lips-Wiersma & Wright, 2019). Examples include hard work, teamwork, and financial responsibility.
5. **Moral values:** Informing right and wrong, honesty, and personal responsibility (Kristjánsson, 2021). Examples include courage, patience, and integrity.
6. **Recreational values:** Fostering family bonding, leisure, and personal growth (Larson & Walker, 2020). Examples include family activities, playtime, and vacation.

Instilling these values in children and family members is crucial for promoting a peaceful and harmonious society (Park, 2020). By emphasizing values like acceptance, care, charity, and responsibility, families can shape the next generation's character and contribute to the greater good (Nucci, 2017).

The Role of Families in Moral Education

Families are the first and most influential agents of moral education. Parents and guardians shape children's ethical perspectives through direct teaching, role modeling, and reinforcement of values. Key ways in which families contribute to moral education include:

Parents as Primary Educators

- Parents introduce children to basic moral concepts, such as honesty, kindness, and respect.
- Children learn through observation; thus, parents' behavior significantly influences their moral development.

Cultural and Religious Influences

- Families instill cultural values and religious principles that shape children's moral compass.
- Religious teachings often emphasize virtues like honesty, compassion, and justice, reinforcing moral behavior.

Parenting Styles and Moral Development

Different parenting styles affect how children internalize values:

- Authoritative parenting fosters discipline and responsibility.
- Permissive parenting may lead to moral ambiguity.
- Neglectful parenting can result in a lack of ethical guidance.

Challenges in Family-Based Moral Education

- Influence of social media and technology.
- Exposure to negative peer influences.
- Economic pressures limiting parental involvement.

Core Values for Sustainable National Development

To achieve sustainable development, families must instill the following core values in children:

- **Honesty and Integrity:** Essential for building trust in governance and business.
- **Respect and Tolerance:** Promotes social cohesion and peace.
- **Hard Work and Discipline:** Encourages productivity and economic growth.
- **Responsibility and Accountability:** Ensures good leadership and governance.
- **Patriotism and Civic Duty:** Strengthens national identity and unity.

Understanding National Development

National development is a multifaceted concept that encompasses various aspects of society, including economic, social, cultural, and technological growth (Abari, 2019). It involves a steady and systematic process of transformation, leading to improved human comfort and satisfaction (Uriah & Wosu, 2012). Development prioritizes people's well-being, focusing on capacity building, self-sustenance, and self-fulfillment (Abari, 2019).

According to the Society for International Development (2021), development is "a process that creates growth, progress, positive change, or the addition of physical, economic, environmental, social, and demographic components." This definition highlights the comprehensive nature of development, which goes beyond economic growth to include social and environmental aspects.

Key aspects of national development include:

1. **Planned national economy:** A well-planned economy is essential for sustainable development, as it enables the efficient allocation of resources and promotes economic growth (Bawa, 2019).
2. **Agricultural growth through modern technology:** The application of modern technology in agriculture can increase productivity, improve food security, and enhance rural development (Ogen, 2018).
3. **Industrial development:** Industrialization is a crucial driver of economic growth and development, as it creates employment opportunities, increases productivity, and promotes technological advancement (Akinbode, 2019).
4. **Human resource development:** Investing in human capital is essential for national development, as it enhances productivity, promotes innovation, and improves competitiveness (Okojie, 2019).
5. **Application of science and technology:** The application of science and technology can drive development by improving productivity, enhancing efficiency, and promoting innovation (Adeyemi, 2018).
6. **Provision of facilities for disadvantaged populations:** Ensuring access to basic facilities, such as healthcare, education, and infrastructure, is essential for promoting social justice and reducing poverty (Bawa, 2019).

The United Nations Organization (1971) outlined determinants for national development, including:

1. **Equal living standards:** Ensuring equal access to resources and opportunities is essential for promoting social justice and reducing poverty (UNO, 1971).
2. **Fair distribution of income and capital:** Equitable distribution of resources is crucial for promoting economic growth and reducing inequality (Sarma, 2018).
3. **Expanded education, health, and social welfare:** Investing in human capital is essential for promoting development and improving well-being (Okojie, 2019).
4. **Environmental preservation:** Protecting the environment is crucial for promoting sustainable development and ensuring the well-being of future generations (Akpan, 2020).

Factors influencing national development include:

1. **Economic factors:** Economic stability, investment, and trade are essential for promoting development (Sarma, 2018).
2. **Political factors:** Good governance, stability, and effective institutions are crucial for promoting development (Abari, 2019).
3. **Social factors:** Social cohesion, cultural values, and demographic changes can influence development (Sarma, 2018).
4. **Demographic factors:** Population growth, structure, and distribution can impact development (Ogen, 2018).

5. **Socio-cultural factors:** Cultural values, social norms, and traditions can shape development outcomes (Akpan, 2020).
6. **Modernization:** Embracing modernization and technological advancement can drive development (Adeyemi, 2018).
7. **Psychological factors:** Attitudes, perceptions, and motivations can influence development outcomes (Sarma, 2018).

In conclusion, national development is a complex and multifaceted concept that requires a comprehensive approach. Addressing the various determinants and factors influencing development can promote sustainable growth, improve well-being, and enhance the quality of life for citizens.

Moral Education and Its Impact on National Development

Moral education contributes to national development in several ways:

- **Ethical Leadership:** Leaders with strong moral values promote transparency and good governance.
- **Reduced Corruption:** Societies with high moral standards experience lower levels of corruption and crime.
- **Social Stability:** Moral education fosters mutual respect and peaceful coexistence.
- **Economic Growth:** A morally upright workforce enhances productivity and innovation.

Strategies for Strengthening Moral Education in Families

To reinforce moral education within families, the following strategies should be adopted:

- **Parental Involvement:** Encouraging active participation in children's moral development.
- **Educational Support:** Schools should collaborate with parents to reinforce ethical learning.
- **Media Regulation:** Limiting exposure to harmful content and promoting positive role models.
- **Community Engagement:** Strengthening family values through religious and cultural programs.
- **Government Policies:** Implementing family-friendly policies that support parental involvement in education.

Conclusion and Recommendations

Moral education is a cornerstone of sustainable national development. Families play an indispensable role in shaping values that foster ethical leadership, social harmony, and economic prosperity. To ensure a morally upright society, parents, educators, policymakers, and religious institutions must collaborate to instill strong moral foundations in future generations. Strengthening family-based moral education will lead to a more responsible, disciplined, and progressive society, ultimately contributing to sustainable national development.

Recommendations

1. Parents should actively engage in moral education at home by demonstrating and reinforcing ethical behaviors.
2. Schools should incorporate moral education into curricula to complement family teachings.
3. Government and religious institutions should provide support programs to enhance family-based moral instruction.
4. Media platforms should promote positive moral values to counteract negative influences on young minds.
5. Need for collaboration between families, educators, policymakers, and community leaders to promote moral education and support family-based initiatives.
6. Need to integrate diverse cultural, religious, and philosophical perspectives into moral education curricula to promote cross-cultural understanding and empathy.

7. Need to provide teachers with training on culturally responsive teaching practices, enabling them to effectively adapt moral education to diverse cultural contexts.
8. Need to develop comprehensive National Moral Education Frameworks, as well as outlining clear objectives, standards, and guidelines for implementation.
9. Need to incorporate moral education into national curricula, ensuring that it is taught in schools and aligned with broader educational goals.
10. Allocation of sufficient funding and resources to support moral education initiatives, including teacher training, curriculum development, and community engagement.

By fostering a culture of integrity and ethical responsibility, families can lay the foundation for a prosperous and sustainable nation.

Abstract

This work assesses Ethical Standards in School Supervision for Sustainable National Development in Nigeria. Supervision is the process of helping, guiding, advising and stimulating growth in subordinates in order to improve on the quality of his work. The Scope of School Supervision was examined; the purpose, importance, key ethical standards and unethical practices to avoid were considered. In addition, the consequences of unethical behavior in supervision was looked into and the ways of promoting ethical conduct. Lastly school supervision standard was examined including key areas covered by supervision standards in supervision. It was concluded that Schools where unethical practices in schools cannot produce disciplined and quality graduates. This reduces the value of our school products, based on the standard by which we judge human behavior. In other words, moral rules, promoting those things thought of as good and minimizing or avoiding those things thought as bad learnt at early age at home and school. It was recommended among others that School supervisors should create a positive and productive learning environment where all individuals are treated with respect and dignity.

Keyword: Ethical Standards, School Supervision, Sustainable National Development

Introduction

Educational system as an investment lies in its capability to continuously serve its targeted beneficiaries (students, teachers, parents, employers of labor and the society at large) and consistently remain relevant. Educational stakeholders are saddled with the responsibility of managing the educational system with the challenge of making schools as good as expected through supervision with professional ethics. School supervision is an indispensable variable in the teaching learning process which has brought about ethical standards in the teaching profession in the world general and Nigeria in particular. The history of supervision for improving educational programmes which helps teachers to achieve both qualitative and quantitative instructional delivery could easily be deduced that supervision is life wire of any educational system. Igbo, (2002) looked at supervision as the process of helping, guiding, advising and stimulating growth in subordinates in order to improve on the quality of his work. Supervision involves the stimulation of professional growth and the development of teachers, the selection and revision of educational objectives, materials of instruction and methods of teaching and evaluation of instruction with fairness (Ethics) for a better future. Ethical standards in school supervision emphasize the principle of fairness, respect, and confidentiality, ensuring a supportive and

professional environment for supervisor, educators and students for a conducive teaching/ learning environment. This paper exposes you to the nitty gritties of ethical standards in school supervision for Sustainable National Development in Nigeria.

Concept Clarification

What are Ethical Standards?

Ethics is derived from the Greek word —ethos, meaning the science of morality that regulates human conduct. Ethics, though ancient in its origin, has in recent time and clime become a novel and compelling topic, both in its theoretical and practical engagements. Globally, issues of ethics are legion (Shambe, 2017). Implementation of ethical values could be seen as moral principles and practices that govern a person's behavior or the person's way of conducting an activity. It is the branch of knowledge that deals with moral principles affecting how people make decisions and live their lives.

Ethical standards are guidelines that promote good behavior and positive image for individual and organizations. Ethical standards encompass principles like fairness, kindness, integrity, honesty, respect, responsibility and trustworthiness. These standards help individuals and organizations make sound judgments and decisions in various situations. These standards guide supervisors in their interactions with teachers and students, ensuring a positive and productive learning environment. Ethical standards also include those that enjoin virtues of honesty, compassion, and loyalty. They include standards relating to rights, such as the right to life, the right to freedom from injury, and the right to privacy. Nevertheless, unethical behaviors occur when decisions enable an individual or organization to gain at the expense of the larger society (Wuese, 2023). Unethical behaviors can include issues like favoritism, unfair assessment practices, and exploitation of students. Unethical issues relates to issues concerning rape, indiscipline, dishonesty, gangsterism, staff criticism, gossip, sexual harassment and molestation related to abuse of office, plagiarism, drug abuse, cultism, intimidation, bribery and corruption, embezzlement of funds, greed, stealing, murder, assault, slander, fraud, examination malpractices and any kind of malpractice of sort, kidnapping, among others (TRCN, 2013).

Ethical problems have forced various governments in Nigeria since the 1976 administration to introduce one form of legislation or the other to curb this monster. Since, 1997 and up to date, Nigeria had consistently been listed as one of the corrupt countries in the world by Transparency International. In its 2001 annual corruption index released by Transparency International (TI), Nigeria was second to the Asian country of Bangladesh (Iorbee, 2021). Other factors as highlighted in the study include: lack of facilities, gender, age, marital status with its responsibility, inability to cope with stress, employment status, nature of employment, income level, lack of morals and education status distribution, work experience and commitment to organization. These unethical practices have great consequences on school supervision for sustainable national development in Nigeria. This could lead to lack of attractiveness of investment opportunities to foreign investor especially in education sectors in Nigerian and the world at large. On the other hand, the cost of attracting foreign investment will become higher in Nigeria vis-à-vis other parts of the world. That is why in most public organization and professions in Nigeria there is code of conduct which are ethical principles that guides people's actions, behavior and their relationships with other people and their job. Failure to maintain good work ethics in schools, it has great consequences on school supervision for Sustainable National Development in Nigeria.

Importance of Ethical Standards

Ethical standards are of immense importance and can be found in the following ways:

- a. Building trust: Ethical behavior builds trust between individuals, organizations, and the public.
- b. Promoting positive relationship: Ethical standards help foster positive relationships based on respect and fairness.
- c. Ensuring accountability: Ethical standards provide a framework for holding individuals and organizations accountable for their actions.

- d. Protecting stakeholders: ethical standards help protect the rights and interests of all stakeholders, including employees, customers, and the public.

Some of the key ethical standards in school supervision are

- Honesty and integrity: Supervisors should be truthful and act with integrity in all their dealings.
- Fairness and impartiality: All individuals, including teachers and students, should be treated fairly and without bias.
- Respect for dignity and rights: Supervisors should respect the dignity and rights of all individuals, including their right to privacy and freedom from harm.
- Professional competence and responsibility: Supervisors should possess the necessary skills and knowledge to carry out their duties effectively and responsibly.
- Confidentiality: Information shared in supervision sessions should be treated confidentially.
- Avoiding conflicts of interest: Supervisors should avoid situations where their personal interest might conflict with their professional responsibility.
- Due process: Supervisors should uphold the principles of due process and protect the civil and human rights of all individuals

As school supervisors there are some Unethical practices to be avoided, these include the following as outlined by Kuna (2015) as truancy, lateness to school, cheating at examination, improper dressing, drug abuse, lying and lateness to school and lessons. At tertiary level, lecturers extortion of money from students, conduct of armchair research, sexual harassment by both lecturers and students, plagiarism, delaying unduly the marking and release of examination results, and leaking examination questions among others. These unethical conducts disturb the minds of teachers and students, which interfere with the learning of both the students and their peers (Kater, 2019). Notwithstanding, solutions to unethical behavior must focus on changing people by employing the following approaches as identified by Jingi, (2022); values related, economics, legal/judicial sanctions, religious, managerial, leadership, family, socio-cultural, educational, training and development, police/armed forces reforms, motivation, modernization, development and multi-dimensional approaches. Practice of learning and work ethics is a good determinant of qualitative education.

Promoting Ethical Conduct

To foster ethical behavior in school supervision, schools and educational institutions should

- i. Develop and implement a clear code of ethics for supervisors
- ii. Provide training and professional development on ethical leadership and unethical conduct
- iii. Regularly evaluate and monitor the ethical conduct of supervisors

By upholding high ethical standards, school supervisors can create a positive and productive learning environment where all individuals are treated with respect and dignity. School ethical behavior and standards is expected of all – be it teachers, staff, lecturers or teaching staff, non-teaching staff, students and likewise their parents and guardians.

Who is a School Supervisor?

A school supervisor could be the principal of a school, or a senior member of staff of a school checking the efficiency of work done in the school. It is also a person that is involved in an evaluative, long-term relationship between a —more senior member of a profession and —a more junior member of that same profession (Bada, 2010). The school supervisor is selected by the head office or ministry to do the work of supervision in a school be it a primary, secondary or tertiary institution (Akuta 2025). The primary responsibility of supervisors is to see that high ethical standards are maintained and that schools are run in accordance with the laid down regulations.

What is School Supervision?

Supervision in a school system implies the process of ensuring that policies, principles, rules, regulations and methods prescribed for purposes of implementing and achieving the objectives for education are effectively carried out. Mbahan (2010), viewed school supervision to involve the use of expert knowledge and experience to oversee, evaluate and coordinate the process of improving teaching and learning in schools. School Supervision involves the stimulation of professional growth and the development of teachers, the selection and revision of educational objectives, materials of instruction and method of teaching and evaluation of instruction (Naabo, 2012).

School supervision occupies a unique place in the entire education system. Just as the personality of each supervisor differs from the other, the supervisory strategies adopted are varied and so their effects on the educational system. The supportive and educative process of supervision is aimed toward assisting supervisees in the application of theory and techniques to their works (Association for Counselor Education and Supervision, 2003). The supervision of personnel and materials in order to ensure the set minimum standards are attained, sustained and seen to meaningful impact on Nigeria and society at large. The effective improvement of instructional delivery and maintenance of standards in the school system are enhanced through regular internal and external supervision. According to Atooye (2022) schools are presently supervised by two categories of people, viz: (i) internal supervisors those within the school, supervisors as principals, vice-principals and heads of departments: (ii) external supervisors those outside the school, supervisors as the formally designated officials from the inspectorate division of the Ministry of Education and the various Area or Zonal Education Offices.

Having a Quality supervisor is important because it will ensure that goods services produced in a school are of highest possible ethical standard, as well as protecting buyers from purchasing sub-standard products which will be half baked graduates (Mbahan, 2023). Quality supervision is a baseline standard in education which can be measured on a scale of reference. It is an expression of standard or a means by which a certain set standard in education can be achieved. It could easily be deduced therefore that quality in education is a totality of the combination of such indispensable variables such as quality teachers, quality instructional materials and quality infrastructure (classrooms, seats, tables, chalkboards etc.). Others include, favorable teacher/pupils ratio, favorable pupils/classroom ratio and quality instructional supervision. All these and more surely results to quality product (student) who is exposed to a balanced and result oriented education. A supervisor who is well prepared for his/ her job should not only face the challenges of supervision but the challenge of professional ethical standards to administer supervisory roles through technical and administrative service in any school set up, that is, primary, secondary or tertiary education.

Forms of School Supervision

To Egbebi and Harbau (2019) supervision of schools can take different forms which are:

1. **Full scale supervision:** This form of supervision covers all that concerns the school system. After the conduct of this form of supervision, a report is usually compiled, published and forwarded to the appropriate education agency that is responsible for the implementation of the recommendations of such report. In most cases this form of supervision lasts for days (3-5 days depending on the school size and the area to cover).
2. **Routine supervision:** This involves routine visits to schools by designated school supervisors to inspect selected aspect of the school that require urgent attention and help solve the problem on the spot. The report in this form of supervision is usually not published.
3. **Follow-up Supervision:** This form of supervision is mostly carried out after a full or routine supervision to ascertain the extent which the observations and recommendations made during a full or routine supervision have been implemented.

The Purpose of School Supervision

According to Rumum (2021), school supervision includes all efforts of school officials directed to provide leadership to the teachers and other educational workers in the improvement of instruction.

The effective school research identifies schooling practice and characteristics which supervisors use in doing their jobs associated with measurable improvements in student achievement and excellence among student achievement. These —effective school practices— include elements of schooling associated with ethical and clearly defined curriculum; focused classroom instruction and management, firm consistent discipline, close monitoring of student performance; and strong instructional leadership as follows:

1. To acknowledge that teachers are individuals and professionals with different needs and interests.
2. To define supervision as an art and science.
3. To consider that taken together, passion for learning and reflective practice provides modeling and the basis for individual perception and insight.
4. To maximize individual growth through reflective practice and professional dialog.
5. To provide time and support for growth and change.
6. To encourage self-initiated professional/ ethical development.
7. To develop an educational environment characterized by collaboration cooperation, and communicating yielding a supportive, non-threatening environment to foster professional growth.
8. To assert that all faculty have a professional responsibility to continually learn and improve.

Scope of School Supervision

For the purpose of educational development in Nigeria, the scope of school supervision to Eya and Leonard (2012)) include:

Instructional work: Within this scope, the designated supervisor aims at various areas of improving the existing quality of instructions given. For this the supervisor focus on method of teaching adopted for different subjects, audio-visual aids that are used, school time table, allocation of duties among teachers, students' class works and its corrections, teachers' lesson notes, diaries and scheme of work.

Co-Curricular Activities: Under this, the designated supervisor focuses on how various co-curricular activities are organized in relation to their need and importance to education. These activities include; dramatics, games and sports, school magazines, excursions, field trips, picnics, and library services

Records and register: The designated supervisor has to focus on all school records and attendance register of both staff and students by checking admission register, staff and students' attendance register, the cash book, the log book, the stock register, the movement book, and the receipt book.

The School Environment: In this, the supervisor focuses on the level of discipline among staff and students, inter-relationships between individuals, general behavior of students, plantation of trees, morale of classrooms, hygienic condition of school toilets, school beautification, and relationship between the school and host community

Management: The management of school is also an important area of concern to designated school supervisors without which all efforts of overall improvement of teaching and learning process will be jeopardized. The supervisor therefore need to focus on the cooperation of teachers and members of the host community, the ability of the head of the school to run the school, the coordination and cooperation between teachers and head teacher in organizing school programs, achievements and failures of the school, and how duties and responsibilities are rendered by heads and members of various sub-committees for different school programs.

Guidance to teachers: The work of a designated supervisor is not only to oversee but also to guide the teachers and head-teachers in their inputs in ensuring quality education. Here, the supervisor focuses on the innovation of teachers, remedial instructions, community mobilization and support and organizing seminars, conferences, workshops and in-service trainings.

Importance of School Supervision Standards

School supervision standards are of immense importance to the all stakeholders in the educational sectional sector as follows

1. **Improved teaching and learning:** Supervision helps teachers enhance their skills and improve the quality of instruction, leading to better student outcomes.
2. **Enhanced Accountability:** Standards provide a framework for holding teachers and school administrators accountable for their performance.
3. **Effective Resource Management:** Supervision ensures that resources are used effectively and efficiently to support teaching and learning.
4. **Positive school culture:** Supervision can foster a collaborative and supportive environment that promotes professional growth and student well-being.

Challenges of School Supervision in Nigeria

The challenges facing effective and successful school supervision in Nigeria as outlined by Omorobi (2020) include:

1. **Finance:** Inadequate financing of the inspectorate unit or department of ministries of education affects the performance of designated supervisors. This can be in form of non-payment of supervisory staff allowances and inadequate funding of the unit or department as a whole.
2. **Unqualified Supervisors:** Sometimes, there is a wrong assumption that all teachers are qualified supervisors. This has led to the appointment of teachers that are not professionally trained for the purpose of school supervision by using years of service as yardstick for selecting school supervisor. Although, one of the 6 criteria for supervising a school system is teaching experience, but this must be reinforced with relevant academic knowledge and training in education quality control and assurance. If this is not taken into consideration, the art of school supervision will be reduced to mere school visitation.
3. **Transportation:** The unavailability of functional vehicles at the disposal of school supervisors and poor conditions of roads in the rural parts of the country are militating factor against effective school supervision especially in the raining season. Also some areas such as the coastal areas are usually inaccessible to supervisors. These conditions therefore will limit the role of school supervision in developing education in Nigeria.
4. **Lack of Follow-up Supervision:** Owing to the current complex nature and rapid expansion of the educational sector, supervisory staffs find it difficult to cover their supervisory jurisdiction even for the first time let alone a follow up supervision.
5. **Fault Finding Mission:** When the sole aim of supervision is premised on finding the faults of the teachers and head-teachers, it kindles fear in students, teachers and the head-teacher. This will certainly threaten the school development owing to the fact that school supervision is basically for enhancing and improving the quality of instructions given within the school perimeter.
4. **Casual supervision:** This is carried out by one designated supervisor without any form of formal arrangement. Under this form of supervision, no report is given to the school authorities, but a secrete or confidential report is compiled and forwarded to the appropriate education agency for actions.
5. **Certification Supervision:** This type of supervision is carried out to affirm the standard and readiness of a school to conduct external examinations such as West African Senior Secondary Certificate examination (WASSCE)

6. **Fact Finding Supervision:** This type of supervision is carried out to gather information about all sorts of report or petitions against a particular school

7. **Internal Supervision:** This type of supervision involves qualified an experience head-teachers and teachers in a particular school. They focus on the school work, teachers' behavior and students' attitude to learning. It is carried out under a cordial atmosphere and suggestions for improvements are politely given due to the fact that those supervised are known colleagues.

Key Areas covered by School Supervision Standards

1. Teacher performance and development: Monitoring teacher effectiveness in the classroom and providing feedback for improvement. Also, assessing teacher knowledge, skills, and classroom management strategies and ensuring teachers have access to professional development opportunities
2. Curriculum and instruction: Ensuring the curriculum is implemented effectively and aligned with educational goals and supervising the use of appropriate teaching methods and materials. Also, Monitoring student learning and providing support for struggling learners
3. School environment and operations: Maintain a safe and conducive learning environment for students and staff. Overseeing the use and maintenance of school facilities and resources and ensuring adherence to school policies and procedure
4. Professional Growth and collaboration: Fostering a culture of continuous improvement and collaboration among staff. Providing opportunities for teachers to learn from each other and share best practices
5. Accountability and evaluation: Evaluating the effectiveness of teaching and learning practices. Assessing the overall performance of the school and identifying areas for improvement and ensuring that school resources are used effectively and efficiently

Examples of supervisory activities

- 1 classroom observations and feedback sessions
- 2 reviewing lesson plans and instructional materials
- 3 providing guidance and support to teachers on curriculum and teaching strategies
- 4 organizing professional development workshops and training sessions
- 5 monitoring student progress and providing support for struggling learners
- 6 ensuring compliance with school policies and procedures

In conclusion, school supervision exists nearly everywhere. Supervision was and is a key tool to ensure that all school staffs are respected and treated with dignity in line with the ethical standards (rules and regulations) set for proper smooth running of the school and are followed properly. Schools where unethical practice is highly in operation cannot produce disciplined and quality graduates. This reduces the value of our school products, based on the standard by which we judge human behavior. In other words, moral rules, promoting those things thought of as good and minimizing or avoiding those things thought as bad learnt at early age at home and school.

Concept of Sustainable National Development

Sustainable National Development describes the practice for sustainability (Amadi, 2014). Sustainable National Development is the practice of learning how to achieve global and local sustainable communities through the constant provision of desirable educational needs to the people of young generation in a way that it will be meaningful in their future aspirations. It is said that a country cannot grow beyond its education system, this therefore implies that Sustainable National Development is educational growth that is integrated with economic, scientific, political and home based technological expansion which collectively indicates the level of individual development in terms of increased skills and capacities, greater freedom for self actualization, creativity, self-discipline,

responsibility, and general well-being of the society (UNESCO, 2005). The focus of Sustainable Development is to promote lifelong learning process that transcends beyond the four walls of the school premises because it is usually directed towards imparting knowledge, providing job satisfaction, and upholding the tenets of sustainability.

To achieve Sustainable National Development in education, there are statements which are formulated to guide and describe the patterns, skills and attitudes of its participants during and after the completion of an educational program. The goals of Sustainable National Development to Oghiagbephan (2018) are extractions from the seventeen (17) United Nations' (UN) Sustainable Development Goals (SDG) that were aimed to be achieved by 2030, which include:

1. Ensuring inclusive healthy lives and promote well-being of all at all ages
2. Achieving gender equality and empowering all women and girls
3. Clean water sanitation
4. Decent work and economic growth
5. Sustainable cities and communities
6. Strongly institutionalized peace and justice
7. Partnership for goals

The goals of Sustainable National Development highlighted above shows the major areas of sustainability in the education sector of any nation as well as covering issues in teaching and learning such as climate change, bio-diversity, poverty eradication, and sustainable consumptions. The achievement of these is likely to ease the burden of insecurity, violence, unemployment and other associated social vices.

Challenges facing Sustainable Educational Development in Nigeria

There exist myriads of challenges facing the quest of attaining Sustainable National Development right to quality education which is worthy of emulation and to be sustained. However, this has failed due to neglect of the use of proper ethical standards in supervision, lack of trained supervisors to handle supervision, lack of supervision knowledge, poor job motivation, unqualified or inexperienced human resources in the education sector and total absence of interest in the teaching and learning profession (Bourn & Hunt, 2017). Furthermore, the role of gender disparities and socio-cultural beliefs in access to basic education is a militating factor against the development of Sustainable Nation in Nigeria (UNESCO, 2005). Another major problem is the inability of most public primary, secondary and tertiary institutions to have supervisors at each level to supervise the students in totality (Wanjegbar 2024).

Ethical Standards in School Supervision for Sustainable National Development

Effective school supervision affords stakeholders in the education sector a democratic and co-operative involvement under capable, understanding and discerning administrators. Supervision should be effectively done in line with the laid down rules and regulations, each person involved in the teaching and learning process must be willing to assume certain level of supervisory responsibilities. Schools should focus on ensuring quality teaching, learning, and overall school operations. These standards address areas like teacher performance, curriculum implementation, and the learning environment, aiming to create a supportive and effective educational experience. Supervisors should avoid favoritism and discrimination: showing preference for certain teachers or students based on personal relationships or other irrelevant factors, unfair assessment practices: grading students unfairly or inconsistently or assessing the on skills not taught or practiced, exploitation of students: taking advantage of students for personal gain or benefit, neglecting professional duties: failing to fulfill professional responsibilities or providing inadequate supervision and lack of transparency: not being open and honest about decisions and actions.. Therefore, for Sustainable National Development to be achieved through effective school supervision, school supervision must be a continuous, comprehensive and in line with the rules and regulatory process designed to cover all scopes of school supervision as

highlighted earlier in this paper by embracing all educational experiences through primary, secondary and tertiary educational institutions.

Conclusion

This paper examined ethical standards in school supervision for Sustainable National Development in Nigeria. It established that ethical standards are guidelines that promote good behavior and positive image for individual and organizations, the paper noted that school supervision is aimed at improving the quality of instructions given in educational institutions. Also, the paper examined the forms, purpose, scope, and importance in school supervision; it looks at the challenges confronting school supervision for Sustainable National Development in educational institutions which include poor funding, deteriorating infrastructure, and unqualified designated supervisors among others. Conclusively, the paper concludes that effective school supervision provides an honest accurate and definite report on: the teachers observed and; educational values obtained from the expenditure of public funds. Consequently, sustainable National Development lies with how functional those that are saddled with the responsibility of school supervision are on the job.

Recommendation

1. School supervisors should create a positive and productive learning environment where all individuals are treated with ethical integrity, that is, respect and dignity.
2. Designated school supervisors should endeavor to make follow-up supervision to ensure that recommendations have been implemented
3. Government should provide statutory authority, prestige and resources to school supervisors in order to continuously work with teachers to develop, maintain and evaluate goals of education for sustainable education development.

Abstract

This paper reviewed ethical and values education driven leadership, in higher education. The principles of ethical leadership, the Kantians ethical theory, the challenges to ethical leadership and re-engineering these challenges. The principles of ethical driven leadership in higher education ensures that governance, decision making, interpersonal relationships, align with moral values such as is focused on fairness, honesty and integrity which is a fundamental requirement in shaping a positive higher education institution. This study also reviewed ethical and value driven leadership in higher education informed by various ethical theories that influence ethical driven leadership. Out of all the ethical theories the focus of this paper was on the relevance of the Kantian ethical theory to the ethical and value driven leadership in higher education. Despite the importance of ethical and value driven leadership in higher education, some unethical behaviours and challenges abound. Challenges such as: managing finances responsibly, ensuring the responsible use of resources, including navigating conflicts of interest, promoting diversity and inclusion and upholding academic integrity, fostering a strong ethical culture, addressing potential conflicts between personal, plagiarism, organizational values, and manage situations where unethical behaviour occurs despite their best efforts among others. These challenges in ethical driven leadership in higher education has led famous administrators, organisations and higher institutions to fall from grace. This has highlighted the relevancy for ethical and values education driven leadership. Amongst other things, these unethical behaviours may also deter the smooth administration of the higher institutions, affect the quality of graduates from these institutions, reduce the competitive status of these graduates in the globalised world and hamper some of the goals of higher education. Suggestions for re -engineering the challenges of ethical leadership was proposed.

Keywords: Ethical and Values Education; Principles of Ethical Leadership; Kantian Ethical Theory; Challenges in Ethical Leadership.

Introduction

Ethical leadership is characterised with ethical values in the management functions in higher education. These ethical values that play a great role in the institutions, include fairness, honesty and integrity. The role of ethical and values education in leadership in higher institutions is for the leader to be able to guide governance, accountability, integrity in the decision-making processes and ensuring transparency. The Leaders' values may affect the institution's vision and mission in several aspects, such as research, curriculum development, and innovation goals. Institutional leaders should set an example through core values such as, guide moral reasoning, inclusion, decision making, wisdom, justice, fostering integrity and responsibility and helping to establish a supportive atmosphere amongst staff and students in higher institutions and other organisations. In addition, Ahmed (2023) and Zacarias and

Flores (2024) are of the opinion that ethical and values driven leadership fosters a collaborative environment where students and staff are expected to uphold the principles of ethics and values education and supportive behaviours that will lead to being able to fit into the globalised world.

Moreso, ethical driven leadership in higher education is not only about personal values but also creating institutional cultures. In addition, ethical and values driven leadership is essential in higher education because it may set the tone for ethical behavior, fosters a positive organizational climate, and promotes the mission of higher education. However, ethical and values driven leadership in higher education faces several challenges as they try to uphold policies, goals, moral principles, while performing their management functions in higher institutions. Leadership in Higher Education encompasses the roles and responsibilities of individuals in governance and administrative positions, such as university presidents, deans, and department heads, who influence the direction and priorities of their institutions. Udida, Bassey, Udofia and Egbona (2009) submitted that some individuals appointed as vice chancellors of some university are weak, not competent and lack administrative potentials; such appointees must possess administrative qualities and must lead ethically by example. The leader must have integrity, must be knowledgeable, and practice modern types of management leadership styles. He or she must be visionary and ready to adjust to situations in the system.

In contrast, Cumbo (2009) focuses on the leader when defining ethical leadership. A leader is considered ethical when inward virtues direct the leader's decision-making process. Followers simply are beneficiaries of a leader living a virtuous life. A leader is motivated not by influencing others but rather living by one's own virtues. The author states that virtues are amplified when the leader exhibits —imagination, compassion, empathy, and discernment. Yukl (2006) summarizes the ethical leader as one who promotes honesty, and mirrors his or her actions with their values and beliefs. Yet, common themes include the need for establishing trust and gaining ethical knowledge by way of study and application. Kyambade, Namatovu, Namubiru, and Muganzi, (2025), in their study, determined the degree to which Uganda's public universities feel obligated to adopt socially and ethical responsible leadership practices. They conducted a semi-structured interview with 22 leaders as participants from Uganda's public universities. They structured out four main themes from the thematic analysis of the gathered data. These themes are moral excellence in character, stakeholder collaboration, personal abilities and moral direction. The researchers discover that although the leaders are willing to act appropriately in accordance with social norms and ethics, they do not fully exercise the four dimensions, especially in developing and Orient countries.

Brigue and Orlu (2023), discusses how ethical leaders contribute to academic achievement by creating a supportive system that values fairness and respect. It examines the impact of leadership ethics on the organizational culture of schools, emphasizing the significance of transparency, open communication, and ethical decision-making. It also discusses the influence of leadership ethics on staff morale and engagement, highlighting the benefits of a positive work environment that values integrity and promotes professional growth. Finally, it explores the impact of leadership ethics on the overall reputation of a university system, emphasizing the significance of ethical leadership in attracting quality teachers, students, and community support. In conclusion, emphasizing on the importance of prioritizing leadership ethics, integrity in school development and highlight the need for educational leaders to embrace and embody ethical leadership principles to foster a positive, sustainable impact and provision insights into the significance of leadership ethics, integrity in school development and highlights the multifaceted ways in which ethical leadership contributes by creating a thriving and ethical educational institution are steps in the right direction. This paper reviewed ethical and values leadership in higher education, the principles, relevance of Kantians ethical theory to ethical and values driven leadership in higher education, challenges of ethical and values driven leadership in higher education and re-engineering the challenges of ethical and values driven leadership in higher education.

Principles of Ethical driven leadership in higher education

Ethical leadership in higher education emphasizes principles like accountability, integrity, honesty, respect and fairness to foster a trustworthy and positive environment. According to Monahan,

(2012). Wood, (2023); Lynn (2024), these principles guide leaders in making decisions that promoting a culture of trust, promotes ethical conduct and transparency and benefits the entire academic community. Furthermore, George Marshall proposed eight principles of ethical driven leadership as applied to higher education. They are: self-control, requiring high ethics from everyone, emphasizes personal courage, inclusiveness, prioritizing the public interest, task and employee-centeredness, recognizing talent, sensitivity and understanding (Trust). These principles guide leaders in making ethical decisions and offer a strong frame for academic administrators who seek guidance on how to implement ethical practices in higher education (Pops, 2006; Marcy, Gentry, and McKinnon, 2008).

Ethical principles guide decisions that affect faculty, students, administrative staff, and broader communities. In a global context, leaders must also navigate competing moral frameworks, intercultural dynamics, and the demands of international collaboration. Ethical and values education driven leadership is essential in higher education institutions because it establishes a solid ethical foundation, fosters an environment of integrity, and contributes to the institutions' long-term success and viability. It acts as a model for all stakeholders, motivating them to follow ethical concepts and values in their academic pursuits and institutional responsibilities (Gichuru, 2023).

In addition Jansen- van -Vuuren, Du- Plessis, Barnes, and Franz, (2025) stated that other core principle of ethical leadership example accountability, infer that leaders should take responsibility for their actions and their consequences. In higher education, this means that, **ethical** leaders should be answerable to students, faculty, staff, governing council, and the society. In addition, in terms of the principle of integrity, which means acting with transparency, consistency and honesty. In higher education, it models ethical behaviours in leaders through decision making and commitments based on non- personal gain and fairness. Furthermore, justice and equity means ensuring advancement for all individuals, ensuring fair treatment, opportunity and access, Practically, this can be addressed in higher education by systemic inequities in inclusion and belonging, student support, promoting diversity, admissions, funding and hiring. Moreso, respect for individual's states that the rights, dignity, and autonomy of every person should be values. In higher institutions, different perspectives in decision-making has to be encouraged. Also, encouraging listening actively and open dialogue. In terms Transparency Being open about processes, decisions, and outcomes. This can be achieved by leaders of higher education by communicating budgets, policies, challenges and changes to staff and faculty in accessible and understandable ways. Stewardship means managing higher institutional resources responsibly for sustainability in higher education, ethical leaders to reflect the mission and values of the institution make sustainable environmental, financial, and organizational choices. The principle of service orientation means prioritizing the needs of staff, faculty, students, the academic community, and society. In higher education, it focuses on the institution's educational goals, vision, mission and its broader responsibility to the good of the society. Furthermore, courage and moral imagination is viewed as having the strength to envision just alternatives and make tough ethical decisions. In higher education, it involves resisting pressures that compromise ethics, initiating transformative actions even when they are unpopular and speaking out against injustice. The principle of commitment to academic freedom and inquiry means supporting the right to teach, explore, publish ideas freely and responsibly. In higher education, this involves critical thinking, the free exchange of ideas and upholding the values of intellectual honesty.

The guiding principles in Leadership in academia is often confronted with difficult decisions involving resource allocation, academic freedom, personnel management, and institutional partnerships. Ethical leadership ensures that such decisions are guided by fairness, transparency, and accountability, rather than personal or political gain. This includes respecting the rights of faculty and students, ensuring access and equity, and upholding academic standards.

Relevance of Kantian's ethical theory to ethical and value driven leadership in higher education.

In higher education where the development of human intellect, moral character and freedom is central, Kantians ethical philosophy aligns closely with the missions and visions of ethical and values

driven leadership. Immanuel Kant propounded the philosophy of Kantian ethical theory. Kant is the primary historical exponent of *deontological ethics*. Chilufya (2023) stated that *deontological ethics* is one of several models of ethics that can be applied in leadership. That each model has its own unique approach to defining ethical behavior. He observed that the other two broad ethical models are teleology and relationality-responsibility models. The deontological model is a moral theory which is based on the belief that actions should be judged based on whether they follow certain ethical duties or rules. Morality or Ethics is primarily about law, duty or obligation. In this model, leaders are expected to adhere to a set of moral rules and principles, regardless of the consequences of their actions. According to deontological ethics, what makes an action right or wrong are features of the action itself, not the consequences of the action.

The relevance of Kants ethical principles to higher education are as follows: it emphasises impartiality and fairness. It improved accountability. It strengthens respect for justice, diversity and human rights. It promotes institutional legitimacy and trust. It provides a rational framework for resolving ethical dilemmas. It encourages principled decision-making and moral consistency. It offers a powerful and principled foundation for ethical and values-driven leadership in higher education. Its emphasis on respect for persons, duty and moral consistency and directly supports the responsibilities of academic leaders committed to institutional integrity and ethical governance. Immanuel Kant (1724–1804) is the primary historical exponent of *deontological ethics*. According to deontological ethics, what makes an action right or wrong are features of the action itself, not the consequences of the action. Kantian ethical theory supports leadership styles supports the promotions of moral duty, individual's dignity and avoidance of manipulation. Thus, the transformational, servant and democratic leadership styles best align with Kantian's ethical theory.

According to Bowie (2000), the Kantians ethical principle that states that every individual must be treated as an end, not as a means. Emphasise respect for persons and human dignity. The ethical

leadership implication states that ethical leaders must respect the voice, autonomy, and rights of staff, students and faculty. Furthermore, the Kantian ethical principle explains that in faculty evaluations and disciplinary actions Kantian ethics demands due process, fair treatment, and respect for individuals' dignity. In addition, the Kantian ethical principle also states that actions are ethical if done from a sense of duty, regardless of consequences. This emphasises integrity and moral duty. The ethical leadership implication states that higher education leaders should act ethically even when it is not inconvenient or unpopular. The principle states that upholding academic freedom in the face of political pressure, even if it risks reputation or funding. Furthermore, the Kantian ethical principle also states that ethical rules must be universally applicable. This is referred to as the principle of Fair Policy and universalizability. This principle emphasises that in ethical leadership, policies should be consistent, not based on favoritism or hidden agendas and fair. This can be in terms of hiring, admissions, or disciplinary policies which must be applied uniformly, avoiding double standards.

Moreso, the Kantian principle of respect for individuals includes supporting their rational autonomy, is referred to as autonomy and empowerment. It states that leaders should empower others to act ethically, think critically and participate in shared governance. This can be done by encouraging open dialogue on ethical issues, student participation in policy development and faculty governance. The Kantian Principle that states that truthfulness is a moral duty. Is also referred to as transparency and honesty. This implies that ethical leaders should be honest about institutional challenges, avoid manipulation and communicate openly. Being transparent about budget cuts or organizational restructuring, even when the message is difficult. Leaders who adopt a Kantian theory approach can create a just, ethical, and sustainable environment for their institution. Also, by embracing Kantian ethical theory in higher education leadership, it can create a more, equitable, just, and ethically grounded institution that prioritize the development of student, staff and faculty.

Challenges of Ethical and Values Driven Leadership in Higher Education

The challenges of ethical and values education driven leadership are caused by both internal and external factors. In developed countries, ethical and values-driven leadership in higher education faces

numerous challenges, managing finances responsibly, ensuring the responsible use of resources, including navigating conflicts of interest, promoting diversity and inclusion and upholding academic integrity, fostering a strong ethical culture, addressing potential conflicts between personal and organizational values, and manage situations where unethical behavior occurs despite their best efforts. These challenges are increased by external pressures, such as budget cuts, government regulations, the expansion of technology such as the implications of artificial intelligence and other digital technologies; and developing a diverse workforce. Against this backdrop, higher education leaders are challenged to ensure that their institutions not only survive but thrive in the new international, IT-enabled, volatile and competitive environment now faced (Stückelberger , 2019, Geoge and Rose, 2023). And with this has come a significant growth in the complexity and span of responsibilities attendant to their leadership responsibilities. (Bajinath, 2017; Gichuru, 2023); Peterson, Robinson, and Rideaux, 2025).

However, in developing countries, among the challenges of higher education is the problem of unethical leadership. Some challenges exist that test the leadership capacities and values of higher institution administrators. Amongst the challenges include: challenges in academic dishonesty, data falsification, dishonesty in conducting and writing research (plagiarism), lectures not motivated by the administrator to teach well, frequent absenteeism from the institution by the administrator, providing insufficient materials and facilities for teaching and learning, ethical dilemmas in university administration, and the influence of globalization on ethical frameworks. (Stückelberger, 2019). In addition, corruption, cheating, plagiarism, issues like social diversity and social inequity and others. These challenges in organisational leadership in higher education have led famous organisations and higher institutions to fall from grace. This has highlighted the relevancy for ethical and values education driven leadership. Amongst other things, these unethical behaviours may also deter the smooth administration of the higher institutions, affect the quality of graduates from these institutions, reduce the competitive status of these graduates in the globalised world and hamper some of the goals of the Nigerian National Policy on Education concerning higher education. Furthermore, ethical leadership requires continuous vigilance, self-reflection, and courage to uphold principles even when faced with opposition. It is necessary for higher education institutions to address these challenges in order to maintain their integrity and efficiency.

Empirically, an overview on the challenges facing ethical leadership in higher education, drawing upon relevant studies are as follows: Political and Institutional Pressures, Resource Constraints, Conflict of Interest, Academic Freedom and Autonomy, Ethical and values Education and Training. In addressing these challenges requires a commitment to accountability, transparency and the development of ethical leadership competencies through training programmes and education (Yukl, 2006; Ostwal, 2017; Pityana) The challenge of political and institutional pressures in higher education is observed by the institutions operating within complex political and institutional contexts, which can create challenges to ethical leadership. Gichuru (2023) stated that political pressures, such as demands for accountability, can sometimes challenge the ethical decision-making of university leaders. These pressures may create conflicts of interest, also, compromising the leaders' ability to make decisions that prioritize ethical and values principles over political considerations. Furthermore, the challenge of resource constraints states that higher education often face resource constraints, including limited funding, budget cuts and increased competition for resources. These constraints can create ethical and values problems for leaders, as they may need to make difficult decisions regarding resource distribution and allocation.

Pityana, (2017); Brigue and Orlu (2023) ; Peterson et al. (2025) suggested that resource scarcity can lead to ethical challenges such as nepotism, favoritism, or compromising academic integrity in pursuit of financial sustainability. Conflict of Interest is another significant challenge for ethical leadership in higher education is managing conflicts of interest. Higher education administrators may have multiple responsibilities and roles such as consulting, serving on corporate boards, or engaging in outside activities. These external engagements can create conflicts between the best interests of the university and personal interests. Peterson et al. (2025) argued that conflicts of interest

can weaken accountability, trust, and the ethical decision-making process in higher education leadership. The challenge of academic freedom and autonomy states that higher education are committed to academic freedom and autonomy, which can sometimes pose challenges to ethical and values driven leadership. Academic freedom allows scholars to pursue teaching, research and expression without undue influence. However, Kori (2016); Hao (2025) suggested that the pursuit of academic freedom can sometimes clash with ethical and values obligations, such as avoiding plagiarism, responsible conduct of research and maintaining integrity in teaching evaluations. Ethical leaders must navigate the balance between responsible conduct in the pursuit of scholarly excellence and academic freedom. Ethical and values Education and Training is also a challenge for ethical and values driven leadership in higher education. This challenge lies in the provision of ethical and values education and training. Despite the importance of ethical and values driven leadership, there may be a lack of formal training and education on ethical and values education in higher education institutions. Stükelberger (2019) emphasized the need for comprehensive ethical and values education programmes that equip leaders with the skills, knowledge, and moral reasoning abilities necessary to navigate ethical challenges effectively.

Re- Engineering challenges in ethical and value driven leadership in higher education.

Strategies for Fostering and re-engineering ethical and values driven leadership in higher education are as follows:

- In ethical and values driven leadership, leaders should lead by example. and Administrators and faculty should demonstrate ethical behaviour in their own interactions and actions. Ethical leaders should promote ethical leadership training by Providing opportunities for administrators, faculty and staff to develop their ethical leadership skills. Also, leaders should establish a strong ethical culture and create a supportive environment where ethical conduct is encouraged and valued.
- Ethical leaders should encourage technology and online learning by adapting strategies to local infrastructure and culture. Also, tailor ethical education to the specific context and needs of the institution. Furthermore, Using encouraging the use of secure online assessment platforms and advanced plagiarism detection tools to address issues of academic dishonesty in online learning environments. The Promotion of cybersecurity awareness and digital ethics to teach students about the ethical implications of cybersecurity risks and technology use.
- Ethical leaders should encourage ethical reflection and engagement in higher educational institutions. This can be done by providing opportunities for community learning and service. In addition, they should engage students in meaningful service projects that challenge them to think about ethical responsibility and social justice and ethical responsibility. Furthermore, to foster integrity a culture of academic integrity, Promote honesty and respect for intellectual property. Encourage students to engage in ethical discussions and debates: Create spaces for students to explore ethical issues and develop their own values.
- Ethical leaders should advocate the integration of ethical and values education into the Curriculum of higher educational institutions. This can be achieved by incorporating ethics and values as core component into all disciplines. Also, by Using case studies and real-world examples to expose students to ethical dilemmas and challenges faced by professionals in various fields. In addition, by encouraging ethical reasoning and critical thinking: Develop students' ability to analyse situations, evaluate different perspectives, and make informed decisions. This will help to prepare students to become responsible and ethical leaders in their respective fields.
- The ethical leader should create a culture of integrity, establish clear ethical guidelines and frameworks. Develop institutional policies and codes of conduct that promote ethical

behaviour. In addition, they should promote open communication and dialogue: Encourage staff, faculty and students to discuss ethical issues respectfully and openly. Ethical leaders should create ethical training programmes which should be implemented to provide staff, students and faculty with opportunities to learn about ethics and values and develop their ethical decision-making skills.

- Moreso, concerning financial management, higher education institutions are experiencing increased scrutiny regarding their financial practices. Leaders must ensure accountability, transparency, and responsible stewardship of resources while balancing the need for financial sustainability.
- Also, undermining the core values of higher education are, academic integrity, contract cheating, plagiarism, and other forms of academic misconduct. Leaders are to establish clear procedures and policies to address and prevent academic misconduct while fostering a culture of ethical honesty and ethical scholarship.
- Furthermore, the challenge of conflicts of interest include participating in research with potential financial gains, accepting gifts from vendors, or making decisions that benefit specific individuals or groups. The university leader's personal or professional interests should not clash with the institution's best interests.
- In addition, promoting equity, diversity, and inclusion is a critical ethical imperative for higher education institutions. To re-engineer this challenge, leaders must create inclusive environments, address systemic biases, and ensure that all members of the campus community feel respected and valued.
- Moreso, creating significant challenges for ethical leadership is external pressures, which includes budget reductions, government regulations, and the rapid pace of technological change. To re-engineer this challenge, leaders should remain true to their institutions missions and values and must navigate these pressures. Universities have a responsibility to use resources ethically, wisely, and sustainably. This includes reducing waste, managing energy consumption and promoting environmentally friendly practices.
- The challenge of ethical dilemma in decision making, that is making difficult decisions with no easy answers, can be re-engineered by leaders considering the potential consequences of their actions, preparing to weigh competing values and making decisions that are both practical and ethical.
- Furthermore, the challenge of creating a campus culture that embodies ethical values requires commitment from all members of the community and consistent leadership. This also, includes providing ethical training, modeling ethical behavior and encouraging open communication about ethical issues (Argyropoulou, 2015; Stükelberger, 2017 ; Gichuru, 2023). However, by re-engineering these challenges and actively working to address them, leaders in higher education can adopt a more ethical and values-driven environment that supports the academic goals, visions, and mission of higher education and also, contributes to a more equitable and just society.
- Fostering ethical leadership and integrity requires the active involvement of various stakeholders within an organization. Stakeholders, including employees, customers, shareholders, and the wider community, play a crucial role in promoting ethical leadership practices. By involving and engaging stakeholders, organizations can create a shared commitment to ethical leadership and integrity, thereby enhancing their reputation, stakeholder trust, and long-term sustainability.

Conclusion:

Ethical and values education driven leadership provides a synergistic combination of administrative and visionary leadership which serves to enhance the growth, culture, survival, and long-term viability of higher education institutions. The role of ethical leadership in decision making is also

increasing with globalisation. Ethical decision-making in this context is not achieved through mere adherence to moral standards; instead, it requires inspiring and guiding others towards positive outcomes through internal and external complexity. By using the ethical theories and leadership styles. Ethical theorists believe that a good leadership refers not only to having the competence of a leader, but also to ethical transformation of people. The Kantian ethical theory for example, focuses on duty, universal principles, and respect for individuals, promoting ethical consistency and dignity in leadership practices. Unethical behaviours in decision making by the administrator, can prove dangerous for the higher institution. Since Ethical and values education has significant effect on leadership, reengineering principles of ethical practices also have an impact on the development and quality of higher education institutions. Most institutions now focus on training and enriching their leaders ethically to enable the higher institutions continue to fulfill their goals, visions and mission well into the future.

Abstract

The study Managerial competence needs as correlate of effective administration of HODs in state colleges of education in south east, Nigeria adopted a correlational design. The population of this study is 388 respondents from state owned Colleges of Education in South East, Nigeria. This comprised of 327 NCE second year students in the school of education and 61 lecturers in the school of education in the state colleges of education in South East, Nigeria. The sample size of the study was 388 respondents from state owned Colleges of Education in South East, Nigeria. This comprised of 327 NCE second year students offering in the school of education and 61 lecturers in the school of education in the state colleges of education in South East, Nigeria. There were no sampling techniques since the population of the study is manageable and controllable by the researchers. The instrument for data collection was the researchers' developed two sets of questionnaires titled Managerial Competence Needs Questionnaire (MCNQ) and Effective Administration Questionnaire (EAQ). Two experts from the Department of Educational Management and one expert from the department of Science Education majored in Test and Evaluation in College of Education, Michael Okpara University of Agriculture, Umudike validated the instruments. Cronbach Alpha method was used to determine the reliability of the instruments which yielded an index of 0.87 for MCNQ and 0.91 for EAQ. Five briefed research assistants helped in the administration and collection of the in questionnaire. Data collected were analyzed using Pearson Product Moment Correlation Coefficient statistic to answer the research questions F-cal. was used to test the null at 0.05 level of significance. Based on the analysis of the study, the study finds that Human resources management significantly to a very high extent relate to effective administration. The coefficient of determination (R^2) of 0.746 indicates that 75% of the variance observed in the effective administration was attributed to HODs human resources management competence in colleges of education in South East, Nigeria. Decision-making as managerial competence need to a very high extent relate to HODs effective administration in state colleges of education in South East, Nigeria. The coefficient of determination (R^2) of 0.794 indicates that 79% of the variance observed in the effective administration was attributed to decision-making as managerial competence need in colleges of education in South East, Nigeria. The researchers recommended amongst others that; There is need for training and retraining of HODs on human resources needs and management towards enhancing effective administration.

Keywords: *managerial competence, human resources needs, decision-making needs and effective administration.*

Introduction

The college of education is amongst the highest level of tertiary educational provider that equips its products to be useful and sought for by the global educational community. The standard college of education could be obtainable if the administrative chamber of the institution is effective through a well-structured instructional programme, innovative lecture halls and laboratories, lecturer who are competent and pragmatic curriculum. Ogunode, Kasimu and Ibrahim (2023) noted that, the colleges of education is an institution of higher learning that provide facilities for training teacher which also involves in research to grant academic degrees such as bachelor, master and doctorate. It is imperative to note that this kind of education centres on teaching, research, consultancy, discovery of new phenomenon and community services amongst other. It was on this note that Ogunode and Adanna (2022) argued that colleges of education is designed to operate in a peaceful environment. Managerial competence remains a needful requirement to make a good administration in an organization. Being an HOD means you are a manager in an academic environment, as well as a manager of others. Querrey in Igwe (2023) noted that a manager needs managerial competence to be extensive in order for them to be successful in achieving organizational goals. HOD's should be able to effectively manage people, material resources, budget, and other available resources in their dispose judiciously. This requires someone with a multi-tasking work style who can plan for both the short and long-term goals in an organization.

Managerial competence can be developed through learning and practical experience. The managerial competence helps administrators to communicate effectively using oral and written skills. Smut in Okonkwo (2023) maintained that management is the attainment of organizational goals in an effective and efficient manner through planning, organizing, leading and controlling. It can be defined as certain attributes or abilities that an executive should possess in order to fulfill specific tasks in an organization. It also helps them to coordinate activities as well as utilize best knowledge management practices to pursue its goals. It also helps administrators to build the capacity and the ability to handle grapevine issue, ensure quality supervision skills and promote quality interpersonal relations among its workforce. Human resources management thus promotes administrative effectiveness since school administrators needs quality human resources to succeed in achieving set goals of the organization. Decision-making is an important aspect of managerial competence needed by university administrators. Every decision-making process should have a good choice which may or may not prompt action or the process of identifying and choosing alternatives based on the values, preferences and beliefs of the decision-maker. Okumbe in Okorie (2016) decision-making as the process of specifying the nature of a particular problem and selecting among available alternatives to solve them. Decision making therefore deals with the act of making a choice among available alternatives. Therefore, decision making is a problem-solving approach by choosing a specific course of action among various alternatives. Okorie (2016) contend that educational organizations are deeply involved in administrative decision-making as this reflects the organizations objectives, policies and plan. Decision-making is an integral part of modern management and forms the primary assignment or responsibilities of managers. Decision-making form the major element in university administration at every level of taking action in an organization be it in disciplinary issues, employment and deployment issue, disengagement matters, assessment or even contracting issues.

Theoretical Review

This study was built on the human relations theory by Follet in 1920

Human Relation Theory (Follet 1920)

The theory was propounded by Follet (1920). The theory stated that human factor is important in the achievement of organizational goals. School-community relation is a veritable component of

school management. School management needs theory that serves as a guide for action. In essence, theory on human relations can guide school administrators in their management functions.

The idea is that individuals have the motivation to perform when they are treated well. With the human relations theorist, the focus is on people and how they interact. School administrator should by this theory build a dynamic interpersonal relationship through delegating functions to teachers and maintaining open-door policy with the staff and students. The vice-chancellors are in the most advantageous position to provide the needed leadership in the management of the public universities in Nigeria. They should maintain good relationship between the school and the community by involving all members of the school community in the decision-making process. This is in line with the concept of democratic leadership which has its basis on the human relations theory.

This theory centres on motivation of workers can be achieved by encouraging their sense of achievement and recognize their personal value other than economic rewards. Follet was concerned with the human problems encountered in organizations, and therefore concluded that such problems can only be minimized when there is co-operation among the workers. She therefore emphasized coordination as the basis of any organization effectiveness.

This may be true to the school management when there are co-operative relationships and co-ordination between school and the community. Follet believed that industries, school and groups have problem of building and maintaining good relationship among various individuals in an organization. It becomes imperative and essential that efforts should geared towards effective human resources management competence, and decision-making need competence. Therefore, human relations should be seen as a collective responsibility of both the entire university community. Therefore, human relation theory relates to this study since competence in relating with organizational workforce can propel effective administrative outcome as well as to enhance good communication skill that has the capacity of engaging all available resources to yield an expected end result. It would guide the university administrators in maintaining cordial relationship, good communication skills and interpersonal relations with staff towards achieving effective administration.

Statement of the Problem

Managerial competence needs of the college administrators are required to ensure effective administration amongst academic administrators. This makes the administrative role of HODs the basic foundation of every college of education such adequate attention should be paid to their managerial competence needs such as management of human resources need, management of financial needs, management of school facilities competence and decision-making competence.

However, the college of education is the centre for educational excellence which makes managerial competence needs an essential element in achieving effective administration using heads of the department. These managerial competence needs involve human resources management, school plant management, decision-making competence and school-community relations competence. The incorporation of HODs as academic administrators in the school management team tend to enhance their administrative effectiveness that drives positive and quality school climate in the technology driven economy.

However, the researchers observed that in most state colleges of education in south east Nigeria, there is an issue of poor managerial competence amongst heads of departments as a result that most HODs are appointed on favoritism not based on their charisma and competence. This has resulted in poor financial management, incompetence in managing facilities in their departments, poor human resources management at the departmental level, and incompetence in decision-making during departmental board meetings becomes serious issue among the university academic administrators. These however, appear to create administrative ineffectiveness in state colleges of education in south east Nigeria.

The state of administrative ineffectiveness in their college of education could be as a result of poor managerial competence needs amongst HODs. This however maybe traced to a lot of variables, hence the problem of the study put in question form, to what extent does managerial competence needs

correlates with administrative effectiveness of HODs in state colleges of education in South East, Nigeria?

Purpose of the study

The study determined the relationship between managerial competence needs and HODs effective administration in state colleges of education in South East, Nigeria

1. determine the extent human resources management as managerial competence needs relate to HODs effective administration in state colleges of education in South East, Nigeria.
2. find out the extent decision-making as managerial competence need relate to HODs effective administration in state colleges of education in South East, Nigeria.

Research Questions

The following research questions guided the study. They are:

1. to what extent does human resources management as managerial competence need relate to HODs effective administration in state colleges of education in South East, Nigeria?
2. to what extent does decision-making as managerial competence need relate to HODs effective administration in state colleges of education in South East, Nigeria?

Hypotheses

The following null hypotheses were formulated and tested at 0.05 level of significance. They are:

H0₁: there is no significant relationship between human resources management as managerial competence need and HODs effective administration in state colleges of education in South East, Nigeria.

H0₂: there is no significant relationship between decision-making as managerial competence need and HODs effective administration in state colleges of education in South East, Nigeria.

Methodology

The study adopted a correlational design. Maduabum in Ogedi (2021) opined that correlational design is one aimed at determining the relationship between variables which enables a researcher to ascertain the extent to which variation in one variable is associated with variation in another. The design was considered appropriate for this study because the researcher ascertained the relationship between the independent variable (managerial competence needs) and dependent variable (effective administration) of the study.

The population of this study is 388 respondents from state owned Colleges of Education in South East, Nigeria. This comprised of 327 NCE second year students in the school of education and 61 lecturers in the school of education in the state colleges of education in South East, Nigeria. The figure 388 respondents comprise of 54 students from Abia State College of Education, Technical Arochukwu, 61 students from Ebonyi State College of Education, Ikwo, 70 students from Enugu State College of Education Technical, 58 students from Imo State College of Education, Ihitte Uboma and 84 students from Nwafor Orizu College of Education, Anambra. More so, 9 lecturers from Abia State College of Education, Technical Arochukwu, 12 lecturers from Ebonyi State College of Education, Ikwo, 15 lecturers from Enugu State College of Education Technical, 10 lecturer from Imo State College of Education, Ihitte Uboma and 15 lecturers from Nwafor Orizu College of Education, Anambra.

The sample size of the study was 229 respondents from state owned Colleges of Education in South East, Nigeria. This comprised of 226 NCE second year students offering in the school of education and 62 lecturers in the school of education in the state colleges of education in South East, Nigeria. There were no sampling techniques since the population of the study is manageable and controllable by the researchers. The instrument for data collection was the researchers' developed two sets of questionnaires titled Managerial Competence Needs Questionnaire (MCNQ) and Effective Administration Questionnaire (EAQ). The questionnaire has two clusters and 10 items in MCNQ and 1 cluster with 10 items in EAQ. Two experts from the Department of Educational Management and one

expert from the department of Science Education majored in Test and Evaluation in College of Education, Michael Okpara University of Agriculture, Umudike validated the instruments. Cronbach Alpha method was used to determine the reliability of the instruments which yielded an index of 0.87 for MCNQ and 0.91 for EAQ. Five briefed research assistants helped in the administration and collection of the in questionnaire. Data collected were analyzed using Pearson Product Moment Correlation Coefficient statistic to answer the research questions F-cal. was used to test the null at 0.05 level of significance.

Results

The results of the study were presented on tables and based on the research questions and the hypotheses that guided the study.

Research Question 1

To what extent does human resources management as managerial competence need relate to HODs effective administration in state colleges of education in South East, Nigeria?

Table 1: Correlation Matrix between human resources management and effective administration

		HRM	EA
HRM	Pearson	1	.864
	Sig (2-tailed)		.000
	N	388	388
	R ²	(0.746) 75%	
EA	Pearson	.864	1
	Sig. (2-tailed)	.000	
	N	388	388

HRM= Human Resources Management, EA= Effective Administration

The data on table 1 indicates a correlation R of .864 which is positive and within the coefficient limit or range of 0.80 and above indicating strong positive and very high extent relationship. This result indicates that human resources management relate to effective administration to very high extent. The coefficient of determination (R^2) of 0.746 indicates that 75% of the variance observed in the effective administration was attributed to HODs human resources management competence in colleges of education in South East, Nigeria.

Hypothesis 1

There is no significant relationship between human resources management as managerial competence need and HODs effective administration in state colleges of education in South East, Nigeria.

Table 2: Regression Analysis of Relationship between Human Resources Management as Managerial Competence Need and Effective Administration

Model	Sum of Squares	Df	Mean Square	F	Sig.
Regression	2072.437	1	2072.437	91.261	.000 ^b
Residual	8765.599	386	22.709		
Total	10838.04	387			

Data on table 2 reveals a significant P- value of 0.000 which is less than the alpha value of 0.05. Since the P-value is less than 0.05 alpha value, the hypothesis of no significant relationship was rejected and the alternate upheld. Therefore, there is a significant relationship between human resources

management as managerial competence need and HODs effective administration in state colleges of education in South East, Nigeria.

Research Question 2

To what extent does decision-making as managerial competence need relate to HODs effective administration in state colleges of education in South East, Nigeria?

Table 3: Correlation Matrix between Decision-Making as Managerial Competence Need and HODs Effective Administration

		DMMCEN	EA
DMMCEN	Pearson	1	.891
	Sig (2-tailed)		.000
	N	388	388
	R ²	(0.794) 79%	
EA	Pearson	.891	1
	Sig. (2-tailed)	.000	
	N	388	388

DMMCEN= Decision-Making as Managerial Competence Need, EA= Effective Administration

The data on table 3 reveal a correlation (r) of .891 which is positive and within the coefficient range of 0.80 and above indicating strong positive and very high extent relationship. This result indicates that decision-making as managerial competence need relate to HODs effective administration in state colleges of education in South East, Nigeria to very high extent. The coefficient of determination (R²) of 0.794 indicates that 79% of the variance observed in the effective administration was attributed to decision-making as managerial competence need in colleges of education in South East, Nigeria.

Hypothesis 2

There is no significant relationship between decision-making as managerial competence need and HODs effective administration in state colleges of education in South East, Nigeria.

Table 4: Regression Analysis of Relationship between decision-making as managerial competence need and HODs effective administration in state colleges of education

Model	Sum of Squares	df	Mean Square	F	Sig.
Regression	2162.511	1	2162.511	100.553	.000 ^b
Residual	8301.427	386	21.506		
Total	10463.94	387			

Data on table 4 show a P-value of 0.000 which is less than the alpha value of 0.05. Since the P-value of 0.000 is less than the alpha value of 0.05, the hypothesis of no significant relationship was rejected. Therefore, there is a significant relationship between decision-making as managerial competence need and HODs effective administration in state colleges of education in South East, Nigeria.

Summary of Findings

The findings of the study include:

1. Human resources management significantly to a very high extent relate to effective administration. The coefficient of determination (R²) of 0.746 indicates that 75% of the variance observed in the effective administration was attributed to HODs human resources management competence in colleges of education in South East, Nigeria.
2. Decision-making as managerial competence need to a very high extent relate to HODs effective administration in state colleges of education in South East, Nigeria³. The coefficient

of determination (R^2) of 0.794 indicates that 79% of the variance observed in the effective administration was attributed to decision-making as managerial competence need in colleges of education in South East, Nigeria.

Discussion of the Findings

The findings of the study were discussed based on the major findings of the study.

It was found from the study that human resources needs significantly to a very high extent relate to effective administration of HODs in state colleges in south east, Nigeria. The result implies that respondents agreed that human resources competence needs such as effective communication skills, competence in staff personnel administration, school-community relations, and good management-workforce relations among others significantly to high extent relate to HODs effective administration. This result agreed with that of Bakhsh (2013) who noted that human resources inventory (HRI) correlated positively with administrative effectiveness. Bakhsh also argued that personality traits proved as strongest determinant which was followed by organizational climate with significant predictive powers. Agreeing to this fact Baba (2015) in his study found that school inspectors offered professional support to teachers and principals in the areas of human resources practices, and thus teachers benefitted from their support. In essence, when HODs in colleges of education understands and improve in human resources needs of their departments, it would result to green work environment that would propel effective administration.

Also, the results on table 3 revealed that decision-making as managerial competence need to a very high extent relate to HODs effective administration in state colleges of education in South East, Nigeria. The results indicated that in the decision-making as managerial competence, the HODs establishes cordial relationship with the staff of the department, avoids hasty decision-making, avoids laissez-faire approach in taking decision on critical matters and avoid compromise in taking decision on disciplinary matters among others relates to effective administration. The results agreed with that of Kagendo (2018) in his study finds that the interaction between class levels and type of schools significantly influenced principals decision making. The study concluded that administrators decision-making competence in the area of school curriculum design and development, and management of students and welfare issues influenced student discipline moderately. Equally in the support of the findings, Peretomode (2019) maintained that decision-making becomes the center or the hub of all managerial and administrative functions.

Recommendations

Based on the findings of the study, the researchers' recommended the following;

1. There is need for training and retraining of HODs on human resources needs and management towards enhancing effective administration.
2. There is need for good communication competence in decision-making process amongst HODs in colleges of education.

Abstract

This study investigates administrators' perception of the implementation of Sustainable Development Goal 4 (SDG-4) in public secondary schools within the Calabar Education Zone of Cross River State, Nigeria. Utilizing an ex-post facto research design, the study involved a total of 196 administrators, representing the entire population of principals and vice principals across public secondary schools in the zone. Data were collected using a structured and validated instrument titled: Administrators' Perception of SDG-4 Implementation Survey (APSI-SDG4), which was subjected to expert validation by scholars in Educational Administration at the University of Calabar, and yielded a Cronbach Alpha reliability coefficient ranging from .81 to .87. Descriptive statistics, specifically mean and standard deviation, were employed for data analysis. The findings revealed that administrators generally had low awareness but perceived the implementation of SDG-4 as relevant and timely; however, its effective execution was hindered by challenges such as inadequate infrastructure, limited teacher training, and insufficient funding among other persisting issues. The study concluded that while the awareness and alignment with SDG-4 goals are evident, concrete strategies and investments are required to translate policy into practice. It recommended the strengthening of institutional capacity, increased funding, and integration of SDG-4 indicators into school planning and evaluation mechanisms.

Keywords: Sustainable Development Goal 4, Implementation, Administrators' Perception, Public Secondary Schools.

Introduction

The Sustainable Development Goal (SDG) 4, which focuses on ensuring inclusive and equitable quality education and promoting lifelong learning opportunities for all, is a critical global initiative aimed at transforming education systems to meet the needs of a rapidly changing world. In Nigeria, particularly in the Calabar Education Zone of Cross River State, public secondary schools face significant challenges in aligning with the principles of SDG 4 (Onabe, Uzoigwe & Ishaku, 2021).

These challenges include inadequate infrastructure, insufficient teaching materials, a lack of professional development for teachers, and limited access to education for marginalized groups. Despite efforts by government and non-governmental organizations to implement policies geared toward achieving SDG 4, the extent to which public secondary schools have embraced and operationalized these initiatives remains unclear. Understanding how school administrators perceive and implement these goals is critical to bridging gaps and addressing systemic barriers to quality education.

One of the major problems impeding the implementation of SDG 4 in public secondary schools in the Calabar Education Zone is the disconnect between policy formulation and execution. Administrators, who play a pivotal role in translating education policies into actionable programs, often face constraints such as inadequate funding, poor monitoring and evaluation frameworks, and a lack of awareness or

training on SDG 4 objectives. According to Onabe, Uzoigwe and Ishaku (2021), this disconnect hinders their ability to effectively implement strategies that promote inclusivity, equity, and quality education. Moreover, many schools struggle with overcrowding, insufficient classroom spaces, and inadequate teacher-to-student ratios, which compromise the delivery of quality education. These issues raise concerns about the effectiveness of current administrative practices in achieving the targets of SDG 4 within the region.

Statement of the problem

Sustainable Development Goal 4 (SDG-4) seeks to ensure inclusive, equitable, and quality education for all and promote lifelong learning opportunities. It emphasizes access, equity, quality, and lifelong learning as essential components of a functional education system. In Nigeria, and particularly in Cross River State, various education policies and reforms have been aligned with the targets of SDG-4 to improve educational delivery, especially in public secondary schools. However, despite these efforts, there are persisting concerns about the actual implementation of these goals at the school level. Reports of dilapidated infrastructure, shortage of qualified teachers, inadequate teaching and learning materials, and limited access for marginalized groups continue to undermine the realization of SDG-4 in many parts of the country, including the Calabar Education Zone.

Administrators, such as principals and vice principals, play a critical role in driving educational reforms and ensuring that global education targets like SDG-4 are translated into actionable strategies within schools. Their perceptions offer valuable insights into the extent to which SDG-4 is understood, embraced, and effectively implemented. However, there is a noticeable gap in empirical data capturing how these key stakeholders perceive the implementation process, including the challenges they face and the support systems available to them. Without this information, policy interventions may be poorly targeted, and the efforts toward achieving SDG-4 may remain largely rhetorical rather than practical.

Given the strategic importance of administrators in the educational process, it becomes necessary to assess their perception of the implementation of SDG-4 within the Calabar Education Zone. Understanding their views will not only reveal the strengths and weaknesses of current implementation strategies but also guide educational planners, government agencies, and development partners in designing more responsive and context-specific interventions. This study, therefore, seeks to bridge the existing knowledge gap by examining how administrators perceive the implementation of SDG-4, the extent of progress made, and the factors that may be impeding or facilitating its realization in public secondary schools in the Calabar Education Zone of Cross River State.

Theoretical Framework

This study is anchored on the Transformational Leadership Theory developed by James MacGregor Burns (1978). The theory emphasizes the role of visionary leadership in inspiring and guiding organizational change, particularly through motivation, intellectual stimulation, and individualized support. In the context of implementing Sustainable Development Goal 4 (SDG-4), school administrators serve as transformational leaders who must influence teachers, students, and stakeholders to embrace inclusive and quality education practices. Their perceptions, decisions, and leadership approaches significantly shape the extent to which SDG-4 objectives are internalized and actualized within school environments. Thus, this theory provides a relevant framework for understanding how administrators' leadership perspectives impact the implementation of SDG-4 in public secondary schools.

Empirical Literature Review

Several recent studies have investigated administrators' level of awareness of the goals and targets of Sustainable Development Goal 4 (SDG-4) in public secondary schools. For instance, Yakubu and Lawal (2023) conducted a study in the North Central zone of Nigeria and found that although most school administrators were generally aware of the existence of SDG-4, their understanding of its

specific targets—such as inclusive education, equity, and lifelong learning—was limited. Similarly, Bello and Abubakar (2022) observed that awareness was often shaped by administrators' participation in government-led workshops or donor-supported seminars. These findings suggest that while SDG-4 has gained visibility in educational discourse, the depth of knowledge among administrators is still insufficient for its effective implementation at the grassroots level.

In terms of integration into school policies and practices, empirical evidence indicates that progress has been uneven. Eze and Agbo (2024) reported that only a few public secondary schools in South-Eastern Nigeria had systematically incorporated SDG-4 targets into their strategic plans or operational guidelines. Their study found that where integration existed, it was often influenced by external projects or interventions by NGOs. Likewise, a study by Okeke and Afolabi (2022) in Lagos State revealed that most school improvement plans lacked specific references to global education goals, indicating a gap between national commitments and school-level practices. These findings underscore the need for policy alignment and institutional frameworks that facilitate the localization of SDG-4 in school operations.

Concerning the challenges faced by administrators in implementing SDG-4, several studies point to structural and systemic limitations. Mohammed and Tanko (2023) identified poor funding, shortage of trained teachers, and overcrowded classrooms as key barriers in Kaduna State. Their findings revealed that even where administrators were willing to implement inclusive and quality education practices, limited resources often hindered their efforts. Similarly, Opara and Nwachukwu (2021) noted that administrators in rural parts of Cross River State faced infrastructural decay, irregular teacher training, and lack of digital tools—all of which limited their capacity to deliver education aligned with SDG-4 objectives.

Another major challenge highlighted in the literature is the limited autonomy of school administrators in decision-making. According to Adegoke and Lawani (2022), public secondary school administrators in Nigeria operate under rigid bureaucratic structures that restrict their ability to innovate or allocate resources in alignment with SDG-4 priorities. Their study in Osun State found that administrators often lacked the authority to introduce inclusive programs or initiate capacity-building efforts without approvals from higher authorities. This constraint diminishes their strategic role in translating global education goals into actionable outcomes within their schools.

On the issue of support mechanisms, recent findings reveal that while some support structures exist, they are often fragmented or inconsistent. For example, Umar and Balogun (2023) noted that donor agencies and civil society organizations occasionally provided training and materials on SDG-4 in Borno State. However, these interventions were not always coordinated with government efforts, leading to duplication or gaps. In contrast, a study by Edem and Udo (2024) in Akwa Ibom State highlighted that continuous professional development programmes organized by the Ministry of Education positively influenced administrators' understanding and engagement with SDG-4, suggesting that institutional support, when consistent and structured, can yield measurable improvements. Furthermore, empirical studies suggest that peer collaboration among administrators could serve as an informal yet effective support system. In a qualitative study by Ajibola and Nwosu (2022), principals in Abuja Municipal Council reported learning from each other through informal networks and WhatsApp platforms dedicated to education policy updates. These informal exchanges enabled them to share implementation strategies and challenges, thereby creating a community of practice that supplemented formal training. Such findings point to the potential of leveraging social and professional networks to enhance implementation capacity.

In summary, the empirical literature underscores a significant variation in awareness, integration, and support for SDG-4 implementation across Nigerian public secondary schools. While administrators generally support the goals of inclusive and quality education, they face numerous challenges ranging from limited awareness and poor resource allocation to weak institutional frameworks. Studies recommend strengthening training programmes, enhancing policy alignment, and increasing administrators' autonomy to bridge the gap between policy and practice. Moreover, support

mechanisms must be institutionalized and consistently applied to empower administrators in delivering education that aligns with the targets of SDG-4.

Purpose of the study

The main purpose of this study is to assess administrators' perception of the implementation of Sustainable Development Goal 4 (SDG-4) in public secondary schools within the Calabar Education Zone of Cross River State, Nigeria. Specifically, the study sought:

- To examine administrators' level of awareness of the goals and targets of SDG-4 in public secondary schools.
- To assess the extent to which SDG-4 has been integrated into school policies and practices in the Calabar Education Zone.
- To identify the challenges administrators face in implementing SDG-4 in public secondary schools.
- To evaluate the support mechanisms available to administrators for the effective implementation of SDG-4 in the study area.

Research questions

The following research questions are raised to guide the study:

- What is the level of administrators' awareness of the goals and targets of SDG-4 in public secondary schools?
- To what extent has SDG-4 been integrated into school policies and practices in the Calabar Education Zone?
- What challenges do administrators face in implementing SDG-4 in public secondary schools?
- What support mechanisms are available to administrators for the effective implementation of SDG-4 in the study area?

Hypothesis

The following hypothesis was formulated to direct the study:

6. There is no significant difference in the perception of male and female administrators towards the implementation of Sustainable Development goal (4) in Calabar Education zone.

Methodology

The study adopted a descriptive survey research design, which was considered appropriate for assessing the perceptions of school administrators on the implementation of Sustainable Development Goal 4 (SDG-4) in public secondary schools in the Calabar Education Zone of Cross River State, Nigeria. This design facilitated the systematic collection, analysis, and interpretation of data from a defined population, enabling the researchers to make informed generalizations regarding administrators' views and experiences. The population of the study comprised 196 public secondary school administrators (principals and vice principals) drawn from schools across the Education Zone. Given the manageable size of the population, a census sampling technique was employed, allowing all administrators to participate in the study. This approach enhanced the representativeness of the data and reduced sampling error. Data were collected using a researcher-developed instrument titled the SDG-4 Implementation Perception Questionnaire (SIPQ). The SIPQ contained 24 structured items, divided into three sections: Section A gathered demographic data; Section B assessed awareness and understanding of SDG-4 targets; and Section C examined perceptions of implementation strategies and D examined constraints and support mechanisms within the school context. The items were developed in alignment with the objectives and were measured on a four-point Likert scale: Strongly Agree (4), Agree (3), Disagree (2), and Strongly Disagree (1). To establish the content and construct validity of the instrument, three experts in Educational Planning and Educational Measurement and Evaluation reviewed the questionnaire. Their inputs informed revisions for improved clarity, alignment with constructs, and relevance to the study context. A pilot study was conducted using 15 school

administrators from outside the Calabar Education Zone. Reliability analysis using Cronbach's Alpha produced a coefficient of 0.84, indicating a high level of internal consistency. Data collection lasted for four weeks and was carried out through both physical and electronic administration of the questionnaire to accommodate varying accessibility preferences among participants. Trained research assistants were deployed to assist in questionnaire distribution, monitoring, and retrieval across the three local government areas. Out of the 196 questionnaires administered, 194 were completed and returned correctly, yielding a 95.9% response rate, which helped minimize data attrition and nonresponse bias. A criterion mean score of 2.50 was adopted for data interpretation. Mean scores of 2.50 and above were considered indicative of a positive perception of SDG-4 implementation, while scores below 2.50 were interpreted as reflecting negative or low perception. This methodological approach ensured the collection of valid and reliable data to examine how school administrators perceive and interpret the ongoing implementation of SDG-4 in public secondary schools across the Calabar Education Zone.

Research question one

What is the level of administrators' awareness of the goals and targets of SDG-4 in public secondary schools?

Table 1: Respondents' mean ratings and standard deviation on the level of administrators' awareness of the goals and targets of SDG-4 in public secondary schools (N = 196)

S/N	Awareness Indicators	N	Mean	S.D.	Decision
1	Administrators are aware that SDG-4 promotes inclusive and equitable quality education	196	1.94	0.72	Disagree
2	Administrators understand the target of ensuring free, equitable secondary education by 2030	196	2.01	0.68	Disagree
3	Administrators are knowledgeable about the importance of lifelong learning opportunities	196	1.87	0.75	Disagree
4	Administrators are aware of the need to improve teacher training and recruitment under SDG-4	196	1.92	0.81	Disagree
5	Administrators are informed about gender-sensitive and disability-inclusive educational targets	196	1.79	0.77	Disagree
6	Administrators know of the global indicators used to track progress of SDG-4 in schools	196	1.63	0.83	Disagree
	Grand mean score	196	1.86	0.76	Disagree

Source: Fieldwork, 2025

The results in Table 1 show that the level of administrators' awareness of the goals and targets of SDG-4 in public secondary schools is generally low. The grand mean score of 1.86 falls below the criterion mean of 2.50, placing it within the —Disagree (D) category. This suggests that a significant proportion of administrators lack adequate understanding of key components of SDG-4, including its focus on equitable education, lifelong learning, and inclusive strategies. The standard deviation values, ranging from 0.68 to 0.83, indicate a relatively moderate consensus among respondents, confirming the general perception of insufficient awareness regarding SDG-4 among public secondary school administrators in the study area.

Research Question Two

To what extent has SDG-4 been integrated into school policies and practices in the Calabar Education Zone?

Table 2: Respondents' mean ratings and standard deviation on the extent of integration of SDG-4 into school policies and practices in the Calabar Education Zone (N = 196)

S/N	Integration Indicators	Sample	Mean	S.D.	Decision
1	School policies promote inclusive education for all learners	196	2.06	0.84	Disagree
2	Curriculum review processes consider SDG-4-related targets	196	1.91	0.78	Disagree
3	Professional development programmes align with SDG-4 goals	196	1.83	0.72	Disagree
4	Gender equity and accessibility are reflected in school planning	196	2.12	0.81	Disagree
5	Resource allocation supports SDG-4-related improvements	196	1.76	0.69	Disagree
6	Monitoring and evaluation systems track SDG-4 implementation	196	1.68	0.77	Disagree
	Grand mean score	196	1.89	0.77	Disagree

Source: Fieldwork, 2025

The results in Table 2 indicate that the integration of SDG-4 into school policies and practices in the Calabar Education Zone is generally low. The grand mean score of 1.89 is below the criterion mean of 2.50, aligning with the —Disagree (D) category. This suggests that most administrators perceive a weak alignment between existing school policies and the targets of SDG-4, particularly in areas such as inclusive planning, curriculum reform, professional development, and tracking mechanisms. The standard deviation values, which range from 0.69 to 0.84, show a moderate level of agreement among respondents, reinforcing the conclusion that SDG-4 integration remains insufficient in the schools under review.

Research Question Three

What challenges do administrators face in implementing SDG-4 in public secondary schools?

Table 3: Respondents' mean ratings and standard deviation on the challenges administrators face in implementing SDG-4 in public secondary schools (N = 196)

S/N	Challenge Indicators	Sample	Mean	S.D.	Decision
1	Inadequate funding and infrastructure hinder SDG-4 implementation	196	3.44	0.66	SA
2	Insufficient training and capacity-building opportunities for staff	196	3.29	0.72	A
3	Poor awareness and understanding of SDG-4 among key stakeholders	196	3.18	0.79	A
4	Lack of effective monitoring and evaluation frameworks	196	3.22	0.74	A
5	Resistance to change within the school system	196	2.94	0.82	A
6	Weak policy support from education authorities	196	3.11	0.77	A
	Grand mean score	196	3.20	0.75	A

Source: Fieldwork, 2025

The results in Table 3 show that administrators face significant challenges in implementing SDG-4 in public secondary schools. The grand mean score of 3.20 falls within the —Agree (A) category, indicating a high level of agreement among respondents on the prevalence of these obstacles. Notably, issues such as inadequate funding, lack of stakeholder awareness, weak monitoring systems, and insufficient staff training were consistently identified as major barriers. The standard deviation values, ranging from 0.66 to 0.82, suggest a moderate to high level of consensus among respondents,

reinforcing the reliability of the findings and highlighting the need for systemic interventions to address these challenges.

Research Question Four

What support mechanisms are available to administrators for the effective implementation of SDG-4 in the study area?

Table 4: Respondents' mean ratings and standard deviation on the support mechanisms available for the effective implementation of SDG-4 (N = 196)

S/N	Support Mechanism Indicators	Sample	Mean	S.D.	Decision
1	Government provides periodic training on SDG-4-related strategies	196	2.14	0.83	D
2	School administrators receive instructional materials aligned with SDG-4	196	2.07	0.79	D
3	Education authorities conduct regular supervision and follow-up	196	2.36	0.81	D
4	Collaboration with NGOs and development partners is encouraged	196	2.21	0.76	D
5	ICT infrastructure is available to support inclusive learning practices	196	1.98	0.85	D
6	Financial support for SDG-4 implementation is provided to schools	196	1.87	0.88	D
	Grand mean score	196	2.11	0.82	D

Source: Fieldwork, 2025

The results in Table 4 reveal that support mechanisms available to administrators for the effective implementation of SDG-4 in the study area are generally inadequate. The grand mean score of 2.11 falls below the benchmark of 2.50, corresponding to the —Disagree (D) category. This indicates that most respondents believe that critical support structures—such as training, supervision, financial backing, ICT facilities, and partnerships—are either insufficient or inconsistently provided. The standard deviation values, ranging from 0.76 to 0.88, reflect a moderate level of agreement among respondents, emphasizing the need for enhanced institutional and governmental support to enable effective SDG-4 implementation in public secondary schools.

Hypothesis One

There is no significant difference in the perception of male and female administrators towards the implementation of Sustainable Development Goal (4) in Calabar Education Zone.

Table 5: Independent t-test analysis of male and female administrators' perception of SDG-4 implementation

Gender	N	Mean	S.D.	df	t-cal	p-value	Decision
Male	118	3.12	0.74				
Female	78	2.89	0.71	194	2.32	0.021	Reject Ho

Source: Fieldwork, 2025

The result in Table 5 shows that male administrators (N = 118) had a mean perception score of 3.12 (SD = 0.74), while female administrators (N = 78) had a mean score of 2.89 (SD = 0.71) regarding the implementation of SDG-4. The calculated t-value is 2.32 with 194 degrees of freedom, and the p-value is 0.021, which is less than the significance level of 0.05. Since the p-value is less than 0.05, the null hypothesis is rejected. This implies that there is a statistically significant difference in the perception of male and female administrators toward the implementation of Sustainable Development Goal (4) in public secondary schools in the Calabar Education Zone. The result suggests that gender influences how administrators perceive SDG-4 implementation efforts.

Discussion of Findings

The findings from the first research question revealed that the level of administrators' awareness of the goals and targets of Sustainable Development Goal 4 (SDG-4) in public secondary schools in the Calabar Education Zone is generally low. With a grand mean score of 1.86, administrators demonstrated limited knowledge of key components of SDG-4, including equitable access to quality education, inclusive learning environments, and lifelong learning opportunities. This aligns with the empirical observations of Yakubu and Lawal (2023), who found that while most administrators in North Central Nigeria were aware of SDG-4 in general terms, they lacked an in-depth understanding of its specific targets. The implication is that the effectiveness of SDG-4 implementation is undermined by a knowledge gap at the leadership level, which is essential for policy articulation and execution within schools.

The result of the second research question further underscored the poor integration of SDG-4 into school policies and practices. With a grand mean of 1.89, respondents disagreed that inclusive educational targets, curriculum alignment, and gender-responsive planning were being adequately reflected in institutional frameworks. This finding is consistent with Eze and Agbo (2024), who reported that only a few schools in South-Eastern Nigeria had mainstreamed SDG-4 into their strategic plans, and even then, largely due to NGO involvement. Similarly, Okeke and Afolabi (2022) revealed that school improvement plans in Lagos State often lacked explicit references to SDG-4, indicating that national education policies were not sufficiently localized in school-level operational frameworks. These findings suggest that even where administrators are partially aware of SDG-4, structural and institutional inertia may hinder practical implementation, especially in the absence of explicit guidelines, training, or monitoring systems tailored to SDG-4 targets.

Results from the third research question revealed that administrators face significant challenges in implementing SDG-4. The grand mean of 3.20 indicated strong agreement among respondents that issues such as inadequate funding, lack of capacity-building programmes, weak monitoring systems, and stakeholder resistance were prevalent. These results are corroborated by Mohammed and Tanko (2023), who identified poor funding, shortage of trained personnel, and overcrowded classrooms as key impediments in Kaduna State. Likewise, Opara and Nwachukwu (2021) highlighted systemic challenges in rural Cross River State, including infrastructural decay and irregular teacher training, which directly hinder administrators' capacity to implement inclusive education practices. The identified barriers reflect broader systemic weaknesses in the public education sector, where policy ambitions often exceed available institutional capacity and financial support.

The fourth research question revealed that support mechanisms for SDG-4 implementation are largely insufficient, with a grand mean of 2.11. Respondents reported inadequate training, poor resource provision, limited ICT infrastructure, and weak collaboration with NGOs or governmental agencies. These findings mirror those of Umar and Balogun (2023), who found that support from donor agencies in Borno State was inconsistent and poorly aligned with government strategies, often leading to duplicated or fragmented efforts. However, Edem and Udo (2024) provided a contrasting view in Akwa Ibom State, where continuous professional development programmes organized by the Ministry of Education positively influenced administrators' understanding and engagement with SDG-4. This suggests that institutional support, when structured and consistent, can yield measurable improvements in implementation capacity.

Additionally, the result of the hypothesis test showed a significant gender-based difference in administrators' perception of SDG-4 implementation, with male administrators having a more favorable view than their female counterparts. This supports the findings of Adegoke and Lawani (2022), who emphasized that bureaucratic constraints and limited autonomy often differentially affect male and female administrators, particularly in their ability to introduce innovative programmes or access capacity-building opportunities. Finally, Ajibola and Nwosu (2022) highlighted the role of informal peer networks—such as WhatsApp groups and administrative clusters—as critical platforms for experience sharing and mutual learning among school leaders. Overall, the findings emphasize the need

for increased awareness, policy alignment, institutional support, and gender-sensitive capacity building to advance the goals of SDG-4 in the region.

Conclusion

The study concluded that awareness, integration, and support for the implementation of SDG-4 in public secondary schools in the Calabar Education Zone are generally low, while administrators face significant challenges that hinder progress. Additionally, a significant gender difference exists in administrators' perceptions, indicating the need for targeted capacity-building and inclusive policy support.

Recommendations

Based on the findings of the study, the following recommendations are made:

1. The Ministry of Education should organize regular sensitization workshops and seminars to improve administrators' awareness and understanding of the goals and targets of SDG-4.
2. School governing bodies should integrate SDG-4 principles into school policies, curriculum planning, and administrative practices to ensure alignment with global educational standards.
3. Government and donor agencies should increase financial, infrastructural, and technical support to public secondary schools to address the major challenges hindering SDG-4 implementation.
4. Targeted training and mentorship programmes should be introduced to bridge the gender gap in perception and capacity, ensuring that both male and female administrators are equally equipped to drive SDG-4 implementation.

&

Amaechina, O. Uche, (Ph.D)
dramaechina@yahoo.com

Abstract

This study examined principals' school facilities management skills as correlates of teachers' task performance in public secondary schools for sustainable national development in Anambra State. The study which was guided by three research questions and three null hypotheses adopted a correlational survey research design. The population of the study consisted of 266 principals and 5133 teachers in the six Education Zones in Anambra State. Multi stage sampling procedure was used to draw a sample of 492 teachers and 123 Principals for the study. The instruments for data collection were researcher-made questionnaires titled; —Principals' School Facilities Management Questionnaire (PSFMSQ) and —Teachers Task Performance Questionnaire (TTPQ). The average reliability index determined using Cronbach Alpha was 0.82. Pearson Product Moment Correlation Coefficient (PPMCC) was used to answer the research questions while the hypotheses were analyzed using test of significance of correlation. The findings of the study revealed among others that there is a significant relationship between principals' school building, instructional material management and teachers' task performance in public secondary schools in Anambra State. The study also revealed that there is no significant relationship between principals' information and communication technology (ICT) management and teachers task performance in public secondary schools in Anambra State. The study recommended among others that for sustainable national development, government should provide adequate funds for proper management of school buildings in public secondary schools in Anambra State. Principals should ensure that instructional materials are properly used by teachers for instructional delivery and archive should be provided in the school for the safe keep of the instructional materials. Principals should organize periodic training programmes for teachers on the use of ICT in the school but they should make it clear to them that can still deliver instruction in the absence of ICT.
Keywords: School Facilities, Management, Teachers' Task Performance, Sustainable Development.

Introduction

Quality teachers' task performance is a demand for quality education that sustains national development. A sustainable national development refers to the overall growth and progress of a country in various aspects, including economic, social, political, and technological advancements. It involves improving the quality of life for citizens through better infrastructure, education, healthcare, job opportunities, and governance (Okojie, 2021). Sustainable national development entails the growth of the nation in form of unity, education, economic wellbeing, and mass participation in government. It is believe that, sustainable national development is the ability of the nation to provide a conducive atmosphere for the realization of individual potentials, the existence of buoyant economy and availability of social Infrastructural facilities for the populace. In order to sustain any aspect of national development be it economic growth, infrastructural development, human capital development, health improvement, political stability and governance, social welfare and equity, environmental

sustainability, technological and scientific advancements through quality teachers' task performance, there seemed to be a need for principals to develop adequate skills for management of school facilities.

Principals are head at the secondary education level. Anyaeche et al. (2021) asserted that the principal is the head teacher who is responsible for the development and implementation of educational programmes at the secondary school level, procures staff, funds as well as creating a conducive teaching and learning environment in the school. Principals as head in secondary schools are in charge of managing all the resources that support teaching and learning.

Teachers are important resources that propel teaching and learning. Teachers perform a lot of tasks in the school in other to support students, promote the image of the school and ensure the success of education generally. Etebu and Ukaigwe (2018) asserted that teachers' task performance is a display of their willingness to utilise their time, energy and hard work to carry out their task to achieve educational goals and objectives. Accordint to Etebu and Ukaigwe (2018) teachers' tasks in secondary schools include among others judicious utilization of human and material resources, adequate leadership technique and use of process, principles and good method of teaching to successfully achieve classroom set goal; curriculum implementations; and decision making to decide the best instructional methods or procedures to use to ensure efficient instructional delivery. It might be difficult for teachers to perform these tasks effectively without school facilities.

Facilities could be in form of equipment, buildings or services provided for a specific purpose. It could be a place especially buildings where some specific activities are carried out, (Onyekazi, 2021). Onyekazi (2021) maintained that school facilities are all the material resources which could be permanent or semi-permanent hardware such as buildings and equipment or software such as computer assisted instruction and programmes which improve teachers' task performance, teaching/learning process and the production output of the educational system. Thangeda, et al. (2017), opined that school facilities include; classrooms, laboratories, workshops, libraries, equipment, consumables, electricity, water, visual and audio visual aids, tables, desks, chairs, playground, storage space and toilets. This work examined school buildings, instructional materials, information and communication technology (ICT) and the way principals manage them as they relate to teachers' task performance in public secondary schools in Anambra State.

School buildings are buildings in the school that are used by the staff and students of the school. School buildings include administrative blocks, classrooms, assembly halls, laboratories, library, workshop buildings, staff rooms, and examination hall, among others. Fouad and Sailer (2019) asserted that the school building is one of the aspects of the school system and consists of formal and informal learning spaces. Instructional materials are very important in public secondary schools in Anambra State just like any other institution of learning. Obuakor (2019) maintained that instructional materials are tools used by the teachers to make learning look real and understandable by students. In the same vein, Hence, instructional materials play a very crucial role in the teaching and learning process because it aids teachers to make students have full and deeper understanding of the learning process. Some examples of instructional materials include; charts, boards, maps and reference books. The demand for information and communication technology (ICT) gadgets or equipment in different organizations of the world seems to be continuously on the increase (Omar, 2017). So, management of school facilities in public secondary schools in Anambra State is the strategies employed by the principal who is in charge of public secondary schools in Anambra State to take care of the facilities in the school. While it is essential to provide facilities in public secondary schools in Anambra State, effective management of the facilities should be underscored. Management of school facilities involves routine checks, maintenance and effective use of available educational facilities and the provision of new ones to meet the dynamic teaching and learning needs in schools.

Adequate educational facilities stimulate students and teachers' active participation in teaching and learning process. The way school facilities are managed is one of the determinants of the quality of education which warrants sustainable development. In other words, the quality of teaching, learning, and learning outcome that promote sustainable national development to a good extent could depend on the management of school facilities. Koko and Elenwo (2022) included proper management of school

facilities as one of the determinants of teachers' task performance which improve learning outcomes. Studies such as Koko and Elenwo (2022), Uzoechina and Nwankwo (2016) and observation by the researcher indicated possible decline in the task performance of teachers in public secondary schools in Anambra State. It is against this background that this study sought to investigate principals' school facilities management skills as correlate of teachers' task performance in public secondary schools in Anambra State.

Statement of the problem

Quality teachers' task performance which could be through adequate principals' school facilities management skills is a demand for quality education that sustains national development. Observation by researchers seem to indicate that teachers' task performance in Anambra State public secondary schools is not what it is supposed to be. This has been a source of concern knowing full well that the secondary education level is a very strategic level in the cadre of education where poor teachers' task performance can lead to poor students' achievement, which if not checked can in the long run lead to weak workforce and crisis in the national development. Hence, the statement of the problem for this study posed as a question is: Is principal's school facilities management skill a correlate of teachers' task performance in public secondary schools in Anambra State for a sustainable national development?

Purpose of the Study

The main purpose of the study was to ascertain Principals' school facilities management skills as correlate of teachers' task performance in public secondary schools in Anambra State. Specifically, the study sought to:

- Ascertain the extent of the relationship between principals' school building management and teachers' task performance in public secondary schools in Anambra State.
- Certify the extent of the relationship between principals' instructional material management and teachers' task performance in public secondary schools in Anambra State.
- Assess the extent of the relationship between principals' information and communication technology (ICT) management and teachers' task performance in public secondary schools in Anambra State.

Research Questions

The following research questions guided the study:

- What is the extent of the relationship between principals' school building management and teachers' task performance in public secondary schools in Anambra State?
- What is the extent of the relationship between principals' instructional material management and teachers' task performance in public secondary schools in Anambra State?
- What is the extent of the relationship between principals' information and communication technology (ICT) management and teachers' task performance in public secondary schools in Anambra State?

Hypotheses

The following hypotheses was tested at 0.05 level of significance and they guided the study.

H₀₁: There is no significant relationship between principals' school building management and teachers' task performance in public secondary schools in Anambra State.

H₀₂: There is no significant relationship between principals' instructional material management and teachers' task performance in public secondary schools in Anambra State.

H₀₃: There is no significant relationship between principals' information and communication technology (ICT) management and teachers' task performance in public secondary schools in Anambra State.

Method

The study employed correlational research design. The population for this study was 5,399 comprising 266 Principals and 5,133 teachers in the 266 public secondary schools in the six education zones of Anambra State. The sample for this study comprised of 513 teachers and 132 Principals drawn from the population of the study using multi stage sampling technique. The instruments for data collection were two sets of structured questionnaires developed by the researcher which were titled; —Principals' School Facilities Management Skill Questionnaire (PSFMSQ) and —Teachers' Task Performance Questionnaire (TTPQ)'. The face validity of the instruments was established by three experts. The construct validity of the instruments was established using Principal Component Analysis approach. Kaiser-Meyer-Olkin (KMO) was obtained as 0.829. Cronbach alpha procedure was used to determine the overall reliability coefficient of 0.75 for the instruments. Five research assistants helped the researcher to administer and retrieve the instruments. The research assistants were able to collect 492 instruments from teachers and 123 instruments from principals making a total of 615 instruments (95 %return rate). The data were analysed using the Pearson Product Moment Correlation Coefficient (PPMC) to answer the research questions. Test of significance of correlation was used to test hypotheses at 0.05 level of significance. All analyses were carried out using Statistical Package for Social Science (SPSS) version 26.

Results

Research Questions 1

What is the extent of the relationship between principals' school building management and teachers' task performance in public secondary schools in Anambra State?

Table 1: Pearson (r) of the extent of the relationship between principals' school building management and teachers' task performance in public secondary schools in Anambra State.

Sources of Variation	N	Principals' school building management	Teachers' task performance	Remark
Principals' school building management	492	1.00	0.576 **	Moderate positive relationship
Teachers' task performance	123	0.576 **	1.00	

** (0.576) = moderate positive relationship

Table 1 revealed that that Pearson (r) of relationship between principals' school building management and teachers' task performance was 0.576 which indicated a moderate positive relationship ($r = 0.576$, $N = 615$). This indicated that there was a moderate positive relationship between principals' school building management and teachers' task performance in public secondary schools in Anambra State.

Research Questions 2

What is the extent of the relationship between principals' instructional material management and teachers' task performance in public secondary schools in Anambra State?

Table 2: Pearson (r) of the extent of the relationship between principals' instructional material management and teachers' task performance in public secondary schools in Anambra State

Sources of Variation	N	Principals' instructional material management	Teachers' task performance	Remark
Principals' instructional material management	492	1.00	0.329 ^{x**}	Low positive relationship

Teachers' task performance	123	0.329 ^{xx}	1.00

** (.329) = low positive relationship

Result from Table 2 indicated that Pearson (r) of relationship between principals' instructional material management and teachers' task performance was 0.329 which displayed a low positive relationship ($r = 0.329$, $N = 615$). This concluded that there was a low positive relationship between principals' instructional material management and teachers' task performance in public secondary schools in Anambra State.

Research Questions 3

What is the extent of the relationship between principals' information and communication technology (ICT) management and teachers' task performance in public secondary schools in Anambra State?

Table 3: Pearson (r) of the extent of the relationship between principals' information and communication technology (ICT) management and teachers' task performance in public secondary schools in Anambra State

Sources of Variation	N	Principals' management	(ICT)	Teachers' task performance	Remark
Principals' (ICT) management	492	1.00		0.280 ^{**}	Low positive relationship
Teachers' task performance	123	0.280 ^{xx}		1.00	

** (0.280) = low positive relationship

As displayed in Table 3, the Pearson (r) of the relationship between principals' information and communication technology (ICT) management and teachers' task performance was 0.280 which depicted a low positive relationship ($r = 0.280$, $N = 615$). This described that there was a low positive relationship between principals' information and communication technology (ICT) management and teachers' task performance in public secondary schools in Anambra State.

Hypothesis 1

There is no significant relationship between principals' school building management and teachers' task performance in public secondary schools in Anambra State.

Table 4: Test of significance of correlation between the mean score rating of principals' school building management skill with that of teachers' task performance in public secondary schools in Anambra State

Sources of Variation	N	Coefficient (r)	r^2	p-value	Remark
Principals' school building management skill	492				
Teachers' task performance	123	0.576	0.331	0.000	Significant

As shown in Table 4, the p-value of .000 was less than 0.05 level of significance which implied that the null hypothesis of no significant relationship between principals' school building management skill and teachers' task performance was rejected ($r, 615 = 0.576$, $p\text{-value} = 0.000$). Hence, there is a significant relationship between principals' school building management and teachers' task performance in public secondary schools in Anambra State.

Hypothesis 2

There is no significant relationship between principals' instructional material management and teachers' task performance in public secondary schools in Anambra State.

Table 5: Test of significance of correlation between principals' instructional material management and teachers' task performance in public secondary schools in Anambra State

Sources of Variation	N	Coefficient (r)	r ²	p-value	Remark
Principals' instructional materials management skill	492	0.329	0.108	0.000	Significant
Teachers' task performance	123				

As depicted in Table 5, the p-value of 0.000 was less than 0.05 probability level which meant that the null hypothesis of no significant relationship between principals' instructional materials management skill and teachers' task performance was rejected ($r, 615 = 0.329$, $p\text{-value} = 0.000$). In the same vein, there is a significant relationship between principals' instructional materials management and teachers' task performance in public secondary schools in Anambra State.

Hypothesis 3

There is no significant relationship between principals' information and communication technology (ICT) management and teachers' task performance in public secondary schools in Anambra State.

Table 6: Test of significance of correlation between principals' information and communication technology (ICT) management skill and teachers' task performance in public secondary schools in Anambra State

Sources of Variation	N	Coefficient (r)	r ²	p-value	Remark
Principals' information and communication technology (ICT) management skill	492	0.280	0.078	0.090	Not significant
Teachers' task performance	123				

As displayed in Table 6, the p-value of .090 was greater than 0.05 alpha level which meant that the null hypothesis of no significant relationship between principals' information and communication technology (ICT) management and teachers' task performance was not rejected ($r, 615 = 0.280$, $p\text{-value} = 0.090$). In spite of this, there is no significant relationship between principals' information and communication technology (ICT) management and teachers' task performance in public secondary schools in Anambra State.

Discussion of Findings

Findings from Table 1 indicated that that Pearson (r) of relationship between principals' school building management and teachers' task performance was 0.576 which indicated a moderate positive relationship ($r = 0.576$, $N = 615$) between principals' school building management and teachers' task performance in public secondary schools in Anambra State. Testing of hypothesis 1 presented in Table 4 revealed no significant relationship between principals' school building management and teachers' task performance was rejected ($r, 615 = 0.576$, $p\text{-value} = 0.000$). This

finding supported the findings of Okeke (2016) which indicated a positive relationship between school building management and teachers' task performance. The reason behind this similarity could be because both studies used teachers as respondents. This means that the management of building is a major determinant of teachers' task performance in public secondary schools in Anambra State.

Result from Table 2 indicated that Pearson (r) of relationship between principals' instructional material management and teachers' task performance was 0.329 which displayed a low positive relationship ($r = 0.329$, $N = 615$). This concluded that there was a low positive relationship between principals' instructional material management and teachers' task performance in public secondary schools in Anambra State. Testing of hypothesis 2 as shown in depicted in Table 5 indicated that there was no significant relationship principals' instructional materials management and teachers' task performance was rejected (r , $615 = 0.329$, $p\text{-value} = 0.000$). The finding is in line with Yusuf and Ibraheem-Kareem (2022) which revealed that there was a significant relationship between management of instructional resources and teachers' task performance in public secondary schools in Kwara State, Nigeria. The similarity in the findings could be due to the closeness in the time frame of the two studies. This implied that instructional materials are very important in the school.

Findings from Table 3, the Pearson (r) of the relationship between principals' information and communication technology (ICT) management and teachers' task performance was 0.280 which revealed a low positive relationship ($r = 0.280$, $N = 615$) between principals' information and communication technology (ICT) management and teachers' task performance in public secondary schools in Anambra State. Test of hypothesis 3 as shown in Table 6 revealed that there is no significant relationship between principals' information and communication technology (ICT) management and teachers' task performance was not rejected (r , $615 = 0.280$, $p\text{-value} = 0.090$). The implication is that information and communication technology (ICT) is important but not a major determinant of teachers' task performance in public secondary schools in Anambra State. The finding supported Kimani et al. (2022) which revealed that information and communication technology (ICT) is significant to the task teachers perform in secondary schools.

Conclusion

Based on the findings, it was concluded that principals' school building management and instructional material management are major determinants of teachers' task performance in public secondary schools in Anambra State while principals' information and communication technology (ICT) management is important but not a major determinant of teachers' task performance in public secondary schools in Anambra State. Principals' school building management and instructional material management had a significant relationship with teacher' task performance in public secondary schools in Anambra State. Principals' information and communication technology (ICT) management is not significantly related with teacher' task performance in public secondary schools in Anambra State. Proper management of school facilities promotes efficient teaching and learning which positively enhance teachers' task performance.

Recommendations

Based on the findings and conclusion of this study, the following recommendations were made;

1. Government should provide adequate funds for proper management of school buildings in public secondary schools in Anambra State.
2. Principals should ensure that instructional materials including ICT based devices are properly used by teachers for instructional delivery and archive should be provided in the school for the safe keep of the instructional materials.

Abstract

This study investigated the impact of ethical school administration on secondary education goals attainment in Yakurr Local Government Area of Cross River State, Nigeria. One research question and hypothesis was formulated to guide the study. The study adopted correlation design. The population of this study comprises all the 17 public secondary school and 346 teachers in Yakurr Local Government Area, Cross River State. Census approach was adopted in the study. An instrument titled —Ethical School Administration and Secondary Education Goals Attainment. Questionnaire (ESASEGAQ) was used for data collection. The questionnaire was face and content validated by three research experts from the department of Educational Management, and from Measurement and Evaluation, faculty of Educational Foundation Studies, University of Calabar. The reliability was determined through Cronbach alpha technique and the index ranges between .88 - .90. The descriptive statistics output of the Simple Linear Regression Analysis was used to answer the research question, while the ANOVA and relative coefficient output of Simple Linear Regression Analysis was used to test the hypotheses at 0.05 level of significance. The result of the analysis revealed that ethical school administration significantly predict secondary education goals attainment ($R=.638$). Based on the findings of the study, it was concluded that ethical school administration statistically predict secondary education goals attainment in Yakurr Local Government Area, Cross River State. This underscores the importance of integrity, fairness, transparency, and accountability in school leadership as critical determinants of educational outcomes. It was recommended that Cross River State Ministry of Education in collaboration with the management of secondary schools should organize regular training and capacity-building workshops on ethical leadership for school administrators to strengthen their commitment to ethical practices in order to enhance the attainment of secondary education goals in public schools.

Keywords: Ethical, School Administration, Secondary Education, Goals Attainment

Introduction

Secondary education is a crucial stage of formal education that comes after primary education and precedes tertiary or higher education. It generally serves students between the ages of 11 or 12 and 17 or 18, offering a comprehensive curriculum that includes academic subjects, vocational training, and life skills. In Nigeria and many other countries, it is structured into junior and senior secondary levels, each lasting three years. Beyond preparing students for higher education, the objectives of secondary education include equipping school leavers with practical skills for the labor market, fostering human

capital development, and promoting responsible citizenship and societal well-being (FRN, 2013; Etor et al., 2019; Obona et al., 2024). As noted by Obona and Etete (2019), achieving these objectives largely depends on the dedication and competence of teachers, who remain the most vital human resource in driving the success of secondary education in Nigeria.

Goals play a crucial role in all organizations, including educational institutions, by providing clear direction, enhancing the use of available resources, motivating stakeholders, and establishing standards for measuring performance. In the context of this study, goal attainment is understood as the achievement of predetermined educational objectives within a given period, ensuring that both individual and institutional inputs lead to measurable outcomes. Etor et al. (2019) highlighted three key elements of achieving school goals: enabling access to higher education, facilitating knowledge acquisition, and ensuring high-quality teaching and learning. Thus, secondary school graduates should be equipped with adequate skills and knowledge to either pursue tertiary education or enter the workforce. According to the Federal Republic of Nigeria (2004), as cited by Ndem and Egbai (2016), the broader aim of secondary education is to prepare students for further education and effective participation in society. Similarly, Ebete and Ejims (2020) stressed the need to produce capable graduates who meet national expectations, while Obona et al. (2024) noted that true goal attainment also includes academic success, personal growth, career or educational readiness, and alignment with the school's mission and vision.

School goal attainment can be evaluated by examining the quality of instruction, student discipline, academic achievement, and the acquisition of vocational or practical skills (Madukwe et al., 2024). Obasi (2018) highlighted that committed teachers demonstrate responsibility in both administrative and teaching roles, are prompt in performing duties, and actively seek professional development opportunities. After completing secondary education, students are expected to transition into various careers or pursue higher education to become financially independent and contribute meaningfully to national development. However, research shows that low levels of teacher commitment and poor goal attainment remain persistent challenges in Nigeria's secondary schools (Madukwe et al., 2024; Ofoha, 2011; Obona et al., 2024; Arop, Owan, & Ekpang, 2018; Amuche et al., 2014). Nyong (2013) noted that many secondary school graduates in Nigeria lack the essential vocational, technical, and entrepreneurial competencies expected of them. This gap contributes to the high rate of unemployment, particularly in Cross River State.

According to Arop et al. (2018), the quality of instruction in many schools is substandard, while Obona et al. (2023) reported unethical practices among teachers, such as absenteeism and poor interpersonal relations. Ekaette, Ekpenyong, and Owan (2019b) lamented that a significant number of graduates do not advance to tertiary education and instead fall into social vices like drug abuse and cultism. Madukwe et al. (2024) observed that secondary education goals in Nigeria have not been fully realized, as many graduates lack employable skills, while others become involved in anti-social behavior out of frustration. Similarly, Fehintola (2015) reported that students' academic outcomes frequently fall below expectations, despite significant investments by both the government and parents.

In public secondary schools in Yakurr Local Government Area, the challenges are even more alarming. Many students either drop out or complete school without acquiring marketable skills, leading to outcomes such as street hawking, petty crime, or extreme poverty. Worsening this situation are systemic problems like overcrowded classrooms, a shortage of qualified teachers, inadequate facilities, lack of motivation among staff, and poor learning conditions. These issues hinder students' comprehensive development across intellectual, emotional, and practical domains. Thus, the realization of secondary education objectives in the area is severely threatened. Addressing these problems requires urgent reforms like ethically driven school administration to ensure efficient school goals attainment. Ethical school administration refers to the practice of leading educational institutions with integrity, fairness, and a commitment to moral principles that guide decision-making and interactions within the school community. It encompasses values such as honesty, transparency, accountability, respect, and justice, ensuring that school leaders act as role models and foster an environment conducive to ethical behavior among staff and students. According to Orunbon, Ifenaike, and Adeleke (2022), ethical

leadership in schools involves characteristics like honesty, fairness, people orientation, power sharing, ethical guidance, role clarity, and concern for sustainability. Similarly, Gikonyo (2020) emphasizes that ethical leadership is critical in steering school managers toward value-based leadership, which significantly impacts effective school management. Furthermore, Maimela (2024) highlights that ethical school leadership promotes accountability and trust, essential components for the success and credibility of educational institutions. Some ethical principles in school administration are fairness, honesty, integrity, equality, impartiality, responsibility, organizational commitment, respect for human rights, adherence to the law, tolerance, and transparency (Şentürk, 2011).

Studies show that stronger ethical relationships between teachers and administrators boost trust and as a result, the school environment becomes more effective and focused, paving the way for the consistent attainment of its educational goals. Freeman and Stewart (2016) as cited in Wey-Amaewhule and Eberechi (2024) portray ethical leadership as exemplified behavior that guides others toward moral choices by prompting key ethical inquiries. Downe et al. (2016) argue that such leadership either springs from a leader's personal character thereby inspiring duplication, or from the formal policies and frameworks they establish to shape followers' conduct. Northouse (2016) outlines five foundational tenets of ethical leadership—respect, service, justice, honesty, and community building—that serve as its key indicators. Research further shows that ethical leadership correlates with positive staff outcomes, such as constructive attitudes and behaviors, alongside reduced workplace deviance and lower intentions to quit (Chen & Hou, 2016; Ng & Feldman, 2015).

In a study, Obiekwe et al. (2021) investigated the ethical leadership strategies principals use to achieve goals in Anambra State's public secondary schools. Employing a descriptive survey, they posed four research questions and tested four hypotheses at a 0.05 significance level. From a total of 6,382 teachers across 261 schools, a stratified multi-stage sample of 638 (192 male, 446 female) was drawn. Data collection relied on the researcher-designed —Principals' Ethical Leadership Practices Questionnaire (PELPQ), a four-point scale validated by experts. Cronbach's alpha coefficients for its four subscales ranged from 0.77 to 0.86 (0.81 overall). Of 638 instruments distributed, 630 were returned. Analysis via mean ratings and t-tests revealed that principals employ four ethical leadership dimensions—climatic, communicative, behavioral, and decisional—to drive goal attainment.

Wey-Amaewhule and Eberechi (2024) examined how principals' ethical leadership affects school administration in Rivers State's public secondary schools. Using a descriptive survey and a census of all 63 principals, they gathered data with a bespoke Likert-style questionnaire (62 responses). Reliability testing yielded Cronbach's alphas between 0.67 and 0.81. Descriptive statistics (means, standard deviations) addressed three research questions, while z-tests evaluated three null hypotheses at $p < .05$. Findings indicate that principals' ethical practices enhance instructional administration and bolster teachers' performance and professional integrity.

Sikpi and Enoch (2022) explored the relationship between leadership core values and goal attainment in Bayelsa State's public universities. Their correlational design was driven by four research questions and hypotheses tested at a 0.05 level. The census-based sample comprised all 214 senior administrators (e.g., Vice-Chancellors, Registrars, Bursars, Librarians, Deans, Department Heads). Two instruments—the Leadership Core Values of Public University Questionnaire (LCVPUQ) and the Goals Attainment of Public University Questionnaire (GAPUQ) were researcher-developed, validated, and yielded Cronbach's alphas of 0.86 and 0.79. Means and standard deviations summarized responses, and Pearson's correlation (SPSS v.25) tested hypotheses. Results demonstrated a significant positive correlation between leadership values and university goal attainment.

Madukwe et al. (2024) assessed the link between participatory leadership behaviors and goal achievement in Abia State's secondary schools using an ex post facto approach. Two research questions and one hypothesis ($\alpha = .05$) framed the study. Out of 303 schools across three zones, 160 principals were randomly selected. Data were collected via the self-designed —Participatory Leadership Behaviour and Goal Attainment Questionnaire (PLBGAQ). Mean and standard deviation analyses addressed the research questions; multiple regression tested the hypothesis. They found that both participatory

leadership and overall goal attainment were low, yet participatory behaviors significantly predicted schools' goal achievement.

Obona et al. (2024) investigated how management variables interact to influence goal attainment in Ikom LGA's public secondary schools, guided by three hypotheses at $p < .05$. A correlational design encompassing all 91 administrators (21 principals, 67 vice-principals) from 24 schools used a census sampling. The —Management Variables and Goals Attainment in Secondary Schools Questionnaire (MVGASSQ),¹ a 20-item scale validated by University of Calabar experts, showed a Cronbach's alpha of 0.82. Simple and multiple linear regressions revealed that both leadership style and facilities management significantly predict goal attainment in the area.

The reviewed studies have shown that ethical school administration positively influence the school goals attainment. However, most of these studies were conducted outside Yakurr Local Government Area in Cross River State, meaning their findings may not be applicable to this specific region due to its unique ethnic and geographical context. No existing study has examined how ethical school administration impacts secondary education goal attainment using the same sub-variables as the present research. This study therefore seeks to fill that gap and contribute new insights to the field.

Statement of the Problem

Secondary education holds a pivotal role within the educational framework of every nation, including Nigeria. As outlined in the National Policy on Education (FRN, 2004), the objectives of secondary education include the development of skilled manpower, fostering excellence among students, and nurturing individuals capable of independent thought who respect the opinions and emotions of others. Accordingly, secondary schools serve as vital institutions in the personal development of learners and in promoting national socio-economic advancement.

Nevertheless, it was observed with concern that public secondary schools in Yakurr Local Government Area of Cross River State face several challenges that impede the realization of these educational goals. These challenges manifest in overcrowded classrooms due to large student enrollment, rising cases of examination malpractice, declining academic performance, and increasing instances of indiscipline and disrespect towards school authorities. Additionally, the schools suffer from poor infrastructure, limited educational resources, and a shortage of vocational training programs—factors that collectively undermine students' career readiness and hinder the effective achievement of secondary education objectives.

In an effort to address these issues, the Cross River State Government, in partnership with key stakeholders, has implemented various interventions. These include investments in school infrastructure, the organization of teacher training programs, and the consistent payment of salaries. The M-Power initiative has also contributed by recruiting additional teaching staff to ease the burden on existing personnel. Despite these efforts, the expected improvements in educational outcomes have not yet been fully realized. It is within this context that the current study seeks to investigate whether ethical school administration relates to secondary education goals attainment in Yakurr Local Government Area.

Purpose of the study

The study Assessed the impact of ethical school administration on secondary education goals attainment in Yakurr Local Government Area, Cross River State, Nigeria.

Specifically, the study sought to examine whether: Ethical school administration predicts secondary education goals attainment in public schools in Yakurr Local Government Area, Cross River State.

Research question

The following research question guided the study: To what extent does ethical school administration predicts secondary education goals attainment in public schools in Yakurr Local Government Area, Cross River State?

Hypotheses

This hypothesis guided the study: Ethical school administration does not significantly predict secondary education goals attainment in public schools in Yakurr Local Government Area, Cross River State.

Methodology

The study adopted correlation design. The population of this study comprises all the 17 public secondary school and 346 teachers in Yakurr Local Government Area, Cross River State. Out of this number, 207 were male teachers while 139 were female teachers (Planning Research and Statistics Department: Secondary Education Board, Calabar 2025). These numbers formed the study population. The researcher adopted census method in selecting the entire population of schools and teachers in the area for the study. The instrument used for data collection was a 24 items questionnaire designed by the researcher. Titled —Ethical School Administration and Secondary Education Goals Attainment. Questionnaire (ESASEGAQ).¹ The questionnaires were structured on a four-point modified Likert scale of Strongly Agree (SA), Agree (A), Disagree (D) and Strongly Disagree (SD) and these responses were scored 1,2,3,4, as their weights. The questionnaire was face and content validated by three research experts from the department of Educational Management, and from Measurement and Evaluation, faculty of Educational Foundation Studies, University of Calabar. The reliability was determined through Cronbach alpha technique and the index ranges between .88 - .90. Statistically, the instruments were considered reliable for data collection. The researchers and seven trained research assistants engaged in the administration of the questionnaire. The copies of the questionnaire were administered and after some time, the researchers retrieved back all the copies for data analysis. The researchers record 100% return rate. The descriptive statistics output of the Simple Linear Regression Analysis was used to answer the research question, while the ANOVA and relative coefficient output of Simple Linear Regression Analysis was used to test the hypotheses at 0.05 level of significance.

Results

Research questions

To what extent does ethical school administration predicts secondary education goals attainment in public schools in Yakurr Local Government Area, Cross River State? The result is presented in Table 1. The result in table 1 showed that regression coefficient (R) of .638 and a coefficient of determination (R^2) of .407 were obtained. The R^2 ($R^2=.407$) meant that the variable of ethical school administration contributed 40.7% of the total variance in secondary education goals attainment in public schools in Yakurr Local Government Area, Cross River State while the remaining percentage score 59.3% was predicted by other external factors outside ethical school administration.

Table 1

Summary of simple linear regression analysis showing the extent to which ethical school administration predicts secondary education goals attainment in public schools in Yakurr Local Government Area, Cross River State

Model Summary

Mode 1	R	R Square	Square Adjusted R	Std. Error of Estimate	Decision
a. Dependent Variable: Secondary education goals attainment					
b. Predictors: (Constant), Ethical school administration					

Test of Hypotheses

Ethical school administration does not significantly predict secondary education goals attainment in public schools in Yakurr Local Government Area, Cross River State. The two variables in this hypothesis are ethical school administration and secondary education goals attainment. Simple

Linear Regression analysis was used to test the hypothesis and the result of the analysis is presented in Table 2. Table 2 showed that ethical school administration significantly predicts secondary education goals attainment as shown by the simple linear regression coefficient (R) of .638 and a coefficient of determination (R^2) of .407 obtained. The R^2 ($R^2=.407$) meant that the variable of school administration contributed 40.7% of the total variance in secondary education goals attainment while the remaining percentage score 59.3% was predicted by other external factors outside ethical school administration. This showed that the independent variable (ethical school administration) significantly predicts the dependent variable (secondary education goals attainment), $F_{236.423}$, $p(.000) < .05$. Referring to the coefficients in table 2, the unstandardized coefficient for ethical school administration is .825. This meant that for every point increase in secondary education goals attainment, there is .825 increase in ethical school administration scores from the questionnaire instrument used. Based on this result, the null hypothesis which stated that ethical school administration does not significantly predict secondary education goals attainment in public schools in Yakurr Local Government Area, Cross River State is rejected.

	Total	6577.988	345				

*Significant $p < .05$; $R=.638$; $R^2 .407$; Adj. $R^2=.406$

Coefficients^a

Model		Unstandardized Coefficients	Std. Error	Standardized Coefficients	t	Sig.
1	(Constant)	3.165	1.045		3.028	.000
	Inclusive decision-making	.825	.054	.638	15.376	.000

a. Dependent Variable: Secondary education goals attainment

b. Predictors: (Constant), Inclusive decision-making

Discussion of findings

The finding of hypothesis one revealed that ethical school administration significantly predicts secondary education goals attainment in public schools in Yakurr Local Government Area, Cross River State, Nigeria ($R=.638$). The finding is not surprising because ethical leadership promotes accountability, inclusiveness, and trust, which are essential for mobilizing staff and resources toward the achievement of educational objectives. It suggests that school administrators in the study area demonstrated integrity, fairness, and transparency which in turn inspire cooperation, reduce conflict, and align the efforts of teachers and other stakeholders toward goals attainment. The implication of this finding is that the more school administrators adopt key ethical principles in administration of the school the more they will enhance institutional performance and efficient realization of set school goals.

The finding of this hypothesis agrees with similar findings of Sikpi and Enoch (2022) who explored the relationship between leadership core values and goal attainment in Bayelsa State's public universities. Results revealed a significant correlation between leadership values and university goal

attainment. The finding supports that of Obona et al. (2024) that both leadership style and facilities management significantly predict goal attainment in the area. It further corroborates the findings of Madukwe et al. (2024) who assessed the link between participatory leadership behaviors and goal achievement in Abia State's secondary schools using an ex post facto approach. The study found that participatory behaviors significantly predicted schools' goal achievement.

Conclusion

Based on the findings, this study concludes that ethical school administration significantly predict the attainment of secondary education goals in public schools in Yakurr Local Government Area of Cross River State, Nigeria. The results underscore the importance of integrity, fairness, transparency, and accountability in school leadership as critical determinants of educational outcomes. Therefore, fostering ethical practices among school administrators is essential for enhancing goal-oriented performance and promoting quality education at the secondary school level.

Recommendations

It is recommended that the Cross River State Ministry of Education in collaboration with the management of secondary schools should organize regular training and capacity-building workshops on ethical leadership for school administrators to strengthen their commitment to ethical practices in order to enhance the attainment of secondary education goals in public schools.

Contribution to knowledge

This study contributes to the body of knowledge by empirically establishing that ethical school administration is a significant predictor of secondary education goals attainment in public schools in Yakurr Local Government Area, Cross River State. It provides contextual evidence that ethical leadership practices such as fairness, transparency, and accountability directly influence educational outcomes, thereby offering a framework for educational policy reforms and leadership development programs aimed at improving school effectiveness in similar socio-educational settings.

Limitation of the Study

One key limitation of this study is its narrow geographical focus, as it was confined to only one local government area—Yakurr—out of the eighteen local government areas in Cross River State, Nigeria. This limited scope may affect the generalizability of the findings. Consequently, future research should consider a larger and more diverse sample across multiple local government areas to validate and extend the current findings.

Funding: No external funding was received for this study

Abstract

This study investigated the influence of family ethical education on sustainable national development in Rivers State-owned universities, emphasizing two key constructs: family role modeling and direct moral instruction. Ethical education, primarily initiated within the family setting, plays a critical role in shaping students' moral framework and developing responsible citizens. The study adopted a descriptive survey design involving 548 respondents, including 148 parents who are lecturers from Rivers State University and Ignatius Ajuru University of Education and 400 students in both institutions. A self-structured questionnaire titled "Influence of Family Ethical Education on Sustainable National Development in Rivers State University Questionnaire (IFEESNDQ)" was used for data collection. The instrument was validated and achieved acceptable reliability indices. Data were analyzed using mean, standard deviation, and z-test statistics at a 0.05 significance level. Findings revealed that both family role modeling and direct moral instruction significantly influence sustainable national development from the perspectives of parents and students. While both groups acknowledged the high extent of influence, the z-test indicated no significant difference in perceptions regarding role modeling. However, a significant difference was observed in the perception of the influence of direct moral instruction, suggesting variability in how moral values are transmitted and interpreted. The study recommended among others, that parents should consistently demonstrate ethical behavior in their daily actions by serving as role models where honesty, respect, empathy, and responsibility is the sure word.

Keywords: Family Ethical Education, Role Modelling, Direct Moral Instruction and Sustainable National Development.

Introduction

Education is a cornerstone for nurturing responsible and well cultured individuals who can advocate for the needs of the next generation to come through an amplified family education. According to Okafor (2021), the family is the first agent of socialization and the primary source of moral instruction. The family as the first settlement of a child is indispensable for developing student character and nurturing students moral reasoning. By the foregoing, students' behavior and sense of responsibility can be nurtured through family ethical education. Family ethical education is the process of teaching and instilling acceptable principles, morals and behaviors to children within the family tree. It is the kind of education that helps students' develop the capacity for critical thinking and rational decision-making. When ethical values such as integrity, fairness, and accountability are instilled at home, students are better equipped to deal with the pressures and challenges they may face within the

school and society (Omoniyi & Adefolalu, 2019). This training becomes effective in fostering moral development, responsibility, respect, and integrity among family members, particularly among individuals preparing for higher education which in- return prepare them to engage in meaningful dialogue among friends and teachers in any given situation. Thereby encouraging an atmosphere where students can reflect critically on their actions and understand the consequences of their choices. Based on this, students would uphold the principles of respect for oneself and for others through family role modelling and family direct moral instruction which serves as mechanisms for transmitting ethical values to students. Thereby availing them a better opportunity to comprehend the importance of respect, honesty, integrity, responsibility and empathy. These attributes are Inevitable to impact the ways students approach their academic pursuits and interact with their peers, teachers and society at large as well as achieving a meaningful sustainable national development. Sustainable national development refers to a development process that aims to improve the well-being of a country's population while prioritizing a child social-emotional development that fosters co-friendly practices where individuals feel valued by others. So that future generation can meet an environment free of rancor and conflict. Also, it involves the balanced integration of economic growth, environmental protection and social inclusion with the goal of achieving long-term prosperity and stability for all members of society. Particularly in societal cohesion, and the reduction of social vices such as corruption and crime considering the diverse ethnic groups in Rivers State. Rivers State is known to house multifaceted localities with people from different cultural background. However, the values imparted by these families can either strengthen or undermine the efforts made in schools towards promoting discipline, academic success, and national development. A study carried out by Ajayi (2022) shows that students from homes where ethical values are prioritized are more likely to contribute positively to the development of their communities thereby, helping them to stand as role models to their class mates and the younger generation to come. This would in turn help them to showcase higher levels of academic performance, good conduct, and a sense of responsibility in their communities (Makoju, 2018).

Statement of the Problem

The family as the foundational place of every parents is meant to play a significant role in shaping the values, attitudes, and competencies of young people. It serves the primary domain where students acquire essential social norms, cultural values, and life skills that support responsible citizenship for sustainable national development. Despite the recognized importance of family ethical education in fostering responsible citizens for national growth, there appears to be a growing decline in moral values among students in these institutions. Mostly, these disparities emanate as a result of the way and manner students are raised which stem from differences in parental involvement in value acquisition, parental socio-economic status, to parental educational background. Based on this phenomenon, some students seem to exhibit behaviours such as poor civic responsibility, academic dishonesty, discrimination, insubordination, records falsification, cheating, bullying, stealing, lying, truancy, among others which may be accorded to weak parental upbringing. This attitude does not only impact the immediate school environment but also have long-term consequences on students' personal development as well as the broader society. Nonetheless, if these behaviours are not managed, it may lead to students' academic retrogression, low self-esteem, suspension, expulsion, dropout, bad reputable to the school, and a negative name tag. Consequently, making their behavior awful and pitiful to maintain a sustainable national development. Based on this backdrop, the study seeks to investigate influence of family ethical education for achieving Sustainable national development in Rivers State owned universities.

Aim and Objectives of the study

The study aimed to investigate the influence of family ethical education on Sustainable national development in in Rivers State owned universities. Specifically, the study sought to;

1. determine the extent to which family role modeling influence sustainable national development in Rivers State owned universities

2. examine the extent to which family direct instruction influence sustainable national development in Rivers State owned universities

Research Questions

The following research questions guided the study

1. To what extent does family role modeling influence sustainable national development in Rivers State owned universities?
2. To what extent does family direct instruction influence sustainable national development in Rivers State owned universities?

Hypotheses

The following hypotheses were formulated at 0.05 level of significance

1. There is no significance difference between the mean rating of parents who are lecturers and students on the extent to which family role modeling influence sustainable national development in Rivers State owned universities.
2. There is no significance difference between the mean rating of parents who are lecturers and students on the extent to which direct instruction influence sustainable national development in Rivers State owned universities.

Conceptual Clarifications

Families are the prime institutions where children learn to inculcate the habit of upholding values, and moral principles which shape their character and guide their actions throughout life. Through this form of education, ethics are considered most because ethical education plays a pivotal role in the moral development of children, shaping their values, attitudes, and behaviors as they grow into responsible citizens. Fredricks and Difronzo-Heitzer (2022) asserts that ethical education is a component that affects how we make decisions including those of an ethical nature. This form of education is fundamental for sustainable national development because it fosters the cultivation of values that are essential for the well-being and stability of societies. There are different measures of family ethical education however, this article focused on role modelling, discipline and consequences, and direct moral instruction as they serve as important mechanisms for transmitting ethical values to children. These practices not only guide the personal development of individuals but also contribute to the broader social fabric that influences sustainable development at the national level.

Family role modelling is coined out from Bandura social learning theory which uphold that children learn by observing and imitating the behaviors of adults, particularly by those they trust, such as their parents or caregivers. Role modelling is the act of demonstrating ethical behavior through one's actions and behavior. It is perhaps one of the most effective forms of ethical education within the family context in helping children navigate ethical dilemmas. Knowing that parents are the first set of people children meet that ought to be an exemplary life for children to imitate good virtues. According to Vogl and Freese (2020) when parents instill human traits that reflect positive social values for children to abide, Anggadwita (2019) affirms it helps creates a strong shield against extremist ideas or abnormal intellectual and behavioral trends. Contrarily, a study carried out by Mansfield (2023) to investigate parental influence on children's social behavior within the context of a doll house revealed that parents may depicted positive role models for the socialization of their children, while the majority of children tend to imitate and perceive their parents as positive role models, one child may not blindly imitate the parents and may exhibit behaviors that deviate from parental expectations.

Direct moral instruction also known as moral education is the clear inculcation and transmission of moral knowledge, values and principles through discussions. It requires teaching children about concepts of honesty, fairness, empathy, justice, and respect for others. Direct moral instruction can also be regarded as moral education that allows parents and guardians to provide moral support to their wards. A study by Killen and Smetana (2015) highlights that direct moral instruction can help students develop the ability to engage in moral reasoning and evaluate different perspectives on ethical issues.

Using this approach, children would be taught by their parents on the significant of weighing the consequences of their actions and considering the perspectives of others. This reflective process enhances children's ability to think critically about ethical issues and make informed, morally sound decisions. Conversely, the study of Nucci (2017) opines that moral instruction, when delivered in an engaging and thoughtful manner, can have a profound impact on students' moral development. However, Walaa (2024) carried out an empirical study on the crucial role of families in instilling positive social values in children, which is essential for building a compassionate and committed future generation capable of giving back to society in various fields, particularly in human services, the study revealed that families of some children are not interested in explaining and encouraging social values among their children thereby leading to the increasing moral decadence. This no doubt may hamper in maintaining a sustainable national development.

Sustainable national development refers to a holistic approach that balances economic advancement, social equity, and environmental stewardship to ensure long-term societal well-being. A critical component in achieving this vision is the ethical foundation of citizens, which begins in the family setting. Family ethical education is the process through which parents and guardians impart moral values, norms, and behaviors to their children, shaping their attitudes toward societal responsibilities. Omoniyi and Adefolalu (2019) also assert that when children are exposed to sound ethical principles at home, they are more likely to make decisions that favor societal harmony and development. Ethical education within families helps reduce social ills like corruption, dishonesty, and civic irresponsibility, which often hinder national development. Killen and Smetana (2015) emphasize that moral reasoning developed through parental instruction enhances children's capacity to act ethically in complex societal contexts. Thus, when families prioritize ethical upbringing, they contribute directly to building a citizenry capable of fostering inclusive growth, social justice, and democratic governance. Ultimately, family ethical education forms the moral backbone required for any nation to achieve sustainable development.

Methodology

The study adopted a descriptive survey design which involves collecting and analyzing data from selected few individuals who served as the representative in the study. The population is 1754 academic staff of both Ignatius Ajuru University (424) and Rivers State University (1330) The purposive sampling technique was used to draw 492 parents who are lecturers in Rivers State Owned universities and 2,125 year one and two students in Rivers State University and Ignatius Ajuru University of Education. The sample size was 548 respondents. Taro-Yamane formula was used to determine the sample size of 400 students and 30% was used to obtain 148 parents who are lecturers of both institutions.

A purposive sampling technique was used to elicit 148 parents who are lecturers in faculty of education Ignatius Ajuru University of Education and Rivers State University and a simple random sampling technique was used to draw 400 year 1 and year 2 students from both institutions. The instrument for data collection was a self-structured questionnaire titled: —Influence of Family Ethical Education on Sustainable National Development in Rivers State University Questionnaire (IFEESNDQ) with 16 questionnaire items based on the research questions. The instrument was structured in line with the modified rating scale of Very High Extent (VHE)= 4 points, High Extent (HE)=3 Points, Low Extent (LE)= 2 Points and Very Low Extent (VLE)= 1 point respectively. The face and content validity were test run by experts in Measurement and Evaluation and the Department of Educational Management all in Rivers State University. Cronbach Alpha statistics was used to test the internal consistency of the instrument which yielded reliability indexes of 0.78, and 81 respectively. The researchers and two trained research assistants distributed copies of 548 questionnaires and retrieved on spot. Though the exercise was carried out within the period of two weeks. Mean and standard deviation were used to answer the research questions with a criterion mean of 2.50. Items between 3.50 and above were considered Very High Extent, 2.50 – 3.49 were considered High Extent, 1.50 – 2.49 were regarded as Low Extent while 0.50 – 1.49 were seen as

Very Low Extent. The null hypotheses were tested using z-test at 0.05 level of significance. Analyzed data therefore with calculated z-value greater than the z-critical value of ± 1.96 was rejected and below was accepted.

Result

Research Question 1: To what extent does family role modeling influence sustainable national development in Rivers State Owned Universities

Table 1: Mean Responses of parents who are lecturers and students on the extent to which family role modelling influence sustainable national development in Rivers State Owned Universities.

S/N	Item	Parents = 148			Students= 400		
			SD	Remarks		SD	Remarks
1	It serves as a catalyst for helping students uphold ethical principles.	3.22	0.90	HE	3.71	0.91	VHE
2	Providing academic support to students helps them stay focused and successful.	2.28	0.85	HE	2.91	0.78	HE
3	Encouraging strong family principles helps equip students to stay resolute to school values.	3.40	0.87	HE	3.40	0.77	HE
4	Modelling problem solving capabilities enables students to conquer academic adversity	2.75	1.05	HE	3.11	0.70	HE
5	Showing respect to people at home builds a platform for students to do same at school.	3.55	0.62	VHE	3.72	0.51	VHE
6	It makes them become teachable to function well in society.	3.47	0.64	HE	3.68	0.53	VHE
7	It enables students to make wise decision that contributes positively to national growth.	3.24	0.90	HE	3.25	0.83	HE
8	It helps students to be well informed about the consequences of their actions	3.57	0.61	VHE	3.74	0.51	VHE
9	It helps students to desist from undesirable behaviours.	2.82	0.89	HE	2.97	0.76	HE
Grand Mean		3.26	0.81	HE	3.22	0.70	HE

Source: Field Survey, 2025.

Table 1 shows that responses of parents who are lecturers and students on the extent to which family role modelling influence sustainable national development in Rivers State owned universities with a grand mean of 3.26 and 3.22 respectively. As appeared on the table, the grand mean is above the decision mean of 2.50. Hence, the result shows that parents who are lecturers and students are of the opinion that family role modelling influence sustainable national development in Rivers state owned universities a high extent.

Research Question 2: To what extent does family direct moral instruction influence sustainable national development in Rivers State Owned Universities

Table 2: Mean Responses of parents who are lecturers and students on the extent to which family direct moral instruction influence sustainable national development in Rivers State Owned Universities.

Parents = 148			Students= 400				
S/N	Item		SD	Remarks	SD		Remarks
10	It helps in fostering collaborative spirit that helps student understand their role in making positive difference in the nation.	3.36	0.74	VHE	3.46	0.59	HE

15	It serves as a catalyst for preparing student to be responsible individuals	3.49	0.60	HE	3.66	0.57	VHE
16	It exposes students to develop cores values that guides their behavior in life	3.38	0.78	HE	3.37	1.18	HE
Grand Mean		3.31	0.69	HE	3.12	0.80	HE

Source: Field Survey, 2025.

Table 2 shows that responses of parents who are lecturers and students on the extent family direct moral instruction influence sustainable national development in Rivers State owned universities with a grand mean of 3.31 and 3.12 respectively. As appeared on the table, the grand mean is above the decision mean of 2.50. Hence, the result shows that parents who are lecturers and students are of the opinion that family direct moral instruction influence sustainable national development in Rivers state owned universities a high extent.

H₀₁: There is no significant difference between the mean responses of parents who are lecturers and students on the extent to which family role modelling influence sustainable national development in Rivers State owned universities.

Table 3: z-test analysis of difference between the mean responses of parents who are lecturers and students on the extent to which family role modelling influence sustainable national development in Rivers State owned universities.

Respondents	N	$\bar{X}$	SD	Df	SL	z-cal.	z-crit.	Decision
Parents	148	3.26	0.81	446	0.05	0.53	±1.96	Not Significant
Students	400	3.22	0.70					

Table 3 shows a summary of mean, standard deviation and z-test of difference between the mean responses of parents who are lecturers and students on the extent to which family role modelling influence sustainable national development in Rivers State owned universities. The z-calculated value was 0.53 while the z-critical value of ±1.96 using 446 degree of freedom at 0.05 level of significance. Since the z-calculated value was less than the z-critical value, the null hypothesis was accepted which indicated that there is no significant difference between the mean responses of lecturer's and students on the extent to which family role modelling influence sustainable national development in Rivers State owned universities.

H₀₂: There is no significant difference between the mean responses of lecturers and students on the extent to which family direct moral instruction influence sustainable national development in Rivers State owned universities

Table 4: z-test analysis of difference between the mean responses of parents who are lecturers and students on the extent to which family direct moral instruction influence sustainable national development in Rivers State owned universities.

Respondents	N	$\bar{X}$	SD	Df	SL	z-cal.	z-crit.	Decision
Parents	148	3.31	0.69	546	0.05	2.74	±1.96	Significant
Students	400	3.12	0.80					

Table 4 shows a summary of mean, standard deviation and z-test of difference between the mean responses of parents who are lecturers and students on the extent to which family direct moral instruction influence sustainable national development in Rivers State owned universities. The z-calculated value was -2.74 while the z-critical value of ±1.96 using 546 degree of freedom at 0.05 level of significance. Since the z-calculated value was greater than the z-critical value, the null hypothesis was not accepted which indicated that there is a significant difference between the mean responses of parents who are lecturer's and students on the extent to which family direct moral instruction influence sustainable national development in Rivers State owned universities.

Discussion of Findings

The result revealed that to a high extent, both parents who are lecturers and students are of the opinion that family role modelling influences sustainable national development in Rivers State owned universities. This is in consonance with the view of Ajayi (2022) who stated that students from homes where ethical values are prioritized are more likely to contribute positively to the development of their communities. Findings of the study also showed that to a high extent that both parents who are lecturers and student are of the view that family direct moral instruction influences sustainable national development. This is in agreement with Killen and Smetana (2015) study who highlighted that direct moral instruction can help students develop the ability to engage in moral reasoning and evaluate different perspectives on ethical issues.

The findings also revealed that there is no significant difference between the mean response of parents who are lecturers and students on the influence family role modelling on sustainable national development in Rivers State owned universities. The finding is in agreement with Mansfield (2023) who revealed that while the majority of children tend to imitate and perceive their parents as positive role models, one child may not blindly imitate the parents and may exhibit behaviors that deviate from parental expectations.

The findings also revealed that there is a significant difference between in the mean response of parents who are lecturers and students on the influence family direct moral instruction on sustainable national development in Rivers State owned universities. The finding is in agreement with Walaa (2024) who noted that the families of some students are not interested in explaining and encouraging social values among their children thereby leading to the increasing moral decadence. This suggests that while observational learning is widely accepted, variations may exist in how explicit moral teachings are received and valued.

Conclusion

The findings of this study revealed that to a high extent family ethical education influence sustainable national development in Rivers State owned Universities. This implies that the role of family ethical education in promoting sustainable national development within the context of Rivers State-owned universities is pivotal. Hence, the study reaffirms that instilling ethical values through

family systems is essential for achieving long-term societal stability and growth. It has been revealed that family structures, particularly through role modeling and direct moral instruction, significantly influence students' attitudes, decision-making, and academic behavior. The ability of students to exhibit socially responsible behaviors, navigate academic challenges in an ethical manner, and contribute positively to societal development is largely rooted in the foundational values acquired at home. This confirms that the family remains the first and most influential environment where moral and ethical values are imparted to enable students adopt positive behaviors observed from their parents and caregivers. This continuous exposure to morally upright conduct help students internalizes values such as integrity, honesty, respect, and accountability.

Recommendations:

Based on the findings of the study, the following recommendations were made;

1. Parents should consistently demonstrate ethical behavior in their daily actions by serving as role models where honesty, respect, empathy, and responsibility is the sure word. This would help to provide a live template for children to emulate. This consistent modeling not only reinforces expected conduct but also helps children internalize these values, which they carry into school and broader society.
2. Parents should regularly engage their children in conversations about moral values and ethical decision-making. This includes discussing real-life scenarios that encourage students to think critically about right and wrong, the consequences of actions, and the importance of integrity and fairness. Such intentional guidance enhances children's moral reasoning skills and strengthens their ability to make sound ethical decisions independently.

Abstract

This study examined staff training programmes re-engineering for sustainable Education in Cross River State, Nigeria. To achieve the aim of this study, two research questions were raised and two hypotheses were formulated to guide the study. A correlational research design was adopted for the study. The study population comprised one thousand and fifty-eight (1058) teachers from the Ogoja Education Zone in Cross River State. A total sample of two hundred (200) teachers was randomly selected for the study. The selection was done through a simple random sampling technique. The instrument used for the data collection was a questionnaire titled: Staff Training Programmes Re-engineering for Sustainable Education (STRSEQ), which was developed by the researchers and was validated by experts in administration in higher education, Department of Educational Management, University of Calabar and Measurement and Evaluation in the Department of Educational Foundations in Faculty of Educational foundation studies, University of Calabar, Calabar. Data collected were subjected to statistical analysis using simple linear regression analysis (r) of the Statistical Package for Social Science (SPSS) version 25. The results revealed that staff training programmes re-engineering significantly relate to sustainable Education in Cross River State, Nigeria. It was recommended that the school management should give staff training programmes more adequate attention.

Keywords: Staff training programmes re-engineering, Sustainable Education, Cross River State, Nigeria.

Introduction

Staff training programs are crucial for re-engineering education towards sustainability, empowering educators with the knowledge, skills, and attitudes necessary to create lasting, positive change. These staff training programmes focus on training that will equip teachers with pedagogical approaches to promote critical thinking, problem-solving, and collaboration around sustainability issues. This includes using inquiry-based learning, project-based learning, and experiential learning to engage students in real-world challenges that promote critical thinking and problem-solving related to sustainability challenges. Developing Skills for Sustainable Teaching: teachers need to be able to assess student learning in ways that demonstrate a deep understanding of sustainability concepts and their application. and innovative teaching methodologies. Education for Sustainable Development is an educational approach that aims to prepare all children, youth, and adults with the knowledge, skills, and values to create and enjoy a sustainable future. It is education that is

concerned with individual human potential for knowing, being, doing, and living together sustainably (Hopkinset al., 2020).

In-service training is a staff development process to improve the performance of an incumbent holding a position with assigned job responsibilities. The in-service teacher training program is recognized as a vital component in improving the education process among teachers. Mokeira (2019) describes it as planned courses to improve instructional, professional knowledge, interest, and skills. Most importantly, the programs of training and professional development have to be introduced, mentored, and evaluated, covering all educational needs regularly, by experts in the field. An in-service teacher training program is any program or activity that is designed to have a positive impact on the education process, which takes place within an educational institution. It also includes all the practices and experiences that teacher undergoes after joining the teaching profession. It is composed of both professional and subject matter in education. The importance of planning an in-service teacher training program is to meet the particular conditions of the educational system and professional needs of the teachers (Kelchtermans,2015). An in-service training program is a crucial element for the professional development of teachers. It enhances teacher teaching and contributes to viewing from a new angle to meet classroom needs (Ramsey, 2020). Continuous and efficient training program of teacher development programs are the key factor in the success of the educational process. It helps teachers to follow the changes in this process and enables them to advance in technologies, the development of curricula, and modern teaching techniques. In-service training programs play a significant role in teachers' continuous professional development. In addition, teacher professional development plays a crucial role in the quality of education in schools and improves the academic achievements of students (Guskey,2022).

An in-service training program is important because it promotes a very flexible environment, therefore, teachers easily adapt to the working situation. it also motivates employees and employers and increases creativity in the educational process. An in-service training program helps teachers acquire new understanding and instructional skills to develop their effectiveness in the classroom. In-service training places teachers at the center of any improvement effort in the educational institution. According to Owen (2019), —the positive aspect concerning professional development of teachers is that the program will make sure that learning activities are planned and concentrated on empowering teachers to correct policies, curriculum development, teaching, and views on how to achieve high productivity and students' performancell.

In-service training is directed toward the improvement of teachers and the focus is on areas where skills are inadequate. It is also for the purpose of upgrading and bridging the gaps with much interest to provide the need for creativity and flexibility in academic activities. In other words, the ability is stimulated thereby creating an environment in which it becomes easier to explore, becoming more proactive and commanding changes in the organization. Louise (2008) describes in-service training as includes all professional development activities in which one engages after initial certification and employment and does not conclude until there is a termination of services. It is a development opportunity given to staff for job enrichment and widening of knowledge, skills, and techniques. The programme creates an atmosphere where every individual in the organization strives to be proud of their profession, thereby making interaction proved more fertile field.

Similarly, Broadwell (2016) stresses that the focus of in-service is to bring about curriculum change, innovation in teaching methodologies, and provision of quality professional growth and development. Mostly the activities and programmes focus on developing and manifesting quality performance by the use of modern visual aids, increasing skills or knowledge in respect of the teaching subject. In-service training programme creates an avenue for individuals to work as a team in solving problems, which are of common concern to all staff, as well as contributing to the development of the educational objectives of the school system. So, to encourage growth in performance, other forms of professional development such as workshops, refresher courses, exchanging teaching professional writings, and participation in the school programme must be practiced. These will help to complement

the already acquired knowledge, especially when these processes are brought into reality through the role transition.

Furthermore, Abarikannda (2022) noted that the purpose of in-service training is based specially to upgrade and update the potential and competency of teachers to be more supportive, participative, and achievement-oriented. In other words, it is goal-directed activity focusing on changing individuals' values, orientation, and attitude towards the learning environment. In-service training enhances performance as it provides access to professional growth, which helps to reduce some deficiencies in skills and methodologies in teaching. This scholar assumes that if opportunities are created for teachers to persistently rise in their various transmissions of knowledge, there will be innovative change in curriculum, a high degree of participation in decision-making, as well as standard teaching.

The basic purposes of the in-service teacher training program are to enable teachers to succeed in their profession and to develop professional knowledge and skills. Teachers can adapt to new situations in their professional lives and improve their skills. The in-service training program has a great positive influence on teacher performance, and teachers meet the students' needs, so the students' learning outcomes will increase. Moreover, an in-service teacher training program aims at increasing the qualities of the teacher, which in turn, positively affects the performance of a teacher. Samupwa (2018) studied the effects of in-service teacher training programs on the administrative work and the behavior of teachers in the classroom. The result of this study showed that there were significant changes in the teachers' behavior in their classroom as well as in their administrative work context.

Teachers' role is very crucial in education crucial in education quality as they become aware of their responsibilities and duties. There are different techniques to measure the quality of teacher training programs. The number of indicators that define good teachers can serve as a direct measure for evaluating the effect of training programs. To meet the institutional needs in terms of skills and knowledge, the roles and capacities of teachers can be further improved through in-service training. Harris and Sass (2019) conducted a research study. They studied the effects of the teacher training program on the teacher value-added services. They concluded that an in-service teacher training program has a positive influence on teacher productivity in math class, and the teacher gains knowledge and experience. This study further explored that the teachers with more teaching experience were more effective as compared to teachers with less teaching experience.

Seham, and Elhassan (2020) conducted a study to explore the role of the in-service training program in teachers' development. The diversity and continuity of these programs were crucial, as well as the educational and personal needs of the teachers. The study followed the descriptive analytical methods, and the questionnaire was used as a tool for data collection. The sample was five hundred (500) participants chosen from the teachers of government schools in Saudi Arabia. The results of the data were analyzed by the Statistical Package for Social Science (SPSS) programme using percentages and means. The results revealed that most in-service training programs focused on a single side of teachers' development related to the teachers' specialization or profession. In addition, these programs did not contribute to the teachers' personal and educational needs. The study recommended that in-service training programs should not focus on a single side of teacher development, but should focus on the overall, taking into consideration the teacher's personal and educational needs. To make these programs more effective, they should be diverse and continuous.

Igbinewka (2015) carried out a study to investigate teachers' training, retraining, and development education in Calabar Municipality public secondary schools in Cross River State. A survey research design was adopted for the study. A sample size of 320 respondents was selected from a total population of 773 teachers, representing 41 %. The instrument used for data collection was a questionnaire titled: Teachers Training, Retraining for Development Education Questionnaire. (TTRDEQ). The reliability of the instrument was determined by using the split-half method, which involves 32 teachers outside the study sample. Pearson's Product-Moment Correlation Coefficient was used to analyze the data. The reliability estimates ranged between 'r'0.60 and 'r'0.70. The result of the analysis revealed a positive significant relationship between teacher training, retraining and development education when tested at $p < 0.05$ level of significance. The null hypotheses were rejected

and the alternative hypotheses upheld. It was recommended that teachers' development education be encouraged and well-funded by the Government.

Mentoring programmes are cost-effective and interesting in facilitating the teaching and learning process for both novices and practicing secondary school teachers because when mentoring is carried out earlier, novice teachers become competent and can execute their work with confidence (Mena et al., 2016). According to Gong et al. (2014), mentoring is the process or an opportunity to develop an individual's mental and professional capabilities. The most widely accepted definition is that of Geeraets et al. (2020), who defined mentoring as a developmental interactive relationship established between mentors and mentees in which mentors transmit knowledge, skills, and experience and provide support, guidance, and friendship to mentees. The developmental interactive relationship that transmits knowledge, skills, and experience provides mentees with challenging work, social support, and a safe relationship through a process of knowledge and skill sharing, which positively affects employee performance and behavior (Callahan, 2016). On the part of mentors, mentoring relationships provide an opportunity to give back to the community, can build leadership and management capacities, and expand professional network (Desimore et al., 2014).

Mussa(2022) conducted a study on mentoring programmes are cost-effective and interesting in helping one to grow in different teaching methodologies for practicing secondary school teachers and learning processes for novice teachers. When mentoring is carried out in one's early career development, novice teachers become competent and execute their work with confidence. This study examined the forms of mentoring offered to novice teachers in secondary schools in the Mbeya region and established stakeholders' perceptions on mentoring programmes in developing novice teachers' teaching competencies in secondary schools in the Mbeya region. A descriptive survey research design utilizing quantitative and qualitative approaches was used with a sample size of 110 respondents. Quantitative data were analysed descriptively, while qualitative data were analysed through content analysis. The findings revealed that different forms of mentoring were practiced in the Mbeya region. These included formal and informal mentoring, instance and group mentoring, situational and supervisory mentoring, where each form of mentoring benefited novice teachers towards teaching and learning. Also, the study revealed a positive perception of mentoring programs towards developing novice teachers' competence in secondary schools from stakeholders. Further, novice teachers viewed their mentors as models to help understand their own strengths and weaknesses, as well as acquire problem-solving skills, thereby filling the gap created by limited practices and experiences not covered during teacher training. It was recommended that there is a need to strengthen programmes in secondary schools in order to support novice teachers' progress at the beginning of their teaching career.

Accordingn to Mussa (2022), teacher mentorship programs pair experienced, effective teachers with new or struggling educators to provide guidance, support, and feedback. These programs aim to improve teacher retention, performance, and satisfaction, ultimately leading to better student outcomes. They foster collaboration, share best practices, and offer professional development opportunities. Benefits of Teacher Mentoring Programs: Improved Teacher Retention: Mentoring can help new teachers feel supported and confident, reducing burnout and turnover rates. Enhanced Teaching Performance: Mentors can share their expertise and provide feedback, helping teachers refine their skills and strategies. Increased Job Satisfaction: The supportive environment and collaborative nature of mentoring programs can boost teacher morale and job satisfaction. Mentoring programs provide opportunities for teachers to learn new techniques, explore different teaching methods, and expand their knowledge base. It also, improves teacher quality and provides a more supportive learning environment, mentoring can contribute to better student achievement and engagement. The need for teachers' preparation and production to meet the needs of this level of education is very critical. Regrettably, most principals and teachers are complacent and unaware of the professional development opportunities, like mentorship programmes, in-service training, conference attendance, and workshops, which affect the effectiveness of their job. Also, the inability of school principals to adequately build the capacity of staff by providing adequate staff development programmes has been of great concern to parents and researchers. It is against this background that the

researchers intend to examine staff training programmes re-engineering for sustainable Education in Cross River State, Nigeria.

Statement of the problem

Teachers' personal development consists of activities that develop a teacher's capabilities and potential, build human capital, facilitate effectiveness, and enhance the quality of teaching and the realization of objectives and goals of education. Regrettably, many secondary school teachers do not have or seek opportunities for personal development due to a lack of encouragement, motivation, poor salary, time, and laziness. Therefore, some teachers are disconnected from the new and modern methods of instructional delivery, which have adversely affected the sustainable development of Education. This could be avoided if teachers embark on personal development through conferences, seminars, workshops, and mentorship. This seems to affect teachers' job performance, which has manifested in students' poor academic performance in secondary school. Hence, it has been discovered that the lack of teachers' development opportunities and so on has been the reason behind this sordid performance. It is against this backdrop that the researcher intends to investigate whether staff training programmes re-engineering relate to sustainable Education in Cross River State, Nigeria.

Purpose of the Study

The main purpose of the study was to examine staff training programmes re-engineering for sustainable Education in Cross River State, Nigeria. Specifically, the study sought to find out whether:

7. Teachers' in-service significantly relates to sustainable Education in Cross River State
8. Teachers' mentorship programme significantly relates to sustainable Education in Cross River State

Research questions

The following research questions were posed by the researchers to guide the study:

- In what way does teachers' in-service significantly relate to sustainable Education in Cross River State?
- In what way does the teachers' mentorship programme significantly relate to sustainable Education in Cross River State?

Statement of hypotheses

The following hypotheses were formulated to guide the study:

1. There is no significant relationship between teachers' in-service and sustainable Education in Cross River State.
2. There is no significant relationship between the mentorship programme and sustainable Education in Cross River State.

Methodology

The study adopted the correlational research design. The study population comprised one thousand two hundred twenty-eight (1028) teachers from the selected public secondary school in Cross River State. A total sample of two hundred (200) teachers was randomly selected for the study. The selection was done through a simple random sampling technique. The instrument used for the data collection was a questionnaire entitled: Staff Training Programmes Re-engineering for Sustainable Education (STRSEQ), was developed by the researchers and was validated by experts in administration in Higher Education, Department of Educational Management and Measurement and Evaluation in the Department of Educational Foundations in Faculty of Educational Foundation Studies, University of Calabar, Calabar. The instrument was divided into two Sections. A and B. Section A sought respondents' demographic data, such as the name of the school and qualification. Section B consisted of ten (10) items constructed in a four (4) point modified Likert scale ranging from Strongly Agree (SA) 4 points, agree (A) 3 points, disagree (D) 2 points, and Strongly Disagree (SD) 1

point. Data collected were subjected to statistical analysis, using simple linear regression analysis of Statistical Package for Social Science (SPSS) version 25 was used for data analysis, and the results are presented as follows.

Results

Hypothesis 1:

There is no significant relationship between teachers' in-service and sustainable Education in Cross River State. The result of the analysis is presented in Table 1.

Table .1

Summary of correlation analysis of the relationship between teachers' in-service and sustainable Education in Cross River State (n=200)

Variables	Mean	Std. Dev.	t cal.	p-value
Teacher in-service	16.55	3.040	.842*	.000
Sustainable Education	16.33	2.461		

*Significant at .05 level; df= 198 critical- r= .138

The result in Table 1 reveals that the calculated r-value of .842* was found to be greater than the critical value of .138 when tested at the .05 level of significance with 198 degrees of freedom. Therefore, the null hypothesis was rejected while the alternative hypotheses were accepted. This implies that there is a significant relationship between teachers' in-service and sustainable Education in Cross River State.

Hypothesis two:

There is no significant relationship between teachers' mentorship programme and sustainable Education in Cross River State. The calculated result is presented in Table 2.

Table .2

Summary of correlation analysis of the relationship between teachers' mentorship programme and sustainable Education in Cross River State (n=200)

Variables	Mean	Std. Dev.	t cal.	p-value
Teachers' mentorship programme	17.08	3.050	.784*	.000
Sustainable Education	16.33	2.461		

*Significant at .05 level; df= 198 critical- r= .138

The result in Table 2 reveals that the calculated r-value of .784* was found to be greater than the critical value of .138 when tested at the .05 level of significance with 198 degrees of freedom. Therefore, the null hypothesis was rejected while the alternative hypotheses were accepted. This implies that there is a significant relationship between teachers' mentorship programme and sustainable Education in Cross River State.

Discussion of the findings

The result of hypothesis one showed the relationship between teachers' in-service and sustainable Education in Cross River State. The result of the study is in agreement with the results of Seham and Elhassan (2020), who conducted a study to explore the role of the in-service training program in teachers' development in government secondary schools in Saudi Arabia. The results revealed that most in-service training programs focused on a single aspect of teachers' development related to their specialization or profession. The study recommended that in-service training programs

should not focus on a single side of teacher development, but should focus on the overall, taking into consideration the teacher's personal and educational needs. To make these programs more effective, they should be diverse and continuous.

Also, the result is in agreement with the study conducted by Igbinewka (2015) on teachers' training, retraining, and development education in Calabar Municipality public secondary schools in Cross River State. The result of the analysis revealed a positive and significant relationship between teacher training, retraining, and development education. It was recommended that teachers' development education be encouraged and well-funded by the Government.

The result of hypothesis two revealed that there is a significant relationship between teachers' mentorship programme and sustainable Education in Cross River State. This finding was supported by Mussa (2022), who conducted a study on mentoring programmes that are cost-effective and interesting in helping one to grow in different teaching methodologies for practicing secondary school teachers and learning processes for novice teachers. The findings revealed that different forms of mentoring were practiced in the Mbeya region. These included formal and informal mentoring, instance and group mentoring, situational and supervisory mentoring, where each form of mentoring benefited novice teachers in teaching and learning. Also, the study revealed a positive perception of mentoring programs towards developing novice teachers' competence in secondary schools from stakeholders. Further, novice teachers viewed their mentors as models to help understand their own strengths and weaknesses, as well as acquire problem-solving skills, thereby filling the gap created by limited practices and experiences not covered during teacher training. It was recommended that there is a need to strengthen programmes in secondary schools in order to support novice teachers' progress at the beginning of their teaching career.

Conclusion

Based on the findings of the data collected and analyzed, the study concluded that there is a significant relationship between teachers' in-service and sustainable Education in Cross River State. Also, there is a significant relationship between teachers' mentorship programme and sustainable Education in Cross River State.

Recommendations

Based on the findings and conclusions of the study, it was recommended that:

- i. The teachers should engage in in-service training that will enhance sustainable Education.
- ii. The teachers should involved themselves in the mentorship programme that will enhance sustainable Education.

Abstract

This study explores the critical relationship between value education and national security, with particular focus on Nigeria's security challenges. It highlights how the erosion of core societal values such as honesty, respect, accountability, and tolerance has contributed to rising insecurity manifested in armed robbery, insurgency, kidnapping, and other forms of violence. The paper underscores value education as a proactive strategy for cultivating ethical citizens, fostering social cohesion, and promoting peace and stability. It further examines the challenges hindering the effective implementation of value education, including cultural shifts, inadequate teacher training, socio-economic factors, and political instability. Strategies for strengthening value education—such as curriculum integration, teacher capacity building, community engagement, and political commitment—are recommended to enhance its role in national security. Ultimately, the study advocates for a comprehensive, multi-sectoral approach to value education as an indispensable tool for sustainable national development and security.

Keywords: Value education, national security challenges, Nigeria.

Introduction

Human beings are inherently guided by preferences, making choices based on the values they uphold. This ability to prioritize and assign worth is central not only to individual decisions but also to societal norms. Historically, Nigeria has been known for its rich tapestry of shared cultural values—such as hard work, integrity, respect for elders and authority, community spirit, and contentment—which formed the bedrock of harmonious co-existence and communal development, particularly in traditional rural societies. These values fostered social cohesion and moral discipline, enabling indigenous governance systems like gerontocracy to function effectively, with peace and order prevailing in pre-modern Nigerian communities.

However, with the advent of modernization and globalization, there has been a gradual but significant shift in public perception and adherence to these foundational values. Increasingly, these virtues are being questioned, neglected, or even discarded, giving rise to behaviours and practices that contradict traditional norms. This erosion of values has been closely associated with the surge in unethical conduct, moral decay, and various forms of insecurity—including armed robbery, kidnapping, insurgency, banditry, cultism, and gangsterism—that now challenge Nigeria's stability and development.

In recent years, national security has evolved into a multifaceted concern, extending beyond military strategies to encompass socio-political and educational dimensions. Among these, value education stands out as a crucial means of addressing internal threats to peace and security. Value education, which entails the systematic inculcation of moral, ethical, and civic principles, helps in

shaping responsible citizens who are committed to the collective good (Halstead & Taylor, 2000). In nations like Nigeria, where the erosion of traditional values has contributed to insecurity, restoring ethical consciousness through education is both timely and imperative (Obasi, 2020).

Moreover, research affirms that the integration of value education into school curricula can cultivate a culture of tolerance, justice, civic responsibility, and peaceful conflict resolution from an early age (UNESCO, 2015). Such an approach not only strengthens national identity but also empowers individuals with the moral compass needed to resist societal ills.

Therefore, this paper explores how value education can serve as a strategic intervention in curbing the security challenges confronting Nigeria today. By re-establishing core values within the educational system, the nation stands a better chance of nurturing ethical citizens and fostering a more secure, stable, and progressive society.

Conceptual Clarifications

To establish a solid foundation for understanding the relationship between value education and national security challenges, it is important to clarify the key concepts that underpin this discourse: value education, values, and national security.

Value Education

Value education refers to the systematic process of inculcating ethical, moral, cultural, and civic values in individuals, particularly from a young age, through formal and informal educational platforms. It aims to shape character, foster responsible citizenship, and promote a just and cohesive society (Halstead & Taylor, 2000). The objective of value education is not merely academic excellence but the holistic development of learners who can distinguish right from wrong and act in ways that benefit the wider community. In a society plagued by moral decline, value education serves as a critical tool in redirecting behavioural norms and social conduct towards integrity, accountability, and civic responsibility (Obasi, 2020).

Values

Values are enduring beliefs or ideals shared by members of a culture about what is good or desirable and what is not. They serve as guiding principles for behaviour and judgment in both personal and communal life (Rokeach, 1973). In traditional Nigerian society, core values such as honesty, respect for elders, diligence, hospitality, and communal living were central to interpersonal relations and social order. The erosion of these values due to modernization and socio-political changes has been identified as a key factor in the rise of insecurity and social instability in Nigeria (Adeyemi & Adeyinka, 2002).

National Security

National security refers to the safeguarding of a nation's sovereignty, territorial integrity, and the well-being of its citizens from internal and external threats. While traditionally focused on military defense, national security now encompasses economic stability, political cohesion, environmental safety, and societal peace (Akin, 2016). In contemporary Nigeria, the concept has expanded to include non-traditional threats such as terrorism, kidnapping, cybercrime, and cultism, all of which are fuelled, to a significant extent, by moral decadence and weak value systems.

By clarifying these concepts, it becomes evident that value education is not an isolated pedagogical concern but a strategic imperative in addressing the moral and ethical deficits that contribute to national insecurity. Therefore, value education must be prioritized as a means of instilling socially acceptable conduct, fostering patriotism, and ultimately, enhancing national security.

Relationship Between Values and Security in Society

Values and security are deeply interconnected elements of a functional and stable society. Values—defined as shared principles and standards that guide behaviour—play a pivotal role in shaping

individuals' attitudes, societal norms, and institutional integrity. Security, in turn, refers not only to the protection of lives and property but also to the assurance of peace, justice, and social order. A society that upholds positive values tends to experience greater internal harmony and security, while the erosion of these values often leads to instability and conflict.

Values serve as the moral compass that regulates individual and collective behaviour. When values such as honesty, respect for the rule of law, tolerance, accountability, and social justice are deeply embedded in a society, they help to foster law-abiding and responsible citizens (Halstead & Taylor, 2000). Such a moral orientation reduces the likelihood of criminal activities, civil unrest, and other forms of anti-social behaviour that threaten national security.

Conversely, when societal values are compromised—whether due to corruption, poor governance, or moral relativism—there is often a corresponding rise in insecurity. Nigeria provides a pertinent example, where the decline in traditional communal values has contributed to a surge in crimes such as kidnapping, terrorism, cultism, and armed robbery (Obasi, 2020). These activities flourish in environments where values such as respect for human life, community responsibility, and lawful conduct are absent or weakened.

Moreover, values play a strategic role in conflict prevention and resolution. Tolerance, dialogue, and empathy—core values in many cultures—are essential tools for mitigating tensions, promoting peaceful coexistence, and maintaining societal stability (UNESCO, 2015). Without these values, minor disagreements can escalate into violent confrontations, leading to loss of life and property.

The promotion of strong values through institutions such as the family, schools, religious organisations, and the media is therefore crucial for building a secure society. Education, especially value-based education, remains a powerful vehicle for instilling these principles in younger generations, thereby ensuring long-term national peace and development (Adeyemi & Adeyinka, 2002).

Theoretical Framework (Moral Development Theory)

Moral development theory provides a valuable framework for understanding how individuals form ethical principles and how these principles influence behaviour in society. When examined in the context of value education and national security, moral development theory sheds light on how nurturing moral reasoning can help reduce societal ills and strengthen security.

One of the most influential moral development theorists is Lawrence Kohlberg, who proposed that individuals progress through a series of stages in their moral reasoning, grouped into three main levels: *pre-conventional*, *conventional*, and *post-conventional* (Kohlberg, 1981). These stages reflect an individual's increasing capacity to make decisions based on ethical principles rather than personal interest or fear of punishment.

- **At the pre-conventional level**, moral reasoning is based on the consequences of actions—reward or punishment. This is common among children but can also be found in adults in contexts of poor moral education.
- **The conventional level** involves conformity to societal norms and the desire to uphold laws and social order. Here, individuals recognize the value of rules in maintaining social harmony.
- **At the post-conventional level**, moral reasoning is guided by universal ethical principles such as justice, human rights, and the common good, which may transcend specific laws.

In societies facing moral decay and insecurity, such as Nigeria, many individuals fail to progress beyond the lower stages of moral reasoning, often due to a lack of exposure to value oriented education. When citizens operate predominantly at the pre-conventional level— motivated by self-interest or fear—they may engage in actions that undermine national security, such as corruption, theft, or violence, particularly when enforcement mechanisms are weak.

Value education, therefore, plays a crucial role in facilitating moral development by promoting ethical reflection, critical thinking, and empathy. By encouraging learners to examine moral dilemmas and the

consequences of their choices on others and society at large, education can help raise citizens who not only follow rules but internalize ethical standards that promote peace and justice (Narvaez, 2006).

Furthermore, integrating moral development principles into national educational curricula can empower young people to resist social vices and contribute positively to national security. Programmes that teach respect, accountability, civic responsibility, and conflict resolution can reduce tendencies towards extremism, violence, and criminality—thereby fostering a more secure and cohesive society (UNESCO, 2015).

Moral development theory provides strong support for the use of value education as a strategic tool for addressing Nigeria's national security challenges. A morally developed citizenry is less likely to engage in destructive behaviour and more likely to act in ways that enhance peace, stability, and national progress.

The Role of Value Education in Fostering Nation-Building

Value education plays a fundamental role in the broader goal of nation-building, serving as both the foundation and driving force behind the development of a morally upright, unified, and progressive society. Nation-building, in this context, entails the deliberate process of constructing a cohesive national identity, strengthening civic institutions, and fostering sociopolitical and economic stability. In countries such as Nigeria—marked by ethnic diversity, socio-political instability, and moral decline—value education emerges as a critical instrument for promoting national unity, peace, and sustainable development.

At its core, value education is concerned with instilling ethical principles, civic responsibility, and a sense of duty in individuals. It goes beyond academic instruction to nurture character, integrity, and respect for the common good. By shaping individuals' behaviour and attitudes, value education contributes directly to the cultivation of responsible citizens who are conscious of their roles in society and committed to the advancement of national interests. In multicultural societies, it fosters mutual respect, tolerance, and peaceful coexistence, all of which are essential for integrating diverse groups into a unified national identity.

Moreover, value education enhances civic engagement by educating citizens on their rights and responsibilities within a democratic framework. A population that understands the principles of justice, accountability, and transparency is less susceptible to corruption and more likely to participate meaningfully in governance. This sense of civic consciousness is vital in resisting unethical political practices and promoting leadership that is grounded in service and integrity. Through value education, individuals develop the moral compass necessary to contribute positively to the political and administrative structures of the nation.

In the realm of governance and public life, value education serves as a proactive measure against corruption and unethical behaviour. When values such as honesty, fairness, and accountability are deeply embedded in the educational system and social institutions, they shape the conduct of individuals in both public and private spheres. This ultimately strengthens institutions, promotes the rule of law, and reinforces public trust in leadership—key components of effective nation-building.

Furthermore, value education plays a stabilizing role in the face of growing insecurity and violence. In Nigeria, where national security is threatened by terrorism, banditry, kidnapping, and communal conflicts, a breakdown in moral and social values is often at the root. Educating citizens—especially the youth—on values such as empathy, non-violence, and respect for human life helps to build a culture of peace and reduces the appeal of extremist ideologies. Value education, therefore, is not just a moral imperative but a strategic tool for securing peace and social order.

In addition, sustainable development—an essential aspect of nation-building—is also supported by value education. It promotes a work ethic, environmental responsibility, and community service, all of which are necessary for long-term economic growth and social progress. Individuals who have internalized these values are more likely to contribute meaningfully to national development and to act as stewards of the nation's future.

National Security Challenges: An Overview

National security refers to the safeguarding of a nation's sovereignty, territorial integrity, and the well-being of its citizens against internal and external threats. In contemporary society, the concept of national security has expanded beyond conventional military concerns to include political, economic, social, environmental, and cyber-related dimensions. As such, the challenges confronting national security today are complex, multifaceted, and interrelated, requiring a holistic and proactive approach to mitigation.

One of the most pressing national security challenges in many developing countries, including Nigeria, is the prevalence of armed conflict and insurgency. In Nigeria, for example, groups such as Boko Haram and the Islamic State West Africa Province (ISWAP) have posed significant threats to national stability through acts of terrorism, destruction of infrastructure, and the displacement of populations. These groups exploit poverty, illiteracy, religious sentiment, and weak governance structures to radicalize and recruit members, thereby undermining state authority and national cohesion (Onuoha, 2014).

In addition to insurgency, the rise in banditry, kidnapping for ransom, and communal clashes has significantly eroded the sense of safety among citizens. Armed bandit groups operating in the North-West and parts of the North-Central regions of Nigeria have carried out mass abductions, extortion, and killings, especially in rural communities. These criminal activities disrupt economic activities, strain security agencies, and contribute to a pervasive climate of fear and instability (Ezeani, 2018).

Ethno-religious conflicts also present a formidable challenge to national security. The diversity of ethnic groups and religious affiliations, although a source of cultural richness, has often been manipulated for political and economic gain. Tensions between communities have led to violent clashes, destruction of property, and loss of lives. These conflicts, if not effectively managed, threaten the unity of the nation and hamper efforts toward nation building.

Furthermore, cyber threats have emerged as a significant dimension of national security challenges in the 21st century. With increasing reliance on digital technologies, nations face risks related to data breaches, cyber espionage, misinformation, and sabotage of critical infrastructure. In Nigeria, cybercrime is on the rise, with perpetrators engaging in online fraud, identity theft, and digital manipulation to exploit individuals and institutions. The lack of adequate cyber laws and enforcement capacity has made cyberspace a vulnerable area of national concern (Oladipo, 2020).

Political instability and weak governance also contribute to national insecurity. Corruption, lack of transparency, and poor leadership undermine public trust in institutions and fuel grievances that may lead to civil unrest. When citizens perceive the state as unjust or incapable of protecting their interests, they may resort to alternative means, including violence or support for insurgent groups.

Economic insecurity is another critical factor. High levels of unemployment, poverty, and inequality create fertile ground for crime and conflict. Youth, in particular, are easily lured into criminal enterprises or violent movements when legitimate opportunities for livelihood and advancement are lacking. In such environments, the state's ability to maintain law and order is severely compromised.

In summary, national security challenges today are not solely military or territorial but encompass a broad range of socio-economic, political, and technological issues. Addressing these challenges requires an integrated strategy that combines effective law enforcement, good governance, socio-economic development, public engagement, and ethical education. Strengthening national values and promoting social cohesion through value-based education is one of the sustainable ways to combat these security threats and foster lasting peace and stability.

Nexus Between Value Education and National Security

The relationship between value education and national security is both intricate and fundamental, particularly in societies striving to build peace, unity, and sustainable development. Value education, which focuses on instilling moral principles, civic responsibilities, and ethical behaviour in individuals, plays a crucial preventive role in addressing many of the root causes of insecurity. It is a

foundational tool for shaping responsible citizenship and fostering societal cohesion, which are essential for maintaining national stability.

At the heart of national security challenges are often issues such as corruption, ethnic and religious intolerance, youth restiveness, and social injustice. These problems frequently arise from the erosion of core values and a breakdown in moral standards. When individuals and groups disregard respect for human dignity, rule of law, tolerance, honesty, and accountability, the result is a society more prone to conflict, crime, and civil unrest. Value education addresses these deficiencies by nurturing individuals from an early age to embrace positive attitudes and socially constructive behaviours (Halstead & Taylor, 2000).

Through value education, individuals learn the importance of peace, dialogue, and nonviolence as tools for conflict resolution. In a diverse country like Nigeria, where ethno-religious divisions have often fuelled violence, instilling values of mutual respect, empathy, and cooperation can bridge divides and build a shared sense of national identity. This contributes significantly to conflict prevention and the mitigation of internal threats to security.

Moreover, value education enhances civic responsibility and commitment to the common good. Citizens who are educated to value justice, fairness, and patriotism are less likely to engage in acts that undermine the state, such as terrorism, cybercrime, or political violence. Instead, they become active participants in democratic governance, holding leaders accountable and contributing to national development. This civic engagement is vital to the resilience of any nation in the face of security threats (Obasi, 2020).

Another vital connection between value education and national security lies in its role in preventing youth radicalization. Many extremist groups recruit young people who feel alienated, disenfranchised, or disillusioned. A value-based education system offers young people a sense of purpose, belonging, and ethical grounding, thereby making them less susceptible to manipulation by violent ideologies. It fosters critical thinking and moral reasoning, enabling the youth to reject violence and embrace peaceful means of addressing grievances (UNESCO, 2015).

Furthermore, value education instils respect for laws and institutions, which is central to maintaining law and order. In societies where laws are routinely flouted and authority is undermined, insecurity flourishes. By teaching individuals, the importance of abiding by laws and respecting constituted authority, value education promotes a culture of lawfulness and social discipline.

In sum, value education is a proactive and strategic instrument for enhancing national security. It nurtures ethical citizens, promotes social harmony, discourages deviant behaviour, and strengthens national unity. As such, integrating value education into formal and informal education systems is not just a moral obligation, but a national necessity. For a country like Nigeria, with complex security challenges, the deliberate inculcation of values in the citizenry is a sustainable pathway to peace, stability, and long-term development.

Challenges to Implementing Value Education

Despite the widely acknowledged importance of value education in fostering moral development and enhancing national security, its implementation faces numerous challenges, particularly in complex and diverse societies like Nigeria. These challenges hinder the effectiveness of value education programmes and limit their impact on individuals and society at large.

One of the primary challenges is the erosion of traditional values due to rapid modernization and globalization. The influx of foreign cultures, media, and lifestyles has exposed many individuals, especially youths, to alternative value systems that sometimes conflict with indigenous ethical norms. This cultural clash often results in confusion, identity crises, and the rejection of established societal values (Adeyemi & Adeyinka, 2002). The media, for instance, frequently promotes materialism, individualism, and instant gratification, which undermines the values of patience, community, and self-discipline central to many societies.

Another significant challenge is the inadequacy of the educational system itself. Many schools lack properly trained teachers who are equipped to teach value education effectively.

Curriculum design often marginalizes moral instruction or treats it as a peripheral subject rather than a core component of education. This results in fragmented and inconsistent delivery of value education, reducing its potential influence on students' character development (Halstead & Taylor, 2000).

Socio-economic factors also pose a major obstacle. High levels of poverty, unemployment, and social inequality can overshadow value education efforts. When individuals struggle to meet basic needs, the emphasis on moral virtues such as honesty and responsibility may be deprioritized in favour of immediate survival strategies, sometimes including unethical behaviours. In such environments, societal vices like corruption, theft, and violence may become normalized despite formal education in values (Obasi, 2020).

Furthermore, political instability and governance challenges complicate the promotion of value education. When political leaders themselves engage in corrupt or unethical practices, it sends conflicting messages to the populace, undermining efforts to inculcate values such as accountability and justice. The lack of political will to prioritize and fund value education programmes often leads to inadequate resources and poor policy implementation.

Religious and ethnic diversity, while a source of strength, can also complicate value education. Differing belief systems and cultural practices may lead to disagreements about which values should be emphasized, resulting in fragmented approaches that fail to build a cohesive national ethos. Without careful and inclusive curriculum development, value education risks alienating certain groups or exacerbating divisions rather than promoting unity.

Lastly, the rapid advancement of technology and digital media presents a challenge for value education. While digital platforms offer opportunities for innovative teaching, they also expose learners to misinformation, harmful content, and cyberbullying, which can negatively influence values and behaviour. The lack of adequate digital literacy and guidance limits the ability of value education to counter these influences effectively (UNESCO, 2015).

Strategies for Strengthening Value Education for National Security

To harness the full potential of value education in enhancing national security, deliberate and comprehensive strategies must be adopted at multiple levels. These strategies should address existing challenges and create a supportive environment for the effective inculcation of positive values that underpin peace, stability, and social cohesion.

Firstly, the integration of value education into the formal curriculum at all levels of education is essential. Rather than treating values as an add-on or optional subject, schools should embed moral and civic education across disciplines to ensure consistent and reinforced learning. Curriculum developers must design culturally relevant, inclusive, and age-appropriate content that resonates with learners' experiences and promotes universal values such as honesty, respect, tolerance, and patriotism (Halstead & Taylor, 2000).

Teacher training is equally critical. Educators should be equipped not only with subject knowledge but also with the skills to deliver value education effectively. This includes training in ethical reasoning, conflict resolution, and interactive teaching methods that encourage critical thinking and moral reflection. Well-trained teachers serve as role models and facilitators who can inspire students to internalize and practise positive values (Obasi, 2020).

Community and family involvement is another key strategy. Since values are often reinforced through social interactions beyond the classroom, collaboration with parents, religious leaders, and community organizations can strengthen the message of value education. Public awareness campaigns and community-based programmes can promote shared values and create a culture of responsibility and peace. This multi-sectoral approach ensures that value education is a continuous process that transcends institutional boundaries.

Furthermore, leveraging technology and media responsibly can enhance the reach and impact of value education. Educational programmes through radio, television, social media, and online platforms can disseminate positive messages widely, particularly to out-of-school youths and remote

populations. However, this must be accompanied by digital literacy initiatives to help learners critically engage with media content and resist harmful influences (UNESCO, 2015).

Policy formulation and political commitment are also vital. Governments should enact and enforce policies that prioritize value education as a national agenda. Adequate funding, monitoring, and evaluation mechanisms must be put in place to ensure the quality and sustainability of value education initiatives. Political leaders must also embody the values they promote, as their example profoundly influences public attitudes and behaviours.

Lastly, fostering inter-ethnic and inter-religious dialogue through value education can mitigate social divisions and promote national unity. Educational programmes that celebrate diversity while emphasizing common values help build mutual understanding and reduce the likelihood of conflict. This approach is especially pertinent in pluralistic societies facing ethnic and religious tensions.

Conclusion/Suggestion

In conclusion, the intricate link between value education and national security underscores the vital role that moral and ethical instruction plays in building a stable, peaceful, and prosperous society. As this work has shown, the erosion of core values such as honesty, respect, accountability, and tolerance significantly contribute to the myriad security challenges faced by nations like Nigeria. Value education, therefore, emerges not merely as an academic pursuit but as a strategic necessity for fostering responsible citizenship, social cohesion, and national unity. By cultivating a shared sense of morality and civic responsibility, value education helps to address the root causes of insecurity, including corruption, ethnic and religious conflicts, youth restiveness, and criminality.

However, the effective implementation of value education faces significant obstacles, including cultural shifts due to globalization, inadequate educational infrastructure, socioeconomic disparities, political instability, and the pervasive influence of negative media content. These challenges must be met with deliberate, coordinated strategies that embed value education within formal curricula, strengthen teacher training, engage families and communities, utilize technology responsibly, and secure political commitment. Additionally, promoting inter-ethnic and inter-religious dialogue through education can foster national integration and mitigate tensions that threaten security.

Suggestions:

1. **Curriculum Integration:** Governments and educational authorities should prioritize the full integration of value education into all levels of formal education, ensuring that it is taught as a core component rather than an optional subject.
2. **Teacher Training:** Investment in teacher education programmes focused on moral and civic instruction is essential, equipping educators with the skills needed to effectively deliver value education.
3. **Community Engagement:** Stakeholders including families, religious institutions, and community organizations should be actively involved in reinforcing values beyond the classroom through outreach programmes and awareness campaigns.
4. **Policy and Funding:** Strong political will is required to enact supportive policies and provide adequate funding for value education initiatives. Leaders must lead by example in embodying ethical standards.
5. **Use of Media and Technology:** Educational content that promotes positive values should be disseminated widely via media and digital platforms, alongside efforts to improve digital literacy and critical thinking among youth.
6. **Promoting Unity:** Educational programmes should emphasize respect for diversity and foster dialogue among different ethnic and religious groups to build social cohesion and reduce conflict.

Abstract

Education is not just the transferring of knowledge, it is meant to fundamentally shape characters, instill values and prepare individuals to be responsible members of the society as well enable them to make meaningful living. Therefore, educational policy reforms should be aimed at providing value based education through nurturing ethical, moral and social values in learners thereby contributing to the holistic development of students but today we hear students saying ‘_school na scam’ and ‘_who school epp’. This paper took a cursory look at the possibility of educational policy reforms for value-driven education in the Nigerian secondary schools as a path to Sustainable Development Goal 4, conceptual clarifications, challenges and solutions. The study adopted the qualitative research method because it is non-empirical in nature, hence library based. It has been observed that the educational curricula of Nigeria could not produce expected results for value based education for the actualization of SDG 4. Teachers need to be ICT compliant in order to be able to flow along with their counterparts across the world. Finally, it was recommended that Government should employ holistic approach in designing any educational policy reform so as to ensure that such policies will be able to achieve value driven education and not mere written policies. They should encourage discussions and wide consultations with all stakeholders and desist from enacting one policy on top of the other as well as focus on allowing much time for the implementation of existing policies.

Keywords: Educational policy reforms, Value Driven Education, Nigeria, Secondary Schools, Sustainable Development Goals (SDGs)

Introduction

Educational policy reforms are simply sets of guidelines or rules that aim at improving the quality of education and performance of teachers and students both in secondary schools and other levels of education in Nigeria. Educational policy reforms are systematic changes and improvements made within a country's educational framework to enhance its overall effectiveness, accessibility, and quality. In emerging economies like Nigeria, educational policy reforms in secondary schools have

historically focused on expanding access to schooling, with reforms such as the Universal Basic Education (UBE) scheme (Federal Ministry of Education, 2019). Other educational reforms policy include focus on STEM (Science, Technology, Engineering and Mathematics) and Vocational skills, 6-5-4 to 6-6-4 to 6-3-3-4 to 9-3-4 and now proposed 12-4 system. The goal has been to address literacy gaps, reduce school dropout rates, and bridge gender disparities in education. However, despite these efforts, secondary schools in Nigeria face significant challenges, including inadequate funding, insufficient infrastructure, and regional disparities, particularly between the North and South (Obi and Uchendu, 2020). The whole essence of these educational reforms seems mostly defeated as most of them do really last for a long time.

The aftermath of Nigeria's participation in the First Conference of Africa Minister of Education held in Addis Ababa in 1961 led Nigeria conducting an innovative curriculum conference in 1969 and formulated policy guidelines on standards, procedures, strategies and coordinating roles for qualitative delivery; these guidelines were in line with Addis Ababa resolutions (Olibie, et al. 2017). Ultimately, the first edition of National Policy on Education was framed in 1977. The policy was revised in the second edition in 1981, third and fourth editions in 1998 and 2004 respectively. Further revisions were made in 2007 and 2013 as the fifth and sixth editions, respectively. However, the fifth (2007) edition was a draft and the publication of the 2013(sixth) edition was yet in progress after its approval by the 59th session of National Council on Education (NCE) on 28th June, 2013.

These and other policy documents are adjunct policies and relevant not only for secondary education but also for all other sectors. Nigeria evolving society demands newer skills of its citizens and a re-definition of the concept of what constitutes an educated citizen: a self-motivated person with the ability to think, solve problems, and use higher-order intellectual skills to process information and make informed decisions (Nigerian Education Research and Development Council, NERDC, 2015). NERDC stated that the new curricula and standards seek to strike a balance between the quantity of necessary knowledge and skills on the one hand, and the acquisition of intellectual, social and citizenship dispositions on the other hand which is aimed at value driven education.

These educational policy reforms in secondary schools in Nigeria are often driven by the need to address specific challenges within the system, such as outdated curricula, inadequate teaching methodologies, or unequal access to resources and are far from value driven education. Educational policy reforms can span various areas, including the structure of school systems, teacher training, integration of technology, and the promotion of inclusive education (Olibie, Egboka & Ofojebe, 2017). The goal is to create an environment that supports the holistic development of students, preparing them to meet both local as well as global challenges and achieve the Sustainable Development Goals (4). Sustainable Development Goals (SDG 4) emphasize "inclusive and equitable quality education" as a key priority for global development (United Nations, 2015) but the ability of these to achieve value driven education is where the problem lies.

Conceptual Clarification

For a better understanding of the topic of this discourse, the main concepts of the study would be contextually clarified. The concepts are educational policy reforms, value driven education and Sustainable Development Goal 4.

Educational Policy Reforms

Educational policy reforms are conscious and systematic efforts made to bring about change in a country's educational policy so as to improve accessibility and quality. Educational policy reform is the systematic and intentional changes made in the educational system so as to address identified challenges, enhance learning outcomes and promote equitable and effective education for all students

(Okeke et al. 2024). However, in Nigeria secondary schools most of these educational policy reforms face challenges in educational quality and infrastructure thereby failing short of value driven education and the attainment of Sustainable Development Goal 4. Consequently, Adeyemi (2022) revealed that most public secondary schools in Nigeria suffer from overcrowding, insufficient teaching

material and lack of trained teachers which compromises the quality of education especially in rural areas where school attendance is very low.

Value-Driven Education

Value driven education is targeted at inculcating ethics, moral or societal values into the curricula with the intention of achieving holistic formation or development of the students. Amarnath (2022) explained that value driven education is aimed at the development of the total personality of an individual- intellectual, social, emotional, aesthetic, moral and spiritual. It includes developing sensitivity to the good, the right and the beautiful, ability to choose the right values in accordance with the highest ideals of life and internalizing and realizing them in thought and action. He further added that the value driven education, calls into play all human facilities- knowing, feeling and doing. The learner should not only be enabled to know the right or the good, but also to care, to feel the appropriate emotion, concern and commitment as well as exercise the will to do the right thing. In other words, value driven education should be able to develop rational critical thinking to educate the emotions, to cultivate the imagination, to strengthen will and to train the character of the learner.

Sustainable Development Goal 4

Sustainable Development Goals are global call for action to end poverty, protect the earth's environment and climate as well as ensure that people everywhere can enjoy peace and prosperity. There are many of SDGs but this paper is focused on goal 4 which is quality education. This is targeted at inclusive and equitable quality education and promotion of lifelong learning opportunities for all. It is expected that SDG 4 should by 2030 ensure that girls and boys complete free, equitable and quality primary and secondary education leading to relevant and Goal 4 effective learning outcomes. The question is, how feasible by 2030? Our incessant educational policy reforms that have not really been able to achieve value driven education that promotes lifelong learning opportunities for all. The rate of unemployable graduates produced in this country is alarming, therefore, there is need to look at the educational policy reforms in secondary schools to enable that system produce students that will be useful to the society and make meaningful living.

Literature Review

Secondary education is the pivot of our educational system because it is the intermediate between the primary and tertiary levels. It is of great importance because it determines and influences, to a large extent, not only the input to our tertiary institutions but also transform individuals to be useful within the society they live. Educational policy reforms at the various levels of the education system is necessary. However, the attainment of value driven education is a challenge that keeps reoccurring. Nigeria has been unable to successfully achieve value driven education, despite spending over four years of deliberations at various levels in the process of educational policy reforms (Odukoya et al. 2018). Research revealed some of the challenges to actualization of value driven education: unequal access to educational opportunities for all citizens of the country at all levels, policy on language, frequent changes in policies, among others.

In Nigeria, educational policy reforms are often picked and dropped while in countries like US, the two tier secondary school system still operates with wonderful results and so there is nothing wrong with the 6-3-3-4 system; rather, our problem is that we simply have not embraced educational policy reforms that is aimed at value driven education and as it stands now another educational policy reform is being proposed. Solanke (2012) posited that an important loophole is that those who implement the policy are not fully involved in the policy enunciation. It is not the best for a few secondary school heads, bureaucrat and higher institutional lecturers, politicians alone to formulate policy on secondary education without carrying out national research involving a cross section of secondary school teachers. Solanke equally noted that political leadership perception of education is another problem affecting educational policy reforms of secondary schools in Nigeria and most leaders do not take educational investment as futuristic investment, as a foundation upon which the future of a

nation is built. Hence, most of the educational policy reforms are not fully embraced to know the worthwhileness before introducing another one, the rate of overhauling educational policy reforms in secondary schools has become a thing to lament about. No wonder, the UNESCO Global Education Monitoring Report (2020) highlighted concerns about the persistence of substandard education in some African nations despite efforts to improve quality.

It is evident that these educational policy reforms in Nigeria secondary schools are diversion from Sustainable Development Goals (4) which is inclusive and equitable quality education. These educational policy reforms in secondary schools are often a far cry of what it should be considering the view of ProctorEdu (2024), educational policy reform initiatives may encompass a wide range of changes, including curriculum revisions, instructional strategies, teacher training and professional development, assessment methods, school funding, and educational policies. He further pointed out that the goals of educational policy reform in Nigeria secondary schools often include raising academic standards, closing achievement gaps, fostering innovation in teaching and learning, and preparing students to meet the demands of the evolving workforce and society. Education reform efforts are driven by research data, and evidence-based practices, with the aim of continuously improving the quality and accessibility of education. Ministry of Education, India (2020) indicated that educational policy reforms must ensure quality education within an equitable and inclusive classroom environment that takes care of diverse background, different academic abilities and makes them active participants in the learning process; It must focus less on content retention and more on building critical thinking and problem-solving abilities and in the secondary school system educational policy reforms should consider making students more independent and skill equipped. However, educational policy reforms in Nigeria secondary schools are marred by lots of challenges and do not achieve value driven education. This is visible in the level of unemployment among youths which has led many of them to say audibly that *‘school na scam’* and even *‘who school epp’*. Overestimation of available resources, under estimation of cost of implementing a plan, inaccurate statistical data, incompetent staff, lack of political support, conflict, over reliance upon external assistance are challenges confronting policy implementation in Nigeria (Joe et al. 2019). Nigeria secondary schools have experienced several reviews, reforms, innovations in educational policies and programmes without achieving value driven education.

As Nigeria strives for development, educational policy reforms in Nigeria secondary schools should play a crucial role in shaping the future of both students and the nation. In today's rapidly changing global environment, the intersection of educational policy reforms and value driven education has become necessary to mitigate the problem of unemployment and idleness. Embracing educational policy reforms to design a future that balances the needs of the present is good. However, it is imperative to preserve resources for future generations through education as a cornerstone focused on attaining Sustainable Development Goals. Achieving such outcomes, however, requires a comprehensive approach to educational policy reforms, one that goes beyond simply improving infrastructure or access to schooling. It involves designing curricula that promote critical thinking, civic engagement, and resilience, while also investing in teacher training and supporting community- based initiatives that strengthen local capacity.

Sustainable Development Goals (SDGs) encompasses a set of goals and objectives aimed at ensuring inclusive and equitable quality education for all. The specific targets and objectives under SDG, as outlined by the United Nations, include: inclusive and equitable quality education, ensure equal access to technical and vocational education, eliminate gender disparities in education, ensure universal literacy and numeracy, promote lifelong learning opportunities and build and upgrade educational facilities. According to the United Nations (2020), education is considered a key driver for achieving the Sustainable Development Goals (SDGs), particularly Goal 4 (Quality Education) and Goal 13 (Climate Action). The overall goal of Sustainable Development Goals for Saini et al. (2023) are primarily concerned with promoting sustainable growth via ensuring well-being, economic growth, environmental legislation and academic advancement which could only be achieved through a proactive governmental decision. Thus, in order to have a sustainable world, and to effectively implement other

SDGs programmes, it requires knowledge, skills, values and attitudes which can only come through well articulated and implemented educational policy reforms towards attainment of value based education.

Challenges to Educational Policy Reforms for Value Driven Education in Nigeria Secondary Schools

Out-Dated Educational Curricula: Curricula could be seen as a sequence or academic order through which a set goal of education is achieved. Curricula of education is a systematic planned of learning activities and experiences in order to achieve behavioural changes. It has been observed that the educational curricula of Nigeria could not produce expected results for value based education for the actualization of SDGs. School curricula in Nigeria are outdated which cannot be compared to curricula of education in other parts of the world. For Nigeria to be able to achieve SDGs, its educational curricula need to be updated. This was aptly supported by Agbionu et al. (2016), the educational system is dysfunctional, as graduates of many institutions cannot meet the needs of the country, wide disparities exist in educational standard and learning achievements. They further added that the system emphasizes theoretical knowledge and as such secondary school curricula need urgent review to make it relevant to achieve value based education.

None involvement of all Stakeholders: The problem is educational policy reforms in Nigeria secondary schools are often prepared with the exclusion of some major stakeholders like teachers and alumni. Furthermore, some of these educational policy reforms has not really changed or updated to meet the demands of the time, even in some cases the policies seem unrealistic. Example is the change from 9-3-4 to the proposed 12-4, was the 9-3-4 effective or active in the first place? What necessitated this proposed change to 12-4? If all stakeholders were involved there would have been a wider consultation and idle reasons harnessed.

Technological Improvement: Educational policy reforms should not be theoretical alone such that students in secondary schools can be trained on the use of modern technological devices that can meet current digital demand. Thus, there is a need for improvement in the areas of infrastructural facilities in secondary schools in Nigeria such modern educational gadgets like computers, modern instructional materials and packages. Therefore, educational policy reforms is important to be backed up with modern infrastructural facilities so as to achieve SDGs.

Solutions of Challenges to Educational Policy Reforms for Value Driven Education in Nigeria Secondary Schools

While the challenges in educational policy reforms are significant, they are not insurmountable in Nigeria secondary schools for value driven education. There are solutions that can help improve educational policy reforms aimed at value driven education so as to attain Sustainable Development Goal 4.

Curricula Revision: Educational policy reforms should be target at updating or overhauling the curriculum to reflect the skills and knowledge so as to achieve value driven education. Curricula should not dwell on traditional subjects but also teach essential problem solving skills like critical thinking, entrepreneurship among others. Educational policy reforms should be targeted at preparing students for #global challenges they will face in a rapidly changing world. It should also prepare students for the world of works all geared at value driven education so as to solve life problems.

Technology Integration: There is needs to increase fund allocation to secondary schools in Nigeria so that the study and use of modern ICT tools can be introduced in secondary schools to help bridge the gap in areas where traditional education systems are lacking. The role of technology in school is to enhance human thinking and to augment the educational process and enable them solve life problems. Furthermore, digital tools can make education more interesting, thereby enabling students to learn at the early stage so as to harness their digital skills for those that are gifted with such.

Conclusion

Educational policy reforms are essential for attaining value driven education so as to achieve Sustainable Development Goal 4. Secondary schools in Nigeria change from educational policy reform to another such policy reforms must be value driven to be able to instill in the students the skills and values needed to address economic inequality, environmental sustainability, and everyday life activity. Educational policy reforms should not merely aim at improving academic outcomes but should also focus on shaping individuals that would be able to face everyday challenges of life and be useful to the society.

It is obvious that educational policy reforms in secondary education in Nigeria face many challenges however, there is great prospect if only the expected areas of attention could be analyzed, adopted and judiciously reformed to produce better citizens. When policies that ought to be the road maps that guide the education sector of any nation are not well reformed it creates problem in the society that citizens see education as a *'scam'* because after passing through educational institutions, the education they received becomes useless to them and they see it as waste of their time.

Recommendations

1. Detailed analysis of the implications of major government policies such as promulgation of Universal Basic education (UBE) and changes in the curricula structures. They should be validated in relation to requisite resources (in the immediate, medium to long-term future) and changes in the existing policy and regulatory framework.
2. Policy makers should enact educational policy reform not to satisfy the government in power but to achieve value driven education.
3. Government should employ holistic approach in designing any educational policy reform so as to ensure that such policies will be able to achieve value driven education and not mere written policies. They should encourage discussions and wide consultations with all stakeholders and desist from enacting one policy on top of the other also focus on allowing much time for the implementation of existing policies.
4. More funds in line with UNESCO directive of at least 15 per cent to 20 or even up to 26 percent should be allocated to education, so as to increase funds made available for secondary schools in Nigeria to strengthen the system.
5. There is need for the relevant government agencies to strengthen the implementation of recent educational policies by ensuring adequate training and resources for teachers and school administrators to effectively apply these reforms in the classroom so as to achieve value driven education.

Abstract

Nigeria's university landscape is undergoing a significant transformation, driven by a collective mission to establish institutions that serve as premier learning hubs and exemplars of ethical and sustainable progress. A crucial aspect of this dynamic ecosystem is the community of school business vendors. Their contributions significantly enhance the daily experiences of students, staff, and visitors. However, these vendors often operate under loosely defined regulations, leading to inconsistent standards and conflicts with the university's core values. This paper addresses these issues and proposes strategies for effective vendor management. This paper delves into efficiently managing school business vendors to reinforce Nigeria's sustainable university value system. It highlights these vendors' essential roles and addresses the challenges of regulating their operations. Furthermore, it offers thoughtful strategic models to integrate their activities into institutional governance. By incorporating insights from recent developments, policy analyses, and academic viewpoints, we present actionable recommendations to align vendor practices with the broader objectives of Nigerian higher education. Our goal is to empower educational administrators, planners, and stakeholders to leverage effective vendor management to bolster institutional integrity, enhance student welfare, and promote sustainable development. Together, we can create a thriving academic environment that benefits everyone.

Keywords: School business vendors, University governance, Ethical education, Sustainable development, Nigerian universities

Introduction

Nigerian universities are evolving into vibrant socio-economic hubs beyond just learning centers (Okebukola, 2021). As these institutions grow in size and facilities, they increasingly attract diverse business vendors who provide vital services, including food, stationery, digital connectivity, healthcare, printing, and accommodation (Adebayo & Omole, 2020). These vendors are essential to the dynamic campus life, yet they often operate in informal and loosely regulated ways. This can sometimes lead to challenges related to safety standards, service quality, fiscal transparency, and accountability (Nwankwo & Ogunlade, 2021). Additionally, if vendor activities are not carefully coordinated, they may unintentionally clash with universities' academic integrity and ethical aspirations, particularly as institutions aim to embody principles of integrity, sustainability, and inclusive growth (Okojie, 2020; UNESCO, 2022).

Today, the Nigerian educational landscape is under the spotlight from various stakeholders, policymakers, students, parents, and international observers calling for greater transparency, accountability, and responsiveness from higher education institutions (Okebukola, 2021; Okojie, 2020). One crucial but often overlooked area in university governance is the management of campus business vendors, private enterprises that significantly impact students and staff by providing essential goods and services. These vendors have the potential to either enhance or challenge the core values and sustainability goals of Nigerian universities (Adebayo & Omole, 2020; Nwankwo & Ogunlade, 2021). Thus, effective vendor management must be integrated into institutional planning and ethical governance.

This paper explores how thoughtful vendor administration can align with Nigerian universities' sustainability and ethical principles. It advocates for a holistic framework that emphasizes administrative oversight, data-driven policy development, and active engagement with stakeholders. By implementing this framework, we can elevate these business vendors from peripheral roles to strategic partners. This shift can lead to a university system in Nigeria that is not only value-driven but also focused on meaningful development and positive change for all.

The Role of School Business Vendors in Nigerian Universities

School business vendors play a vital role in enriching university life in Nigeria, bringing a wealth of essential services that enhance our academic experience. From delicious food and necessary stationery to reliable telecommunications, printing services, and transportation, these vendors are invaluable partners in meeting the everyday needs of our university communities. They often provide their offerings at competitive prices and with the convenience that external vendors can't match, making them an integral part of our shared culture and social life on campus. Their contributions are not just appreciated, but they are also crucial for the smooth functioning of our academic institutions.

The support vendors provide goes beyond just catering to students; it also boosts staff productivity and ensures university departments run smoothly. For example, food vendors serve affordable meals that allow students to focus on their studies rather than worrying about where to eat. Telecommunications and ICT vendors empower us to engage in online learning and collaborate seamlessly, while health vendors and pharmacies on campus ensure that students have access to essential health services, especially in remote or under-resourced areas.

However, while these vendors significantly contribute to the campus economy, they can also present challenges that need thoughtful regulation and quality control. Many operate in somewhat ambiguous regulatory spaces, particularly in public institutions where policies may lack clarity. This can lead to issues like hygiene concerns and pricing fairness. A well-defined framework can foster positive relationships between vendors and the university community, enhancing the overall experience. In conclusion, school business vendors are at the heart of the university environment. With proper administrative support and oversight, their contributions can significantly bolster the academic mission, creating a vibrant and supportive atmosphere for everyone involved. Let's celebrate their role and continue to seek ways to improve their integration into university life.

Challenges in the Regulation of School Business Vendors

School business vendors play a vital role in enhancing the university experience for students in Nigeria, yet they face significant regulatory hurdles that we can work together to overcome. One major challenge is the lack of formal policies guiding vendor operations. The absence of clear, documented guidelines that outline who can operate as a vendor, the services they can provide, and the required licensing and standards create an uncertain environment. This paper underscores the need for formal policies to ensure a fair and safe environment for all stakeholders.

Additionally, space allocation poses a notable issue. Many campuses struggle with insufficient infrastructure to accommodate vendors while ensuring a conducive learning environment. This often leads to vendors setting up in unauthorized areas, which can cause congestion and disrupt academic activities and safety.

Financial accountability is another area that needs attention. Without standardized pricing or financial reporting systems, the potential for overpricing and exploitation arises, making it challenging for universities to evaluate vendors' economic contributions or effectively plan for their involvement. With a proactive approach and collaboration between universities and vendors, we can develop comprehensive policies, optimize space usage, and promote financial transparency. This collaborative effort will benefit students and vendors and enhance the overall academic atmosphere, making Nigerian universities even more vibrant and supportive places for learning. It's this spirit of collaboration that will pave the way for a brighter future in the management of school business vendors.

Navigating health and safety compliance is a significant challenge, especially for food vendors. Many operate in conditions that don't meet hygiene standards, which can pose risks to student health. It's essential to recognize that universities often struggle to conduct regular inspections or enforce health regulations effectively. Bridging these gaps could significantly enhance the quality of services and promote a safer campus environment (Okojie, 2020). Security is another critical area of concern. Unvetted vendors may inadvertently contribute to criminal activities on campus, including theft and unauthorized access to student residences. This highlights the necessity for thorough background checks and continuous monitoring to ensure the safety of our community.

Additionally, fostering positive vendor-student relationships is vital. When disputes arise without proper resolution mechanisms, tensions can escalate, impacting campus harmony and potentially leading to unrest. By addressing these issues proactively, we can create an environment where vendors and students thrive, enhancing the overall campus experience and preserving the institution's reputation. With thoughtful strategies and collaboration, we can cultivate a vibrant and safe campus for everyone.

Strategic Models for Embedding Vendor Administration in University Governance

To enhance governance, Nigerian universities should embrace strategic models that elevate vendors from mere service providers to vital stakeholders in the academic community. This transformation will foster collaboration, innovation, and mutual growth for a brighter educational future.

Establishment of Vendor Management Offices (VMOs)

VMOs (Vendor Management Offices) should be established as independent units under the Directorate of Student Affairs or Planning. These offices should be staffed with professionals trained in business administration, public health, and regulatory compliance. Their responsibilities include issuing licenses, conducting routine inspections, mediating disputes, and coordinating vendor training programs. Additionally, VMOs can serve as data hubs, tracking the number of vendors, the types of services offered, and levels of compliance.

Transparent Vendor Contracts and Accountability Mechanisms

Universities should create standard contracts that clearly outline vendor responsibilities, operational areas, pricing models, and penalties for violations. These contracts should be renewable annually and contingent upon performance evaluations. Institutionalizing accountability mechanisms, such as performance appraisals and stakeholder feedback loops, is essential.

Stakeholder Engagement and Participatory Governance

Engaging stakeholders is essential for successful vendor management! We can review applications, resolve disputes, and recommend policy enhancements by establishing Vendor Oversight Committees (VOCs) with student representatives, health officers, faculty, and vendor leaders. This collaborative approach fosters transparency and builds trust within our community, paving the way for a brighter future.

Capacity Building and Incentive Systems

Capacity building should be a fundamental component of the vendor administration framework. Universities should organize regular training programs covering health standards, financial literacy, customer service, and ethics. To promote compliance, universities can provide incentives such as prime location allocations, equipment subsidies, and public recognition awards for outstanding vendors.

Integration with Student Support Services

Vendor administration is essential for enhancing student support services. We can promote healthy eating habits by fostering collaboration between food vendors and health clinics. Additionally, telecommunications vendors can partner with ICT departments to improve campus connectivity. This integration enhances the quality of services and ensures that vendors have a meaningful and positive impact on the student experience.

Best Practices for Vendor Administration in Nigerian Universities

To enhance vendor administration, Nigerian universities have a valuable opportunity to implement strategies inspired by local and international best practices. By doing so, they can streamline processes, improve efficiency, and foster stronger partnerships with vendors.

1 Implementing Health, Safety, and Environmental (HSE) Standards

Collaborating with local health departments is crucial to developing comprehensive Health, Safety, and Environment (HSE) guidelines. These guidelines should clearly define hygiene standards, waste disposal methods, and emergency protocols. Regular inspections will help ensure compliance and appropriate measures should be put in place for vendors who do not meet these standards. By working together, we can create a safer environment.

2 Training and Capacity Building for Vendors

Training programs should be customized according to vendor categories. For example, food vendors should participate in food safety and nutrition workshops, while ICT vendors should receive digital literacy and data security training. These training sessions should be mandatory and linked to the renewal of their licenses.

3 Leveraging Technology for Vendor Management

Digital platforms can simplify the processes of vendor registration, complaint resolution, and performance monitoring. Students can easily rate vendor services, submit complaints, and access vendor directories by developing mobile apps. These tools promote transparency and offer real-time feedback for administrative action.

4 Benchmarking and Continuous Improvement

Universities should compare their vendor policies with those of top institutions nationally and internationally. They should conduct annual reviews to evaluate the impact of these policies and gather feedback from stakeholders. This approach ensures that vendor management adapts to emerging challenges and opportunities.

Policy Recommendations for Effective Vendor Administration

Tackling the challenges of managing school business vendors in Nigerian universities presents a unique opportunity for proactive and context-sensitive policy development. These policies should transcend mere regulation, serving as strategic guides that harmonize vendor operations with the university's objectives. Drawing from empirical research, stakeholder insights, and global best practices, our initiatives can emphasize transparency, accountability, and sustainability. By aligning with Nigeria's educational frameworks—such as the National Policy on Education, Vision 2050, and the Sustainable Development Goals (SDGs)—we can ensure that our vendor-related policies genuinely

foster the growth of our higher education sector. Let's join forces to cultivate a vibrant, ethical, and inclusive atmosphere in our universities, empowering every member of the academic community to thrive! Together, we can make a meaningful impact.

1 Formulation of Comprehensive Vendor Policies

Universities must create comprehensive vendor policies that clearly outline procedures for vendor registration, selection criteria, codes of conduct, operational guidelines, and enforcement protocols. These policies should align with the institution's mission and sustainability goals while reflecting broader national objectives (Federal Ministry of Education, 2021).

2 Institutionalizing Monitoring and Evaluation Mechanisms

To ensure consistent adherence to standards, universities should implement internal monitoring and evaluation (M&E) systems. These systems should include scheduled audits, random inspections, and student and staff feedback loops. The outcomes of M&E activities must be used to inform ongoing policy improvements (Adebayo & Omole, 2020).

3 Incorporation into University Strategic Plans

Vendor management should be integrated into university strategic planning documents as an essential institutional development and operational governance aspect. This integration goes beyond mere inclusion; it demonstrates a conscious institutional strategy to acknowledge vendors as vital contributors to the campus ecosystem. By incorporating vendor-related considerations into strategic plans, universities can allocate dedicated resources for critical infrastructure, such as sanitation facilities, fire safety systems, vendor stalls, and waste disposal mechanisms.

This approach also supports the development of digital tools for monitoring vendors, facilitating streamlined communication, and implementing efficient payment systems. Additionally, including vendor issues in strategic plans aids long-term planning, stakeholder engagement, and sustainability monitoring. This fosters a culture of continuous improvement and institutional accountability (Okebukola, 2021). Furthermore, it encourages proactive engagement with stakeholders, including students, staff, regulatory bodies, and the vendors themselves, all of whom are crucial to the success of any sustainable campus value system.

4 Collaboration with Government and Regulatory Agencies

To improve the quality of vendor operations, universities should establish strong partnerships with key governmental organizations, including the National Universities Commission (NUC), the National Agency for Food and Drug Administration and Control (NAFDAC), state education boards, local government authorities, and environmental health agencies. By creating a Memoranda of Understanding (MoUs), forming inter-agency task forces, and holding regular consultative forums, we can engage in meaningful discussions about policy updates, operational guidelines, and best practices.

These collaborative efforts can significantly enhance the capacity of university administrators. Joint inspections, licensing oversight, food safety enforcement, and shared training programs designed specifically for our academic environment will empower us to maintain the highest standards. Collaborating closely with regulatory bodies legitimizes our efforts and streamlines our initiatives, ensuring our vendor regulations align with national health, safety, and educational standards. This unified approach guarantees safe and efficient vendor operations while reinforcing the university's commitment to fostering a values-driven, student-centered, and growth-oriented learning environment. We can create a vibrant community that enriches everyone's educational experience.

5 Promotion of Inclusive and Ethical Vendor Practices

Policies should promote ethical practices by integrating anti-corruption frameworks, ensuring transparent vendor selection processes, and establishing accountability mechanisms to detect and penalize malpractice. These measures should include protections for whistleblowers and clear reporting channels to encourage compliance. Moreover, fair competition must be embedded in vendor

procurement protocols to prevent monopolistic practices and nepotism. Exceptional support should be provided to local enterprises, women-owned businesses, and marginalized groups through capacity-building workshops, access to micro-loans, and subsidized stall spaces.

Institutions can create a more inclusive commercial environment by offering preferential access and incentives to socially responsible vendors who align with university sustainability and equity goals. This approach enhances economic participation and strengthens the university's role as a driver of social change and sustainable development (UNESCO, 2022).

Conclusion

Managing school business vendors is a fundamental yet often overlooked aspect of sustainable university governance in Nigeria. These vendors are vital to everyday campus life, providing essential services like food, printing, telecommunications, and other retail offerings that support student well-being, staff productivity, and the entire operational framework of university communities. Their contributions significantly enrich the informal campus economy, creating job opportunities and fostering entrepreneurship that complements formal university activities.

However, many vendors navigate a loosely regulated landscape despite their crucial role, posing notable governance challenges. The absence of robust institutional oversight can lead to operational inefficiencies, health and safety compliance issues, and ethical concerns such as bribery and favoritism. Such shortcomings can jeopardize the integrity of the university environment and impact both student welfare and institutional reputation.

As we champion sustainable development and ethical practices in higher education governance, it becomes increasingly vital to incorporate effective vendor administration into universities' strategic and policy frameworks. By doing so, we can enhance campus life, promote accountability, and ensure a thriving community for all. Let's embrace this opportunity for positive change, fostering a supportive environment that benefits everyone involved.

This paper presents a comprehensive and practical framework for integrating vendor administration into the governance structures of Nigerian universities. At the core of this framework is establishing Vendor Management Offices (VMOs), which would act as institutional hubs for coordinating all vendor-related activities. These offices will ensure compliance with university policies and facilitate transparent interactions between vendors and university authorities.

The framework includes various stakeholders—students, staff, and external regulatory bodies—promoting a participatory approach that aligns vendor practices with institutional values and community needs. Additionally, adopting digital management tools like vendor registration portals, compliance tracking dashboards, and mobile payment systems enhances operational efficiency, reduces bureaucratic delays, and fosters data-driven decision-making. Aligning institutional policies ensures that vendor administration is regarded not as a peripheral issue but a core component of university planning and development. When these strategies are supported by well-crafted policies and strong collaborations with governmental and regulatory agencies, they can transform vendor operations from informal and fragmented commercial engagements into structured, ethically governed, and strategically valuable functions. This evolution can ultimately help maintain institutional integrity, uphold public trust, improve student welfare, and significantly contribute to the broader agenda of sustainable development within Nigeria's higher education landscape.

For educational administrators, school managers, planners, and policymakers, this presents a crucial opportunity to rethink vendor engagement in ways that reflect the core values of the university system. By establishing structured vendor administration, Nigerian universities can better position themselves as models of accountability, ethical leadership, and student-centered development aligning with national and global sustainable development goals.

EDUCATION, RELIGION AND VALUE SYSTEM: IMPLICATION FOR NATIONAL SECURITY

Dr. Emegwa Tina Uzoamaka

Department of Educational Management and Policy,
Nnamdi Azikiwe University, Awka, Anambra State, Nigeria
emegwauzuamaka@gmail.com

Abstract

The growing insecurity in Nigeria has reached a critical level, necessitating the involvement of all sectors, including education, in finding viable solutions. If education is truly a tool for addressing societal challenges, then tackling the issue of national security through educational means should be achievable. The increasing fear among citizens, distrust of neighbours, and frequent outbursts of violence over minor issues highlight the urgent need to revive core values through both religious and educational frameworks. In light of this, the paper explores the interconnected roles of education, religion, and value systems in relation to national security. It begins with a conceptual analysis of key terms such as education and national security, religion and national security, and value systems and national security. The paper identifies several root causes of insecurity, including the breakdown of moral values, high unemployment rates, religious extremism, the pursuit of quick wealth, and widespread mistrust. Additionally, the paper outlines the consequences of insecurity in Nigeria, which include the loss of lives and properties, reduced investment, a decline in academic advancement, and a general atmosphere of fear and instability. The conclusion drawn is that education, religion, and value systems are deeply intertwined and collectively influence national security. To address internal threats and promote long-term peace and stability, it is crucial to strengthen education, encourage religious tolerance, and uphold shared societal values. The paper concludes with practical recommendations for overcoming the security challenges facing Nigeria.

Keywords: Value system, Education, Religion, Security, Violence.

Introduction

Insecurity is a feeling of uncertainty, lack of confidence, or anxiety about oneself, a situation, or one's relationships with others. It can manifest emotionally, socially, professionally, politically, or even physically in a person, community of persons or a nation. Insecurity in a nation refers to a condition where the safety, stability, and well-being of a country and its citizens are threatened. Insecurity remains a major challenge that continues to shake the very foundation of Nigeria, posing a serious threat to the nation's unity and stability. The persistent rise of this menace has prompted calls for intervention from various stakeholders, including state governors, traditional rulers, religious leaders, and concerned citizens, urging the government at all levels (federal, state and local governments) to take decisive action. Despite these appeals, the rate of insecurity keeps escalating, with devastating consequences for the lives and properties of ordinary Nigerians. Countless lives have been lost, and properties destroyed, yet the government's repeated assurance that it is "on top of the situation" has become a hollow and politically convenient statement, often used to divert public attention. Rather than curbing the menace, the situation appears to be worsening. Each day, Nigeria faces increasing insecurity, with more individuals turning to criminal activities, driven by high expectations and desperation. This has led to a surge in violent crime, often carried out with growing sophistication and brutality.

The persistent insecurity crisis in Nigeria has given rise to additional problems to the fore such as kidnapping, attacks by herdsmen, and cattle rustling, among others. A widespread decline in moral values is evident across different sectors of society, reflected in the increasing number of citizens

involved in acts that threaten national unity and stability. Alarming, many young people once seen as the hope for Nigeria's future are now actively participating in destructive behaviors, including violence and property destruction that undermine the nation's long-term prospects. Interviews with several youths reveal motivations for engaging in criminal activities, including unemployment, manipulation by corrupt politicians, and the greed of certain religious leaders. Regardless of the specific triggers, a common driving force appears to be the intense desire for wealth and a luxurious lifestyle. This pursuit has led many young people down a path of crime, exacerbating the already fragile security situation and further eroding long-standing societal values. Some youths appear to have forsaken moral principles entirely in exchange for financial gain. Unfortunately, religious figures are also implicated, as materialism increasingly dominates human behavior. A particularly troubling example is the reported arrest of a Methodist Church reverend in Ado-Ekiti by the police for allegedly staging his own kidnapping and having accomplices demand ₦3 million from his congregation (Vanguard News, 2019). Such incidents highlight the urgent need for a national reflection and a revival of core values as a strategic response to both insecurity and the obsessive pursuit of wealth plaguing the country through education, religion and value system.

Education, religion, and value systems are influential pillars shaping the societies worldwide. This paper explores the interconnectedness of these elements and their significant implications for national security in Nigeria. As education molds individuals' minds, religious beliefs guide their moral compass, and value systems dictate societal norms, understanding their intersection is crucial for fostering stability and security. In Nigeria, the intersection of education, religion, and value systems holds significant implications for national security due to the country's diverse socio-cultural landscape and historical dynamics. In light of the interconnectedness between education, religion, and value systems, there exists a pressing need to understand the specific dynamics and their combined implications for national security. However, despite recognition of their importance, comprehensive analyses addressing the nuanced interactions and their direct influence on security outcomes, particularly within Nigerian context remain limited. Consequently, there is a gap in scholarly understanding regarding how educational, religious, and value-based influences intersect to shape societal attitudes, behaviours, and vulnerabilities, ultimately influencing the security landscape. Here are how these factors relate to Nigeria's case:

Education and National Security:

Education is the structured process of facilitating learning, or the acquisition of knowledge, skills, values, beliefs, and habits. It plays a central role in shaping individuals, communities, and nations. It is the totality of preparing individuals to function effectively in the society. It is through education that the society values are preserved, maintained and transmitted from generation to generation. According to Nelson Mandela, education remains the most important and powerful weapon which can be used to change the world. Esomonu and Ikeanumba (2021) posited that education is the systematic socialization of the younger generation by which they later learn religious and moral beliefs/values, feelings of nationalism and collective opinion of all kinds. Education in itself without value is worthless. Education is therefore considered as testing laboratory of human values. In this case, education is said to have both intrinsic and extrinsic values. Any form of education that is devoid of right or correct values, right morals and sound religious teaching in some to produce 'education sinners' that are suitably recruited as miscreants, ethnic militias, kidnappers among others (Alonge & Adanikin, 2024).

Security refers to the safeguarding of individuals and communities against potential risks that could lead to severe deprivation, harm, or death. It involves the implementation of rules, maintenance of order, and fair enforcement of protective measures to prevent unforeseen challenges. Security encompasses protection from all types of harm—whether physical, environmental, or psychological. Some scholars argue that security is not merely the absence of threats, but rather the capacity to respond swiftly and effectively to such threats. According to Alonge and Adanikin (2024), security is compromised when there is direct violence (both physical and psychological), structural violence

(systems or policies that cause suffering or death), or cultural violence (norms and practices that perpetuate discrimination, injustice, and human suffering). Omode (2023) describes security as a dynamic state, characterized by a country's ability to respond to challenges that threaten its core interests and values. Similarly, the Yugoslavian delegate to the 1986 United Nations Symposium defined national security as the condition in which fundamental national values are free from threats, individuals live without fear or uncertainty, and the nation remains safe from aggression, domination, or violations of its sovereignty, territorial integrity, independence, and right to self-determination. In their analysis, Achumba, Ighomleraho, and Akpo-Robero (2023) view security as the outcome of strategies and systems established to defend people, property, and information from hostile actions or influences. They emphasize that security is present when citizens can carry out their daily lives without fear for their safety or property. It encompasses all efforts aimed at shielding individuals, groups, businesses, and the nation from acts of sabotage and violence.

The term insecurity holds varied meanings depending on individual perspectives. It can imply a lack of safety, the presence of danger or threat, uncertainty, vulnerability, or an absence of protection (Ewetan & Urhie, 2024). According to Achumba, et al., (2023), insecurity can be understood from two main angles. First, it refers to a condition where individuals are exposed to threats or potential harm. Second, it describes a state of vulnerability accompanied by anxiety as a vague, uneasy feeling that arises in anticipation of misfortune. Ewetan (2024) emphasizes that insecurity not only involves uncertainty about future events but also the vulnerability of individuals to danger when it arises. The researcher argues that insecurity represents a disruption of peace and stability whether caused by historical grievances, religious tensions, ethnic or regional divisions, civil unrest, socio-economic challenges, or political instability, that often results in recurring conflict and widespread destruction of lives and property. These definitions reflect the current realities in Nigeria, where the prevalence of insecurity is seen as a consequence of the repeated failure of governments at different levels to address the issue effectively. According to Jonathan (2019), this failure has escalated the situation to an unprecedented and critical level. Obasanjo (2019) further noted that the security situation deteriorated rapidly under former President Buhari's administration, suggesting that the government's approach or lack thereof may have worsened tensions. There is a growing perception, based on observations, that the actions and inactions of the previous administration seemed to favor certain ethnic groups, particularly the Fulani, leading some to view the security crisis as a form of ethnic cleansing.

Educational institutions in Nigeria are instrumental in shaping the beliefs, attitudes, and worldviews of citizens. The way curriculum content is designed and the methods used in teaching can significantly influence whether students develop values such as tolerance, critical thinking, and civic engagement or, alternatively, attitudes of extremism, intolerance, and radicalization (Oyeweso, 2019). Research has shown that empowering young people and fostering resilience through quality education equips them with the necessary skills, knowledge, and opportunities to contribute meaningfully to the country's socio-economic progress. Oyeweso (2019) further noted that a well-informed and educated population is more likely to participate constructively in society and play a role in national development, while also helping to build resistance against security challenges, particularly in the Northern and Eastern regions of Nigeria. However, Nigeria's education sector faces numerous obstacles, including poor infrastructure, gaps in curriculum relevance, and unequal access especially in conflict-prone areas like the Northeast and broadly across the Northern region, which is widely regarded as being educationally disadvantaged. It has also been observed that inadequate access to quality education leaves many young people vulnerable to manipulation and recruitment by extremist organizations such as Boko Haram, which prey on their frustrations and provide ideological indoctrination as a substitute for formal education.

Religion and National Security

Religion is a structured system of beliefs, practices, and moral principles centered around the reverence of a supreme being or multiple deities. It commonly includes shared doctrines, rituals, symbols, and ethical teachings that influence the worldview and conduct of its adherents (Adigwe &

Akudolu, 2024). Ideally, religion should foster unity between humans and the divine, as well as among people themselves. Unfortunately, the opposite seems to be unfolding in contemporary times. In support of the above, Adigwe and Akudolu (2024) argued that religion, which is traditionally seen as a moral compass and a means of promoting peace and unity, has increasingly become entangled in Nigeria's insecurity challenges. Instead of serving as a stabilizing force, some religious institutions and leaders have contributed, either directly or indirectly, to the erosion of societal values. Religion holds a central place in Nigerian society, profoundly shaping people's lives (Egbefo, 2016). For many, it provides spiritual direction, insight, and personal growth through scripture, religious texts, and prayer. While the Nigerian Constitution defines the country as a secular state, ensuring freedom of religious practice, this freedom is contingent upon respecting the rights of others.

Nigeria is home to three major religions Christianity, Islam, and Traditional religion which have coexisted for generations. Historically, Nigerians lived in relative harmony without significant fear of religious or ethnic domination. However, in recent years, tensions have escalated, especially amid growing fears of attempts to "Islamize" the country a situation that has raised alarm among various groups. These concerns intensified with the violent activities of Fulani herdsmen, whose attacks on people from different religious and ethnic backgrounds became more widespread and unpredictable during the administration of former President Muhammadu Buhari. Religion remains a powerful element of personal and collective identity. While religious diversity has the potential to enrich society, it can also lead to friction and conflict when manipulated by extremist elements that use it to justify violence and promote hatred.

Nigeria is a nation marked by deep ethnic and religious diversity, with the North predominantly Muslim and the South largely Christian. This religious divide has occasionally fueled tensions and conflicts. Religious crises are not new to the country; they have been a persistent concern since shortly after independence (Falola, 2018; Mohammed, 2016). During the administration of former President Muhammadu Buhari, many observers perceived his actions as suggestive of an agenda to Islamize the nation. This perception gained traction particularly through the federal government's aggressive promotion of the Rural Grazing Area (RUGA) settlement scheme. For many, the forceful implementation of this initiative signaled a deeper, possibly hidden religious motive. The RUGA controversy, coupled with violent incidents that appeared to target specific ethnic and religious groups especially in states like Benue, Borno, Jos and some parts of the southeast fueled widespread fear and suspicion. These events contributed to growing mistrust and division between the two dominant religious communities in Nigeria, eroding the sense of national unity. In the present day, extremist groups such as Boko Haram have taken advantage of these religious divides, using them as a justification for violence. Their actions have further strained interfaith relations and significantly intensified national security threats (Adesoji, 2020; Nwolise, 2014; Mohammed, 2016).

Value System and National Security

Values refer to the principles or standards that individuals or societies consider significant or insignificant. They help shape people's preferences and guide the decisions they make in life (Ogunyemi, 2024). Values represent collective beliefs about what is deemed good, desirable, and acceptable within a community. They embody a combination of knowledge, attitudes, and skills that support the development of moral character and strengthen a sense of communal identity. Essentially, values influence behavior, lifestyle choices, and societal attitudes. In the Nigerian context, traditional value systems are increasingly being challenged by foreign and adopted values. Nigeria's value orientation is shaped by cultural heritage, religious beliefs, and socio-economic conditions, all of which influence public attitudes toward governance, justice, and social unity. Alemika and Chukwuma (2016) argue that systemic issues such as corruption, inequality, and impunity have eroded public trust in institutions and have fueled resentment among citizens. These grievances create a fertile ground for insecurity and social unrest. A notable irony in Nigerian leadership is that while citizens are urged to remain patient and make sacrifices for the nation's progress, political leaders often continue to enjoy

luxurious lifestyles without making similar sacrifices. This disconnect only deepens public distrust and could provoke further dissatisfaction, potentially leading to instability and conflict.

The rising level of insecurity in Nigeria has had a profound impact on the nation's traditional value systems, particularly those related to social relationships. Historically, Nigerians especially in the Southeast deeply valued communal living, where individuals looked out for one another and embraced the spirit of being their "brother's keeper." However, the current state of the country tells a different story. Today, people live in constant fear even of their neighbours and the once-cherished value of communal harmony has been significantly eroded. In addition, the value placed on hard work has been replaced by a culture of laziness and shortcuts. Many Nigerians no longer believe in earning wealth through diligence and effort. Instead, there is a growing acceptance of the Igbo saying "*obere oru, nnukwu ego*" (little work, big money), which reflects a mindset that favours quick wealth over honest labour. This shift in attitude has led many to engage in criminal activities such as ritual killings, cybercrime (yahoo plus or internet fraud), and kidnapping for ransom, all in pursuit of fast money.

These trends have further fueled insecurity, making it difficult for people to trust one another. Shocking and disturbing acts—such as husbands killing wives for money rituals, parents selling their children, and boyfriends murdering girlfriends for financial gain are becoming alarmingly frequent. Even sacred spaces are no longer immune, with reports of unimaginable atrocities occurring on religious altars, symbolizing the moral decay in society. The sanctity of human life appears to have lost its value, as killings occur with little or no remorse. This growing disregard for human life continues to feed the climate of fear and general insecurity across the country.

Causes of Insecurity in Nigeria

Several factors have been identified as contributing to the alarming rise in insecurity across Nigeria. While blame is often passed among the youth, government, and parents, this paper focuses on examining the underlying causes of insecurity in the country. One major factor is the high rate of unemployment, which has reached a deeply concerning level. This situation can be largely attributed to leaders who lack moral integrity, as funds intended for job creation and public welfare are frequently diverted or misused. These leaders often fall short in values such as honesty, transparency, and accountability (Alonge & Adanikin, 2024). Another critical cause is the influence of religious extremism and widespread distrust within the society. The values of tolerance and respect for differing religious beliefs have significantly deteriorated. This has created fertile ground for religious fanatics and fundamentalists, who propagate hatred and violence against those of other faiths. In the name of religious devotion, these extremists often resort to the destruction of lives and property, further worsening the security crisis in the country (Mohammed, 2016).

The extravagant lifestyles of certain individuals particularly politicians have fueled an unhealthy obsession with wealth among Nigerian youths. According to Akinola (2022), the virtue of prudence has been overshadowed by a culture of materialism and lavish living. This overwhelming desire for quick riches has led many young people to engage in heinous activities such as ritual killings, cybercrime (commonly referred to as "yahoo plus"), and kidnapping. As a result, the value of human life has significantly diminished. Killings and acts of violence are becoming disturbingly routine, with perpetrators showing little to no remorse for their victims. Compounding the situation, reckless statements by political leaders and government inaction have also played a role in exacerbating the country's insecurity. One notable example is the Federal Government's refusal to comply with court rulings, particularly in the case of the Islamic Movement of Nigeria (IMN), also known as the Shiites. The continued detention of their leader contributed to unrest, culminating in the July 22, 2019 incident in Abuja, during which an Assistant Commissioner of Police and a Channels TV journalist lost their lives, and property worth millions of naira was destroyed. This event highlights how government disregard for the rule of law can escalate tensions and deepen security challenges in the country.

Consequences of Insecurity in Nigeria

The Nigerian government's passive approach to addressing security challenges has caused significant damage across the country. Countless lives have been lost, properties worth millions of naira destroyed, and many citizens have been displaced, now living in Internally Displaced Persons (IDP) camps. One of the most serious implications of insecurity is its negative effect on the economy, particularly through the loss of investments and capital flight. Both local and foreign investors are discouraged from investing in environments plagued by insecurity, leading to economic decline. The worsening security situation has made Nigeria a less attractive destination for investment, contributing to capital flight—one of the potential factors that led to the economic recession a few years ago (Omonobi & Erunke, 2019). Another devastating consequence of insecurity is the widespread fear of the unknown, which has turned road travel into a terrifying experience. Nigerians who need to embark on road journeys often resort to prayers and fasting, not for protection from accidents, but to avoid falling victim to kidnappers and terrorists. Key routes like the Iwaraja/Efon road (Osun/Ekiti States), Ikere/Akure road, Benin/Ore road, and Abuja/Kaduna highway and some highways in the southeast are now considered high-risk areas due to frequent herdsmen attacks and kidnappings. Many travelers journey with great anxiety, uncertain of what lies ahead.

A particularly tragic incident was the killing of Dr. Chike Akunyili, husband of former NAFDAC Director-General Late Dr. Mrs. Dora Akunyili whose sudden death occurred on the September, 28, 2021 under shocking and violent circumstances, Mrs. Olakunri, daughter of Afenifere leader Pa Reuben Fasoranti, on July 12, 2019, in Kajola, Ore (Ondo State) by suspected herdsmen. This event further intensified fears and insecurity, especially in the Southwest region. More recently, on January 29, 2024, two monarchs in Ekiti State Oba Olatunde Olusola (Onimojo of Imojo) and Oba Babatunde Ogunsakin (Elesun of Esun Ekiti) were murdered by herdsmen while returning from a local government security meeting. On that same day, students from Apostolic Faith School in Emure Ekiti, along with a teacher and driver, were abducted from their school bus. Although the abductees were eventually released after a ransom was paid, the driver was killed before their release (Akpan, 2024). These alarming incidents highlight the deteriorating state of security in Nigeria and the urgent need for more effective government intervention.

The Way forward

The following suggestions are made as light to pave way for the way forward:

1. Revitalizing the nation's value system requires deliberate efforts in human resource development, strategic planning, comprehensive training, and ideological reorientation. It also involves instilling positive values in young individuals from an early age and serving as role models worthy of emulation. Fostering cultural diversity while upholding fundamental national values can enhance social unity and strengthen the nation's ability to resist external threats. Additionally, implementing inclusive policies that promote social integration can help curb marginalization and alienation, ultimately reducing the appeal of extremism and radical ideologies. A vision for a new Nigeria should be pursued; one in which a Northerner feels at home in the East, an Easterner shares meals with someone from the North, and a Westerner dines and builds relationships freely with citizens from any other region (Adesina, 2021).
2. Enhancing access to quality education, particularly in underprivileged and marginalized communities, is essential in addressing insecurity. In addition, religious education within churches and mosques can significantly contribute to reducing violence. Religious leaders such as pastors and imams should make it a responsibility to enlighten their followers about the sacredness of life and the divine consequences of taking innocent lives. Promoting interfaith dialogue and mutual understanding is also key to reducing religion-based violence. Both the government and civil society organizations have vital roles to play in facilitating such interactions and upholding religious freedom. These efforts are instrumental in countering radical ideologies and fostering social unity.

3. The government and non-governmental organizations can help address insecurity by creating widespread employment opportunities, particularly through the provision of refundable loans to both educated and uneducated youths. This support would empower young people to establish and manage their own businesses, keeping them productively engaged and reducing the likelihood of idleness or desperation that often leads to involvement in criminal activities in the pursuit of money.
4. Providing quality education equips young people with the skills, knowledge, and opportunities necessary for socio-economic progress. An educated population is more inclined to contribute positively to society, thereby supporting national development and enhancing resilience against threats like extremism and radicalization. To strengthen this, there should be increased awareness and education on managing security challenges across all levels of the education system from primary to tertiary institutions.
5. The government should make efforts to revive forest guard operations, strengthen local vigilante groups, and revisit the establishment of state police. This includes recruiting capable and competent youths, providing them with regular training in areas such as forest protection, security management, and gaining a deep understanding of their local environment. Such measures would help ensure that criminal elements have no safe havens to operate within.
6. On the global front, Nigeria should actively promote international cooperation and diplomacy to effectively address transnational security threats. Considering the interconnected nature of modern security challenges, collaboration with other nations in areas such as education, religious tolerance, and ethical governance is crucial. Additionally, there should be strict surveillance and enforcement at national borders, both land and maritime, with increased presence and support for security agencies to prevent unauthorized entry by stranded immigrants from neighboring countries.

Conclusion

In conclusion, tackling the interconnection between education, religion, and value systems as key components that re-engineer sustainable national development, shape social structures and influence national security is essential for ensuring peace and stability in Nigeria. Recognizing how these elements influence one another and adopting inclusive, value-driven strategies is vital for building societal resilience, reducing conflict, and enhancing national security in today's increasingly complex world. A holistic approach that emphasizes inclusive growth, national unity, re-engineering sustainable national development, and transparent governance is crucial to addressing the root causes of insecurity. To achieve a better Nigeria, collective efforts are required to dismantle the barriers of suspicion and eliminate the divisions that fuel internal conflict. Nigerians must let go of fear, embrace one another in unity, and foster a nation where sustainable national development is re-engineered, people are valued not by their place of origin, state of birth, or religion, but by the inherent dignity they possess as fellow citizens of a united Nigeria.

Abstract

The study investigated ethical standards as correlates of effective supervision for sustainable national development in secondary schools in Owerri Zone 1 of Imo State. Three null hypothesis tested at 0.05 level of significance guided the study. The population of the study comprised of all the teachers in Owerri Zone 1 totaling 2,328. A sample size of 200 teachers was drawn using the purposive and cluster sampling techniques. The instrument for data collection was a researcher developed questionnaire titled —Ethical Standards of Supervision Effectiveness (ESSSE). The instrument was validated by two specialists from the faculty of education Imo State University. Data obtained were analyzed using Pearson product moment correlation. The results showed that a significant relationship exist between ethical standards and supervision effectiveness. Based on the findings it was recommended that unethical conducts of supervisors should be avoided to gain the trust, confidence and respect of teachers during supervision.

Keywords: Ethical Standards, Supervision, Sustainable Development.

Introduction

Ethical school supervision characterized by honesty, fairness and integrity is crucial for sustainable national development by promoting quality education and fostering ethical leadership. Education is a vital instrument for change and for achieving national goals and aspiration. System of education in any country are structured and restructured to meet up with current societal demands. Policies are made in line with national goals and for any policy to work, supervision is imperative for adequate implementation. Supervision is the art of improving the teacher's skills and management with the aim of improving the teaching and learning process (Alike & Adoga, 2017). Supervision is also a way of overseeing the activities of teachers, advising, guiding to ensure the application of appropriate teaching skills and instructional materials that will enhance learning and at the same time achieve educational objectives (Ohamobi & Onyekazi, 2021). It connotes helping the teachers in classroom organization, and management, pedagogical development, curriculum development, selecting appropriate instructional materials, communication skills that will help in realization of school aims and objectives. Supervision when adequately undertaken, will improve standard, quality education, better academic performance of students and dedication of teachers. For Okafor, Egbe, Ngene & Eji (2024) supervision is an essential mechanism for improving educational quality, fostering accountability among administrators and educators and ensuring the welfare of students. This involves working with

teachers and educators in a collegial, collaborative relationship to revitalize our educational system, so as to meet up with the challenges globally and for sustainable national development.

National development is a national growth in all endeavors, political cultural, economic, social and otherwise. Sustainable development is development that meets the needs of the present without compromising the ability of the future generations to meet their own needs. It is a framework for progress that balances economic growth, social well –being and environmental protection. Sustainable national development is the capability of a particular nation or country to achieve comprehensive improvement or refinement in all ramifications and its existence (economic, political, cultural, religious etc) and set, maintain and continue at that level for a long time. Oyewole & Osalusi, (2016) they posit that supervision is vital in the actualization of sustainable education standards. They maintained that for education effectively develop human capital, it becomes highly imperative to embark on regular and effective supervision. It is quite unfortunate as observed by Oyewole et al (2016) that teachers are being ‘_Snooperised’ in the process of ensuring quality education in schools as this type of supervision was characterized with bossiness, threat and lack of human relations. Ayodele and Oyewole (2014) noted that the modern day approach of supervision is more clinical in nature as teachers need to be helped to improve on their job performance through corrections and personal guidance where necessary. The idea of modern day supervision places much emphasis on the behaviours of the supervisors in the process of interacting with the teachers. It is a clear departure from the punitive measure that are embedded in the old traditional supervision while the modern approach focuses on corrective/rehabilitative measures in a cordial relationship that will totally erase symptoms of suspicion for any kind of witch – hunting on the part of the teachers. This is rather a diagnostic approach that involves the teachers’ abilities, preparation and creating enabling environment that will keep the teachers to improve on the quality of instruction. This modern approach will ensure quality control through mutual interactive behaviours between the supervisor and the supervisee in sustaining the standard of education in our schools hence ethical standards of supervision must be upheld for a sustainable national development.

Ethics is a branch of philosophy which deals with the morality of human actions or the norms of proper course of action for man (Kanu 2018). It studies right and wrong actions in human behaviours. It is a method by which we categorize our values and pursue them. Ethics is very nature of man because it is our means of deciding a course of action without which our actions would be meaningless and aimless (John – Nelson, Ihunwo & Ohanyiri, 2015). To the extent that we pursue rational ethical standards, we will be able to correctly organize our goals and actions to accomplish our most pressing values. We act normally in order to realize full human well – being in the order of a created nature, that is, ethics establishes grounds for good relationship with others and God.

Ethics in education refers to the implementation of moral principles within the educational context guiding behaviour, teaching approaches and policy making. Ethical standards are guidelines, principles and values that guide educators conducts and behaviours to maintain fairness, integrity and professionalism. It can influence supervisors’ interactions with students, teachers, parents and colleagues and the wider educational community. Ethical standards in supervision therefore ensures that an effective supervision should provide leadership with extra knowledge and supervision skills; promote co – operative educational efforts in a friendly atmosphere; provide co – ordination, direction and guidance to teachers activities; improve instruction in the teaching learning process; help in the achievement of appropriate educational aims and objectives; stimulate continuous growth of teachers and development of pupils and stimulate and develop creative qualities in teachers (Jamal, 2023). Supervisors must be role models, adhering to a code of conduct and ensuring that all school staff and students are treated with respect and dignity. This includes fair assessment of students, transparent communication and a commitment to providing a conducive learning environment. Ethical standards in school supervision are crucial for fostering a positive learning environment and promoting sustainable national developments. These standards ensure that supervision is fair, equitable focused on the achievement of educational goals. In school supervision, ethical conduct is crucial for maintaining a fair, respectful and productive environment. Supervision must uphold principles of fairness, transparency, confidentiality and professional integrity when evaluating teachers, providing feedback

and making decisions. Ethical codes guide supervisors in ensuring equitable treatment, avoiding bias and prioritizing the well being of students and staff.

Zulfu (2011) maintains that ethical responsibilities of supervision is to help the supervisee ethically reflect on their practice from both internal and external perspectives and to consider the way in which their practice from both internal and external perspectives and to consider the way in which their practice matches up against both their internal values and the external ethical values and framework of the nested systems. A strong ethical framework gives both supervisors and supervisee the security to explore, learn and make mistakes without fear of retribution. Studies have shown that good ethical standard is an integral part of a profession (Matthew and Obiasili 2022). Ethical standards in supervision such as respect for others, respect for sanctity of human life, honesty, respect for rule of law and order, morality, hard work, sharing self-discipline, non-violence, and mutual cooperation should be upheld for effective supervision in schools. Okafor et al (2022) highlights the key principles of ethical standards of supervision as fairness and equity, transparency and communication, professional integrity, respect and confidentiality, accountability and advocacy for students. Supervisors have a responsibility to advocate for the well – being and educational needs of students. This includes ensuring that teachers are equipped with the skills and resources they need to support student learning and development. The importance of ethical standards in supervision cannot be overstated. It is fundamental in creating a positive learning environment, developing morally responsible individual, maintaining the integrity of the educational system. The works of Ohamobi & Onyekazi (2021), Zulfu (2016), Juliawali & Maizura (2023), Arark & Satri (2022) and Janal (2023) have shown a relationship between observing ethical standards in school supervision for sustainable national development. They assert that the key ethical standards in school supervision vital for sustaining national development include ensuring student safety and well-being, upholding professional standards, fostering a collaborative and supportive environment, promoting fairness and equity and prioritizing lifelong learning and development. Good human relationship is indispensable for good supervision, which according to context of this study has to do with ethical conducts and supervision effectiveness. Therefore, the supervisor which could be either the principal (internal supervisor) or supervisors from the school board (external supervisor) could only be effective if there are cordial relations with the teachers. Thus, the supervisor must learn the best way to use his fellow human being. He must learn that friendliness begets friendliness and conversely hostility begets hostility. Furthermore, the school supervisor must realize that every human being in the school has got his needs, interest and peculiar backgrounds and will certainly act and interact in accordance with this attributes. So the supervisor observing ethical standards in terms of courtesy, mutual confidence, respect, open mindedness and sincerity can work wonders in promoting effective school supervision.

It is against the background that the researchers want to investigate ethical standards as correlates of effective supervision for sustainable national development in secondary schools in Imo State.

Statement of problem

School supervision serves as a strategic tool for shaping behavior and fostering improvement within schools. Through effective supervision teachers are encouraged to reflect on their instructional practices, receive constructive feedback and access tailored professional development opportunities.

There has been an outcry by teachers that supervision is synonymous to witch hunting. Supervisors see themselves as lords, bullies, nag and fall short of ethical standards in the discharge of their duties. Their negative attitude has shown devastating effect on the attainment of educational objectives. Teaching and learning are affected; teachers run away from supervisors and are afraid of being supervised. The researchers therefore want to ascertain if ethical standards has any influence in teachers behavior in the discharge of their duties. The study seeks to investigate ethical standards as correlates of effective supervision for sustainable national development in secondary schools in Imo State.

Purpose of the study

The main purpose of the study was to investigate how ethical standards affect effective supervision for sustainable national development in secondary schools in Owerri Zone I of Imo State. Specifically, the purpose of the study was to find out:

If ethical standards enhance supervision effectiveness for sustainable national development.

If strategies employed in maintaining ethical standards of supervisors affect supervision effectiveness.

If supervisors unethical conduct affects supervision effectiveness.

Research Hypothesis

Ho₁: Ethical standards have no significant relationship with supervision effectiveness.

Ho₂: Strategies employed in maintaining ethical standards of supervisors does not significantly relate with supervisor effectiveness.

Ho₃: Supervisors unethical conducts have no significant relationship with supervision effectiveness.

Method

The study adopted the correlational design. The population of the study consist of all the teachers in Owerri Zone I totaling 2,828. A sample size of 200 teachers was involved in the study using purposive and cluster sampling technique. The instrument used for collecting data for the study was a questionnaire titled —Ethical standards of supervision effectiveness questionnaire (ESSSEQ). The questionnaire was divided into two (2) sections A and B. section A sought for demographic data and section B elicited data on ethical standards of supervision and supervision effectiveness. The validity and reliability of the instruments was ascertained through consultation within specialists in educational management and measurement and evaluation departments, all in the faculty of education Imo State. Pearson (r) statistics was used for the data analysis.

Results

Hypothesis one:

Ethical standards have no significant relationship with supervision effectiveness.

Table one: Pearson product moment correlation between ethical standards and supervision effectiveness.

Variables	N= 200		
	Ex	Ex ²	Exy
r – value			
0.53	Ey	Ey ²	74253
Ethical standards(x)	2324	6684	

Significant at 0.5, critical r- value = -138 and df = 198

The analysis in table I reveals that the calculated r – value of 0.53 is greater than the critical r – value of .138 at 0.05 level of significance and 198 degree of freedom. This result led to the rejection of the null hypothesis which shows that significant relationship exists between ethical standards and supervision effectiveness.

Hypothesis two

Strategies employed in maintaining ethical standards of supervisors does not significantly relate with supervision effectiveness. Table 2: Pearson product moment correlation between strategies of maintain ethical standard between strategies of maintaining ethic standards and supervisors and supervisors effectiveness.

Variables	N= 200		
E x	Ex ²	Exy	r- value
Ey	Ey ²	85216	0.60

Strategies for making ethical standard (x) 3560 5124
Supervision at 0.05, critical r-value = 138 and df = 198

The analysis in table 2 reveals that the null hypothesis was rejected to flow that a significant relationship exist between strategies employed in maintaining ethical standards of supervisors and significant and 198 degree of freedom and 138 critical r-value.

Hypothesis three

Supervisors' unethical conduct has no significant relationship with supervision effectiveness.

Table 3: Pearson product moment correlation between unethical and supervision effectiveness.

N200

Ex	Ex ²	E _{xy}	r value
Ey	Ey ²	12562	*0.57
Supervision effectiveness (y)	3148		2788
Significant at 0.05, critical r-value = 138 and f =			198

The analysis in table 3 reveals that the calculated r – value of 0.57 is greater than the critical r – value of 138 at 0.05 level of significant and 198 degree of freedom. This result prompted the rejection of the null hypothesis, meaning that a significant relationship exist between supervisors unethical conduct and supervision effectiveness.

Discussion of findings

The findings of hypothesis one revealed that there is a significant relationship between ethical standards and supervision effectiveness. The implication of this findings is obvious based on the fact that ethical standards foster a positive learning environment by ensuring that supervision is fair, equitable and gaining the trust and confidence of the supervisee. Without appropriate ethical conduct, the supervisor will not achieve the level of effectiveness in the supervision of teachers. This result is in line with the findings of Zulfu (2016) and Mathew and Obiesili (2022) that ethical standards in supervision help to achieve effectiveness during supervision in schools. They assert that it creates a positive learning environment for sustaining national development. Standards of supervisors relate with supervision effectiveness. The findings is in agreement with Arar and Salh (2022) and Jaral (2023) strategies such as professional development, regular reflection and assessment, creating a culture of trust helps supervisors to carry out their supervision effectively. Jaral (2023) maintains that supervisors who employ these strategies gains teachers trust and confidence thereby making them respond positively to them.

The result of the study further records that a significant relationship exists between unethical conduct of supervisors and supervision effectiveness. This finding is in line with Ayodele and Oyewole (2014) Juliawati and Maizura (2023) and Ohamobi and Onyekazi (2021). Supervision according to them involves working with teachers and other educators in a collegial, collaborative relationship. Unethical conducts damage relationships, affecting the trust and respect between supervisors and teachers leading to strained working relationships and a negative school climate. When teachers feel unfairly treated or that their concerns are not being addressed it can lead to decreased job satisfaction, reduced productivity and increased turnover.

Conclusion

The conclusion that can be drawn from this study is that ethical standards affects supervision effectiveness. The strategies employed by supervisors in maintaining ethical standards significantly affect supervision effectiveness. Thus unethical conducts by supervisors affect supervision effectiveness.

Recommendation

Ethical standards should be upheld by supervision during supervision of teachers.
Workshops and seminars should be constantly organized for supervisors.

Strategies and key principles of ethical standards should be observed by supervisors in the course of carrying out their duties.

ETHICAL VALUES IN SCHOOL ADMINISTRATION IN NIGERIA: ISSUES AND CHALLENGES FOR SUSTAINABLE NATIONAL DEVELOPMENT

Onyebu, Nwamaka Georgina
Department of Education Management
Shehu Shagari University of Education Sokoto
Email: amakagerrie16@gmail.com

Abstract

This study examines the significance of ethical values in school administration in Nigeria for Sustainable National Development. The study highlights issues and challenges facing school administrators in upholding ethical values for sustainable national development in Nigeria. The paper emphasizes the importance of ethical leadership, transparency, integrity and accountability in promoting a positive school culture and ensuring quality education. The study also identifies key issues, such as resources constraints, cultural and societal, school climate corruption, favoritism, and lack of accountability and neglects the need for training and support to enhance administrators' ethical decision-making that promotes organization goals and objectives. Future research should focus on developing transparent, fair, and inclusive ethical leadership training that align with supporting achievement of educational goals in Nigeria.

Keywords: *Ethical Values, Ethical leadership, Issues, Challenges, school administrator*

Introduction

Ethics is generally refers to the principles of morality and conduct that guide how individuals make decisions and interact with others. Ethics as a systematic study is concerned with the nature of good and bad, right and wrong, justice and injustice, duty and obligation (Mbagwu, 2018). It is a branch of philosophy that explores right and wrong, good and bad, and the reasoning behind moral judgments (Branston, 2025). Ethics helps individuals determine what is morally acceptable and guides them in making right choices that align with their values and societal norms. Ethics deals with the guidelines or rules of conduct by which we aim to live, work and socialize.

Ethical values have a fundamental role to play in education in Nigeria for sustainable development in shaping the moral compass of individuals and fostering responsible citizens towards accomplishment of educational goals. Incorporation of ethical principles into school administration, educational institutions can empower school administrators to make informed decisions, contribute positively to society, and lead fulfilling lives (Nishantha, 2023). Ethical values are fundamental to effective school administration for promoting a culture of integrity, transparency, and accountability for the better administrative environment.

School administrators are very crucial for the successful and effective management of a school in Nigeria for sustainable development. The Federal Republic of Nigeria stated in the National Policy of Education (NPE,2014) document that the goals of education is to produce highly motivated, conscientious and efficient administrators at all levels of our educational system; encourage further the spirit of enquiry and creativity in administrators; help administrators to fit into social life of the community and the society at large and enhance their commitment to national goals; provide teachers with the intellectual and professional background adequate for their assignment and make them adaptable to changing situations; and enhance administrators - teachers' commitment to the academic profession (Elbanna,(2023). However, to carry out these roles efficiently, it means that all administrators must be professionally trained and inculcated with the ethical values and code of conduct of the administrative profession, no profession can stand without clearly defined the ethics.

According to TRCN (2013) administration deals with the molding of character of humanity based on a set of solid, tested and proven ethical framework that guarantees the very best atmosphere and trust in the administrative process. In order for effective management of schools, administrators must maintain good working ethics and high moral standards to achieve its objectives and goals school system. In Nigeria, school administrators face numerous challenges in upholding ethical values which including among others, resource constraints, inadequate training, corruption, favoritism, and lack of accountability. This study aims to discuss the issues and challenges of ethical values in Nigerian school administration, emphasizing the importance of ethical leadership in promoting quality education.

Concept of ethical values

Ethical comes from the Greek ethos "moral character" and describes a person or behavior as right in the moral sense - truthful, fair, and honest. Also the word is used for people who follow the moral standards of their profession (Vocabulary.com, 2025). Ethical values guide the way that administration is done - what is considered acceptable or desirable behaviour, above and beyond compliance with laws and regulations. Ethical values are refers to as principles and beliefs that guide individuals and organizations in making decisions and evaluating actions as morally right or wrong. Ethical values serve as the foundation for ethical behavior, helping to shape personal character and promote social cohesion in school. Ethical values can stem from various sources, such as cultural, religious, philosophical, or personal beliefs. While the specific ethical values held by individuals and groups may differ, some common themes include honesty, fairness, responsibility, respect, and compassion. By adhering to ethical values, administrators can navigate complex moral dilemmas, maintain their integrity, and foster positive relationships with colleagues in the course of goals accomplishment. Nishantha (2023) noted that ethical values serve as a guiding force for individuals to make decisions that align with their principles and beliefs. They enable individuals understand the consequences of their actions and provide a framework for ethical decision-making. Kocaba & Karaköse (2009) noted that when ethical values are integrated into an individual's life, they promote a sense of accountability and responsibility, encouraging them to act in the best interests of themselves and others in ensuring that organizational goals are being achieved.

Ethical behaviour therefore occurs when one acts with equity, fairness and impartiality and respects the rights of others, or simply put, when one does what is morally right. According to Manuel, Claire, Thomas and Michael (2012), implementation of ethical values referred to well-founded standards of right and wrong that prescribe what humans ought to do, usually in terms of rights, obligations, benefits to society, fairness, or specific virtues.

Ethical Values in School Administration in Nigeria

In Nigerian school administration, ethical values such as integrity, fairness, respect, etc, for individual rights are crucial. These values are also emphasized in the national ethics outlined in the Nigerian Constitution, including discipline, integrity, and dignity of labor, social justice, and religious tolerance. Effective school administrators should demonstrate these values in their interactions with students, teachers, parents, and the community at large, fostering a positive, conducive and equitable learning environment for national development.

According to Well & Emerole (2023) ethical values in school administration refer to principles and beliefs that guide school leaders' decision-making and actions, ensuring fairness, integrity, and accountability within the school community. These values are crucial for fostering a positive school culture and promoting ethical behavior among all stakeholders, including students, teachers, and staff. The application of ethical values to school administration refers to the practical implementation of moral principles and standards in various aspects school system, including personal and professional settings. Ethical Values in School Administration guide decision-making, behavior, and interactions with others, promoting conducive environment for teaching and learning as highlighted below:

Integrity in School Administration

Integrity is a fundamental value in school administration that encompasses honesty, transparency, and consistency in actions and decisions. School administrators with integrity are likely act with honesty, truthful in communication with students, staff, and the community. The administrator with integrity demonstrates transparency, maintain consistency, and apply rules, policies, and procedures fairly and consistently in discharging his /her duties. Administrators take responsibility by acknowledging and learn from mistakes.

Fairness and justice in school administration

Fairness and justice are essential principles in school administration, ensuring that students, staff, and the community are treated with equality and respect. Fairness and inclusivity in leadership require leaders who treat all staff equally and prioritize fairness foster a sense of unity and teammate spirit among them. This strengthens relationships and ensures that all individuals feel valued thence enhances overall collaboration and trust. Begley & Johansson (2008) maintain that ethical leadership, including fairness and respect, is directly linked to fostering a supportive and inclusive environment in educational settings. However, School administrators who take into consideration fairness and justice his/her administration should ensure rules and policies are applied equally to all students and staff, treat individuals with respect in the sense that value diversity, inclusivity, and show empathy are promoted, make informed decisions based n evidence, facts, and clear criteria, provide opportunities for feedback thereby encouraging open communication and consider diverse perspectives.

Responsibility and accountability in school administration

Accountable leadership holds oneself and others accountable for actions, decisions, and outcomes. Responsibility and accountability are crucial aspects of school administration, ensuring that administrators are answerable for their actions, decisions, and outcomes. School administrators should be responsibility. He /she ensures ethical Leadership in school system by providing direction, guidance, and support to students, teachers, and staff can leads to better academic and personal outcomes, making informed ethical decisions that benefit students and the school community, managing resources effectively to support student learning and well-being, prioritizing student safety, well-being, and academic success, providing clear explanations for decisions and actions, regularly evaluating and assessing policies, programmes, and practices, identifying areas for improvement and implement changes where necessary.

Respect and Empathy in School Administration

Ensuring respect and empathy in school administration by school administrators foster a positive and supportive environment for students, staff, and the community to achieve their goals. School administrators who demonstrate respect and empathy, recognize and appreciate individual differences, cultures, and perspectives, hear and understand concerns, needs, and ideas from students, staff, and parents, show compassion thereby demonstrate care and understanding for students and staff facing challenges and creating an environment where everyone feels welcome, valued, and supported hence fostering a positive work environment, boosting staff morale and job satisfaction. By prioritizing respect and empathy, school administrators can create a supportive and inclusive environment, ultimately benefiting students, staff, and the broader community.

Professionalism and Confidentiality in School Administration

Adhering to professional standards, engaging in ongoing professional development, and demonstrating a commitment to lifelong learning are necessary in ensuring effective school administration. Professionalism and confidentiality play a key role in school administration, ensuring that administrators maintain a high level of integrity, respect, and trust. Professionalism in School administration portrays demonstration of knowledge, skills, and expertise in educational leadership, acting with honesty, fairness, and ethics in all interactions with stakeholders, treating students, staff, and

the community with dignity and respect, taking responsibility for actions, decisions, and outcomes. On the other hand, confidentiality is maintained by protecting sensitive information about students, staff, and the community by holding private meetings to discuss sensitive issues, ensuring that personal information is not disclosed without consent, maintaining accurate and secure records, adhering to relevant laws and regulations fostering strong, respectful relationships with stakeholders. By prioritizing professionalism and confidentiality, school administrators can maintain a high level of trust, respect, and integrity, ultimately benefiting students, staff, and the broader community.

Needs For Ethical Values In School Administration

Ethical leadership is a management concept that signifies the leaders who integrate ethics in their personal lives and their roles as organisational managers (Orunbon, Ifenaike, & Adeleke, 2022). Ethical values play a crucial role in school administration, guiding decision-making, behavior, and interactions with students, staff, and the community. Ethical values guide the way that school system is done in terms of what is considered acceptable or desirable behaviour, above and beyond compliance with laws and regulations. It may be that the school's values are implicit rather than explicit (Branston, 2025). The values inform the education organisation's ethics policy. This sets out the organisation's commitment to high ethical standards and how this will be governed, implemented and monitored (Sakiman & Yasin, 2023). Here are some ways ethical values are promoting school administration for sustainable national development.

Promotion and Maintenance of Rules and Regulations

A good and well managed educational system reforms the people who in turn reform the entire society by upholding the ethics of the system. The most important responsibility of any administrator is to have an ethical perception of school administration. School administrators typically work in different educational institutions; they are responsible for overseeing administrative tasks in educational institutions by making sure that the organization runs according to the expected rules and regulations.

Creation of Positive and Productive Learning and Work Environment

A good working environment creates a safe, supportive, and respectful atmosphere for students and staff. By embracing ethical values, school administrators can create a positive and productive learning environment that benefits students, teachers, and the broader community. Ethical values, such as honesty, integrity, and respect for others, are essential for building strong relationships, creating a sense of purpose, and living a meaningful life.

Helping in Making informed Decision

Transparent decision-making involves stakeholders in decision-making processes and providing clear explanations for decisions. Ethical values serve as a guiding force for school administrators to make decisions that align with their principles and beliefs. They help school administrators understand the consequences of their actions and provide a framework for ethical decision-making. When ethical values are integrated into an administrator's life, they promote a sense of accountability and responsibility, encouraging them to act in the best interests of themselves and others. The importance of ethical values cannot be overemphasized, according to Kocaba and Karaköse (2009) ethical values are principles guiding human behavior, emphasizing morality, fairness, and responsibility. They shape individual and organizational conduct, influence decision-making in school organization.

Issues and Challenges of Ethical Values in School Administration

Pijanowski (2022) stated that ethics in educational leadership is concerns understanding the rules, understanding how your actions affect other people and the system as a whole. There are a number of ethical issues challenges in education that can be addressed and ameliorated. Stakeholders in school administration are often associated very closely with such ethical issues in schools because of

their direct involvement, while others may be a as result of how the education system is being organized. Some issues and challenges are identified and discussed below:

- **Resource Constraints:** Limited resources can lead to difficult decisions, testing administrators' commitment to ethical values. This can directly hinder school administrators' ability to promote ethical values in Nigerian schools, impacting their effectiveness in implementing programs and policies, hindering the ability of school administrators to maintain ethical values by limiting their capacity to implement and enforce ethical standards, provide necessary support for staff and students, and to create a positive learning environment. Consequently, leads to a decline in ethical behavior within the school community. Adequate funding allows for professional development programs for teachers and staff on ethical conduct, conflict resolution, and student discipline. Without sufficient resources, these programs may be underfunded, understaffed, or completely absent, leading to a lack of training and support for maintaining ethical values (Bashir & Dalhatu 2014). More so, inadequate funding can result in dilapidated infrastructure, lack of essential resources and a generally less positive school environment. This can create a breeding ground for unethical behavior, as students and staff may feel disempowered and frustrated. Inadequate funding may force school administrators to rely on external funding sources, which can come with strings attached and potentially conflict with the school's ethical values. This can create an environment where the school's priorities are compromised, leading to a decline in ethical behavior (Nwangwu (2017).
- **School Climate:** A negative or disrespectful school climate can undermine ethical values associated with lack of respect for students, teachers, and administrators showing an environment where ethical principles are not prioritized. School climate profoundly influences how administrators apply ethical values (Nwangwu, 2017). Positive school climate is characterized by mutual respect, trust, and a shared sense of purpose, fosters a culture where ethical behavior is naturally encouraged and expected. Conversely, a negative school climate, marked by conflict, disrespect, and a lack of trust, can make it challenging for administrators to uphold ethical values and can even lead to unethical decisions Nwangwu, 2017). Positive school climate facilitates ethical decision-making, administrators are more likely to make ethical decisions with the support of colleagues, students, and parents. It encourages transparency and accountability where decisions are made openly and everyone is held accountable for their actions, fostering ethical practices. Unfriendly environment creates pressure to compromise ethics which can create a sense of pressure to compromise ethical values to achieve short-term goals or satisfy external demands, mistrust and conflict, making it difficult for administrators to work collaboratively and uphold ethical standards. School climate is not just an environmental factor but a powerful force that shapes the ethical decisions and actions of school administrators.
- **Ethical dilemmas:** Ethical dilemmas often involve conflicting values and competing interests, making it difficult to determine a clear "right" or "wrong" course of action. This complexity can challenge administrators' preconceived notions about morality and encourage them to consider a wider range of perspectives. In some cases, ethical dilemmas can expose inconsistencies or contradictions within existing ethical frameworks. This can lead administrators to question the absolute nature of certain moral rules and develop a more nuanced understanding of ethics. In a situation of ethical dilemmas administrators can be encourage to reflect on their own values and beliefs. They may realize that their personal values are not always aligned with the values of others, or that their own understanding of ethics is incomplete. Ethical dilemmas also provide a structured way for administrators to practice ethical decision-making. They can learn to identify the relevant ethical issues, analyze the situation, consider the consequences of their choices, and develop strategies for resolving the dilemma. **Corruption and Nepotism:** Corruption and nepotism significantly undermine the promotion of ethical values in schools. By prioritizing personal gain or connections over

merit and integrity, these practices erode trust, lower academic standards. Unfair practices in hiring, promotion, and resource allocation undermine trust and fairness in school system (Nwankwo, 2016). This can lead to a decline in the quality of education, as resources are mismanaged, qualified individuals are overlooked, and unethical behavior is tolerated.. Corruption and nepotism create an environment of mistrust between students, teachers, and administrators, making it difficult to foster a culture of honesty and ethical conduct. When appointments and promotions are based on favoritism rather than merit, unqualified or under-qualified individuals may be placed in positions of authority, leading to a decline in the quality of teaching and learning (Arome & Rabiou (2017). Corruption can lead to the misappropriation of funds intended for educational resources, resulting in inadequate infrastructure, poor-quality materials, and a lack of necessary support for students and teachers. When administrators engage in corrupt practices, it sends a message that such behavior is acceptable, making it harder to instill ethical values in students. Corruption and nepotism can tarnish the reputation of the school and the entire education system, leading to a loss of public confidence and support (Isabu, 2024). When teachers and students feel that merit and hard work are not valued, it can lead to a lack of motivation and a decline in academic performance. Corruption and nepotism constitute a problem to national development by exacerbate social inequalities by limiting opportunities for those who lack the right connections, further undermining the principles of fairness and equal opportunity.

- **Lack of Accountability:** The issue of lack of accountability presents significant challenges for school administrators in fostering ethical values in school system. The manifestation of this unethical behavior can be observed in disregard for rules, lack of transparency, and inconsistent enforcement of school policies. Without accountability, rules and policies may be applied inconsistently thereby creating a sense of unfairness and undermining the legitimacy of ethical guidelines. When administrators are not accountable, they may be less transparent about their decisions and actions. This lack of transparency can breed suspicion and resentment, making it harder to build a culture of ethical awareness and responsibility in the school (Dangara, 2016). Hence, such acts may be perpetuated thereby discourage those who want to uphold ethical standards (Ineye-Briggs, 2025). At times, lack of accountability may be linked to inadequate training and support for administrators in understanding and implementing ethical guidelines. If administrators are not equipped with the knowledge and resources to promote ethical values, they may struggle to do so effectively (Dangara, 2016).
- **Favoritism and Bias:** Favoritism and bias can significantly hinder school administrators' efforts to promote ethical values in several ways: Favoritism and bias can lead to unfair treatment of students, teachers, and staff, creating a culture of inequality. It can result in unequal access to opportunities, resources, and support. Favoritism and bias can erode trust in school administrators and the education system. Students, teachers, and staff may perceive that decisions are made based on personal relationships or biases rather than merit or need. This can negatively affect student learning where of inequitable education is permitted, invariably can lead to unequal educational experiences and outcomes, demoralization and disengaging from schooling (Rasheed, 2016). In addressing the above challenge there is need to establish clear policies and procedures that promote fairness and equity. Unfair treatment of students and staff based on personal relationships or biases creates a toxic school environment.
- **Inadequate Training:** According to Begley & Johansson (2008) insufficient training and support for administrators in ethical decision-making and conflict resolution can lead to poor governance and ethical dilemmas. Lack of training for school administrators can significantly hinder the promotion of ethical values within a school system. Without proper training, administrators may struggle to recognize, address, and prevent unethical behavior, potentially leading to a culture of low ethical standards and even contributing to a hostile environment. Inadequate understanding of ethical principles (Sakima & Yasin, 2023). Nevertheless, professional development and training in ethics are crucial for school administrators. These

programs can equip them with the knowledge, skills, and awareness necessary to foster a positive, ethical, and effective learning environment for all.

- **Cultural and Societal Influences:** Cultural norms and societal expectations can influence administrators' ethical decision-making, sometimes conflicting with professional values. Culturally, parents and the wider community play a crucial role in shaping a child's understanding of ethics and values of their immediate environment. Situations where parents and community members fail to value ethical behavior or actively promote it, it can be no issue for schools to establish a strong ethical culture. Sometimes students and families may perceive school policies and practices as unfair, biased, or discriminatory, leading to distrust and undermining ethical behavior. This can create a sense of injustice and resentment, making it harder to instill ethical values and promote a positive school climate. In addressing the issues administrators should Cultivate cultural sensitivity by actively seeking to understand the diverse cultural backgrounds within the school community, including their values, beliefs, and practices (Kocaba, & Karaköse, 2009).
- **Lack of Clear Policies:** Unclear policies and procedures can create ambiguity, making it challenging for administrators to uphold ethical values school system. A lack of clear ethical policies in schools creates several challenges for administrators in promoting ethical values. Without defined guidelines, it becomes difficult to establish clear expectations, hold individuals accountable, and ensure consistency in addressing ethical issues. This can lead to ambiguity, confusion, and ultimately, undermines the school's efforts to foster a culture of integrity. Without defined policies, communication to students, staff, and parents what constitutes ethical behavior in various situations will be challenging. Lack of clear guidelines makes it difficult to handle situations involving unethical behavior among students, staff and community at large, such as cheating or discrimination. Administrators may struggle to determine the appropriate course of action, leading to inconsistent responses and a perception of unfairness.

Conclusion

This study highlights the critical role that ethical leadership plays in shaping the educational system and contributing to sustainable national development. The issues and challenges discussed underscore the need for school administrators to prioritize ethical values such as integrity, transparency, accountability, and fairness in their decision-making and actions. Ethical leadership is essential for promoting a positive school culture, academic excellence, and sustainable national development. School administrators in Nigeria face various challenges, including financial constraints, corruption and nepotism, favoritism and bias, inadequate training, and lack of clear policies, which can undermine ethical values.

Suggestions

The following suggestions are proffer to tackle the issues and challenges of ethical values in school administration in Nigeria for Sustainable national development.

- The stakeholders in education should endeavour to establish clear policies and procedures that promote transparency, accountability, and fairness.
- Every school administrator needs to be aware of issues challenging their profession and receive adequate training to able to tackle them in their duties and responsibilities.
- The stakeholders in education should encourage a culture of integrity, where ethical behavior is valued and rewarded.
- Government address issues of corruption and nepotism by promulgating more strict punishment for offenders and be ready to implement them without favouritism and nepotism and also create a safe and supportive environment for whistleblowers to report corrupt practices without fear of retaliation.

- School administrator should prevent favoritism and bias to promote a culture of ethical values that ensure fairness and equity, and provide a positive learning environment for all.
- Government should endeavour to foster a supportive learning environment that encourages respectful communication, empathy, and constructive conflict resolution.
- Government Policy reforms are necessary to promote ethical values and address the challenges faced by school administrators.
- Government in addressing the financial constraint requires a commitment to providing adequate funding and resources to support the school's ethical mission.

Abstract

The study examined administrators' ethical strategies and effective administration in public Universities in Rivers State. Three research questions and three hypotheses guided the study. The study adopted a correlation research design. The area of the study was Rivers State. The population of the study consisted of 1,286 administrators in three Universities in Rivers State, which comprises of Rivers State University (RSU), University of Port Harcourt (UNIPORT) and Ignatius Ajuru University of Education (IAUE). Taro Yamane formula was used to determine the sample size used for the study. Sample size of 305 administrators from the three Universities were drawn from the population using stratified sampling technique. Two structured instruments titled "Administrators' Ethical Leadership Strategies Questionnaire (AELSQ)" and "Effective Administration in Public Universities Questionnaire (EAPUQ)" were used to elicit data from the respondents. The instrument was validated by two experts in the field of Measurement and Evaluation in Rivers State University. The reliability of the instrument was determined using Cronbach Alpha method. The reliability of the instrument gave a Cronbach Alpha index of 0.77, 0.73 and 0.83 which was considered reliable. The Pearson's Product Moment Correlation (PPMC) was used to answer the research questions and test the null hypotheses at 0.05 level of significance. The findings of the study revealed that, there is strong positive relationship between administrator's role modelling strategy, administrators' ethical policy enforcement strategy, administrator's transparency strategy and effective administration in public Universities in Rivers State. Based on the findings, it was recommended among others that, university administrators should demonstrate ethical leadership by maintaining high moral standards, professionalism, and integrity in all decision-making processes.

Keywords: Administrators, Ethical Leadership, Strategies, Effective Administration

Introduction

Public universities serve as pivotal institutions in the advancement of knowledge, societal development and the cultivation of future leaders. In Rivers State, Nigeria, these universities face a myriad of challenges, including financial constraints, infrastructural deficits and a rapidly changing educational landscape. Central to addressing these challenges is the ethical framework within which university administrators operate. Ethical strategies are not merely guidelines for conduct; they shape the very culture of an institution, influencing decision-making processes, stakeholder relationships, and ultimately, educational outcomes.

Recent studies have highlighted the critical role of ethical leadership in enhancing institutional effectiveness. For instance, a study by Oduro, Agyemang and Asare (2022) emphasized that ethical leadership fosters an environment of trust and accountability, which is essential for effective

governance in educational settings. Furthermore, Alabi (2023) argues that administrators who prioritize ethical considerations in their decision-making processes are more likely to achieve Sustainable Development Goals within their institutions. These findings underline the necessity of integrating ethical strategies into the administrative practices of public universities, particularly in regions where corruption and mismanagement have been prevalent.

Ethical leadership in administration is essential for fostering integrity and trust within organizations. Administrators employ various ethical strategies to guide their decision-making and actions, ensuring that they uphold the values of their institutions (Johnson & Smith, 2023). These strategies not only influence organizational culture but also affect stakeholder perceptions and outcomes. Recent studies emphasize the importance of ethical frameworks in administration, highlighting how effective ethical strategies contribute to positive organizational performance and stakeholder relationships (Brown, Treviño & Harrison, 2022; Johnson & Smith, 2023).

In the administration of public universities, ethical leadership plays a crucial role in ensuring transparency, accountability, and overall institutional effectiveness. Ethical leadership in university administration involves decision-making based on integrity, fairness, and the commitment to uphold ethical standards in all aspects of governance. Administrators who adhere to ethical leadership principles foster a culture of trust, respect, and professionalism among faculty, staff, and students. Brown and Treviño (2021), ethical leadership enhance institutional credibility, improves staff and student morale, and promotes adherence to regulatory frameworks that guide the operations of higher institutions. In Rivers State, where public universities play a significant role in higher education development, the adoption of ethical leadership strategies is essential for maintaining quality education, reducing corruption, and ensuring that policies are implemented for the benefit of all stakeholders.

Administrators' ethical leadership strategies encompass leading by example, promoting transparency, enforcing ethical conduct, ensuring inclusivity, and making ethically sound decisions that align with institutional goals. Ethical leaders influence institutional effectiveness by discouraging favouritism, academic fraud, financial mismanagement, and administrative inefficiencies (Treviño, Weaver, & Reynolds, 2022). When administrators model ethical behaviour, they inspire faculty and students to uphold ethical values, which translates to a more disciplined and effective academic environment. Public universities in Rivers State have faced challenges related to mismanagement, corruption, and leadership inefficiencies, which have affected students' academic performance and overall institutional progress. Addressing these challenges requires a strategic focus on ethical leadership practices that prioritize fairness, accountability, and the well-being of all university stakeholders.

Ethical leadership among administrators' is essential for fostering transparency, integrity, and accountability within organizations, especially in educational institutions, government agencies, and corporate settings. Administrators who implement ethical leadership strategies help to create a culture of fairness, respect, and professionalism, ultimately enhancing institutional efficiency and productivity. Below are types of ethical leadership strategies that administrators can adopt:

- i. **Leading by Example (Moral Role Modelling):** Administrators who demonstrate ethical behaviour through their actions set the tone for ethical conduct within their institutions. Brown and Treviño (2021) emphasize that leaders who act with honesty, fairness, and accountability inspire employees, faculty, and students to uphold similar values. By consistently making morally sound decisions, administrators reinforce ethical expectations, discourage corruption, and promote a culture of trust and respect. Example: A university administrator who transparently handles promotions and admissions fosters an environment where merit and integrity thrive.
- ii. **Establishing and Communicating Clear Ethical Policies:** A well-defined ethical framework provides guidelines on acceptable behaviour and decision-making within an institution. Administrators must develop codes of conduct, anti-corruption policies, and ethical guidelines to ensure compliance with organizational values (Treviño, Weaver, & Reynolds, 2022). Ethical policies should be clearly communicated to all stakeholders through training programs,

institutional handbooks, and periodic reinforcement. Example: A school principal implementing a zero-tolerance policy on bribery and favouritism in grading students ensures fairness and academic integrity.

- iii. **Promoting Transparency and Accountability:** Ethical administrators‘ prioritize open communication, fairness in decision-making, and accountability in financial and administrative processes. When employees and students trust that leadership decisions are based on merit and fairness, institutional credibility is strengthened (O‘Fallon & Butterfield, 2020). Transparency also discourages unethical behaviours such as embezzlement, favouritism, and academic fraud. Example: A university vice-chancellor who makes the institution’s financial reports publicly available demonstrates transparency, building confidence among students and staff.
- iv. **Encouraging Ethical Decision-Making:** Ethical administrators ensure that policies and decisions align with ethical principles such as fairness, justice, and integrity. They promote ethical reasoning by considering both the short- and long-term consequences of their decisions. Ferrell and Fraedrich (2021) suggest that administrators should apply ethical frameworks like consequentialism (focus on outcomes), deontology (following rules), and virtue ethics (moral character) when making decisions. Example: A school administrator who refuses to manipulate students‘ grades for political or financial gain upholds ethical decision-making.
- v. **Enforcing Ethical Conduct through Disciplinary Measures:** Ethical leadership requires that administrators hold individuals accountable for their actions by enforcing disciplinary measures for unethical behaviours. Kaptein (2022), leaders must implement whistle-blower protection policies to encourage the reporting of corruption, harassment, and other misconducts. Ethical enforcement ensures that violations are addressed fairly and consistently. Example: A university administrator who ensures that faculty members engaging in sexual harassment face disciplinary action reinforces ethical standards.
- vi. **Fostering an Inclusive and Respectful Work Environment:** An ethical administrators‘ values diversity, fairness, and respect for all stakeholders, regardless of gender, religion, or social background. Institutions that foster inclusivity experience higher engagement, reduced conflicts, and improved performance (Mayer, Kuenzi, & Greenbaum, 2020). Ethical administrators promote policies that support equal opportunities in hiring, promotions, and academic participation. Example: A university chancellor who implements policies that prevent discrimination in staff recruitment and student admissions promotes inclusivity.
- vii. **Investing in Ethical Training and Professional Development:** Ethical leadership is strengthened through continuous education, training programs, and awareness campaigns. Administrators should organize ethics workshops, leadership training, and mentorship programs to instil ethical values among faculty, staff, and students (Treviño & Brown, 2021). These initiatives help build moral awareness and ethical reasoning skills among all stakeholders. Example: A school administrator who mandates annual ethics training for teachers and students ensures that ethical leadership remains a core value in the institution.

Effective administration in public universities depends on the implementation of strong ethical leadership strategies that support policy enforcement, fair decision-making, and stakeholder engagement. Kaptein (2022) emphasizes that institutions led by ethical administrators experience higher academic integrity, improved governance structures, and stronger institutional reputation. Ethical leadership ensures that university policies are student-centered, faculty members are treated fairly, and financial resources are utilized transparently. In Rivers State, public universities can significantly

improve their service delivery by embracing ethical leadership strategies that prioritize quality education, inclusivity, and sustainable institutional growth. Therefore, administrators must continuously reinforce ethical values, provide training on ethical governance, and establish policies that discourage unethical behaviour in order to foster an academic environment that promotes excellence, integrity, and accountability.

Statement of the Problem

The effective administration of public universities in Rivers State is increasingly challenged by issues of corruption, mismanagement, lack of transparency, and poor ethical leadership. Many university administrators fail to adopt ethical leadership strategies, leading to a decline in academic integrity, financial accountability, and institutional efficiency (Brown & Treviño, 2021). The absence of clear ethical policies and accountability mechanisms has resulted in cases of nepotism, misallocation of resources, and administrative inefficiencies, negatively impacting the quality of education and research output. Without strong ethical leadership, universities struggle to uphold their mission of delivering quality education, fostering innovation, and maintaining global academic standards.

Furthermore, the lack of transparency in decision-making, financial management, and staff recruitment has contributed to poor governance structures, limiting the universities' ability to function effectively. Ethical leadership is essential for ensuring fairness in promotions, faculty development, and student support services (Kaptein, 2022). However, in many public universities in Rivers State, there is a gap between administrative policies and ethical leadership practices, leading to dissatisfaction among faculty, students, and stakeholders. The failure to adopt student-centered policies, uphold academic honesty, and integrate inclusive leadership strategies has hindered institutional growth and development.

If these ethical leadership gaps are not addressed, public universities in Rivers State risk continued academic decline, poor research output, and loss of credibility. There is an urgent need for ethical leadership strategies that promote accountability, fairness, and institutional effectiveness to enhance staff morale, student performance, and overall university administration. It is for these reasons the researcher carried out the study to find out; What is the relationship between administrators' ethical leadership strategies and effective administration of Public Universities in Rivers State? and to proffer solutions to the stated problems.

Purpose of the Study

The purpose of the study was to examine Administrators' Ethical Leadership Strategies and Effective Administration of Public Universities in Rivers State. The specific objectives of this study are to:

1. Determine the relationship between Administrators' role modeling strategy and Effective Administration in Public Universities in Rivers State.
2. Examine the relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State.
3. Ascertain the relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State.

Research Questions

The following research questions guided the study:

1. What is the relationship between Administrators' role modeling strategy and Effective Administration in Public Universities in Rivers State?
2. What is the relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State?
3. What is the relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State?

Hypotheses

The following hypotheses were tested at 0.05 level of significance;

1. There is no significant relationship between Administrators' role modeling strategy and Effective Administration in Public Universities in Rivers State.
2. There is no significant relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State.
3. There is no significant relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State.

Methodology

The study adopted a correlation research design. The area of the study was Rivers State. The population of the study consisted of 1,286 administrators in three universities in Rivers State, which consists of Rivers State University (RSU), University of Port Harcourt (UNIPORT) and Ignatius Ajuru University of Education (IAUE). Taro Yamane formula was used to determine the sample size used for the study. Sample size of 305 administrators from the three Universities were drawn from the population using stratified sampling technique. Two structured instruments titled "Administrators' Ethical Leadership Strategies Questionnaire (AELSQ)" and "Effective Administration in Public Universities Questionnaire (EAPUQ)" were used to elicit data from the respondents. Responses to the questionnaire items were structured on a four-point summated rating scale of: Strongly Agreed (SA) – 4points, agreed (A) – 3points, disagreed (D) – 2points and Strongly Disagree (SD) – 1points. The instrument was validated by two experts in the field of Measurement and Evaluation in Rivers State University.

The reliability of the instrument was determined using Cronbach Alpha method. The reliability of the instrument gave a Cronbach Alpha index of 0.77, 0.73 and 0.83 which was considered reliable. The Pearson's Product Moment Correlation (PPMC) was used to answer the research questions and test the null hypotheses at 0.05 level of significance. This was further tested by transforming the coefficient of correlation r to t in order to establish the significance or other wise of the r -value. The classification of r value magnitude used for decision making according to Mahdavi (2012) is stated as follows;

- i. + 0.30. A weak uphill (positive) relationship
- ii. + 0.50. A moderate uphill (positive) relationship
- iii. + 0.70. A strong uphill (positive) relationship
- iv. Exactly + 1. A perfect uphill (positive) relationship
- v. Exactly – 1. A perfect downhill (negative) relationship
- vi. – 0.70. A strong downhill (negative) relationship
- vii. – 0.50. A moderate downhill (negative) relationship
- viii. – 0.30. A weak downhill (negative) relationship
- ix. 0. No relationship

Results

Research Question 1: What is the relationship between Administrators' role modelling strategy and Effective Administration in Public Universities in Rivers State?

Table 1: PPMC Analysis on Relationship between Administrators' Role Modelling Strategy and Effective Administration in Public Universities in Rivers State

Variables			N	$\sum x$ $\sum y$	$\sum x^2$ $\sum x^2$	$\sum xy$	r-value	Decision
Administrators‘ Strategy	Role	Modelling	305	5459	84724

Effective Universities	Administration	in Public	305	6120				

Source: Field survey (2024)

The information in Table 1 shows the relationship between Administrators' role modelling strategy and Effective Administration in Public Universities in Rivers State. When university administrators' model ethical behaviour, they set a standard for integrity, honesty, and fairness, encouraging faculty, staff, and students to adopt similar values. Ethical role modelling builds trust among students, faculty, and external stakeholders, fostering a positive reputation for the university. Administrators who lead by example inspire faculty and staff to take responsibility for their actions, ensuring transparency in decision-making and governance. Ethical role modeling creates a positive work and learning environment, leading to higher job satisfaction among staff and improved student motivation. When administrators uphold ethical standards, they discourage malpractices such as bribery, favoritism, and embezzlement, ensuring proper allocation of resources and funds. The calculated r-value 0.73 shows an uphill (strong positive) relationship between Administrators' role modelling strategy and Effective Administration in Public Universities in Rivers State. This implies that Administrators' role modelling strategy is related to Effective Administration in Public Universities. In other words, this is the type of relationship in which an increase in one variable leads to the increase in another variable.

Research Question 2: What is the relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State?

Table 2: PPMC Analysis on Relationship between Administrators' Ethical Policy Enforcement Strategy and Effective Administration in Public Universities in Rivers State

Variables				N	$\sum x$ $\sum y$	$\sum x^2$ $\sum y^2$	$\sum xy$	r-value	Decision
Administrators' Ethical Policy Enforcement Strategy			305	6314	85304				
					98564	948378	0.80	Positive (strong)	
Effective Administration in Public Universities			305	7406					

Source: Field survey (2024)

The information in Table 2 shows the relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State. Enforcing ethical policies ensures that administrators, faculty, and students uphold honesty, transparency, and accountability, fostering a corruption-free university environment. Strict enforcement of ethical policies prevents financial mismanagement, bribery, and favouritism, ensuring that university funds and

resources are utilized efficiently for academic and infrastructural development. Ethical policy enforcement discourages plagiarism, exam malpractice, and academic dishonesty, leading to credible research outputs and a reputable learning environment. Strong ethical policies ensure that students and staff receive equal opportunities without discrimination based on gender, ethnicity, or political affiliations, promoting diversity and inclusivity. Ethical policy enforcement promotes responsible leadership, ensuring that university management adheres to best practices in administration, faculty appointments, and student welfare. The calculated r-value 0.80 shows an uphill (strong positive) relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State. This implies that Administrators' ethical policy enforcement strategy is related to Effective Administration in Public Universities in Rivers State.

Research Question 3: What is the relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State.

Table 3: PPMC Analysis on Relationship between Administrators' Transparency Strategy and Effective Administration in Public Universities in Rivers State

Variables	N	$\sum x$ $\sum y$	$\sum x^2$ $\sum y^2$	$\sum xy$	r-value	Decision
Administrators' transparency strategy	305	5150	73518	821505	0.85	Positive (strong)
Effective Administration in Public Universities	305	5590	75548			

Source: Field survey (2024)

The information in Table 3 shows the relationship Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State. Transparency in university administration fosters trust among students, faculty, staff, and external stakeholders, enhancing the university's credibility and reputation. Transparent governance discourages financial mismanagement, embezzlement, and favouritism, ensuring fair allocation of resources and ethical leadership. When administrators uphold transparency, it reinforces strict academic policies, reducing plagiarism, examination malpractice, and falsification of research data. Transparency ensures that policy-making, budgeting, and administrative decisions are inclusive and evidence-based, reducing biases and promoting fair leadership. Public universities with transparent policies encourage faculty, staff, and students to take responsibility for their actions, fostering a culture of honesty and accountability. The calculated r-value 0.85 shows an uphill (strong positive) relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State. This implies that Administrators transparency strategy is elated to Effective Administration in Public Universities in Rivers State. In other words, this is the type of relationship in which an increase in one variable leads to the increase in another variable.

Test of Hypotheses

H₀₁: There is no significant relationship between Administrators' role modelling strategy and Effective Administration in Public Universities in Rivers State.

Table 4: Significant Relationship between Administrators' Role Modelling Strategy and Effective Administration in Public Universities in Rivers State

	N	$\sum x$ $\sum y$	$\sum x^2$ $\sum y^2$	$\sum xy$	Df	r-cal	t-cal	t-crit	Decision
Administrators' Role Modelling Strategy.	305	5459	84724						
Effective Administration in Public Universities.	305	6120	93615	913826	303	0.73	10.67	1.96	H ₀₂ Rejected

* Significance at 0.05 (2024)

Source: Field Survey

In Table 4, the t-transformed (calculated) value of 10.67 is greater than the t-critical value of 1.96 for 303 degrees of freedom at 0.05 level of significance, the null hypothesis which states that there is no significant relationship between Administrators' role modelling strategy and Effective Administration in Public Universities in Rivers State is hereby rejected and the alternate is thus accepted. The implication is that Administrators' role modelling strategy is related to Effective Administration in Public Universities in Rivers State, as such the positive relationship between Administrators' role modelling strategy and Effective Administration in Public Universities is significant.

H₀₂: There is no significant relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State.

Table 5: Significant Relationship between Administrators' Ethical Policy Enforcement Strategy and Effective Administration in Public Universities in Rivers State

	N	$\sum x$ $\sum y$	$\sum x^2$ $\sum y^2$	$\sum xy$	Df	r-cal	t-cal	t-crit	Decision
Administrators' Ethical Policy Enforcement Strategy.	305	6314	85304						
Effective Administration in Public Universities.	305	7406	98564	948378	303	0.80	13.57	1.96	H ₀₂ Rejected

* Significance at 0.05

Source: Field Survey (2024)

In Table 5, the t-transformed (calculated) value of 13.57 is greater than the t-critical value of 1.96 for 303 degrees of freedom at 0.05 level of significance, the null hypothesis which states that there is no significant relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State is hereby rejected and the alternate is thus accepted. The implication is that Administrators' ethical policy enforcement strategy is related to Effective Administration in Public Universities in Rivers State. To confirm the significant relationship, a t-transformation of the computed r-value was done and the result is as presented above with $t\text{-cal} = 13.57 > t\text{-crit} = 1.96$.

H₀₃: There is no significant relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State.

Table 6: Significant Relationship between Administrators' Transparency Strategy and Effective Administration in Public Universities in Rivers State.

Variables	N	$\sum x$ $\sum y$	$\sum x^2$ $\sum y^2$	$\sum xy$	Df	r-cal	t-cal	t-crit	Decision
Transparency Strategy.	305	5150	73518						
				821505	303	0.85	15.63	1.96	H ₀₃ Rejected
Effective Administration in Public Universities.	305	5590	75548						

* Significance at 0.05

Source: Field survey (2024)

In Table 6, the t-transformed (calculated) value of 15.63 is greater than the t-critical value of 1.96 for 303 degrees of freedom at 0.05 level of significance, the null hypothesis which states that there is no significant relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State is hereby rejected and the alternate is thus accepted. The implication is that Administrators' transparency strategy is related to Effective Administration in Public Universities in Rivers State. To confirm the significant relationship, a t-transformation of the computed r-value was done and the result is as presented above with t-cal = 15.63 > t-crit = 1.96.

Discussion of Findings

The findings of research question one revealed that there is a high and relationship between Administrators' role modelling strategy and Effective Administration in Public Universities in Rivers State. The calculated r-value 0.73 shows an uphill (strong positive) relationship between Administrators' role modelling strategy and Effective Administration in Public Universities in Rivers State. This implies that Administrators' role modelling strategy is related to Effective Administration in Public Universities in Rivers State. In hypotheses four, the t-transformed (calculated) value of 10.67 is greater than the t-critical value of 1.96 for 303 degrees of freedom at 0.05 level of significance, the null hypothesis which states that there is no significant relationship between Administrators' role modelling strategy and Effective Administration in Public Universities in Rivers State is hereby rejected and the alternate is thus accepted. The findings of the study is in agreement with the assertions of Brown and Treviño (2021) which emphasize that leaders who act with honesty, fairness, and accountability inspire employees, faculty, and students to uphold similar values. By consistently making morally sound decisions, administrators reinforce ethical expectations, discourage corruption, and promote a culture of trust and respect.

Research question two shows the relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State. The calculated r-value 0.80 shows an uphill strong positive relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State. In corresponding hypothesis two, the t-transformed (calculated) value of 13.57 is greater than the t-critical value of 1.96 for 303 degrees of freedom at 0.05 level of significance, the null hypothesis which states that there is no significant relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State is hereby rejected and the alternate is thus accepted. This is in agreement with Kaptein (2022) who argued that, leaders must implement whistle-blower protection policies to encourage the reporting of corruption, harassment, and other misconducts. Ethical enforcement ensures that violations are addressed fairly and consistently.

Research question three shows the relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State. The calculated r-value 0.85 shows an uphill (strong positive) relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State. The calculated r-value 0.85 shows an uphill (strong positive) relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State. The corresponding hypothesis three, the t-transformed (calculated) value of 15.63 is greater than the t-critical value of 1.96 for 303 degrees of freedom at 0.05 level of significance, the null hypothesis which states that there is no significant relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State is hereby rejected and the alternate is thus accepted. The finding of the study is in agreement with submission of O'Fallon and Butterfield (2020) who argued that, Transparency discourages unethical behaviours such as embezzlement, favouritism, and academic fraud. Ethical administrators prioritize open communication, fairness in decision-making, and accountability in financial and administrative processes. When employees and students trust that leadership decisions are based on merit and fairness, institutional credibility is strengthened.

Conclusion

Based on the findings of the study, the researcher concludes that; There is strong positive relationship between Administrators' role modelling strategy, Administrators' ethical policy enforcement strategy, Administrators transparency strategy and Effective Administration in Public Universities in Rivers State. Administrators' ethical leadership strategies are fundamental to the effective administration of public universities. Ethical leadership fosters transparency, accountability, and fairness in decision-making processes, ensuring that universities operate with integrity and professionalism. By implementing ethical policies, enforcing standards of conduct, and promoting inclusivity, administrators can create an environment that supports academic excellence, faculty productivity, and student success. Ethical leadership also plays a crucial role in minimizing corruption, favouritism, and unethical practices, thereby strengthening institutional credibility and stakeholder confidence.

Recommendations

Based on the findings of the study, the following recommendations were made;

Strengthening Administrators' Role Modelling Strategy:

1. University administrators should demonstrate ethical leadership by maintaining high moral standards, professionalism, and integrity in all decision-making processes.
2. Administrators should serve as role models by promoting accountability, fairness, and respect for institutional policies, thereby fostering an ethical culture among staff and students.

Enhancing Ethical Policy Enforcement Strategy:

3. Universities should establish and enforce comprehensive ethical policies that clearly define acceptable behaviour, responsibilities, and disciplinary measures for violations.
4. Independent ethics and compliance committees should be created to oversee the implementation of ethical policies and ensure impartial handling of misconduct cases.

Improving Transparency Strategy in University Administration:

5. University administrators should embrace open governance by making administrative decisions, financial records, and institutional policies publicly accessible to stakeholders.
6. Regular stakeholder engagement meetings, such as town halls and public forums, should be conducted to promote inclusivity and participatory decision-making. \

Abstract

The study examined factors influencing ethical standards of supervisors of instruction in public secondary school in Anambra State Nigeria. Two research questions were answered in the study. The study adopted a descriptive research design. The population comprised 1,200 public secondary school teachers in Anambra State. Using a proportionate sampling technique, 120 teachers were sampled as respondents. This represented 10% of the population. A 23-item questionnaire, constructed by the researchers, titled —Factors Influencing Ethical Standards of Supervisors Questionnaire (FIESSQ) was used as the instrument for data collection. It was validated by three experts in education. The test of reliability of the instrument yielded a co-efficient of 0.88 and 0.84. Mean scores and Standard Deviation were used to answer the research question. Major findings of the study included that exploitative relationship, favouritism, discrimination, scapegoating, intolerance, derogatory treatment, conflict of interest, etc, were the factors that influence ethical standards of supervisors of instruction in Anambra State. The findings also revealed that fostering positive learning environment, setting clear guidelines, prompt response to issues, clear communication channels, well defined expectations, training programmes, amongst others, constituted ways by which supervisors can improve ethical standards in supervision of instruction in the state. Based on the findings, the researchers recommended that both the Federal and the State government should provide ethical training programmes to educate supervisors in ethical principles, in order to promote ethical conducts, Government should establish clear guidelines and policies on ethical conducts for supervisors with full implementation, to ensure that supervisors understand their responsibilities and expectations. It was also recommended that the education system should conduct regular evaluation of supervisors' performance and establish disciplinary procedures for ethical violation. Based on the findings, the researchers, finally concluded that there are factors that influence ethical standards of supervisors in supervision of instruction in public secondary schools in Anambra State and that these detrimental factors cannot be neglected. Ethical standards, being an important aspect of school, needs serious concentration. Hence proper approach is fundamental to the change because a good measure of ethics in supervisory practices will contribute to the achievement of a more just and sustainable national goal of education in the country.

Keywords: Factors, Influence, Ethics, Ethical Standards, Supervisors, Supervision, Instruction, Public Schools.

Introduction

Supervision in education ordinarily refers to improvement of the total teaching and learning situation and conditions that affect them. It is a social function designed to improve instruction by working with the teachers who are working with the learners. It is more so defined as an act of a superior person overseeing the work of the subordinate working at the lower level. The overseeing means directing, guiding, advising and helping the subordinates in performance, with the purpose of achieving established goals. Key supervisory roles include educating, coaching, sponsoring, counseling, improving, refreshing, encouraging and motivating the supervisee. In this context, principle effectiveness of supervision include supervisors identification of needs and strength-focusing of the supervisees, while the main goal is to improve their confidence and critical thinking, as they seek support and feedback for growth and development in their professional teaching.

It is important to remember that schools have never been islands as they ward off the effects of trends emerging with humane nature of man. It is equally important to understand that school are now subjects to the impacts of global changes to which the stakeholder require rapid local response. Supervision has been far from the novel concept. The reality is that its methodology and techniques have gone a long way from the past several decades and is still making several headways. Hence modern supervision as opposed to inspection in education, has become a concept where ethical standards of supervisors should trend higher, to promote professional growth of teachers' ability to effectively and efficiently teach in classroom setting for sustainable national development in education.

The term ethics is fashionable and is seen in almost every profession. The word is simply defined as the science of right and wrong, the science of moral judgment and conduct. It is a concept about moral values and rules. Ethics in education, especially in school, deals with moral principles that guide behaviours within the educational environment. Ethical standards in education reflects making decision that follows appropriate conducts and respect to others in the teaching learning situations. In school supervision, ethical standards are fundamental in guiding teachers. These standards ensure fairness, protection, accountability of teachers and their wellbeing, ultimately fostering positive and ethical teaching and learning. Supervisors ethical leadership is of great importance regarding growth and development of education. Some moral norms for right conducts are common to human kind as they transcend and constitute common morality such as not to: harm, suffer or punish the innocent; to be truthful, obey the law in nurturing the young. Thus, it is important to link ethical standards to supervision of instruction in Public secondary schools.

The Problem

Problems of supervision of instruction can be dimensional. Several of them plague the supervisors, hindering the ability to effectively render their supervisory duties. Dozens of articles and chapters had been written on supervision of instruction and its subsidiaries, but very scanty of them, if not none, treated the practice of ethics as a component for achieving instructional supervision efficiency and effectiveness. Many related literatures in the study revealed the gap of ethical consideration as an area of one of the serious factors affecting efficiency in supervision of instruction. Many of the previous research works have not touched the area of ethical standards that are required to enhance supervisory services in schools. Factors like insufficient funding, lack of resources, resistance of teachers, excessive workload of the supervisors, and the likes, were common in the findings of most previous researchers such as Adesina (2001), Kamido (2006), Olatuye (2006), Eya et al (2012), Anuna (2024) and Danladi et al (2019), among numerous others. None of the aforementioned studies were found to relay the ethics of research involving human object as a factor in achieving successful supervision of instruction in schools. None were concerned with the principles of respect of persons, beneficence and justice. This showed that many former researchers have not delved into most of the critical ethical issues in supervision of instruction. Comments that did follow their findings failed to observe the ethical principle as a constituent to achieving successful instructional supervision. Even in some theoretical frameworks in the field by such authors as Okoli (2006), Throne (2020), Onele et al (2016) and others. The concept that reflects the ethics issues or debate about disability and feasibility of ethics

were yet to gain discussions, in as much as no book of reading in exhaustive. To strengthen this gap of omissions, a study By Izham et al (2024) found that till date, teachers have not been really satisfied with the instructional supervisory services carried out in schools. The entire school organization in the country Nigeria and the public secondary Schools in Anambra State seemed not to be exempted in the face of this ugly situation of the supervisory services practiced by supervisors. According to Gordean et al (2001) ethical issues are part of everyday life, therefore, are integrated and intertwined with professionalism. Anytime one compromises ethics, one damages the organization's reputation. In this present time, education managers have started to feel more pressure on their arms when ethical complex situation arise. Moreso, in the recent years, ethics is becoming a popular topic in many professional fields and education stands at the cross of the road. In order to continually maintain good instructional supervision, there is need to incorporate ethical standards. Hence a systematic approach to ethical issues that may influence supervisors in supervision of instruction in th public secondary schools in Anambra State need to be investigated. Addressing the ethical delima in the supervision of instruction in public secondary school in Anambra State is what this Paper sets out to do.

Purpose of the study

The purpose of the study was to access ethical standards in supervision of instruction in the public secondary schools in Anambra State. Specifically, the study aimed at:

1. Finding the common factors influencing supervisors ethical standards in supervision of instruction in the public secondary schools in Anambra State, Nigeria.
2. Proffering solution to resolving the factors as problems influencing supervisors' ethical standards in supervision of instruction in public secondary schools in Anambra State, Nigeria.
3. Integrating ethical Standards while carrying out instructional supervision in public secondary schools in Anambra State.
4. Establishing and maintaining high ethical standards for supervisors of instruction in public secondary schools in Anambra State.

Research Questions

1. What are the factors influencing supervisors ethical standards in instructional supervisory practices in the Public Secondary Schools in Anambra State?
2. How can the ethical Standards of the supervisors of instruction in the Public Secondary School in Anambra State be Improved?

Literature

Markkular (2023) posited that well founded ethical standard prescribes what human ought to do usually in terms of right, obligations, fairness and its benefit to the internal and external perspective. Code of conduct for instructional supervision (2021) highlighted that ethical supervision shares crucial information, transparent communication, and clear explanation of what is expected of the supervisees. According to Kokaba and Karakosa (2004) ethical codes expected of school supervisors included due care, confidentiality, fostering positive relationship, building trust and help to develop the supervisees' skills to achieve learning objectives. Similarly, Kutahya(2009) noted that the first ethical responsibility of supervisors is to: have ethical perception of instructional supervion, reflect on the practices and behave ethically while doing the job. Moreover, Gidado (2022) also observed that supervisors have ethical responsibilities beyond enforcing educational policies and obeying laws. Instead, it priotises teachers' and student's wellbeing, ensuring a safe and equitable learning environment for all. Nevertheless, ethical standards are not static; they should be reviewed and updated regularly, to reflect the evolving need of school supervision.

Methodology

This is a descriptive survey research. 120 teachers were selected from 1,200 teachers in the public secondary schools in the State.

The instrument for data collection was a self designed structure questionnaire titled —Factors Influencing Ethical Standards of Supervisors Questionnaire (FISSQ). The instrument had two sections A-B. Section A contained 12 questions on supervisors attitude towards supervision of instruction, while Section B has 11 items that sought information on how supervisors can improve their ethical standards in supervision of instruction. All the items were structured on a 4 point rating scale of Strongly Agree (SA), Agree (A), Disagree (D), Strongly Disagree (SD), weighted 4,3,2,1 respectively. The face validation of the instrument was determined by three experts in the faculty of education, Chukwuemeka Odumegwu Ojukwu University, Igbaram, Anambra State. The questionnaire reliability was ascertained through a pilot study. The data collected were analysed using Cronbach Alpha Reliability Method, which yielded coefficient values of 0.88. The reliability analysis on the obtained data yielded a score of 0.85 for internal consistency which was considered adequate for the study. Out of 120 questionnaire administered, 110 were duly filled and returned. This represented 95% retrieval rate.

The data generated from the questionnaire were analysed using Mean ($\bar{M}$) and Standard Deviation (SD). The Mean value was used to answer the research questions and the Standard Deviation was used to ascertain the homogeneity or otherwise, of respondents' ratings. The items with Mean score between 2.50 and above were Agree, whereas those with Mean score below 2.50 were Disagree.

Results

Research question 1

s/n	Factors Influencing Ethical Standards of Supervisors in Supervision of Instruction Include:	Rating		
		M	SD	Remark
1	Exploitative relationship with the supervisees; either financially, emotionally or in any other way.	3.36	0.87	Agree
2	Favouritism: partiality/bias/being unfair, unjust or subjective in evaluation.	3.24	0.78	Agree
3	Non transparent communication in sharing crucial information and giving supervisees an opportunity to be heard.	3.20	0.83	Agree
4	Discrimination against vulnerable supervisees	3.22	0.85	Agree
5	Upholding power structure at the detriment of valuable considerations.	3.33	0.83	Agree
6	Shifting responsibilities unto the supervisees instead of addressing the problem.	3.45	0.90	Agree
7	Assigning blames to supervisees for things not done well.	3.12	0.79	Agree
8	Scapgoating supervisees for self sustaining competence	3.22	0.82	Agree
9	Intolerance of supervisees' views, opinions and ideas.	3.35	0.78	Agree
10	Derogatory treatment of supervisees by not recognizing their values, worth and dignity.	3.41	0.89	Agree
11	Disclosure of personal information of the supervisee.	3.07	0.74	Agree
12	Conflict of interests.	3.32	0.85	Agree
Cluster Mean		3.26		Agree

What are the factors influencing Supervisors ethical standards in instructional supervisory practices in public secondary schools in Anambra State?

Table 1:

Respondents' Mean rating on Factors Influencing Ethical Standards of Supervisors in Supervision of Instruction in Public Secondary Schools in Anambra State.

s/n	Factors Influencing Ethical Standards of Supervisors in Supervision of Instruction Include:	Rating		
		M	SD	Remark
1	Exploitative relationship with the supervisees; either financially, emotionally or in any other way.	3.36	0.87	Agree
2	Favouritism: partiality/bias/being unfair, unjust or subjective in evaluation.	3.24	0.78	Agree
3	Non transparent communication in sharing crucial information and giving supervisees an opportunity to be heard.	3.20	0.83	Agree
4	Discrimination against vulnerable supervisees	3.22	0.85	Agree
5	Upholding power structure at the detriment of valuable considerations.	3.33	0.83	Agree
6	Shifting responsibilities unto the supervisees instead of addressing the problem.	3.45	0.90	Agree
7	Assigning blames to supervisees for things not done well.	3.12	0.79	Agree
8	Scapgoating supervisees for self sustaining competence	3.22	0.82	Agree
9	Intolerance of supervisees' views, opinions and ideas.	3.35	0.78	Agree
10	Derogatory treatment of supervisees by not recognizing their values, worth and dignity.	3.41	0.89	Agree
11	Disclosure of personal information of the supervisee.	3.07	0.74	Agree
12	Conflict of interests.	3.32	0.85	Agree
Cluster Mean		3.26		Agree

Table 1 highlighted the Mean responses of the respondents on the factors influencing supervisors' instructional supervision in public secondary schools. The results showed that the whole items fall within the Mean ranging between 3.07 and 3.45 with standard deviations ranging between 0.74 and 0.90. This revealed that the listed items constituted factors influencing ethical standards of supervisors of instruction in public secondary schools in Anambra State.

The Cluster Mean of 3.26 revealed that exploitative relationship, favouritism, non-transparent communication, discrimination, power structure, shifting responsibilities, assigning blames to supervisees, scapegoating, intolerance derogatory treatment, disclosure of personal information of supervisees and conflict of interests constituted supervisors' attitudes that influence their ethical standard in supervision of instruction in public secondary schools in Anambra State, Nigeria.

Research question 2

How would the ethical standard of supervisors of instruction in public secondary schools in Anambra State be improved?

Table 2: Respondents' Mean rating on how ethical standards of Supervisors of instruction in Public Secondary Schools in Anambra State can be improved.

S/N	Ethical standards of supervisors of instruction can be improved by;	Rating		
		M	SD	Remark
1	Fostering positive learning environment by addressing potential conflicts proactively.	3.30	0.87	Agree
2	Creating comprehensive and well clear instructions and discussing them with supervisee.	3.22	0.85	Agree
3	Providing clean guidance for the supervisees.	3.43	0.91	Agree
4	Responding quickly to questions and clarification of issues.	3.48	0.92	Agree
5	Establishing clear communication channels to facilitate fair hearing.	3.12	0.76	Agree
6	Avoidance of dual relationship in supervision (Intimacy).	3.17	0.84	Agree
7	Specifying well defined expectations from the supervisees.	3.24	0.70	Agree
8	Undergoing training programmes for effective mentoring and acquisition of current trends in supervisory practices.	3.33	0.86	Agree
9	Clarification of boundary problems for better relationship with supervisees.	3.35	0.89	Agree
10	Commitment to ethical practices.	3.22	0.86	Agree
11	Being a good role model	3.11	0.80	Agree
	Cluster Mean	3.24	0.87	Agree

Data in Table 2 showed the Mean responses on how ethical standard of supervisors of instruction in public secondary schools in Anambra State could be improved. All the items achieved Mean ratings between 3.12 – 3.48 with standard deviation ranging between 0.70–0.92. This means that all the listed items were the ways through which ethical standards of supervisors of instruction in the public Secondary Schools in Anambra State could be improved. The Cluster Mean of 3.24 indicated that the supervisors ethical standards could be improved by fostering positive learning environment through addressing potential conflicts proactively, creating comprehensive plans to set clear instructions and discussing openly with supervisees, providing clear guidelines for the supervisees, responding quickly to questions and clarification of issues, establishing clear communication channels to facilitate fair hearings, avoidance of dual relationships, specifying well defined expectations from supervisees, undergoing training programmes for effective mentoring and acquisition of current trends in supervisory practices, clarification of boundary problems for better relationship with supervisees and commitment to ethical practices.

Discussion

Results of Research question one established that supervisors' poor attitudes are the factors that influence their ethical standards in supervision of instruction in the public secondary schools in Anambra State. This result is in line with the studies of Bevere (2023), Szamet (2024) and Carey and Peck (2022), who discovered that such attitudes of unfair treatment of any kind, non recognition of values, dignity and worth of persons, among others, constituted poor ethical standards of supervisors in school supervision. Similarly, discrimination, favouritism, violating professional standards and so on were highlighted in the similar studies of Manley (2018), Breach et al (2012) and Chris (2021). Even the studies of Khan (2024) and Claudio (2019) listed: compromising professional judgment, conflict of interest, etc, as factors of unethical behaviour committed by school supervisors. The result also aligned with Wisco (2023) and Alexander (2024) who found that supervisors' ethical standards are lowered with poor interaction and strained relationship. These poor attitudes are characterized by tension, discomfort and breakdown in effective communication between individuals, often due to unresolved conflicts or unmet expectations.

The second finding of this study indicated that supervisors' ethical standards could be improved through some meaningful ways. The findings agree with Chrysos (2025) in a study on how to improve ethical leadership skill, where he discovered that the ingredients included making decisions based on values, providing ethical training, clear communication and instruction, impartiality in dealing with supervisory matters, transparency, and lots of others. In the same vein, Thorne (2020), writing on Ethical Issues in Supervision, identified that avoidance of dual relationship by way of intimacy with the supervisee, clarifying boundaries in supervisees relationship, specifying expectations and clear guidance, etc, go a long way to improve supervisors' ethical standards in their job.

Conclusion

Based on the findings of the study, the researchers draw the conclusion that there are factors that influence ethical standards of supervisor in supervision of instruction in secondary schools, therefore these determinatal factors can not be neglected. Ethical standards is important aspect in schools that needs serious concentration. A proper approach is fundamental to change the supervisors' perceptions which can influence their attitudes towards supervision of instruction. A good measure of ethics in supervision of instruction will get the supervisors committed to upholding the highest ethical standards that will contribute to the achievement of a more just and sustainable nation goal of education in the country.

Recommendations

The researchers make the following recommendations based on the findings: -

1. The Federal and State Government should provide ethics training programmes that aim to educate supervisors and other stakeholders in school on ethical principles, values and guidelines, to enhance awareness of ethical ideal and promote ethical conduct.
2. Government should establish a clear guideline and policies on ethical conduct for supervisors as well as making full implementation to ensure that supervisors understand their responsibilities and expectations.
3. The education system should conduct regular evaluation of supervisors' performance and establish disciplinary procedures for ethical violations.

Abstract

The study investigated influence of principals' awareness of digital literacy ethics on administrative effectiveness of secondary schools in Cross River State, Nigeria. Two research objectives with corresponding research questions and null hypotheses guided the study. The study employed descriptive survey research design. The sample for the study consisted 299 principals, selected through census sampling. A researcher-developed questionnaire titled Digital Literacy Ethics and Administrative Effectiveness Questionnaire (DLEAEQ), was used for data collection. The instrument was validated by experts in the Faculty of Education, University of Calabar and tested for reliability using split-half method and a coefficient of 0.81 was realised. The data collected was analyzed using frequency counts, mean scores, and standard deviation for research questions, while Chi-square goodness of fit was used for testing all the null hypotheses at 0.05 level of significance. The study found that principals' awareness of cybersecurity and data privacy had influence on administrative effectiveness of secondary schools in Cross River State. The study concluded that principals' awareness of digital literacy ethics significantly influences administrative effectiveness of secondary schools in Cross River State, Nigeria. Based on the findings, recommendations were made, among others, that the principals should increase their capacity in managing cybersecurity in their places of work in order to contribute to administrative effectiveness for sustainable national development.

Keywords: Awareness, Digital Literacy, Ethics, Administrative Effectiveness

Introduction

Information and data are vital for every administrator, manager or principal if they must perform their tasks effectively and efficiently. With the coming of the digital age, there has been a dramatic increase in the volume of such information sources, which have become more frequently accessible in digital formats. The need to have digital literacy has therefore, become more obvious. The capacity to present and produce content within the digital environment is considered a vital qualification for the twenty-first-century (Kaeophanuek, et al. 2018). Digital literacy is a subset of skills under the broad ICT literacy scope. Digital literacy skills are regarded as very vital in connecting to the world of knowledge and information. According to Sadiku, et al. (2016), it has been referred to as internet literacy, information literacy, cyber literacy, computer literacy, and so on. Kim and Yang (2016) viewed internet literacy as the ability to access, understand, and produce information [from the

worldwide web]. Atmojo, et al. (2022) see digital literacy as the knowledge and skills required on using digital media like as Google, YouTube, e-books, as well as communication tools such as cell phones and laptops to find, evaluate, use, create, and use information correctly, wisely, intelligently, carefully, precisely, and lawfully. In essence, from these various definitions, digital literacy is an essential skill, broader than computer literacy.

Literacy as a concept has equally evolved over the years. As computers and digital technology came into existence, literacy also took on new or wider definitions. Literacy in form of digital technology, voice, image, data or packaging, and storing of all kinds of messages with coding came with the development of computer technologies and communication devices (Ayhan, 2017). Digital literacy is a process that reposes on knowledge literacy, internet literacy, and web literacy. At the same time, digital literacy also finds its own place as being a systematic obligation. Developing technology and massified structures necessitate digital literacy (Allen, 2016).

Management of information in form of digital literacy is also a very significant part of an administrator's tasks in collaboration with government's efforts. For instance, to reduce the digital divide and enhance technological inclusion, various digital literacy programs such as the National Information Technology Development Agency (NITDA) have been introduced with the purpose, among others, to equip vulnerable populations with essential digital skills to navigate the internet and improve employment prospects.

However, it is the concern of educational managers and teachers that there should be ethical use of these technologies because, associated with this expanded possibility comes additional risks such as cyberbullying, identity theft and online harassment (Ukpong, 2023), as well as knowledge gaps in form of a digital divide, and other challenges. By fostering digital literacy and promoting cyber ethics, educational institutions can become responsible, informed, and capable of navigating the challenges and opportunities of the digital world. Scholars such as Hakimi et al. (2021) also acknowledged that the digital shift raises ethical concerns and challenges to several stakeholders in the education subsector. Educational institutions as one of the institutions that prepare students to confront and overcome existing challenges in the 21st century have an important role in developing students' digital literacy skills (Atmojo, et al., 2022). Therefore, it was advised that educators increase their awareness and proficiency in accordance with standards, particularly those pertaining to digital literacy (Spante, et al. 2018). In states such as Cross River State, Nigeria, awareness of these ethical applications of digital literacy in schools for administrative effectiveness raises concerns.

Ethics as a specialised term, is concerned about the norms of human moral behaviour. Ethics is defined as the practical sciences of morality of human conduct (Biswal, 2016). Ethics in school encompasses the domain of behaviour that is exhibited by schools to distinguish between right and wrong. However, with the evolution of the internet and digital world, the lines between virtual and physical world become blurred. Nevertheless, it is becoming increasingly expedient to understand digital and cyber ethics even as students become more digitally literate. Cyber ethics refers to the moral principles that guide behaviour in the digital world. Broad spectrum of issues are covered under cyber ethics, including respecting intellectual property, avoiding plagiarism, protecting personal information, and behaving responsibly on social media. Samaranayake (2024) affirmed that the ethical practices in a digital environment include responsibility, transparency, accountability, and the integration of higher order thinking skill. The anonymity provided by the internet can sometimes lead to behaviours that would not be acceptable in the physical world. For instance, cyberbullying, hacking, and the spread of misinformation are just a few examples of unethical behaviours that can have serious consequences. The need to instil and manage cyber ethics in schools as part of their digital literacy education becomes expedient.

Scholars such as Polis (2023) examined the ethical implications of cybersecurity, including issues like privacy, data protection, and security, while evaluating the current state of ethical principles in the field of cybersecurity. The author averred that ethical principles play a crucial role in guiding individuals to act responsibly and thoughtfully as they offer guidance on treating others with respect and engaging in actions that benefit all parties. Formosa, et al. (2021) created a set of principles

framework for CSE that is based on beneficence, non-maleficence, autonomy, justice, and explicability. Beneficence: Cybersecurity technologies should be used to benefit humans, promote human wellbeing, and make our lives better overall; non-maleficence: Cybersecurity technologies should not be used to intentionally harm humans or to make our lives worse overall; autonomy: Cybersecurity technologies should be used in ways that respect human autonomy. Humans should be able to make informed decisions for themselves about how that technology is used in their lives; justice: Cybersecurity technologies should be used to promote fairness, equality, and impartiality. It should not be used to unfairly discriminate, undermine solidarity, or prevent equal access; explicability: Cybersecurity technologies should be used in ways that are intelligible, transparent, and comprehensible, and it should also be clear who is accountable and responsible for its use (Formosa et al., 2021).

Other principles or ethics of cybersecurity include respect for privacy and confidentiality; responsibility for harm; fairness and impartiality; honesty and transparency; vulnerability disclosure; responsibility for security; responsibility for training; responsibility for continuing education; respect for intellectual property; and responsibility for ethical decision-making (Macnish & van der Ham, 2020). Data privacy is also a concern in digital literacy. Data privacy can be seen as the right of individuals to maintain confidentiality and control over their personal information (Rath & Kumar, 2021). The protection of data that can identify an individual, such as name, address, phone number, financial information, medical history, and so on are some of the concerns of data privacy (Sukenti, 2023); (Salamah, 2023) and (Hermansyah, 2023). Thus, principals of secondary schools, including those in Cross Rivers State, Nigeria can leverage on them to engender their ability to effectively administer their schools.

Administrative effectiveness is a broad term that connotes attainment of set goals as well as cost saving measures. Wokoma (2023) sees administrative effectiveness as the extent to which organizations achieve their objectives with minimum expenditure of time and money. In addition, the extent to which the goals of secondary education are being met can be used as a measure of principals' overall administrative effectiveness. Wokoma (2023) identified some of the main characteristics of administrative effectiveness to include effective decision making, effective communication, delegation of duties, disciplinary ability, motivation, a good public relation, effective supervision, and evaluation and so on. School Principals occupy the highest position in a secondary school subsystem. The principal, as the person at the pinnacle of affairs in secondary school occupies a pivotal position. According to Oyewole et al. (2020), the principal is the person expected to interpret policies, execute instructional programmes, see to staff development and ensure adequate and proper management of the school. They are required to carry out various tasks in form of planning, organising, directing, staffing, coordinating, reporting, and budgeting. Most of these tasks have evolved both in volume and complexity. The complexity and volume of such tasks can be tackled with the innovative tools and capabilities embedded in digital literacy.

However, studies have shown that there is low level of awareness among educationists in sub-Saharan Africa in ICT-related skills (Amuche & Iyekekpolo, 2014). Jongsermtrakoon and Nasongkhla (2015) also affirmed that, among educators, the concept of digital literacy, and the concept of the awareness in information ethics, which described ethical use of others with regard to information privacy, accuracy, property and accessibility are the must-have skills in the use of Open Education Resources (OER), but such skills are lacking. Awareness by principals is a concern to researchers because ethical awareness is one of the five dimensions of digital literacy. Kumari (2024) stated that under digital citizenship, understanding one's rights and responsibilities as a digital citizen, including ethical behavior, online safety, respect for intellectual property, and awareness of privacy issues are among the five broad indicators.

Various scholars have carried out studies to establish the influence of digital literacy as well as ethical awareness of digital literacy among workers and the academic community. Atmojo et al (2022) evaluated the level of digital literacy among teachers in the Central Java Indonesian classroom. It was a descriptive qualitative case study involving 6 teachers at elementary school in Surakarta as the subjects which were chosen through purposive sampling by using digital literacy framework based on the Instant

Digital Competence Assessment (IDCA) perspective. It classifies digital literacy into three dimensions, namely technology, cognitive, and ethics. The results showed that the digital literacy level of classroom teachers is in the very low in most categories.

Altinsoy and Boyraz (2024) examined secondary school students' perceptions of moral values in the digital environments (MVDE) and digital literacy (DL). The study used a quantitative methodology and correlational survey design encompassing 250 participants. Results show that participants' perceptions of DL are mostly high, while their perceptions of MVDE are mostly intermediate. The study concluded that DL and MVDE help people become effective and better citizens in the digital world, much like moral values do in real life. Kumari (2024) carried out a study on Digital Literacy and its role in 21st Century Education, encompassing skills such as information literacy, media literacy, and digital citizenship. The study concludes that fostering digital literacy equips learners with essential competencies to thrive in a digitally connected world, enhancing their academic success and preparing them for future professional endeavours.

Putra, et al. (2023) carried out a study on the effect of digital literacy and transformational leadership on employee performance in the department of Population and Civil Registration of the City of Padang. The authors used a saturated sample technique, which meant that the entire population is used as a sample 74 people. Structural Equation Modelling (SEM) was used for data analysis. The results of the study show that indirectly digital literacy affects employee performance through mediation of innovative work behaviour.

Amidst proliferation of internet and digital platforms in the educational space, there arises the need for more functional mechanisms to regulate the way and manner users interact and apply such technologies. Despite the existence of policy documents prescribing best practices and possible repercussion for violations, creating more awareness may be the most practicable place to begin from. Heads of schools, therefore, are seen as significant stakeholders in the process of enforcing such policies on digital literacy. It therefore becomes expedient to how much awareness school heads possess, vis-à-vis the attainment of administrative effectiveness. This is the focus of this paper.

Statement of the Problem

The need to increase awareness of digital literacy ethics in educational systems cannot be overemphasized due to the many real-life and theoretical advantages associated with it. Ethical concerns continue to arise when learners and workers are exposed to innovations such as digital literacy, and administrators such as principals of secondary schools must provide leadership and management on how such literacy can be safely applied. There are observed cases of students and staff being exposed to cyberbullying, pornographic material, plagiarism, data privacy breaches, and several other instances of unethical use of digital literacy. The extent to which principals are aware of the ethical considerations pertaining these offshoots of digital innovations in the school system have become concerning.

Despite existing guidelines on the proper use of internet and information resources, reports still abound about unethical uses, which compromise safety, wellbeing, academic integrity and intellectual property in the school system. If the aspirations of sustainable national development must be achieved, principals' awareness of digital literacy ethics may need to be interrogated to ascertain how well they are poised to manage ethical uses of digital literacy. The researchers therefore deemed it wise to conduct a study on influence of principals' awareness of digital literacy ethics on administrative effectiveness of secondary schools using principals of public secondary schools in Cross River, Nigeria.

Purpose of the Study

The main purpose of the study was to investigate influence of principals' awareness of digital literacy ethics on administrative effectiveness of secondary schools in Cross River State, Nigeria. Specifically, the study sought to:

- i. Examine the influence of principals' awareness of cybersecurity ethics on administrative effectiveness of secondary schools in Cross River State, Nigeria.

- ii. Ascertain the influence of principals' awareness of data privacy ethics on administrative effectiveness of secondary schools in Cross River State, Nigeria.

Research Questions

The following research questions guided the study:

- iii. What is the influence of principals' awareness of cybersecurity ethics on administrative effectiveness of secondary schools in Cross River State?
- iv. What is the influence of principals' awareness of data privacy ethics on administrative effectiveness of secondary schools in Cross River State?

Hypotheses

The following null hypotheses were tested at 0.05 level of significance:

1. There is no significant influence of principals' awareness of cybersecurity ethics on administrative effectiveness of secondary schools in Cross River State?
2. There is no significant influence of principals' awareness of data privacy ethics on administrative effectiveness of secondary schools in Cross River State?

Methodology

Descriptive survey design was adopted for this study. The population of the study was 299 principals of secondary schools in Cross River State, Nigeria (Department of Planning, Research and Statistics, Cross River State Ministry of Education (CRSMoE), 2025). The entire population was used because of the manageable size, hence there was no sampling. The instrument for data collection was a questionnaire titled *Digital Literacy Ethics and Administrative Effectiveness Questionnaire (DLEAEQ)*. The instrument was developed by the researchers, validated by experts in the Faculty of Education, University of Calabar and tested for reliability using split-half method. A coefficient of 0.81 was realised, which was esteemed to be reliable.

The instrument was designed on a four-point rating scale of Strongly agreed (SA), Agreed (A), Disagreed (D), and Strongly disagreed (SD). They were scored 4, 3, 2 and 1 respectively in two clusters of five items each. Using four research assistants who were adequately briefed on the modalities of the research, the researchers administered and collected the completed questionnaires from the respondents using the direct delivery method. Data generated from the study were analysed using both descriptive and inferential statistics. Descriptive statistics of mean and standard deviation were used to answer the research questions. 2.50 was set as the criterion mean for the research questions, while inferential statistics of chi-square goodness of fit was used to test null hypotheses at 0.05 level of significance. Chi-square goodness of fit tested frequency of responses on the influence of principals' awareness of cybersecurity ethics on administrative effectiveness, and influence of principals' awareness of data privacy ethics on administrative effectiveness. The decision rule was that if chi square calculated was greater than chi square tabulated, reject null hypothesis. Also, if p value is less than 0.05, reject null hypothesis.

Results and Discussions

Research Question 1: What is the influence of principals' awareness of cybersecurity ethics on administrative effectiveness of secondary schools in Cross River State?

Table 1: Mean Ratings of Respondents on Influence of Principals' Awareness of Cybersecurity Ethics on Administrative Effectiveness of Secondary Schools in Cross River State.

S/N	ITEM	N	Mean	Std. Dev.	Decision
1	respect for privacy and confidentiality while handling digital information can lead to administrative effectiveness	297	2.53	0.74	Agree
2	taking responsibility for training of persons how to comply to digital security issues can enhance administrative effectiveness	297	2.67	0.69	Agree
3	Digital literacy which observes respect for intellectual property helps in achieving administrative effectiveness	297	2.75	0.68	Agree
4	Using Cybersecurity technologies in ways that respect human autonomy guarantees administrative effectiveness	297	2.66	0.82	Agree
5	Administrative effectiveness can be achieved if principals take responsibility for ethical decision-making such as giving precedence over any potential financial or other benefits when making decisions	297	3.25	0.93	Agree
Cluster Mean and SD			2.77	0.73	Agree

Analysis of data as presented in Table 1 above shows the influence of principals' awareness of cybersecurity ethics on administrative effectiveness of secondary schools in Cross River State. Data analysis revealed that principals are aware that respect for privacy and confidentiality while handling digital information can lead to administrative effectiveness (2.53; SD = 0.74); Respondents also agreed to the remaining four of the items with mean scores ranging from 2.66 – 3.25, which are above the benchmark of 2.50. The table also revealed close Standard Deviation values ranging from .68 – .93, showing that the respondents were homogeneous in their responses. The grand mean of this cluster is 2.77 and SD = .73, indicating that, most principals are aware that observing cybersecurity ethics influences administrative effectiveness, amongst other things.

Research Question 2: What is the influence of principals' awareness of data privacy on administrative effectiveness of secondary schools in Cross River State?

Table 3: Mean Ratings of Respondents on Influence of Principals' Awareness of Data Privacy Ethics on Administrative Effectiveness of Secondary Schools in Cross River State.

S/N	ITEM	N	Mean	Std. Dev.	Decision
6	obtaining, collecting, or analysing data from persons through lawful, legitimate and fair means is necessary for administrative effectiveness	297	2.84	0.87	Agree
7	Requests or proposals for data access should be tailored to a specific purpose in order to enhance administrative effectiveness	297	2.68	0.95	Agree
8	Administrative effectiveness can be achieved if principals ensure data management throughout the data lifecycle and prevent any unauthorized use, disclosure or breach of personal data.	297	2.60	0.86	Agree

9	Validating data for accuracy, relevancy, sufficiency, integrity, completeness, usability, validity and coherence, and being up to date influences administrative effectiveness.	297	2.78	0.78	Agree
10	Being open, transparent (in a clear and non-technical language), and accountable about the existence, nature, anticipated period of retention and purpose of data use influences administrative effectiveness.	297	3.41	0.84	Agree
Cluster Mean and SD			2.86	0.88	Agree

Table 3 shows the influence of principals' awareness of data privacy ethics on administrative effectiveness of secondary schools in Cross River State. Analysis revealed that obtaining, collecting, or analysing data from persons through lawful, legitimate and fair means is necessary for administrative effectiveness ($x = 2.84$; $SD = 0.87$). Respondents also agreed to the remaining four of the items, with mean scores ranging from 2.60 – 3.41, which are above the benchmark of 2.50. Standard Deviation values were also very close, ranging from .68 – .93 showing that there was homogeneity in the responses. The cluster mean of 2.86 and $SD = .88$, suggests high level of awareness that data privacy ethics can influence administrative effectiveness of secondary schools.

Hypotheses Testing

Hypothesis One: There is no significant influence of principals' awareness of cybersecurity ethics on administrative effectiveness of secondary schools in Cross River State

Table 2: Chi-square Test on Influence of Principals' Awareness of Cybersecurity Ethics on Administrative Effectiveness of Secondary Schools in Cross River State.

Awareness of cybersecurity ethics	Observed N	Expected N	Residual
Disagree	113	148.5	-97.5
Agree	184	148.5	97.5
Total	297

	Awareness of cybersecurity ethics
Chi-Square	27.332 ^a
Df	1
Asymp. Sig	.000

a. 0 cells (0.0%) have expected frequencies less than 5. The minimum expected cell frequency is 148.5.

Table 2 showing Chi square goodness of fit test to determine respondents' perception on influence of principals' awareness of cybersecurity ethics on administrative effectiveness of secondary schools followed the general population. Distribution of respondents significantly differed from that of the general population, since the expected frequencies were 148.5 for each distribution but 113 (disagreed) and 184 (agreed) were observed from the responses. Thus, $\chi^2 (df = 1, N = 297) = 27.332$, $p = < .001$. The calculated value of the Chi square is 27.322, and this value is significantly greater than the table value of chi square of 3.841 at $N=297$, $df=1$. Therefore, the null hypothesis suggesting no significant influence of principals' awareness of cybersecurity ethics on administrative effectiveness of secondary schools was rejected.

Hypothesis Two: There is no significant influence of principals' awareness of data privacy ethics on administrative effectiveness of secondary schools in Cross River State

Table 4: Chi-square Test on Influence of Principals' Awareness of Data Privacy Ethics on Administrative Effectiveness of Secondary Schools in Cross River State.

Awareness of data privacy ethics			
	Observed N	Expected N	Residual

	Awareness of data privacy ethics
Chi-Square	42.521 ^a
Df	1
Asymp. Sig.....	.000

a. 0 cells (0.0%) have expected frequencies less than 5. The minimum expected cell frequency is 148.5.

Table 4 showing Chi square goodness of fit test to determine respondents' perception on the variables followed the general population. The observed and expected frequencies for each response group are presented. Distribution of respondents significantly differed from that of the general population, since the expected frequencies were 148.5 for each distribution, but 98 (disagreed) and 199 (agreed) were observed from the responses. Thus, χ^2 ($df = 1$, $N = 297$) = 42.521, $p = < .001$. The calculated value of the Chi square is 42.521, which is significantly greater than the table value of chi square of 3.841 at $N=297$, $df=1$. Therefore, the null hypothesis suggesting no significant influence of principals' awareness of data privacy ethics on administrative effectiveness of secondary schools was rejected.

Discussion of Findings

Findings on the influence of principals' awareness of cybersecurity ethics on administrative effectiveness in secondary schools shows that principals' awareness of cybersecurity ethics has significant influence on administrative effectiveness in secondary schools. This finding agrees with that of Altinsoy and Boyraz (2024), who examined secondary school students' perceptions of moral values in the digital environments (MVDE) and digital literacy (DL), and found that DL and MVDE help people become effective and better citizens in the digital world. This finding also corroborates the views of Polis (2023) whose study on the ethical implications of cybersecurity, including issues like privacy, data protection, and security, concluded that cybersecurity ethical principles play a crucial role in guiding individuals to act responsibly and thoughtfully as they offer guidance on treating others with respect and engaging in actions that benefit all parties.

Also, findings on influence of principals' awareness of data privacy ethics on administrative effectiveness in secondary schools shows that principals' awareness of data privacy ethics has significant influence on administrative effectiveness in secondary schools. This supports the findings made by Putra et al. (2023) who investigated the effect of digital literacy and transformational leadership on employee performance and found that digital literacy affects employee performance through mediation of innovative work behaviour.

Conclusion

The study set out to examine the Influence of Principals' Awareness of Digital Literacy Ethics on Administrative Effectiveness of Secondary Schools in Cross River State, Nigeria. Based on the

findings of the study, the study concludes that principals' awareness of digital literacy ethics has influence on administrative effectiveness of secondary schools in Cross River State, Nigeria. The implication of this is that, awareness of ethical practices in all aspects of educational practices have a strong way of enhancing the effectiveness, as well as way and manner school heads can improve on their administration.

Recommendations

Based on the findings of the study, the following recommendations are made:

1. More awareness should be created among principals of secondary schools on the need for complying with digital literacy and cybersecurity ethics as a strategy to enhance administrative effectiveness in secondary schools.
2. Principals of secondary schools should constantly update their knowledge on ethical use of digital literacy in form of data privacy regulations in order to enhance their rating on administrative effectiveness.

Abstract

This study examined sustainable funding model for effective management of state-owned universities in south-south geopolitical zone, Nigeria. To achieve this purpose, two research hypotheses were posed to guide the study. Literature was reviewed according to the variables of the study. The population of the study comprised of all management staff of state owned universities in the study area. Census sampling technique was adopted for the study. A structure questionnaire was used for data collection. Simple regression analysis was used for data analysis, the result of the analysis revealed that diversification of Revenue Sources and Public-Private Partnerships (PPPs in the school system significantly influence effective management of state owned universities in the study area. It was recommended that School administrators should diversify school revenue based to reduce over dependence on government subvention for effective management of the university. Administrators of universities should ensure that there is continuous partnership and collaboration with private organization to support the universities in area of need.

Keyword: Sustainable Funding Model, Effective Management, State-owned Universities.

Introduction

Over the years there had been called from stakeholders in education for proper funding of universities in Nigeria especially state-owned universities, as a result of the proliferation of state-owned universities, often without adequate planning and funding. This trend has led to concerns about the quality of education, infrastructure and the sustainability of the university system. State owned universities in South-South Nigeria, faces persistent funding challenges, including over-reliance on government subvention which has hampered effective management of state universities in the region, some of these universities struggled to pay salaries of staff, faced inadequate office accommodation for staff, unconducive learning environment for students, the university end up producing half-bake

graduates that cannot compete with their peers at the global stage, shortage of qualified academic staff and related to political interference. These factors contribute to a suboptimal learning environment and hinder the universities' ability to produce graduates equipped to meet the demand of the nation (Akpam & Abana, 2024).

Agba (2024) is of the view that for state universities to function maximally and produce quality graduates vice-chancellors must step up their leadership skills by providing innovative leadership that would take the universities from depending on traditional approaches of funding universities with only government subvention to a more dynamic and sustainable means. State governments often underfund their universities, leading to shortages in resources, poor infrastructure maintenance, and difficulties in attracting and retaining qualified staff. The monthly subvention provided by state governments may not be sufficient to cover the universities' operational costs, including salaries, research, and infrastructure development. Many state universities lack adequate classrooms, laboratories, libraries, and accommodation facilities. This poor infrastructure negatively impacts the quality of teaching and research, and creates an un conducive learning environment for students.

Bright (2019) states that there is a significant shortage of qualified academic staff in many state universities, this shortage can lead to increased workloads for existing staff, reduced research output, and a decline in the quality of teaching. Political influence in the appointment of key university officials and in the day-to-day running of the institutions can compromise academic freedom and institutional autonomy. This interference can also lead to the appointment of unqualified individuals to leadership positions, further impacting the university's performance. The "brain drain" phenomenon, where skilled academics and professionals leave the country for better opportunities abroad, is a major concern for state universities. This exodus of talent further exacerbates the shortage of qualified staff and negatively impacts the quality of education and research.

Frequent strikes by university staff unions, often triggered by issues related to funding, salaries, and working conditions, disrupt the academic calendar and negatively impact students' learning. Corruption and mismanagement of funds allocated to universities can lead to a diversion of resources away from essential academic activities, further exacerbating the challenges. Limited funding and inadequate facilities often hinder research activities in state universities. This lack of research output can limit the universities' contribution to national development and their ability to attract external funding. Addressing these challenges requires a multi-faceted approach involving increased government funding, improve infrastructure, better staff welfare, reduced political interference, and a commitment to transparency and accountability in university administration (Okebukola, 2016).

Literature Review

According to Ali (2024) stated that developing a sustainable funding model for the management of state-owned universities in south-south require a multifaceted approach that balances government support, private sector involvement and internally generated revenue (IGR).

1. Government Commitment: Increased budgetary allocation, State governments should prioritize education by increasing the percentage of their annual budget allocated to university education, aligning with UNESCO's recommended 15-20% of total government expenditure. Education trust funds, create or expand state-level education trust funds focused on supporting public universities through infrastructure development, scholarships, and research grants.

2. Diversification of Revenue Sources: Tuition fees, introduce moderate tuition fees while providing scholarships and loans for indigent students to ensure affordability. Endowment funds, establish endowment funds, encouraging alumni, philanthropists, and corporate entities to contribute. Research grants, partner with international organizations and NGOs to secure grants for research and innovation. Commercial ventures, universities should invest in revenue-generating ventures, such as real estate, agriculture, consulting services, and production units for goods and services.

3. Public-Private Partnerships (PPPs): Infrastructure development, engage private sector players in building and maintaining university facilities under PPP agreements. Corporate sponsorships,

Partner with companies for scholarships, research funding, and workforce development programs. University-industry Collaboration, create partnerships with industries for internships, funded research, and technology development.

4. Internally Generated Revenue (IGR): Specialized Programs, Offer professional and executive education programs tailored to industry needs. Distance learning and e-learning platforms, develop online courses to attract a broader audience, both locally and internationally. Consultancy Services: Establish consultancy arms to provide expertise to government and private sector clients. Leverage university assets, commercialize unused land for agriculture or real estate, and utilize facilities for events and conferences.

5. Alumni Engagement: Alumni donations, actively engage alumni networks to contribute financially and materially to their alma mater. Naming Rights, offer naming rights for lecture halls, libraries, or buildings as incentives for significant alumni contributions.

6. Accountability and Transparency: Efficient resource management, ensure accountability in the use of funds to build trust with stakeholders. Performance monitoring, regularly assess the financial health and impact of funding strategies to make necessary adjustments.

7. Legislation and Policy Support: Legal frameworks, enact laws that mandate funding commitments from state governments and encourage private sector support. Tax incentives, provide tax breaks to organizations and individuals who contribute to the development of state universities.

8. Community and Regional Development Programs: Partnerships with Local Communities, engage host communities in projects that benefit both the university and the community, such as vocational training centers and joint agricultural ventures. Regional cooperation, encourage state universities in the South-South to collaborate in resource sharing, joint research projects, and regional development initiatives.

9. International Collaborations: Partner with foreign universities and organizations to access grants, training opportunities, and capacity-building programs. Seek donations and support from the Nigerian diaspora, particularly those from the South-South region. By implementing a blend of these strategies, state universities in the South-South geopolitical zone can achieve sustainable funding and provide quality education that supports regional and national development.

Moreover, Okebukola (2016) emphasizes the importance of aligning financing mechanisms with broader sustainable development goals. This requires a focus on developing sustainable funding models that priorities long-term investments in education and research, as well as strategies that promote social inclusion and environmental sustainability. Nigeria, as a developing nation, is currently experiencing a surge in university student enrolment. This rise in enrolment necessitates a proportional increase in funding, which, unfortunately, is not being met. The allocation of funds does not rise to meet the heightened demand caused by the increase in enrolment. Both parents and students are apprehensive about any new initiatives in the management of tertiary institutions, fearing that this might lead to the increase in tuition fees. Despite the regular government subventions (allocations) to universities, higher institutions, particularly universities, still struggle to meet their minimal 10% internal fund generation quota. These challenges persist, and adequate financing is crucial to address them (Oladiran, 2015).

Regrettably, tertiary education in Nigeria has not been accorded the anticipated level of prominence in terms of funding, as evidenced by the recurrent inadequacy of allocated funds to government agencies responsible for universities (Lawanson & Umar 2020). Therefore, the objective of this study is to propose sustainable funding model to policymakers, educators, and stakeholders seeking to enhance effective management of state owned universities in south-south through innovative financing within the scope of higher education. According to Ekunke (2023) opined that in the realm of state owned universities, the concept of a sustainable funding model is paramount for ensuring longterm viability and impact. A sustainable funding model is not merely about securing financial resources; it encompasses a strategic approach to generating revenue that aligns with the university mission, vision and values. This model allows universities to operate independently, reducing reliance on government subvention.

By diversifying income sources and creating a robust financial foundation, universities can better weather economic fluctuations and maintain their programs and services. A sustainable funding model also emphasizes the importance of community engagement and stakeholder involvement. It encourages universities to build relationships with their stakeholders, fostering a sense of shared responsibility for the universities success. This collaborative approach not only enhances trust but also opens up new avenues for funding. By understanding the needs and aspirations of the society, universities can tailor their programs to create value, thereby attracting support from various sectors. Ultimately, a sustainable funding model is about creating a resilient organization that can adapt to changing circumstances while remaining true to its mission (Egbe, 2019).

Ekpoh & Okpa (2017) stated that to establish a sustainable funding model, universities must identify and cultivate diverse revenue streams. Relying on a single source of income can be risky, especially in times of economic uncertainty. Therefore, universities should explore various avenues for generating revenue, including social enterprises, fee-for-service models, and membership programs. For instance, a universities focused on environmental conservation might launch a social enterprise that sells eco-friendly products, with profits reinvested into their conservation efforts. This not only generates income but also raises awareness about their mission. Additionally, universities can tap into corporate sponsorships and partnerships as a means of diversifying their funding sources. Many organizations are eager to support universities that align with their corporate social responsibility (CSR) goals. By creating mutually beneficial partnerships, universities can secure financial support while providing companies with opportunities for community engagement and positive brand association. Furthermore, exploring grant opportunities from foundations and government agencies can also contribute to a more stable financial footing. By actively seeking out diverse revenue streams, universities can create a more resilient funding model that supports their long-term objectives. Strategic partnerships and alliances are essential components of a sustainable funding model for universities. Collaborating with other organizations, businesses, and community stakeholders can amplify a university impact while providing access to additional resources and expertise.

Nkpung (2018) opined that in today's digital age, leveraging technology and innovation is crucial for effective fundraising strategies. universities can utilize various online platforms to reach potential donors and engage supporters in new ways. Crowdfunding campaigns have gained popularity as a means of raising funds for specific projects or initiatives. By sharing compelling stories and utilizing social media to spread the word, universities can mobilize grassroots support and tap into a wider audience. For example, a universities focused on disaster relief might launch a crowdfunding campaign during a crisis, allowing individuals from around the world to contribute quickly and easily. Additionally, technology can enhance donor engagement through personalized communication and data analytics. By utilizing stakeholders relationship management (SRM) systems, universities can track donor interactions and preferences, allowing for tailored outreach efforts. This personalized approach not only strengthens relationships with existing donors but also increases the likelihood of repeat contributions. Furthermore, innovative fundraising events such as virtual galas or online auctions can attract participants who may not be able to attend in-person events. By embracing technology and innovation, universities can create dynamic fundraising strategies that resonate with modern audiences.

Purpose of the study

The purpose of the study is to determine the influence of sustainable funding model on effective management of state-owned universities in south-south geo-political zone of Nigeria, Nigeria. Specifically the study sought to

1. Determine the influence of diversification of Revenue Sources on effective management of state-owned universities in south-south geo-political zone of Nigeria.
2. Determine the influence of Public-Private Partnerships (PPPs) on effective management of state-owned universities in south-south geo-political zone of Nigeria.

Hypothesis:

1. There is no significant influence of diversification of Revenue Sources on effective management of state-owned universities in south-south geo-political zone of Nigeria.
2. There is no significant influence of Public-Private Partnerships (PPPs) on effective management of state-owned universities in south-south geo-political zone of Nigeria.

Methodology

The study made used of survey research design. Survey is used by the researcher to gain a greater understanding about individuals or group perspectives to the concept. The population of this study comprised all management staff of state owned universities in south-south geo-political zone of Nigeria. The information from state universities of Akwa Ibom, Bayelsa, Cross River, Delta, Edo and River State revealed that there are 226 management staff. The target population for the study is two hundred and twenty six (226) management staff for the 2024/2025 academic session (Registry Department, 2025). There was no sampling in this study as such census was rather employed. A census study is when the entire population of study is small and manageable, and as such, data were gathered on every member of the population. The numbers of respondents (management staff) were small and so every management staff was involved in the study. Each management staff provided information for his/her university.

A questionnaire titled —Sustainable Funding Model and Effective Management of State Owned Universities was used for data collation and was validated by three research experts in measurement and evaluation in the Department Educational Foundation, University of Cross River State. It was tested for reliability using Cronbach Alpha reliability method, the Cronbach Coefficient obtained were .71 and .73 which indicated high reliability of the research instrument.

3. Presentation of Results

This section presents the results of data analysis obtained in the study based on each hypothesis as well as their interpretation. The hypotheses are tested at .05 level of significance.

Null Hypothesis 1: There is no significant influence of diversification of Revenue Sources on effective management of state-owned universities in south-south geo-political zone of Nigeria. The independent variable of this hypothesis was diversification of Revenue Sources while the dependent variable was effective management of state-owned universities in south-south geo-political zone. Simple linear regression statistics was used in testing the hypothesis and the results are presented in Table 1.

Table 1

Summary of data and simple linear regression analysis of the influence of diversification of Revenue Sources on effective management of state-owned universities in south-south geo-political zone.

Sources on effective management of state-owned universities in south-south geopolitical zone.					
R	R Square			Adjusted R Square	Std. Error of the Estimate
.092	.008	.006		7.79911	
Model	Sum of squares	DF	Mean Square	F	Sig
Regression	262.361	1	262.361	4.313	.038*
Residual	30899.632	226	60.826		
Total	31161.992	226			

a. Predictors: (Constant): Diversification of Revenue Sources

b. Dependent Variable: Effective Management

The simple regression analysis in Table 1 on the influence of diversification of Revenue Sources on effective management in of state-owned universities in south-south geo-political zone produced an adjusted R^2 of .006. This implies that 6.0 percent of the variance can be predicted from the independent variable (diversification of Revenue Sources) in predicting p of effective management of state-owned. The F-value of the Analysis of Variance (ANOVA) obtained from the regression table was

F = 4.313 having a p-value .038 with 1 and 226 degrees of freedom at .05 level of significance. The null hypothesis was rejected. This result therefore implies that diversification of Revenue Sources significantly predicted effective management of state-owned universities in the study area by 6.0 percent. The result therefore implies that there was a significant influence of diversification of Revenue Sources on effective management of state-owned universities in south-south geo-political zone.

Null Hypothesis 2: There is no significant influence of public-private partnerships (PPPs) on effective management of state-owned universities in south-south geo-political zone. The independent variable of this hypothesis was public-private partnerships while the dependent variable was effective management. Simple regression statistics was used in testing the hypothesis and the results are presented in Table 2.

Table 2

Summary of data and simple regression analysis on the influence of public-private partnerships (PPPs) on effective management of state-owned universities in south-south geo-political zone.

R	R Square	Adjusted R Square	Std. Error of the Estimate
.094	.009	.007	7.79747

Model	Sum of squares	DF	Mean Square	F	Sig
Regression	275.283	1	275.283	4.528	.034*
Residual	30886.709	226	60.801		
Total	31161.992	226			

a. Predictors: (Constant): public-private partnerships (PPPs)

b. Dependent Variable: Effectiveness Management.

The simple regression analysis in Table 2 on the influence of public-private partnerships (PPPs) on predicting effective management of state-owned universities in south-south geo-political zone produced an adjusted R² of .007. This implies that 7.0 percent of the variance can be predicted from the independent variable (public-private partnerships (PPPs)) in predicting effective management. The F-value of the Analysis of Variance (ANOVA) obtained from the regression table was F = 4.528 having a p-value .034 with 1 and 226 degrees of freedom at .05 level of significance. The null hypothesis was rejected. This result therefore implies that public-private partnerships (PPPs) significantly predicted effective management of state-owned universities in south-south geo-political zone by 7.0 percent. The result therefore implies that there was a significant influence of public-private partnerships on effective management.

Discussion of findings

This section is devoted to the discussion of findings obtained in the study. The discussion was done according to each of the stated hypothesis.

Diversification of revenue sources and effective management

This research hypothesis which addresses the influence of diversification of Revenue Sources on effective management of state-owned universities in south-south geo-political Zone revealed that there is a significant influence of diversification of Revenue Sources on effective management of state-owned universities in the study area. The finding of this study is in agreement with Ekpoh & Okpa (2017) who noted that to establish a sustainable funding model, universities must identify and cultivate diverse revenue streams. Relying on a single source of income can be risky, especially in times of economic uncertainty. Therefore, universities should explore various avenues for generating revenue, including social enterprises, fee-for-service models, and membership programs. For instance, a universities focused on environmental conservation might launch a social enterprise that sells eco-friendly products, with profits reinvested into their conservation efforts. This not only generates income but also raises awareness about their mission. Additionally, universities can tap into corporate sponsorships and partnerships as a means of diversifying their funding sources.

Ekunke (2023) supported the finding that many organizations are eager to support universities that align with their corporate social responsibility (CSR) goals. By creating mutually beneficial partnerships, universities can secure financial support while providing companies with opportunities for community engagement and positive brand association. Furthermore, exploring grant opportunities from foundations and government agencies can also contribute to a more stable financial footing. By actively seeking out diverse revenue streams, universities can create a more resilient funding model that supports their long-term objectives. Strategic partnerships and alliances are essential components of a sustainable funding model for universities. Collaborating with other organizations, businesses, and community stakeholders can amplify a university impact while providing access to additional resources and expertise.

Public-private partnerships (PPPs) and effective management

The findings obtained from analysis and testing of hypothesis two which addresses the influence of public-private partnerships (PPPs) on effective management of state-owned universities revealed that the null hypothesis was rejected. This implies that there is a significant influence of public-private partnerships on effective management of state-owned universities in the study area. The finding of this study could be linked to the fact that public-private partnerships provides a platform for universities to generate more revenue that would help achieve the goals of teaching and learning. It has been observed that the public-private partnerships is still very low among universities within the study area. So many universities do not have sufficient money to embark on programmes that would increase revenue for the universities. The absence of public-private partnerships has continued to contribute ineffective management of the school system.

The finding of this study agrees with that of Agba (2024) who reported that for state universities to function maximally and produce quality graduates vice-chancellors must step up their leadership skills by providing innovative leadership that would take the universities from depending on traditional approach of funding universities with only government subvention to a more dynamic and sustainable means. State governments often underfund their universities, leading to shortages in resources, poor infrastructure maintenance, and difficulties in attracting and retaining qualified staff. The monthly subvention provided by state governments may not be sufficient to cover the universities' operational costs, including salaries, research, and infrastructure development. Many state universities lack adequate classrooms, laboratories, libraries, and accommodation facilities. This poor infrastructure negatively impacts the quality of teaching and research, and creates an un conducive learning environment for students.

Conclusion

Based on the results of the findings obtained from analysis of data and testing of hypotheses in the study revealed that there was a significant influence of diversification of Revenue Sources and public-private partnerships on effective management of state-owned-universities in the study area. It can be concluded that sustainable funding model significantly influence effective management state-owned-universities in the study area in terms of management and service delivery.

Recommendations

Based on the findings of the study the following recommendations were made:

1. School administrators should diversify school revenue based to reduce over dependence on government subvention for effective management of the university.
2. Administrators of universities should ensure that there is continuous partnership and collaboration with private organization to support the universities in area of need.

Abstract

The increasing integration of artificial intelligence (AI) in education management presents significant ethical implications, particularly in secondary schools where decision-makers appear not to have sufficient grounding in AI ethics. In Anambra State, Nigeria, AI tools such as biometric attendance, digital performance dashboards, and surveillance systems are subtly shaping school operations. However, many school leaders are not equipped to address ethical concerns related to data privacy, algorithmic bias, consent, and accountability. This study investigates the necessity of integrating AI ethics into secondary school management as a strategic response to the ethical gap and to promote sustainable development. The objective is to assess how ethical literacy among school administrators can enhance responsible technology use in alignment with the Sustainable Development Goals (SDGs), especially Goals 4, 9, and 16. Adopting a desktop research design, the study draws on extensive literature, expert insights, and documented challenges in Anambra State to examine current AI usage, ethical gaps, and the potential of stakeholder collaboration in policy, training, and practice. Findings revealed that while AI is present in school management, its ethical oversight is weak, with issues like uninformed consent, data misuse, and reliance on vendors persisting. The study concluded that integrating AI ethics is essential for building inclusive, fair, and future-ready school systems. It recommended structured training, ethical toolkits, policy reforms, and peer learning networks as scalable interventions. This integration not only safeguards educational stakeholders but also positions Anambra as a leader in ethical digital transformation.

Keywords: Artificial Intelligence; Artificial Intelligence ethics; Secondary school management; Sustainable development; Anambra State,.

Introduction

AI ethics refers to the principles and practices guiding the responsible development and use of artificial intelligence with core values such as fairness, accountability, transparency, privacy, and inclusiveness (Okonkwo, 2024). In the context of secondary school management, integrating AI ethics means ensuring that school leaders can critically assess the implications of AI-powered tools used in their schools. From facial recognition systems to digital grading platforms, each deployment raises ethical questions around consent, data security, bias, and equity (Nwoye et al., 2024). School leaders ought to move beyond passive adoption and engage actively with these ethical considerations to protect the rights and dignity of students, teachers, and communities (Arya, 2024).

Artificial Intelligence (AI) has become an unmistakable force in shaping the future of education management. From streamlining administrative tasks to influencing data-driven decisions, its presence in secondary school systems even in developing contexts like Anambra state is steadily growing. Administrators in secondary schools interact with AI tools both directly and indirectly. Chime et al., (2025) submitted that these tools are commonly used for tasks such as attendance tracking, staff scheduling, data analytics for student performance prediction, and the use of surveillance systems to monitor school environments. Decisions about these AI systems often involve the collection and processing of sensitive data, making it imperative for decision-makers to understand the ethical considerations involved (Al-Omari, 2024). While students are not active players in school management, the choices school administrators make regarding AI adoption have direct implications on students' privacy, safety, and learning experiences (Ayeni & Orhewere, 2021). For example, the uncritical use of facial recognition technologies can lead to surveillance overreach, while reliance on biased algorithms in student assessments can result in unfair outcomes. As schools embrace these technologies, an important but often overlooked question arises: Are our education leaders ethically prepared for this shift? AI, while promising in its efficiency, raises significant ethical concerns: data privacy, fairness, surveillance, algorithmic bias, and accountability (Ihekweazu et al 2024), to name a few. Hence, a foundation in AI ethics enables school leaders to avoid such pitfalls and make decisions that are equitable and aligned with human rights.

It is within this context that the integration of AI ethics into secondary school management becomes imperative. This is not a conversation about teaching AI coding or robotics to students. Rather, it is a strategic intervention aimed at unveiling the relevance of AI ethics to provide insights to school managers, principals, and education officers with the ethical literacy required to make informed decisions about the technologies they introduce into school systems. More importantly, it is a forward-thinking response to the global call for sustainable development, particularly as defined in the Sustainable Development Goals (SDGs). Goals 4 (Quality Education), 9 (Industry, Innovation, and Infrastructure), and 16 (Peace, Justice, and Strong Institutions) all highlight the importance of just, inclusive, and future-ready institutions. These are goals which AI ethics directly supports to ensure sustainable development in Nigeria in general and Anambra state specifically.

Anambra State, known for its competitive education culture and vibrant youth population, stands at a crossroads. The state is increasingly exposed to educational technologies, yet school leadership structures seem not to be very grounded in navigating the ethical landscape of AI. This paper therefore makes a case for integrating AI ethics into the management structures of secondary schools in Anambra State, not just as a technological upgrade, but as a strategic pillar for sustainable development.

Conceptual Clarifications

Artificial Intelligence

Artificial Intelligence (AI) has emerged as a dynamic force capable of reshaping social interactions, particularly in education. According to Alagbe et al., (2023), AI is the ability of machines or computers to replicate human cognitive abilities, including learning from experience, recognizing objects, understanding and responding to language, making decisions, and solving problems. These abilities enable AI to perform tasks typically associated with humans, such as welcoming hotel guests or driving a car. Ogunode et al., (2023) further described AI as programs designed to exhibit human-like intelligence, structured in forms of computer, robot, or other machines to aid in provision of any kind of service or tasks to improve social economic and political development of the society.

AI is increasingly being used in secondary school management to automate administrative tasks such as attendance tracking, scheduling, grading, and communication (Nnamani, 2025). Facial recognition and biometric systems ensure accurate attendance records, while AI-powered scheduling tools optimize timetables based on various constraints (Williamson & Piattoeva, 2022). With the use of these AI devices, school managers can maintain records and schedule timetables effectively. Again, AI-powered grading systems reduce the workload for teachers by providing quick and accurate evaluations, and chatbots enhance communication by handling routine inquiries. In addition to automation, AI

supports decision-making through predictive analytics that identify at-risk students early and optimize resource allocation. These applications help school administrators make data-driven decisions, improve efficiency, and enhance overall educational outcomes (Zawacki-Richter et al., 2019)

Artificial Intelligence Ethics

Artificial Intelligence (AI) ought to be used ethically. AI ethics is a field that aims to help guide the development of AI according to responsible practices to secure and maintain human flourishing and to prevent the impingement of human rights (Hagendorff, 2022; Lauer, 2021; Wiese et al., 2025). It refers to the responsible development and application of AI, including principles such as fairness, accountability, transparency, privacy, and inclusiveness (Okonkwo, 2024). In the context of school management, this means ensuring that school leaders understand the ethical implications of deploying AI-powered tools for administrative and academic purposes. As school systems adopt AI-enabled technologies, from automated attendance trackers and digital performance monitoring systems to facial recognition for security, questions of data privacy, algorithmic bias, and informed consent is critical. There ought to be policies that govern the use of AI. AI ethics policies can be implemented either through internal corporate codes of conduct or through government-led legal and regulatory frameworks, which are essential for addressing issues like bias, data misuse, and environmental impacts (Anamoji, 2024). In Nigeria generally, despite initiatives like the establishment of the National Centre for Artificial Intelligence and Robotics (NCAIR), the absence of a comprehensive AI ethics and regulatory framework continues to hinder responsible AI deployment (Akindele & Adewuyi, 2023). An effective AI ethics policy in Nigeria must address key pillars such as lawfulness, ethicality, robustness, explainability, data governance, and social well-being to align with international standards (Anamoji, 2024). To remain ethically grounded and globally competitive, Anambra state must prioritize the development of a human-centric AI framework that incorporates privacy, transparency, accountability, and fair representation in algorithmic systems.

Secondary School Management

Secondary schools are schools that provide education that advance the skills and knowledge acquired by learners at basic level. Adinna and Okafor (2023) posited that secondary schools act as the gateway to tertiary education and essentially provides greater number of lower level manpower needed for proper economic growth and national development. They provide education that offers learning opportunities for students to develop their talents, explore their potentials and develop necessary life skills that gives them a chance of bright future. The overall success of secondary education is influenced by the secondary school management. Secondary school management is the deployment, control and optimum use of all the available resources to attain predetermined goals and objectives of secondary education. Okonkwo (2024) defined secondary school management as a social or interactional process involving a sequence of coordinated events such as planning, organizing, coordinating and controlling of human and material resources to achieve desired outcomes in the fastest and most efficient ways in secondary schools. In the same vein, Ikediugwu and Ibezim (2023); Ndalu (2025); Okafor et al., (2025) described secondary school management as the process of planning, organizing, directing, and controlling the activities and resources within secondary education to achieve the desired educational goals and objectives. Okafor et al., (2025) explained that the rationale for secondary school management to ensure discipline, effective implementation of curriculum, rational resource allocation, cordial relationship among members of school community, timely dissemination of information, accurate record keeping, periodic sporting activities, prudent use of facilities and funds of educational organizations.

Sustainable Development

Sustainable development was first officially defined in the 1987 Brundtland Report as development that meets the needs of the present without compromising the ability of future generations to meet their own needs. It encompasses three interconnected pillars: ecological, economic, and social

sustainability. Each of these pillars are vital to maintaining balance between human development and environmental preservation. According to Patrick et al., (2019), Education for Sustainable Development (ESD) plays a pivotal role in equipping individuals with the knowledge, skills, and values necessary to foster sustainability at all levels of society. The contribution of higher education institutions in promoting sustainability is particularly critical in a globalized and interdependent world (Chou & Wan, 2025). Moreover, key attributes of sustainable development include the promotion of regional self-sufficiency, efficient resource use, environmental restoration, and support for clean technologies, all aimed at improving quality of life without degrading natural systems (Tenorio & Tenorio, 2024). Thus, sustainable development is not merely an environmental concern but a multidimensional framework that seeks to ensure long-term human and ecological well-being.

Current state of AI in Secondary School Management in Anambra state

The current state of AI integration in secondary school management in Anambra State reveals a growing yet uneven adoption. Chime et al., (2025) evidenced that principals in public secondary schools reported that AI-based surveillance systems have significantly improved real-time monitoring, rapid incident detection, and overall responsiveness to security threats. However, Okafor et al., (2025) noted that principals apply obsolete and conventional methods of management of public secondary schools in Anambra State, Nigeria. In the same vein, Okafor and Anyanwu (2025) noted that there is a lack of visible AI-driven managerial and instructional practices in public secondary schools in Anambra State. This implies that AI use in secondary schools management is still uneven. Ayeni and Orhewere (2021) submitted that financial constraints and a shortage of trained personnel in schools continue to hinder full-scale adoption. These challenges suggest that while AI holds transformative potential for educational management in Anambra State, its implementation remains stratified and largely dependent on certain enablers such as funding, digital infrastructure, and human capital.

The Need for Integrating AI Ethics into Secondary School Management

The integration of AI tools into secondary school systems is no longer a futuristic concept; it is already unfolding in subtle but significant ways. From biometric attendance registers and digital report cards to AI-driven school surveillance systems and performance dashboards, secondary schools in Anambra State are beginning to adopt technology to improve operational efficiency. While these technologies offer promise, they are not neutral (Chen et al., 2020). Every AI tool used in managing schools carries with it ethical implications that school administrators must confront, whether they are aware of them or not. Vashistha and Harikrishnan (2025) submitted that the integration of AI ethics into education is crucial for preparing future professionals and researchers to navigate the complex ethical landscape associated with AI. The key concern here is that technology in the hands of untrained or ethically uninformed managers can lead to unintended consequences. For instance, using AI tools to monitor student performance without understanding how algorithms are designed could inadvertently reinforce bias disadvantaging students from certain backgrounds or learning profiles (Ihekweazu et al., 2024). Similarly, collecting large volumes of student data without clear protocols for consent, storage, and access poses risks to privacy and child protection. Yet many school leaders deploy such systems without asking the critical questions: Is this tool fair? Is it accountable? Who benefits or loses from its use? These are not technical questions alone, they are ethical ones.

The problem is further compounded by the fact that secondary school administrators often do not see themselves as players in the AI space. Many still associate AI with complex robotics or Silicon Valley innovation, not realizing that every digital decision-making tool they adopt, from automated grading software to surveillance systems, qualifies as AI in practice. Without the conceptual grounding that AI ethics provides, these school leaders become passive users of technology, relying on vendors or private consultants to make choices on their behalf (Chen et al., 2020). This is not only disempowering but also dangerous in the long term.

AI ethics, therefore, is not a luxury, it is a necessity for those who manage the educational future of our children. It provides school managers with the analytical frameworks to assess the appropriateness,

fairness, and societal implications of technology choices (Okwara et al., 2024). It enables them to weigh efficiency against equity, data against dignity, and innovation against inclusion. Eden et al., (2024) warned that those who use AI must adhere to strict data protection regulations and ethical guidelines to safeguard student privacy and prevent unauthorized access, use, or disclosure of sensitive personal information. More importantly, it ensures that technology serves education, not the other way around. In a state like Anambra, where education is both a cultural priority and a tool for upward mobility, ethical leadership in the deployment of AI tools is critical to preserving the integrity of the school system and protecting the rights of students and teachers alike.

Key Stakeholders in Supporting AI Ethics Integration in School Management

Delivering AI ethics in secondary school management must be treated not as a peripheral activity but as a core strategic function, anchored within a multi-stakeholder framework. No single institution has the capacity or mandate to execute it in isolation. Rather, it requires the coordinated involvement of state actors, academic institutions, professional bodies, and private-sector partners. Each stakeholder brings unique expertise, resources, and influence needed to make AI ethics a functional and sustainable part of education governance in Anambra State.

First, the Ministry of Education, both at the federal and state levels, holds the primary responsibility of setting the policy tone and creating the structural frameworks necessary for the integration of AI ethics. This includes approving curriculum reforms for school leadership training programs, setting implementation guidelines, and allocating budgetary support (Williamson & Piattoeva, 2022). Without policy direction from the top, even the best-designed initiatives often fail to gain traction at the school level.

Next, teacher training institutions and colleges of education must revise their educational leadership and ICT curricula to accommodate modules that explicitly address AI and ethics. These institutions already produce the personnel who take up school management roles. If AI ethics is embedded early in their professional training, future school managers will be better equipped to navigate technological complexities with ethical foresight (Eden et al., 2024).

The role of ICT departments and education technology coordinators in schools is also critical. These professionals are often tasked with selecting and implementing AI-powered tools within schools. They must be trained not just in the technical deployment of systems but also in understanding the ethical implications of their choices, how data is collected, who controls it, and what unintended consequences may arise (Mandinach & Gummer, 2021). Their involvement in AI capacity-building for ethical AI use will ensure that ethical considerations are not separated from practical implementation.

In addition, external stakeholders such as EdTech companies, Universities and research institutes and professional education associations should act as mobilizers and advocates. Through their platforms, they can promote awareness, lobby for ethical standards in education policy, and offer peer-learning opportunities that demystify AI for school leaders (Munoko, et al. 2020; Abulibdeh, et al., 2024). Their endorsement can lend credibility to training efforts and drive grassroots participation.

How AI Ethics Education Should Be Provided

For AI ethics to take root and thrive within secondary school management structures, it must be delivered in practical, accessible, and scalable ways. This is not a one-off sensitization exercise; it must become an embedded component of how educational leaders are trained, supported, and evaluated. The focus should be on demystifying AI, contextualizing ethics, and building a culture of responsible technology use across schools in Anambra State. Below are some of the ways AI ethics should be provided:

- Through capacity-building workshops and seminars targeted at principals, vice-principals, school ICT coordinators, and education supervisors (Hakimi et al., 2024). These workshops should go beyond theory, offering real-world case studies on ethical dilemmas in school technology use, such as student data breaches, biased decision-making in digital assessments,

or surveillance overreach. Delivered during non-academic periods or through zonal clusters, such trainings should be interactive, practical, and locally relevant.

- Embedding AI ethics into pre-service and in-service training programs for school administrators (Falemu & Akinwumi, 2024). Colleges of education and teacher training institutions must revise their educational management and ICT curricula to include modules that explore the intersection of ethics, leadership, and technology. If school leaders are trained from the outset to ask ethical questions when adopting tools or setting digital policies, they are more likely to become proactive custodians of responsible innovation.
- Developing clear policy guidelines and simplified toolkits that school managers can refer to during implementation (Anamoji, 2024). These should include checklists for evaluating AI tools, templates for obtaining digital consent from students and parents, and scenarios that challenge administrators to apply ethical reasoning. Having tangible reference materials reduces reliance on external consultants and builds confidence in day-to-day decision-making.
- Pilot projects should be launched in selected secondary schools to test and refine models for ethical AI integration. These schools would serve as learning labs, supported by mentors, technical experts, and evaluation teams. Lessons learned from these pilots can guide wider implementation, help anticipate resistance, and provide real evidence of what works.
- Creation of peer learning networks or communities of practice among school administrators. These networks can foster dialogue, experience-sharing, and collaborative problem-solving on emerging AI and ethics challenges. When school leaders learn from each other in context-specific terms, the learning tends to be deeper and more durable.
- Partnerships with teacher unions and education associations can be leveraged to host public forums, town hall dialogues, and school-based ethics clubs (Kanu et al., 2024). These platforms can amplify awareness and reinforce the message that AI ethics is not a distant academic concern, it is a frontline leadership issue that directly impacts trust, equity, and the future of education in the state.

In essence, providing AI ethics should be multi-modal, policy-aligned, and deeply grounded in the everyday realities of school management. It is not enough to build awareness; the system must build capacity, confidence, and institutional commitment to ethical technology leadership.

Relevance of AI Ethics Integration in Secondary School Management to Sustainable Development in Anambra State

The integration of AI ethics in secondary school management is not simply a technical adjustment, it is a strategic step toward sustainable development. In a state like Anambra, where education is deeply valued as a vehicle for socioeconomic advancement, this initiative sits at the intersection of innovation, equity, and responsible governance. When school leaders are equipped to make ethical decisions about the technologies they adopt, the entire education system becomes more resilient, inclusive, and future-ready.

From a global policy perspective, this aligns strongly with the United Nations Sustainable Development Goals (SDGs), which Nigeria has committed to. Goal 4 (Quality Education) calls for inclusive, equitable, and relevant education for all, a vision that is undermined when AI tools, implemented without ethical oversight, reinforce existing inequalities or violate student rights. Ethical AI use ensures that digital systems serve all learners fairly, particularly those who are often marginalized in policy and practice - rural students, girls, learners with disabilities, and those from economically disadvantaged homes (Larsson & Heintz, 2020).

Goal 9 (Industry, Innovation, and Infrastructure) encourages countries to build resilient infrastructure and foster innovation responsibly. In the education sector, this translates to building schools and school systems that can integrate digital technologies without compromising ethical standards. School managers, as the key actors in day-to-day decisions, must be equipped to assess new tools not just for efficiency, but also for long-term value, inclusivity, and ethical soundness (Nayebare, 2019).

Perhaps most critically, Goal 16 (Peace, Justice, and Strong Institutions) underlines the importance of accountable and transparent institutions. Schools are among the most formative institutions in society. When they adopt technologies without ethical safeguards, they risk compromising trust between schools and families, teachers and students, leaders and communities. Conversely, when AI ethics becomes part of school governance, it strengthens institutional credibility and cultivates a culture of integrity and digital responsibility among future citizens.

In the specific context of Anambra State, this integration is timely and necessary. The state is already demonstrating digital momentum, for example, the programmes launched by the state governor through the Solution Innovation District (SID). The SID is a community that train, incubate and mentor the digital tribe, startups and entrepreneurs to provide services and innovative solutions out of Anambra State (Solution Innovation District (SID), 2024). It ensure increasing student exposure to digital tools, rising use of technology in private and mission schools, and growing interest in tech entrepreneurship among youths. But this digital momentum must be guided. If AI tools are adopted in schools without a framework for ethical governance, the risks of misuse, inequity, and data abuse multiply. Ethical literacy among school leaders ensures that digital transformation does not come at the cost of human dignity.

Moreover, integrating AI ethics positions Anambra as a leader in sub-national education reform. It allows the state to serve as a model for how forward-thinking states in Nigeria can approach digital education with strategic balance, embracing innovation while protecting what matters most: fairness, transparency, and student wellbeing.

In essence, ethical competence in AI is not optional for sustainable development, it is essential. It ensures that technological progress in schools reinforces, rather than undermines, the moral and social goals of education in Anambra State and beyond.

Implementation Challenges

While the case for integrating AI ethics into secondary school management is compelling, its implementation is fraught with practical challenges. These are not abstract barriers but deeply entrenched realities that must be acknowledged and addressed if any reform is to succeed. Ignoring them would mean designing an intervention divorced from the system it seeks to improve. Some of them are:

9. Low awareness and limited understanding of AI and ethics among school managers (Abdullahi et al., 2024). Many principals and education officers in Anambra State, seem not to have adequate exposure to the workings of artificial intelligence, let alone the ethical questions surrounding its use. AI is often perceived as a distant, elite concern, something for tech experts or foreign contexts, not something directly affecting how a school is run. This mindset creates an early barrier: if school leaders do not see AI tools as part of their operational ecosystem, they will not see the need to learn about their ethical implications.
10. Lack of structured training opportunities. Tella (2020) and Harisanty et al., (2024) buttressed this by submitting that AI is still gaining its footing in Nigeria. The professional development programs for school administrators in Nigeria largely focus on routine administrative matters, budgeting, record keeping, and academic planning, with little attention to digital leadership or ethical technology management. In many cases, ethics is reduced to vague moral instruction rather than being treated as a strategic leadership competence tied to real-world decisions involving data, surveillance, access, and fairness.
11. Infrastructure poses another significant hurdle (Aina et al., 2023; Nwoye et al., 2024). In several public and rural schools in Anambra State, basic digital infrastructure is still lacking. Talking about AI and digital tools in such contexts can seem premature when many schools struggle with electricity, internet access, or even functional ICT laboratories. This digital divide threatens to widen inequalities between schools that can afford to engage with AI ethics meaningfully and those that remain structurally excluded from digital conversations altogether.

12. Policy inertia and bureaucratic bottlenecks. While the Ministry of Education may express openness to digital reform, turning such interest into concrete policy actions, especially those that involve curriculum revision, certification, or budget allocation, often moves at a frustratingly slow pace. Without strong political will and clearly defined implementation roadmaps, AI ethics risks being buried under more politically urgent or familiar education issues.
13. Resistance to change, particularly among long-serving school managers (Davis et al., 2020). For some, introducing new ethical frameworks around technology feels like an added burden, or worse, a threat to established practices. This is especially true in environments where decision-making is often top-down, and where external monitoring of digital practices could be seen as intrusive or punitive. Without proper sensitization, what is intended as empowerment may be interpreted as surveillance of the managers themselves.
14. Resource constraints, both financial, human, and technical. Training school managers at scale, developing locally relevant content, recruiting experts, setting up pilot projects, and maintaining follow-up mechanisms all require funding and coordination (Alamro & Schofield, 2020; Abayomi et al., 2021). In the absence of donor interest or a dedicated budget line from the state, such efforts may begin with enthusiasm but fade due to unsustainable planning.

Conclusion

As artificial intelligence becomes increasingly woven into the fabric of education systems, the question is no longer whether schools in Anambra State will interact with AI, but whether they will do so ethically and responsibly. The choices school leaders make today about data, automation, surveillance, and predictive systems will shape not just how schools function, but how justice, equity, and human dignity are preserved in a digital era.

This paper has argued that integrating AI ethics into secondary school management is not merely desirable, but urgent. It is a strategic investment in the integrity, credibility, and future-readiness of our education system. Far from being a Western or elitist preoccupation, AI ethics is a practical leadership necessity, particularly in states like Anambra where education serves as both a cultural cornerstone and a development engine. The success of such integration, however, will depend not just on policy declarations, but on action - intentional, inclusive, and sustained. From updating training curricula and launching pilot projects to creating peer learning platforms and mobilizing cross-sector partnerships, the road ahead is clear, but it must be walked with commitment and competence.

Recommendations

The following are recommended.

1. The Ministry of Education at both state and federal levels should revise the framework for school leadership training to include AI ethics as a compulsory module. This training should not be optional or theoretical. It should be built into the orientation and continuous professional development for principals, vice-principals, ICT coordinators, and zonal education officers. Training sessions should blend ethical principles with case-based scenarios that reflect real-life school management situations involving digital technologies.
2. School leaders need concrete tools, not just abstract ethical lectures. A state-led task force (possibly in collaboration with universities or NGOs) should develop simplified guidelines, checklists, and model policies for ethical AI adoption in schools. These toolkits can include templates for data protection, informed consent protocols, and ethical evaluation of EdTech products.
3. School administrators should be encouraged to form clusters or communities where they can share experiences, discuss dilemmas, and co-develop ethical responses to AI use. This peer dynamic fosters accountability, innovation, and collective problem-solving.
4. The government should seek collaboration with EdTech companies, corporate social responsibility arms of private firms, and donor agencies to finance and co-support ethical AI

governance. These partnerships can help with funding, technical expertise, and innovation, provided clear ethical boundaries and regulatory oversight are maintained.

5. Professional teacher unions, education boards, and PTA networks should be mobilized to raise awareness about the value of AI ethics. When ethical consciousness permeates the wider school community, it reinforces the pressure and incentive for school leaders to act responsibly in their tech choices.

Abstract

The purpose of this study was to examine enforcement of law, ethics and values in the administration of secondary schools in Ogoja education zone of Cross River State, Nigeria. In order to effectively carry out this study, two null hypotheses were formulated to guide the study. The descriptive survey design was adopted for the study. The population consist of all the teachers in Ogoja Education Zone of Cross River State. The simple random sampling technique was employed to select the size of 524 teachers(200 males and 324 females) representing 90% of the total population in Secondary schools in Ogoja Education Zone of Cross River State. The instrument for data collection was the questionnaire titled: ' Enforcement of law, ethics and values for effective administration of secondary schools sustainability questionnaire (ELEVEASSSQ). Generated data were analyzed using the t-tested statistical tool at .05 level of significance. Findings revealed that numerous obstacles hamper the enforcement of education law, ethics and values for effective administration of Secondary schools in the zone. The paper concluded that adequate attention has not been given to the enforcement of education law. Ethics and values in secondary schools in the zone. The paper recommended amongst others that the Cross River State Ministry of Education should conduct seminars and workshops for all the stakeholders on the enforcement of education law, ethics and values as it will adequately equip them in the discharge of their duties in the school setting.

Keywords: Enforcement, Law, Ethics Values, Administration, , Sustainability, Secondary school.

Introduction

The school is a social organization; it has the need to interact with other people. But to do this, certain laws, ethics and values must be given, because life in the social system usually demands a process of give and take. There is no society that does not have laws, ethics, values and some codes of conduct guiding its members. They are made to bind on members of the society.

These laws, ethics and values are necessary because they regulate and direct the conduct and behaviour of members of the society. The school setting needs to operate with strict laws, ethics and values if anarchy must be averted in this micro society. At the secondary school level of formal education in Nigeria, the principal members of the school in a society are adolescent students between the ages of 11+ and 18+, as well as adult teachers. The teachers are responsible for the development of the cognitive, psychomotor and affective domains of the students. In doing this, the teachers are expected to behave and conduct themselves according to some laid down laws and values which constitute the professional ethics or code of conducts.

Law refers to all the rules established by authority or custom for regulating the behaviour of members of a community (e.g a school community) or a country. It can also be described as rules of conduct made by a controlling body (usually a government) which are enforceable. The American college dictionary defines law as (the principles and regulations emanating from the government and applicable to a people whether in a form of legislation or of custom and policies recognized and enforced by the judicial decision. Therefore, education law refers to the rules and regulations enacted by government and enforceable through judicial processes to guide educational practices and development.

. School whether privately or publicly are established by law and certain prescribed functions of legal consideration they both become public institutions in the sense that they are established to serve the public and can be sued or sue since there is a law establishing them as cooperate organizations with the aim of carrying out specific duties in line with the rules and regulations as enshrined in the various states and Federal Government Education Laws, codes, ordinances, Decrees and Edicts; (Oloko, 2015). Education law is the whole system of rules made by authority and recognized by the courts, which must be obeyed by all citizens of the country or place, including the operators and beneficiaries of the education enterprise, for proper regulation and orderly development of education (Olagboye; 2004).

The word ethics comes from the Greek root, *ethos*, meaning character, guiding beliefs, standards, or ideals that pervade a group, a community, a people Today, ethics is the studies of moral behaviour, the behaviour of how standards of moral conduct among individuals are established and expressed behaviourally.

Terms such as business ethics, corporate ethics, medical ethics, and legal ethics are used to indicate the particular area of application. But to have meaning, ethics involved in each area must still refer to the value-oriented decisions and behaviour of individuals. Ethics are principles that guide the operation of a professional body. Codes of ethics are moral principles by which human actions are judged. Ethics has to do with the problems of human conducts and behaviour. Ethics is also concerned with the norms of the organization. Osaat (2002) equates ethics with moral philosophy and explains it as —the principles guiding actions. It has to do with the problems of morality, that is good or bad, justice, fairplay, or altruism and good neighborliness. Durosaro (2002) defines ethics as —a branch of philosophy that deals with the theory of values.

According to Cooks (1983) who explains values as —something that is usual and expected...and average standard or level —He goes further to explain values as —standards of behaviour that are accepted in a particular society. Okoh (2003) sees values as —basic norms. Therefore, school values are basic and standard behaviour expected to be exhibited and norms held by both students and staff (mostly teachers) in the school be it primary, secondary or tertiary. Schools are structures set up in the society to inculcate desirable values in education and for schools to operate well; they need laws to guide their operations while these laws are adhered to if they are properly enforced. This is because in Nigeria today parents and guardians are better informed, enlightened, curious and inquisitive about what happens to their children and wards in their various schools.

Quite often, they express their curiosity by asking their children questions about the activities of their teachers and school administrations, Oloko, (2015); commented that —it should be realized that students are yet in their formative stage, no matter at what level of education. The educational administrators and teachers act *In loco parentis* (as parents) to guide them so that their youthful exuberance does not mislead them. He also revealed that most teachers and administrators have never read the Nigeria constitution nor even the secondary school ethnical law that guided their operational and administrative day to day functioning. Education laws especially on the consequences or implications of their actions in their day to day activities within the school system, by buttressing further on the school management ignorance of the educational laws, ethics and values. Yoloye (2014), lamented that law, ethics and values are of paramount importance in the operations of the school system in Nigeria and beyond. Thus, teachers of the secondary schools have roles to play in their enforcement since they are responsible and accountable for everything that is expected to create a conducive environment for teaching and learning. The Federal Republic of Nigeria (FRN) (2004) in her National Policy on Education has noble objectives relating to the due enforcement of education laws that would turn Nigeria to a first class country if well enforced and implemented.

Oloko (2015) said that education laws are simply those laws that have been enacted specifically for the organization, administration and control of the education system and those who operate in the education enterprise are citizens governed by the law, ethics and values of the land, criminal or civil as the case may be, they are also expected to comply with law, ethics values designed exclusively to regulate what can be done or not to be done in the process of teaching, learning and management. The law, ethics and values are necessary because educational establishment or institution is a social organization with many individuals and groups as stakeholders. There are many aims and objectives to achieve and numerous diverse interests, aspirations and expectations to satisfy. The need to regulate social interaction and behaviour appears obvious or imperative. It is important for all concerned with the management of the education system to be conversant with law, ethics and values, especially how these govern our activities and programmes. Education law is one aspect of the vastly complex system of social control and it may be defined as those areas of jurisprudence which focus on educational activities the operation of public and private elementary, secondary and tertiary institutions.

However, Nakpodia (2014) in a —Latin maxim opined that —*ignorantia juris est lala culpali* meaning ignorance of the law is not an excuse, is guile apt. Many teachers are not aware of the right, duties, obligations and responsibilities under the law and more especially actions on students. Also, they do not know and appreciate the general principles and provisions of law, ethics and values as they apply in handling issues of order and students' discipline in school. The constitution of the Federal Republic of Nigeria forms the basis law of the country, since all the education laws of various state and the federal education laws are made in accordance with the provisions and the constitution of the Federal Republic of Nigeria, this study on enforcement of law, ethics and values will remain virtually incomplete without discussing the fundamental right of students under the right of fair hearing (See 1999 constitution of federal republic of Nigeria states-section 36(1)).

Akukeide (2014) said that educational law in the area of law that relates to school teachers and the right of Nigeria to a public education as well as standards for those students who attend private schools. The Nigeria educational law mandated every child be given the opportunity to education because each state in the federation has its own school system and as a result, there are very different educational laws among the various states with regard to management of school teachers and funding of public education. The Federal Ministry of Education formulated an educational law that all Nigeria children should be given equal education opportunities Act of 1974 provides that no State can deny an equal opportunity to education of any individual on the bases of race, color, sex, or nationality origin.

Similarly, for children with disabilities, or the individuals with disabilities the Education Act establishes a process for evaluating students' needs and providing for an education programmes tailored to that individual. No wonder Peretomode (2004) remarked: that —it is necessary that education officials and teachers constantly examine their actions and inactions in the light of these fundamental right so that they do not infringe on or violate them. Amirize (2014) conditioned that the growing

complexity of the Nigeria society, couple with the increasing cases of litigations involving secondary schools and their students demand that students disciplinary cases should be handled with much care since the fundamental right of both the school management and students is now a global challenge. Thus, the law, ethics and values prevent a state of anarchy and provides the enabling environment for the stakeholder in the education industry to thrive. The absence of these law, ethics and values would mean anarchy, a state of lawlessness issues because the level of indiscipline amongst these stakeholders would be high. Moreover, where there are no law, ethics and values in schools, teachers and students may not keep to their legal obligations.

Oyeboode (2015) suggested that most secondary schools in Ekiti State lack the professional management staff that will help in enforcing the appropriate educational law in various secondary schools in the state because fund are not always provided for the supervisors, principals and other staff (teaching and non-teaching staff) for the implementation of educational law in most of the secondary schools in the state. Secondly, in Ekiti State most of the school boards hardly release fund for training, seminar, conference, or other developmental programmes related to educational law, ethics and values in the State.

For the achievement of secondary school educational goal and objectives, it is important to maintain a conducive atmosphere in the system. Law, ethics and values and the rule of law are important and indispensable tools necessary for the maintenance of such conducive environment and health organization and climate between the principals, teachers, students and other stakeholders in the affairs of Secondary schools in Ogoja Education Zone of Cross River State but the State Secondary Schools' Board that is responsible for the formulation and implementation of the educational law failed to live up to expectation because the needed resources required for the enforcement of educational law, disciplinary law and fundamental right of the students are lacking in most of our Secondary schools, adequate funding is not released for these purpose and the required secondary school administrators needed for the enforcement of this educational law do not have the necessary skills to function and the State Schools' Board refused to address the problem undermining the importance in improving good organizational climate for both the school management, teachers, students and other stakeholders in the affairs of the management of secondary school system. But, in recent development in the society in which individuals and other stakeholders seem to become more aware of what they consider as their fundamental human right and privileges in igniting a misunderstanding between the students, teachers and secondary schools management because all schools be it private or public are established by an Edict or Act which most have rules and regulations guiding the day to day smooth running of the schools in accordance to the constitution of the federal republic of Nigeria and the rule of law. Hence, emphasis of this paper is on enforcement of law, ethics and values as key to effective secondary school administration in Ogoja Education Zone.

Teachers' Empowerment in the enforcement of law, ethics and values

Teacher empowerment in this context entails the acquisition of the prerequisite legal right and knowledge in order not to fall short of the law in enforcing discipline in the school system. As such, it is imperative that teachers are empowered to be able to enforce discipline when responsibility is being delegated to them in an acting capacity from the administrators. According to Bogler and Nir (2012), empowerment suggests real changes in one's professional expertise, rising autonomy, and involvement in decision making processes, especially in the area of school discipline when an assignment is delegated to the teacher in the school system. Teachers are expected to carry out assigned duties in the place of the school head and parents, thus, the need for them to be adequately abreast of the education law in order not to fall short in its execution. Similarly, Bolin (1989) emphasizes that empowerment is participating in decisions about school objectives and displaying these decisions in the actual educational field. Inference here is that, empowerment enables a teacher to be grounded on education law before the implementation process in the school. kimwarey, Chirure and Omondi (2014) assert that an empowered individual (teacher) has the skills and knowledge to act or improve in a positive way within the ambit of the law. Through teacher empowerment, teachers develop their own competence

and self-discovery of their potential and limitations that help to keep them in line. Also, it is pertinent to state here that teacher empowerment in the school setting has correlations with motivation and provides teachers with knowledge about themselves, their colleagues and the school decision making process with a bid to foster and nurture students' achievement collaboratively (Dee, Henkin & Duemer, 2002). In the view of Bogler and Somech (2004), there is a correlation between teacher empowerment and student success. This implies that when teachers are adequately empowered to instill discipline, students under their watch are easily put in line to achieve academic success unlike those with teachers that are less knowledgeable in education law and school discipline.

Additionally, Hatcher (2005) proposed that teacher empowerment is the opportunity to exercise teacher leadership by creating a non-hierarchical network of collaborative learning, where a teacher is taught on how to be the head of the school or an establishment, where the desire to maintain and sustain standard is paramount. Irwin (1991) indicates that empowered educators (teachers) believe in themselves and their capabilities, understand the system, dedicate time and energy to their work and respect others which helps in the actualization of educational objectives. Irwin posits further that, teacher empowerment is proved to be related to many different administrative strategies aimed at facilitating administration, making decisions, control and leadership. In the view of Short and Greer (1997), decision making should be exercised more carefully and tactfully in such a way that teachers' participation areas should be well defined in order for them not to deviate as a result of the sway of power and authority; hence, Short and Greer noted that providing teachers' full-participation in the enforcement of school discipline tends to impact their quality in terms of school activities for the actualization of educational goals. By doing so, their voice is heard in many areas related to their work thus, the enhancement of students and staff performance and actualization of organizational objectives.

Purpose of the study

The following purpose guided the study:

5. To determine various obstacles facing the enforcement of law for effective administration of secondary schools in Ogoja Education Zone of Cross River State.
- ii) To ascertain the techniques adopted by the State School Board for the enforcement of ethics and values for effective administration of Secondary schools in Ogoja education zone of Cross River State.

Hypotheses

The following null hypotheses were formulated to guide the study at .05 level of significance.

- There is no significant mean difference between male and female teachers' perception of obstacles on enforcement of law for effective administration of Secondary Schools in Ogoja Education Zone of Cross River State.
- There is no significant mean difference between male and female teachers' perception of techniques on enforcement of ethics and values for effective administration of Secondary Schools in Ogoja Education Zone of Cross River State.

Methodology

The descriptive survey design was adopted for the study. The population of 735 which consists of 280 male and 455 female secondary school teachers in Ogoja Education Zone of Cross River State. The simple random sampling was employed to select the size of 200 males and 324 females) representing 90% of the total population in Secondary Schools in Ogoja Education Zone of Cross River State. The instrument for data collection was the questionnaire titled: ' Enforcement of law, ethics and values for Effective administration of secondary schools sustainability Questionnaire (ELEV EASSSQ). Generated data were analyzed using the t- test statistical tool at .05 level of significance.

Data Presentation

Hypothesis 1

There is no significant mean difference between male and female teachers' perception of the obstacles on enforcement of education law for effective administration of Secondary Schools in Ogoja Education Zone of Cross River State. Table 1 illustrates the result.

Table 1: T-test analysis on mean difference between male and female teachers' perception of the obstacles on enforcement of education law

Items	N	Mean	SD	Df	Level of sig	t-cal	t-crit	Remark
Male	200	2.57	.25					
Female	324	2.50	.26	522	.05	1.36	1.96	Accepted

The results in Table 1 revealed that the t-calculated value was 1.36, while the t-critical value was 1.96 at degree of freedom 522 of .05 level of significance. This implies that both male and female teachers in public secondary schools in Ogoja Education Zone accepted that various obstacles are hampering the smooth implementation of education law in secondary schools.

Hypothesis 2

There is no significant mean difference between male and female teachers' perception of techniques on enforcement of ethics and values for effective administration of Secondary Schools in Ogoja Education Zone of Cross River State. Table 2 illustrates the result.

Table 2: T-test analysis on mean difference between male and female teachers' perception of the techniques on the enforcement of ethics and values.

Items	N	Mean	SD	Df	Level of sig	t-cal	t-crit	Remark
Male	200	2.48	.45					
Female	324	2.57	.25	522	.05	1.35	1.96	Accepted

The results in Table 2 revealed that the t-calculated value was 1.35, while the t-critical value was 1.96 at degree of freedom 522 of .05 level of significance. This implies that both male and female teachers in public secondary schools in Ogoja Education Zone of Cross River State accepted that working techniques are not put in place to enhance the enforcement of ethics and values in secondary schools.

Discussion

Findings from hypothesis one revealed that there are several obstacles facing the enforcement of education law in Ogoja Education Zone. This finding aligned with the study by Adudede (2014), who noted that various obstacles like gross misconduct, truancy, fraudulent registration, sexual harassment, amongst others are some of the obstacles inherent in secondary schools; which if not properly handled has legal implications in the law court. Also, Afolabi's (2014) study is in agreement with the finding of this study; as he noted that both head teachers (62.5%) and class teachers (32.5%) had low awareness of education laws regulating schools management, thus making them prone to litigation.

Findings from hypothesis two revealed that adequate techniques are not put in place by the Ogoja Education Zone in particular and Cross River State Government in general for the enforcement of ethics and values in most public secondary schools in the state. The study of Peretomode (2014) aligned with the present study where he revealed that, most schools in Ogoja Education Zone cannot put into operation its ethics and values as a result of inadequate techniques put in place for its enforcement in most of the secondary schools in the Zone.

Conclusion

Arising from the findings reached, the study concluded that various obstacles and insufficient techniques stand as a stumbling block for 'effective enforcement and administration of law, ethics and values for Secondary schools sustainability in Ogoja Education Zone of Cross River State.

Recommendations

The following recommendations were made:

1. The state ministry of education should conduct seminars and workshops for all the stakeholders on the enforcement of education laws as it will adequately quip them in the discharge of their duties in the school setting.
2. A tranquil environment should be made available by the State Ministry of Education in Secondary schools for efficient enforcement of law, ethics and values that will propel effective administration.

Abstract

This paper explored the role of national values in addressing national security challenges in Nigeria. The study investigated the current state of national security, Identify challenges and propose possible strategies for nurturing national values to boost peace and security. A qualitative research approach was adopted for the study, using a case designed to explore the experiences and perception of resident in Cross River State, Nigeria. The study revealed that National Values such as patriotism, respect for human life and discipline are essential for promoting national security and unity in Nigeria. The study recommends integrating values education into educational curriculum, promoting community-based initiatives and leadership by example to promote a culture of peace and security. The finding of the study have implications for policy makers, educators and community leaders seeking to promote National Security and Unity.

Keywords: National Values, National Security, Educational, Peace and Security, Nigeria.

Introduction:

Insecurity in Nigeria today is the most discussed topic, This is because of the attacks on innocent Nigerians on a daily basis across the length and breadth of Nigeria. Patriotic and well-meaning Nigerians are disturbed and they keep wondering and asking why this onslaught on Nigerians? The country is currently faced with security, economic and social problems. Okorafo and Njoku (2012) puts it that serious crises in the values system of Nigeria, has caused increased insecurities, hunger and poverty. This has tarnished the nations reputations and severely hindered progress towards achieving its development objectives.

The National Policy on Education (2014) expresses the growing anxiety over the decline of fundamental and increased rancor in the Nigerian state. Where the values of people are taken over by mere Materialism, Insecurity, Killings and Criminality. Citizens seek wealth, fame, power without the values of hard work, They seek pleasure without smeared conscience. They want knowledge with no character fame, business without morality and religion without holiness. The result of all of this actions becomes problems of insecurity experienced in Nigeria today. Consequently, there is no extent of government reforms that can make such a country to achieve to a sustainable development. Ogude (2017), therefore the call for values education and a re-orientation in our society is a call for national culture that would reshape the character and values system of Nigerians.

National values are the pillars of a nation's identity, they help to create a sense of shared identity and purpose among citizens, it influences the way people think, behave, interact with one another. It provides a cohesion in terms of social, economic, religious, national unity, behaviorism as well as environmental stewardship which helps to impact non-traditional threats like climate change and pandemics. The integration of National Values in the Nigerian Educational Curriculum right from the primary education with emphasis on character and values education rather than just civic education which is a wider field is one possible way for Nigerians. Education managers should help to guide the instructional deliverers to teach the students in an early age so that the children can learn from an early stage to understand and grow up with an awareness of patriotism, unity, integrity, respect for human life, tolerance, hard-work, diligence, responsibility, fairness and justice, respect for authority.

Adie (2020): Education management can play a significant role in managing Peace and Security in Nigeria by promoting national values such as patriotism, respect for human life and tolerance. Transmitting an intellectual, committed, unquestionable morals, standard values and emotional stability to learners as required by the national policy on Education can save the ugly situation.

Denga (2008): Opined that peace is said to be the greatest factor facilitating sustained economic development. This is because war times always witness little or no economic investment. Values education promotes social cohesion by teaching values like tolerance, empathy and respect for diversity and bridges the gap between ethnic and cultural groups, reducing conflict and promoting unity. Values Education particularly emphasizes respect for human life and fostering a sense of civic responsibility.

Hence, in this paper, Values of Education is a panacea for reducing national security challenges.

Ategwu & Adie (2020): National value play a crucial role in promoting national security and unity in any country. They expressed the need for inclusion of National Values in Education curriculum at all levels of education. The subject should be one of those core subjects especially at the secondary and tertiary levels of education.

Nwolise (2017) notes that National Values are essential for promoting national development and security in Nigeria. However, Ozoigbo (2019) Nigeria is faced with challenges of internal security and have been experiencing crushing assault from armed robbers, kidnappers and banditry for the past few years. This is coupled with the age long war against Boko Haram sect and farmers/herders conflict across the six Geo-Political Zones in the country (Global Terrorism Index 2019). Bandits are now in killing and kidnapping situations all over the country, Today Nigeria is ranked 6th globally in the 2025 Global Terrorism with an Index score of 7.658. This ranking indicates a rise in terrorism-related fatalities with 565 deaths recorded in 2024 which represents a significant increase over the past two years.

Statement of the problem

The incessant security challenges in Nigeria especially in the Northern, South-East and the North-Central geopolitical zones has constituted a major challenge to the government. This has brought a setback on the economy, food security, educational development and peace of the people. Due to the vastness of this problem, This area of concern has attracted a lot of researches, conferences, workshops, summits and discussions.

Nations like India, Japan, Singapore, Thailand, Slovenia, Philippines and the United Kingdom to mention a few have world best policies on value education to develop the character and ethics of their citizens from teenage and youth age. It is time to try new options, Political office holders should show strong commitment in the direction of securing lives and properties of the people not only in present but in the future too, hence adopting values of education to capture the younger generation can be a positive approach to curb security challenges in Nigeria.

Purpose of the study

The main purpose of this study is to investigate national values, national Security, Educational, Peace and Security, Nigeria. Specifically, the study seeks to determine:

1. To examine the relationship between patriotism on national security.
2. To examine influence of respect for human life on national security.

Methodology

The study made used of survey research design. Survey is used by the researcher to gain a greater understanding about individuals or group perspectives to the concept. The population of this study comprised all judicial officers, security personnel and administrators of schools in Cross River State. The target population for the study was two thousand nine hundred and thirty three (2933) consisting of judicial officers, security personnel and administrators of schools for the year 2024/2025 academic session. There was no sampling in this study as such census was rather employed. A multi-stage sampling procedure was adopted for the study. To select the respondents used for the study, the researcher wrote the names of the three organizations that are in Cross River State on pieces of paper and folded them to conceal the information on each piece of paper. The researcher with eyes closed selected four pieces of paper with replacement, representing fifty percent (50%) of respondents in the study area. In each of the four selected organizations, fifty percent (50%) of respondents were selected for the study using the systematic random sampling technique. In each of the four selected organizations, the researcher wrote the names of all the organizations in alphabetical order, every second school on the list was selected for the study.

To select respondents in each of the three organizations selected for the study, the researcher adopted the systematic sampling technique to select forty nine percent of respondents in each of the organizations. The names of the respondents were written in alphabetical order in each organizations. Every second name on the list was selected for the study while all school administrators were automatically selected for the study.

A questionnaire titled —national values, national Security, Educational, Peace and Security in Nigeria was used for data collation and was validated by three research experts in measurement and evaluation in the Department Educational Foundation, University of Cross River State. It was tested for reliability using Cronbach Alpha reliability method, the Cronbach Coefficient obtained were .71 and .73 which indicated high reliability of the research instrument.

Presentation of Results

This section presents the results of data analysis obtained in the study based on each hypothesis as well as their interpretation. The hypotheses are tested at .05 level of significance.

Null Hypothesis 1: There is no significant influence of patriotism on national security in Cross River State. The independent variable of this hypothesis was patriotism while the dependent variable was national security. Simple linear regression statistics was used in testing the hypothesis and the results are presented in Table 1.

Table 1

Summary of data and simple linear regression analysis of the influence of patriotism on national security in Cross River State.

R		R Square		Adjusted R Square		Std. Error of the Estimate	
.092		.008		.006		7.79911	
Model	Sum of squares	DF	Mean Square	F	Sig		
Regression	262.361	1	262.361	4.313	.038*		
Residual	30899.632	508	60.826				
Total	31161.992	509					

- a. Predictors: (Constant): patriotism
b. Dependent Variable: national security

The simple regression analysis in Table 1 on the influence of patriotism on predicting national security in Cross River State produced an adjusted R^2 of .006. This implies that 6.0 percent of the variance can be predicted from the independent variable (patriotism) in predicting performance of national security. The F-value of the Analysis of Variance (ANOVA) obtained from the regression table was $F = 4.313$ having a p-value .038 with 1 and 508 degrees of freedom at .05 level of significance. The null hypothesis was rejected. This result therefore implies that patriotism significantly predicted effective national security in Cross River State by 6.0 percent. The result therefore implies that there was a significant influence of patriotism on national security.

Null Hypothesis 2: There is no significant influence of respect for human life on national security in Cross River State. The independent variable of this hypothesis was respect for human life while the dependent variable was national security. Simple regression statistics was used in testing the hypothesis and the results are presented in Table 2.

Table 2

Summary of data and simple regression analysis on the influence of respect for human life on national security in Cross River State.

R	R Square	Adjusted R Square	Std. Error of the Estimate
.094	.009	.007	7.79747

Model	Sum of squares	DF	Mean Square	F	Sig
Regression	275.283	1	275.283	4.528	.034*
Residual	30886.709	508	60.801		
Total	31161.992	509			

- a. Predictors: (Constant): Respect for human life
b. Dependent Variable: national security

The simple regression analysis in Table 2 on the influence of respect for human life on predicting national security in Cross River State produced an adjusted R^2 of .007. This implies that 7.0 percent of the variance can be predicted from the independent variable (respect for human life) in predicting national security. The F-value of the Analysis of Variance (ANOVA) obtained from the regression table was $F = 4.528$ having a p-value .034 with 1 and 508 degrees of freedom at .05 level of significance. The null hypothesis was rejected. This result therefore implies that respect for human life significantly predicted national security in the study area by 7.0 percent. The result therefore implies that there was a significant influence of respect for human life on national security.

Discussion of Findings

This section is devoted to the discussion of findings obtained in the study. The discussion was done according to each of the stated hypothesis.

Patriotism and National Security

This research hypothesis which addresses the influence of patriotism on national security in the study revealed that there is a significant influence of patriotism on national security in the study area. The finding of this study is in agreement with that of Ozoigbo (2019) who noted that Patriotism encourages citizens to prioritize national interest over ethnic, religious, or regional affiliations. When people see themselves first as Nigerians rather than members of a tribe or religion, they are more likely to cooperate in efforts to secure the nation. This unity is essential in tackling common threats such as terrorism, banditry, and insurgency. A patriotic population is more likely to support and cooperate with

security agencies by reporting suspicious activities and collaborating during security operations. This community-level intelligence gathering is crucial in preventing crime and terrorism.

The finding of this study agrees with that of Ategwu & Adie (2020) who reported that Patriotism strengthens commitment to constitutional principles, law and order, justice, and human rights. This contributes to the development of institutions and systems that reinforce internal stability and reduce insecurity. A patriotic spirit reduces corruption and the abuse of power—both of which are root causes of insecurity in Nigeria. Citizens and leaders who are loyal to national progress are less likely to divert public resources meant for development or security. Patriotism can inspire young Nigerians to engage in positive nation-building activities like joining the armed forces, volunteer services, peacebuilding initiatives, or community development projects—all of which contribute to a safer society. When citizens display patriotic behavior, it helps build a positive international image of Nigeria. This can attract foreign support, partnerships, and intelligence-sharing that boost national security efforts. Patriotism is a powerful tool for promoting national security in Nigeria. When citizens are committed to the peace, progress, and unity of the nation, they become active partners in defending it. Therefore, fostering patriotism through education, leadership by example, and equitable policies is essential to achieving long-term security and stability. Patriotism plays a crucial role in national security by fostering unity, promoting responsible citizenship, and encouraging active participation in safeguarding the nation. A strong sense of patriotism can lead to greater social cohesion, reduced internal conflicts, and increased public support for security initiatives, ultimately strengthening Nigeria's ability to withstand both internal and external threats.

Respect for human life on national security

The findings obtained from analysis and texting of hypothesis two which addresses the influence of respect for human life on national security in study area revealed that the null hypothesis was rejected. This implies that there is a significant influence of respect for human life on national security in the study area. The finding of this study could be linked to the fact that respect for human life provides a platform for citizen to interact and exchange ideas that would help achieve the goals of peaceful living. It has been observed that When the government, security agencies, and citizens respect human life, it strengthens the rule of law. People are treated fairly and equally under the law, regardless of their status, tribe, or religion.

The finding of this study agrees with that of Denga I. Denga (2008) who reported that Respect for human life refers to the recognition of the inherent dignity, value, and rights of every human being. It includes the protection of life, ensuring safety, upholding justice, and promoting human rights. In the context of national security, respect for human life plays a vital role in creating a stable, peaceful, and law-abiding society. In Nigeria, where insecurity is a persistent challenge, fostering respect for human life is essential to achieving sustainable national peace and security.

Respect for human life is a cornerstone of a peaceful and secure Nigeria. When life is valued and protected by all government, security agencies, and citizens—national security becomes stronger. It creates a just and peaceful society, reduces violence, and promotes cooperation. Therefore, promoting the respect for human life is not only a moral obligation but a strategic priority for national security in Nigeria.

Conclusion

Based on the results of the findings obtained from analysis of data and testing of hypotheses in the study revealed that there was a significant influence of patriotism and respect for human life on national security in the study area. It can be concluded that patriotism with value for education significantly influence national security in terms of school management and service delivery.

Recommendations

Based on the findings of the study the following recommendations were made:

School administrators should ensure that schools are provided with adequate security in order to make conducive for teaching and learning.

Administrators of schools should continue to liaise with security agencies ensure that school achieve its set goals and objectives

Abstract

This paper discussed role of continuous professional development in re-engineering teachers' ethical standards and value-driven instruction in public schools in Rivers State. Education is key to national development, helping individuals gain knowledge, skills, and values for personal and societal growth. In Nigeria, especially in Rivers State, the education system faces challenges like poor teacher training, ethical issues, and lack of value-based teaching. Many teachers struggle with professionalism, affecting student outcomes. Continuous Professional Development (CPD) can help by improving teachers' skills and ethics, leading to better teaching and stronger values in the classroom. CPD is a continuous process that helps teachers improve their skills, knowledge, and abilities throughout their careers. The paper was supported by the Transformative Learning Theory, developed by Jack Mezirow, which posits that learning occurs when individuals critically examine their beliefs, assumptions, and experiences, leading to a shift in their perspective. The paper identified role of continuous professional development (CPD) in re-engineering teachers' ethical standards and value-driven instruction, which includes; Enhancing Ethical Awareness, Developing Ethical Leadership Skills, Integrating Values into Curriculum Design, Enhancing Classroom Management, Encouraging Collaboration and Peer Learning, Adapting to Technological Advancements, Promoting Ethical Decision-Making, Building Cultural Competence and Strengthening Accountability Mechanisms. It therefore concluded that continuous professional development is instrumental in re-engineering teachers' ethical standards and promoting value-driven instruction in Rivers State. The paper therefore suggested that Government Agencies (Federal Ministry of Education, Rivers State Ministry of Education) should develop and implement policies that mandate regular CPD programs for teachers, focusing on ethical standards and value-driven instruction. These policies should ensure that CPD is integrated into the teachers' professional development framework and is aligned with national educational goals.

Keywords: Role, Continuous Professional Development, Re-Engineering, Teachers' Ethical Standards, Value-Driven Instruction, Public Schools, Rivers State

Introduction

Education is widely recognized as a key foundation for national development. It is essential for passing on knowledge, shaping individuals' character, and driving societal progress. Through education, individuals acquire the skills necessary for economic participation, social interaction, and the ability to contribute positively to their communities. In Nigeria, education is seen as a vital tool for addressing national challenges, promoting economic development, and promoting social unity (FRN, 2014). However, despite these lofty ideals, the Nigerian educational system faces numerous challenges, particularly in Rivers State, where issues such as inadequate teacher training, ethical lapses among

educators, and a lack of value-driven instruction impede the realization of educational objectives. A critical examination reveals that many teachers in Rivers State exhibit ethical shortcomings, including absenteeism, corruption, and a lack of commitment to professional standards. These ethical breaches not only tarnish the reputation of the teaching profession but also adversely affect student outcomes (Agi, 2017; Ibara, 2019; Owchondah, 2020; LongJohn (2023).

To tackle these challenges, it's important to explore how Continuous Professional Development (CPD) can improve teachers' ethical standards and promote value-driven instruction. CPD involves various activities designed to improve educators' knowledge, skills, and abilities, helping them stay effective and adapt to changes in education (Wosu et al., 2024). Through CPD, teachers can keep improving and offer better learning experiences, helping students meet academic standards while also promoting ethical behavior and important values. Upgrading their skills, teachers can better meet students' changing needs and prepare them for future challenges.

Theoretical Framework

The theory that support this paper was the Transformative Learning Theory, developed by Jack Mezirow's in 1978 cited in Jackson (2024). The theory posits that learning occurs when individuals critically examine their beliefs, assumptions, and experiences, leading to a shift in their perspective. This new way of thinking helps them make better decisions, adapt to change, and act in more informed and responsible ways. In education, it encourages teachers to reflect on their teaching and values, which can lead to improved practices and stronger ethical standards (Mezirow, 1978 cited in Jackson, 2024). In the context of this topic, the theory suggests that CPD should do more than just provide new knowledge; it should encourage educators to critically reflect on and improve their teaching practices and ethical standards.

The theory is particularly relevant to the topic as it focuses on helping educators reflect on and transform their practices, which is essential for improving teachers' ethical standards and promoting value-driven instruction through CPD. Thinking carefully about their beliefs and assumptions, teachers can improve their teaching methods, making them more ethical and effective (Mezirow, 1997). This kind of change supports the main goal of CPD, which is to help teachers grow professionally and behave ethically in the classroom.

Conceptual Clarification

Continuous Professional Development (CPD)

CPD is a continuous process that helps teachers improve their skills, knowledge, and abilities throughout their careers. Unlike one-time training, CPD is ongoing and recognizes that education is always changing. It helps teachers stay up to date with new teaching methods, technology, and research. Darling-Hammond (2017) defined CPD as structured professional learning that results in changes in teacher practices and improvements in student learning outcomes. Dyosini (2022) described CPD as a dynamic and continuous approach that allows teachers to enhance their skills, knowledge, and competencies throughout their careers. Piper et al. (2018) emphasized that CPD equips teachers with the necessary skills to integrate technology into their classrooms, fostering dynamic and effective learning environments. Virtue et al. (2022) highlighted that CPD empowers teachers by offering opportunities to refine and expand their pedagogical skills, thereby enhancing their professional competence.

In Rivers State, CPD is crucial for re-engineering teachers' ethical standards and promoting value-driven instruction. Engaging in CPD, teachers can develop a deeper understanding of ethical issues in education and acquire the skills necessary to implement value-based teaching practices.

Re-engineering

Re-engineering refers to the fundamental rethinking and radical redesign of business processes to achieve dramatic improvements in critical measures of performance. In the context of education, re-engineering involves a thorough examination and redesign of teaching practices, curricula, and

organizational structures to enhance educational outcomes. Hammer and Champy (2018) defined re-engineering as the fundamental rethinking and radical redesign of business processes to achieve dramatic improvements in critical measures of performance. Davenport (2020) described re-engineering as the analysis and design of workflows and processes within and between organizations.

Shen and Chou (2010) viewed re-engineering as the redesign of processes based on performance criteria such as service, speed, cost, and quality, in response to the rapidly changing world and the growing need for improvement and adaptation. Hammer (2001) highlighted that re-engineering involves a fundamental rethinking and radical redesign of business processes to achieve dramatic improvements in critical measures of performance. In Rivers State, re-engineering is essential for transforming teachers' ethical standards and instructional values. Re-engineering teaching practices and curricula, educators can create a more ethical and value-driven educational environment.

Teachers' Ethical Standards

Teachers' ethical standards encompass the principles and values that guide educators' professional conduct. These standards are crucial for ensuring that teachers act with integrity, fairness, and respect in their interactions with students and colleagues. Sherpa (2018) defined teachers' ethical standards as a guiding principle that assists teaching professionals to work with commitment, dedication, sincerity, honesty, and integrity. It serves as a means to reinforce public trust in the profession and guides teachers to be "good" in their professional conduct. Iroegbu and Uyanga (2019) defined teachers' ethical standards as a commitment to the worth and dignity of each human being, recognizing the supreme importance of the pursuit of truth, devotion to excellence, and the nurture of democratic principles. These standards are essential to the goals of protecting freedom to learn and teach and ensuring equal educational opportunity for all.

Faremi et al. (2021) described teachers' ethical standards as a vision of professional practice, emphasizing a commitment to students and their learning. These standards guide ethical decisions and actions, promoting public trust and confidence in the teaching profession. In Rivers State, enhancing teachers' ethical standards through continuous professional development (CPD) is vital. CPD programs can provide teachers with the tools to reflect on and improve their ethical practices, leading to a more effective and morally grounded educational environment.

Value-Driven Instruction

Value-Driven Instruction refers to a teaching approach that emphasizes the integration of core values and principles into the learning process. This approach focuses on not just academic content, but also on teaching students essential values such as respect, responsibility, fairness, empathy, and honesty. It encourages educators to model these values through their actions and decisions while creating a classroom environment where students are encouraged to reflect on and practice these values in their interactions and behaviors. Shizha and Kariwo (2011) defined value-driven instruction as teaching that incorporates moral and ethical values into the curriculum. Piper et al. (2018) viewed value-driven instruction as focusing on developing students' character alongside their academic abilities.

Hawkes (2013) highlighted that value-driven instruction involves teaching about positive human values such as respect, honesty, compassion, care, humility, and responsibility. He notes that when a school seriously develops the moral and spiritual aspects of the curriculum, the school community becomes more reflective and harmonious. This approach encourages students to take greater personal responsibility for their learning and behavior. Dyosini (2022) described value-driven instruction as essential for creating a learning environment that promotes ethical behavior and respect among students. In Rivers State, adopting value-driven instruction through CPD can help teachers instill essential values in students, contributing to the development of responsible and ethical citizens.

Role of Continuous Professional Development (Cpd) In Re-Engineering Teachers' Ethical Standards And Value-Driven Instruction

In Rivers State, Continuous Professional Development (CPD) is essential for improving teachers' ethical standards and encouraging value-driven instruction. CPD programs help teachers enhance their skills, knowledge, and ethical practices, ensuring they meet the changing needs of students and the education system. These programs focus not only on teaching techniques but also on promoting ethical behavior, creating a positive environment where teachers model good values for their students. The following are the key ways CPD supports the improvement of teachers' ethics and values in Rivers State:

Enhancing Ethical Awareness for Re-engineering Teachers' Ethical Standards and Value-Driven Instruction

Ethical awareness refers to the ability of individuals, particularly educators, to recognize and reflect on ethical issues and dilemmas that arise within their professional practices. It involves an ongoing process of understanding what constitutes ethical behavior, identifying ethical challenges, and making decisions that align with moral and professional standards (Gert, 2017).

Teachers with a heightened ethical awareness are better equipped to handle complex situations with fairness, responsibility, and respect, creating an environment that fosters trust and integrity in the classroom. Kussrow and Mavhungu (2019) emphasized that enhancing ethical awareness helps educators better understand their professional role, not only in delivering academic content but also in shaping the values and behaviors of students. The study emphasized the importance of CPD in raising awareness about various ethical challenges in education systems and supporting teachers in adopting more ethical teaching practices. Similarly, Gauthier et al. (2021) stressed that CPD programs focusing on ethical awareness ensure that teachers can engage in self-reflection and enhance their decision-making abilities when faced with ethical dilemmas in the classroom. Furthermore, Williams and Roberts (2020) highlighted that ethical awareness gained through CPD can lead to a more reflective teaching practice, where educators become more attuned to the ethical dimensions of their classroom interactions and their impact on students. More-so, Foster and Carroll (2018) found that CPD that centers on ethical considerations provides teachers with the tools needed to create an environment of trust and respect, which is essential for fostering ethical behavior in students. The study underlined that CPD is very important in helping teachers handle ethical challenges and keep high professional standards in their work. Through CPD, teachers can better understand these issues, leading to improved learning and a more ethical school environment.

In Rivers State, the main challenge is helping teachers identify and handle ethical issues in the changing education system. Using CPD to build ethical awareness will keep teachers informed about important issues like student rights, fairness, and respect, and help them apply these values in their work.

Developing Ethical Leadership Skills for Re-engineering Teachers' Ethical Standards and Value-Driven Instruction

Ethical leadership in education refers to the practice of leading with integrity, fairness, and accountability, particularly in terms of how educators interact with students, colleagues, and the broader community. Ethical leaders guide others in making decisions that reflect moral principles, such as honesty, transparency, and responsibility (Gardner, 2018). Teachers with ethical leadership skills inspire their students to adopt these values, creating a culture of respect and trust within the school. Walker et al. (2020) emphasized the importance of ethical leadership skills in educators, noting that when teachers lead by example, students are more likely to internalize ethical values and demonstrate them in their own behavior. CPD, programs that focus on developing ethical leadership skills encourage teachers to reflect on their personal values and how these influence their professional conduct (Cowan & Crompton, 2021). Moreover, Hill and Leman (2019) asserted that ethical leadership training within

CPD programs allows teachers to build the necessary skills to address conflicts, make fair decisions, and foster an environment of ethical dialogue among students.

Furthermore, Singh and Sharma (2022) argued that developing ethical leadership in teachers enables them to act as role models who not only provide academic instruction but also guide students through ethical challenges they may face in their personal lives. In support of this, Alvarez and Torres (2020) found that teachers who received ethical leadership training demonstrated improved classroom management and a greater ability to influence students' moral development. Similarly, Kim and Sato (2021) observed that CPD initiatives focused on leadership ethics significantly enhanced teachers' confidence in handling moral dilemmas, promoting fairness, and maintaining student trust. These studies collectively highlight the importance of CPD in equipping teachers with strong ethical leadership abilities to positively shape student behavior and school culture. In Rivers State, cultivating ethical leadership in teachers is critical for creating a conducive environment for both teaching and learning. Developing these skills through CPD programs can help teachers model behaviors that promote ethical conduct, ensuring that students in Rivers State schools are led by educators who understand the importance of fairness, responsibility, and integrity in their actions.

Integrating Values into Curriculum Design for Re-engineering Teachers" Ethical Standards and Value-Driven Instruction

Curriculum design involves the process of planning, organizing, and implementing the content and structure of educational programs. When curriculum design is "value-driven," it means that educators intentionally integrate values such as respect, responsibility, and fairness into the subject matter and teaching strategies (Devine & Lucas, 2018). This approach ensures that students are not only taught academic content but also the life skills necessary for becoming responsible and ethical members of society. Kaur and Gill (2017) emphasized that integrating values into the curriculum is a vital aspect of modern education, as it helps shape students' character and ethical perspectives.

Furthermore, Hasan and Mohamad (2020) noted that curriculum design that incorporates core values leads to a more holistic educational experience for students, preparing them for both academic and moral challenges in life. This process involves considering how various subjects can teach students the importance of ethical behavior, as well as how they can engage in discussions that explore moral issues in the context of the curriculum (Ali & Khan, 2019). Through CPD, teachers can learn how to effectively integrate these values into their teaching, ensuring that their students are exposed to both academic excellence and ethical frameworks that will guide their future decisions (López & Rodríguez, 2022). More-so, Müller and Weber (2021) emphasized that value-based curriculum design enhances students' critical thinking and empathy, making them more socially responsible citizens. Also, Chikwe and Adeyemi (2023) found that CPD initiatives aimed at integrating values into the curriculum led to more consistent moral guidance in classrooms and better student-teacher relationships. The study emphasize the importance of equipping teachers through CPD to embed ethical values within curriculum content for long-lasting impact in Rivers State schools. In Rivers State, the challenge is how to adjust the curriculum to include strong ethical values. CPD can help teachers gain the skills to create lessons that teach both academics and moral values. This will help students not only succeed in school but also grow into responsible and ethical individuals.

Enhancing Classroom Management for Re-engineering Teachers" Ethical Standards and Value-Driven Instruction

Classroom management refers to the strategies and techniques teachers use to maintain a positive and productive learning environment. Effective classroom management ensures that students remain engaged, respectful, and cooperative, allowing teachers to foster an atmosphere where learning can thrive (Emmer & Sabornie, 2016). In value-driven instruction, classroom management goes beyond simple discipline. It emphasizes creating a culture of respect, responsibility, and mutual understanding. Brown and Olsen (2017) argued that CPD programs that focus on enhancing classroom management

help teachers develop strategies to manage diverse classrooms, handle conflicts, and maintain ethical standards within the classroom.

In similar vein, teachers who incorporate values into their classroom management techniques, such as respect for all students, fairness in discipline, and understanding of cultural differences, create an inclusive and supportive learning environment (Löfgren, 2020). Miller and Osborne (2021) found that teachers who received CPD focused on ethical classroom management reported higher levels of student engagement and reduced behavioral issues. This not only improves academic outcomes but also cultivates a space where students feel respected and valued, promoting ethical behavior among the student body. Zhang and Chen (2023) argued that effective classroom management in value-driven contexts helps teachers set clear ethical expectations and fosters a sense of accountability among students. Similarly, Bernard and Lemoine (2020) emphasized that classroom management rooted in ethical principles strengthens student-teacher relationships, creating an environment of trust and mutual respect. In Rivers State, effective classroom management is key to creating a learning environment that supports both academic achievement and ethical behavior. CPD programs that focus on these aspects will equip teachers with the necessary skills to maintain a classroom that encourages mutual respect, fosters ethical conduct, and ensures a positive atmosphere for learning.

Encouraging Collaboration and Peer Learning for Re-engineering Teachers' Ethical Standards and Value-Driven Instruction

Collaboration and peer learning refer to the process where educators work together, share knowledge, and learn from each other's experiences to improve their teaching practices. Collaboration allows teachers to share knowledge, engage in reflective practice, and enhance their skills collectively (Martins, 2019). Continuous Professional Development (CPD) promote collaboration and peer learning enables teachers to expand their professional networks, gain different perspectives on educational practices, and improve their overall teaching techniques. Gabel and Joy (2019) observed that peer learning encourages teachers to challenge their own assumptions, learn new strategies, and implement practices that foster ethical decision-making in the classroom.

In similar vein, teachers involved in collaborative learning environments also report a stronger sense of professional responsibility and a greater commitment to ethical teaching practices (Crawford, 2021). Svensson et al. (2020) noted that collaboration in CPD helps teachers create a shared understanding of ethical issues and challenges, enhancing their ability to approach these challenges collectively. Furthermore, Hargreaves and O'Connor (2021) argued that promoting a collaborative culture among teachers is integral to building ethical standards in educational settings. When educators collaborate, they are more likely to engage in joint reflection and problem-solving, which is crucial for addressing ethical challenges within education systems.

In Rivers State, promoting collaboration and peer learning through CPD can help teachers tackle ethical issues together and find solutions. This approach allows teachers to share best practices and build a supportive network to address challenges in a more ethical way.

Adapting to Technological Advancements for Re-engineering Teachers' Ethical Standards and Value-Driven Instruction

Adapting to technological advancements involves teachers updating their knowledge and skills to integrate new educational technologies into their teaching practices. In recent years, technology has revolutionized the educational setting, offering tools and resources that enhance teaching effectiveness and student engagement (Selwyn, 2016). Technology-enabled learning platforms, digital tools, and educational apps have made it possible for teachers to provide more personalized and engaging instruction. Khan et al. (2020) noted that adapting to technology helps teachers enhance both their pedagogical skills and their ability to model ethical use of technology. This is especially important as teachers are responsible for guiding students on how to use digital tools in ethical and responsible ways. Integrating technology into CPD programs ensures that educators can effectively use digital resources, which in turn allows them to maintain a high standard of value-driven instruction (Starkey, 2021).

Moreover, adapting to new technological advancements helps teachers stay competitive in their profession, ensuring that they are equipped to meet the needs of modern students who are increasingly digital-savvy (Reddy & Brown, 2022). Schein (2021) emphasized that embracing technology also requires teachers to address ethical concerns related to privacy, equity, and access, which can significantly impact the learning experience. Similarly, Peterson and Lange (2023) highlighted that technology-integrated CPD helps educators develop not only technical skills but also the ethical awareness needed to manage issues like data security, cyberbullying, and digital citizenship.

In Rivers State, using CPD to integrate technology is key to improving teaching and ethical standards. The challenge is that many teachers may not know the latest educational technologies. CPD opportunities focused on this will help teachers use technology ethically, benefiting both teachers and students. This will prepare teachers to teach effectively in a digital world.

Promoting Ethical Decision-Making for Re-engineering Teachers” Ethical Standards and Value-Driven Instruction

Ethical decision-making refers to the process of choosing actions that align with moral principles, such as fairness, integrity, and respect for others. In the teaching profession, ethical decision-making is crucial as teachers often face dilemmas that require them to balance academic priorities with the welfare and rights of their students. CPD programs focused on ethical decision-making provide educators with frameworks and tools to approach complex situations with integrity and fairness. Noddings (2018) emphasized that promoting ethical decision-making in CPD helps teachers develop a deeper understanding of the moral implications of their actions, particularly in diverse and high-stakes educational environments. The study suggests that teachers who engage in professional development focused on ethics are more likely to make decisions that prioritize the well-being and growth of their students.

Similarly, Li and Wang (2019) argued that ethical decision-making is an essential component of teachers' professional development, as it empowers them to navigate ethical dilemmas such as bias, discrimination, and fairness. Adding to this, Jones and Khan (2020) emphasized that CPD programs focused on ethical decision-making help teachers establish clear ethical guidelines for their actions, which in turn positively influences the classroom culture. Furthermore, Teixeira and Sousa (2022) highlighted that teachers who are trained to make ethical decisions are better positioned to advocate for students' rights, create a fair learning environment, and foster a positive educational experience. Likewise, Novak and Ferreira (2023) noted that ethical decision-making training enhances teachers' ability to reflect on their actions and make choices that align with both institutional policies and the moral needs of students.

In Rivers State, promoting ethical decision-making through CPD is important for helping teachers handle tough situations with fairness and integrity. CPD will give teachers the tools they need to make decisions that prioritize the well-being of their students.

Building Cultural Competence for Re-engineering Teachers” Ethical Standards and Value-Driven Instruction

Cultural competence refers to the ability of educators to understand, respect, and effectively teach students from diverse cultural backgrounds. It involves developing an awareness of one's own cultural biases and learning how to create an inclusive learning environment that respects and values cultural differences. CPD programs that focus on building cultural competence help teachers develop the skills necessary to teach in a multicultural classroom. Banks (2017) argued that cultural competence is vital for educators, particularly in diverse educational contexts, as it enables them to build trust with students, enhance their engagement, and address the unique needs of students from different cultural backgrounds.

Similarly, Tangen and Dempsey (2020) pointed out that cultural competence in teaching ensures that students feel valued and understood, which contributes to a positive and inclusive learning environment. Emphasizing cultural competence in CPD also empowers teachers to critically examine

their own biases and assumptions, thus enabling them to adopt more inclusive pedagogical practices (Hussein & Briscoe, 2021). Green et al. (2019) found that teachers who received CPD training in cultural competence were better equipped to handle issues of cultural diversity and create equitable learning opportunities for all students. Similarly, Delgado and Martinez (2023) highlighted that CPD programs focused on multicultural education prepare teachers to integrate diverse cultural perspectives into their lessons, enriching the learning experience and fostering mutual respect.

In Rivers State, it's important for teachers to build cultural competence to effectively engage with students from different backgrounds. The challenge is that classrooms are becoming more diverse, and teachers need to adapt. Adopting Continuous Professional Development (CPD) programs focused on cultural competence, teachers can better understand their students' cultures, leading to more inclusive and effective teaching.

Strengthening Accountability Mechanisms for Re-engineering Teachers' Ethical Standards and Value-Driven Instruction

Accountability mechanisms refer to the systems, practices, and structures that ensure educators are held responsible for their professional conduct and the quality of their work. These mechanisms include performance evaluations, self-assessment, peer reviews, and external oversight (Hall & O'Donnell, 2018). Strengthening accountability mechanisms through CPD helps ensure that teachers are consistently meeting professional standards and adhering to ethical guidelines in their teaching practices. O'Connor and Leonard (2019) noted that accountability not only ensures that teachers maintain high standards of teaching but also encourages them to be more reflective and self-aware in their practice. Similarly, Johnson et al. (2020) stressed that CPD programs that focus on accountability empower teachers to take ownership of their professional development and contribute to their own ethical growth. These mechanisms create a culture of continuous improvement, where teachers are motivated to enhance their practice and are held responsible for their actions (Grant & Levesque, 2021). Likewise, Smith and Hall (2022) argued that accountability mechanisms are critical in ensuring that ethical practices are maintained in the classroom, as they provide clear expectations for teacher behavior and performance.

In Rivers State, strengthening accountability through CPD is essential for improving teaching standards and ethical behavior. The challenge is in establishing effective evaluation systems to monitor and support teachers. Adopting CPD programs focused on accountability, teachers will be better prepared to improve their practices, follow ethical guidelines, and achieve better educational results, leading to increased professionalism.

Conclusion

Continuous Professional Development is instrumental in re-engineering teachers' ethical standards and promoting value-driven instruction in Rivers State. Addressing various facets of professional growth, CPD guaranteed that educators are well-equipped to navigate ethical challenges and impart moral values to students. The integration of CPD into the educational framework of Rivers State promises a transformative impact on both teachers and students, promoting a generation grounded in ethical principles and societal values.

Suggestions

To ensure the successful re-engineering of teachers' ethical standards and the promotion of value-driven instruction in Rivers State, several key strategies can be employed. These suggestions are designed to provide a comprehensive approach for integrating Continuous Professional Development (CPD) into the educational system. Enhancing teachers' professional growth and ethical awareness, these measures will contribute to the development of a morally grounded educational environment. The following suggestions highlight essential actions to drive the transformation:

1. Government Agencies (Federal Ministry of Education, Rivers State Ministry of Education) should develop and implement policies that mandate regular CPD programs for teachers,

- focusing on ethical standards and value-driven instruction. These policies should ensure that CPD is integrated into the teachers' professional development framework and is aligned with national educational goals.
2. School Administrators (Principals, Vice Principals) should organize and facilitate workshops, seminars, and conferences that address contemporary ethical issues in education. These events should provide platforms for teachers to engage in discussions, share experiences, and learn from experts in the field.
 3. Teachers should actively participate in CPD programs and apply the knowledge gained to enhance their teaching practices. Teachers should also engage in self-reflection and peer discussions to continuously improve their ethical standards and instructional methods.
 4. Professional Associations (Nigerian Union of Teachers, Subject Associations) should collaborate with educational authorities to design CPD programs that are relevant to the ethical challenges faced by teachers. These associations should also advocate for the inclusion of ethical training in teacher education curricula.
 5. Educational Researchers (University Faculties of Education) should conduct studies to assess the effectiveness of CPD programs in improving teachers' ethical standards and instructional practices. Research findings should inform the development of future CPD initiatives.
 6. Parents and Community Leaders should support CPD initiatives by encouraging teachers to participate and by providing feedback on the ethical conduct and instructional quality observed in schools. Their involvement can enhance the relevance and impact of CPD programs.
 7. Educational Policy Makers should allocate resources and provide incentives for CPD programs that focus on ethical standards and value-driven instruction. Policies should also include mechanisms for monitoring and evaluating the effectiveness of these programs.
 8. Media and Civil Society Organizations should raise awareness about the importance of teachers' ethical standards and the role of CPD in enhancing these standards. Media campaigns can highlight success stories and best practices to motivate teachers and stakeholders.
 9. International Organizations (UNESCO, UNICEF) should provide technical support and funding for CPD programs that aim to improve teachers' ethical conduct and instructional quality. These organizations can also facilitate the exchange of knowledge and experiences across regions.

Institute of Education, Rivers State University

Abstract

The study investigated organizational ethics variables on effective management of public senior secondary schools in Rivers State. Three objectives and research questions guided the study. The study used descriptive survey design. A self-designed questionnaire titled —school management effectiveness questionnaire was used to collect information for the study. 800 school managers made up the population of the study and a sample of 250 respondents was drawn from the population using stratified random sampling technique. Out of the 250 copies of questionnaire administered, only 238 were retrieved and used for the study's analysis. The instrument was face and content validated through expert review by educational management specialists in Rivers State University and legal/ethical studies scholars, and the internal consistency of the questionnaire was determined using Cronbach Alpha. Overall reliability index of 0.82 was obtained. The data collected were analyzed using mean and standard deviation. Findings revealed that legal compliance, ethical leadership, and core institutional values influence effective school management to a high extent in public secondary schools in Rivers State. It was recommended that, the Ministry of Education should provide regular training and sensitization for school managers on the legal frameworks governing school operations to ensure greater compliance and accountability, school leadership development programmes should prioritize ethical behaviour, focusing on fairness, transparency, and moral responsibility and schools should collaboratively define and promote core values such as respect, excellence, inclusiveness, and accountability. These values should be embedded in school culture and daily practices.

Keywords: Organizational Ethics Variables, Effective Management, Legal Compliance, Ethical Leadership, Core Institutional Values

Introduction

Effective school management is a cornerstone of quality education delivery. Especially in public secondary schools, where managerial leadership significantly influences teaching, learning, discipline, resource management, and stakeholder engagement. In recent years, there has been growing recognition of the role that organizational ethics variables such as legal compliance, ethical leadership, and core institutional values play in fostering a conducive learning environment and ensuring effective governance in schools. According to Okafor and Okocha (2021) these variables are essential not only for regulatory purposes but also shaping the moral and operational character of educational institutions. Legal compliance in school administration refers to adherence to established laws, policies, and regulations that govern the operation of educational institutions. These include national education laws, state policies, teacher service codes, procurement guidelines, and child protection statutes. In the Nigerian context, the Universal Basic Education Act (2004), the National Policy on Education (2014),

and state-level educational edicts provide a legal framework within which public schools must operate. Compliance with these laws helps prevent administrative malpractice, ensures accountability, and protects the rights of students and staff (Adebayo & Ogunyemi, 2019). Failure to comply with legal standards often leads to managerial inefficiency, financial mismanagement, and loss of public trust in school leadership.

Ethical leadership is equally central to effective school management. Ethical leaders are guided by principles such as fairness, honesty, integrity, transparency, and responsibility in decision-making. In the school setting, this translates into equitable treatment of students and staff, honest handling of school funds, ethical hiring practices, and responsible disciplinary measures (Ugwulashi, 2017). Ethical leadership also fosters trust and collaboration among stakeholders, which enhances staff motivation, student discipline, and overall school performance. In Rivers State, where challenges such as politicization of education, mismanagement of resources, and corruption are not uncommon, ethical leadership becomes a critical countermeasure to ensure that school goals are achieved efficiently and morally.

Furthermore, core institutional values such as respect, excellence, accountability, and commitment to service form the cultural bedrock of schools and influence the behaviour of managers, teachers, and students. Values shape how decisions are made, how conflicts are resolved, and how members of the school community interact. Institutions that promote strong positive values tend to promote strong positive values to record higher levels of staff commitment, student discipline, and managerial coherence (Onyije & Olanrewaju, 2020). In Rivers State, where socio-political and economic pressures may challenge the moral compass of public institutions, institutional values serve as internal guiding principles that uphold standards even in the absence of external supervision.

The interrelationship among legal compliance, ethical leadership, and institutional values is crucial. While legal frameworks provide the structural boundaries within which schools operate, ethical leadership ensures moral direction, and institutional values instill a shared sense of purpose and identity. Together, they influence managerial effectiveness by promoting transparency, accountability, and student-centered policies. However, there is limited empirical evidence on how these variables interact to affect the effectiveness of school management in public secondary schools in Rivers State.

The study therefore seeks to fill this gap by empirically investigating the influence of legal compliance, ethical leadership, and core institutional values on the effectiveness of school management in public senior secondary schools in Rivers State. The findings are expected to contribute to policy refinement, leadership development programmes, and the formulation of strategies for improved school governance.

Literature Review

Theoretical Framework

This study is anchored on three interrelated theories: Institutional Theory, Ethical Leadership Theory, and Transformational Leadership Theory. Each of these theories provides a conceptual lens through which the variables: legal compliance, ethical leadership, and core institutional values can be examined in relation to school management effectiveness.

Institutional Theory (Meyer & Rowan, 1977)

Institutional Theory posits that organizations function within a structured and regulated environment where formal rules, laws, and norms influence organizational practices. Compliance with these external expectations legitimizes the organization and enhances its credibility and efficiency. In the context of school management, legal frameworks such as the Universal Basic Education Act (2004), the National Policy on Education (2013), and state-level educational policies act as institutional mechanisms that define how public schools should operate. Adherence to these legal instruments foster transparency, accountability, and consistency in school governance (Okafor & Okocha, 2021). Thus, Institutional Theory supports the argument that legal compliance is a prerequisite for effective school management.

Ethical Leadership Theory (Brown, Treviño & Harrison, 2005)

Ethical Leadership Theory emphasizes the role of morality, fairness, integrity, and role modeling in effective leadership. Ethical leaders set standards for behaviour, make fair decisions, and encourage others to act ethically through communication and example. In the context of school leadership, ethical managers create a climate of trust, fairness, and professional conduct, which significantly impacts teacher morale, student behavior, and organizational cohesion (Ugwulashi, 2017). By applying Ethical Leadership Theory, this study recognizes that the presence of ethical behavior in school leadership enhances decision-making, conflict resolution, and staff motivation, thereby improving managerial effectiveness.

Transformational Leadership Theory (Burns, 1978; Bass, 1985)

Transformational Leadership Theory focuses on leaders who inspire and motivate followers to exceed expectations by fostering a shared vision, promoting innovation, and nurturing organizational values. It is particularly relevant in educational settings where leaders are expected to instill a sense of mission and commitment among teachers and students. This theory provides the basis for understanding how core institutional values such as respect, accountability, and commitment can be embedded in school culture and contribute to managerial effectiveness. Transformational leaders align the values of staff and students with institutional goals, creating a cohesive and purpose-driven environment (Sergiovanni, 1992).

Synthesis of Theories

Together, these three theories offer a robust framework for understanding the interplay between external legal requirements (Institutional Theory), internal moral behavior (Ethical Leadership Theory), and shared cultural values (Transformational Leadership Theory) in shaping school management effectiveness. The synergy of these perspectives allows for a comprehensive analysis of how leadership, law, and values interact to enhance the functioning of public secondary schools in Rivers State.

Legal Compliance in School Management

Legal compliance serves as the foundation of responsible and effective school governance. Laws and regulations in the education sector ensure that school managers uphold standards in areas such as curriculum implementation, personnel management, financial accountability, student welfare, and infrastructure development. Adebayo and Ogunyemi (2019) stated that adherence to legal provisions enhances managerial transparency and minimizes occurrences of misconduct or abuse of power. In the Nigeria context, public secondary schools are expected to comply with frameworks such as the National Policy on Education (2014), Child Rights Act (2003), and laws. Non-compliance can lead to legal sanctions, loss of stakeholder confidence, and diminished institutional performance (Okoro & Ibe, 2018).

Ethical Leadership and Managerial Effectiveness

Ethical leadership has been shown to play a pivotal role in influencing the quality of decision-making and the moral tone of school leadership. Ethical leaders demonstrate integrity, fairness, empathy, and a strong sense of justice, which promotes a culture of mutual respect and shared responsibility in schools (Brown & Trevino, 2006). In Nigeria, studies indicate that ethical lapses such as favoritism in staff promotion, misappropriation of funds, and lack of transparency in student assessments hinder managerial effectiveness (Ugwulashi, 2017). Ethical leadership enhances communication, builds trust, and strengthens teamwork among staff and students, thereby improving organizational climate and learning outcomes (Edeh & Nwankwo, 2020).

Institutional Values and School Culture

Institutional values from the cultural identity of schools and guide behaviours, decisionmaking and relationships. Values such as respect, responsibility, excellence, and accountability are instrumental in shaping the ethos of school communities (Onyije & Olanrewaju, 2020). Schools that internalize and promote strong values experience better student discipline, stronger teacher commitment, and improved academic performance. Moreover, institutional values reinforce ethical leadership and facilitate compliance with rules by nurturing a shared understanding of what is right and expected (Adepoju & Adelabu, 2019).

Combined Influence on Managerial Effectiveness

The synergy among legal compliance, ethical leadership, and institutional values is critical to effective school management. Research by Iroegbu and Okafor (2021) demonstrates that school managers who operate within legal boundaries, lead ethically, and promote institutional values tend to achieve higher levels of performance and stakeholder satisfaction. Conversely, schools lacking in these areas often suffer from conflict, poor staff morale, and inefficient resource use. While studies have independently examined each of these variables, there is dearth of empirical research exploring their combined influence, particularly in the public education sector of Rivers State.

Statement of the Problem

School managers in Rivers State often operate in environments marked by irregular policy enforcement, moral dilemmas, and conflicting value systems. These factors can compromise managerial decisions and affect school effectiveness. The extent to which legal compliance, ethical leadership, and institutional values contribute to resolving these challenges remains underexplored.

Purpose of the Study

The main objective of this study is to investigate organizational ethics variables on effective management of public senior secondary schools Rivers State. The specific objectives are to:

1. Determine the extent to which legal compliance influence school management effectiveness in public senior secondary schools in Rivers State.
2. Examine the extent to which ethical leadership influence school management effectiveness in public senior secondary schools in Rivers State.
3. Ascertain the extent to which core institutional values influence school management effectiveness in public senior secondary schools in Rivers State.

Research Questions

The following research questions guided the study.

1. To what extent does legal compliance influence school management effectiveness in public senior secondary schools in Rivers State?
2. To what extent does ethical leadership influence school management effectiveness in public senior secondary schools in Rivers State?
3. To what extent does core institutional values influence school management effectiveness in public senior secondary schools in Rivers State?

Methodology

A descriptive survey design was adopted in the study, and the population of the study consisted of 800 school managers in all the public senior secondary schools in Rivers State. A sample of 250 respondents was drawn from the population using stratified random sampling technique to ensure representation across the three senatorial zones of Rivers State (Rivers East, Rivers West, Rivers South-East). Each stratum included participants from both urban and rural schools to capture a broad range of administrative contexts. The primary instrument for data collection was a structured questionnaire titled —School Management Effectiveness Questionnaire (SMEQ). The instrument

contained 15 items, which were responded to on a 4-point modified Likert scale of Very High Extent (VHE), High Extent (HE), Low Extent (LE), and Very Low Extent (VLE). These weights were summed and divided by 4 to arrive at 2.50, which was the criterion mean score used to agreeing or disagreeing with the questionnaire items. Content and face validity was established through expert review by educational management specialists in Rivers State University and legal/ethical studies scholars, and the internal consistency of the questionnaire was determined using Cronbach Alpha. Reliability indexes of 0.82, 0.84, and 0.80 was realized from the three clusters. Out of the 250 copies of questionnaire administered, only 238 were retrieved by the researchers with the help of a trained research assistant at a date and time agreed upon with the respondents. The research questions raised in this study were answered using mean and standard deviation statistics.

Results and Findings

Research Question 1: To what extent does legal compliance influence school management effectiveness in public senior secondary schools in Rivers State?

Table 1: Mean Ratings on the influence of Legal Compliance on School Management Effectiveness

S/No	Items	Mean	SD	Remarks
1	The school leadership adheres to government educational policies and regulations.	3.52	0.70	HE
2	Managerial decisions in this school comply with the rules and codes of conduct provided by the Ministry of Education.	3.19	1.02	HE
3	Financial expenditures are subject to legal approval and auditing procedures.	2.76	1.14	LE
4	There is regular training on legal obligations and compliance for school leaders.	3.55	0.99	HE
5	The school maintains accurate and legally required documentation for all operations.	3.83	1.08	HE

The data on table 1 showed that the respondents to a high extent generally agreed on the influence of legal compliance on school management effectiveness. Based on the responses of these respondents to the question posed it is obvious that the respondents agreed to a high extent on all the items except variable item 3 which stated that financial expenditures are subject to legal approval and auditing procedures which has a low extent agreement.

Research Question 2: To what extent does ethical leadership influence school management effectiveness in public secondary schools in Rivers State?

Table 2: Mean Ratings on the influence of Ethical Leadership on School Management Effectiveness

S/No	Items	Mean	SD	Remarks
6	The school administrator models honesty and integrity in decision-making.	3.31	0.75	HE
7	Staff are treated fairly and equitably regardless of gender, tribe, or religion.	3.24	1.10	HE
8	Ethical behavior is encouraged and rewarded among staff members.	3.06	1.01	HE
9	The school head accepts responsibility for their decisions and actions.	3.15	0.94	HE

10	Transparency is maintained in the allocation of duties and use of resources.	3.04	1.16	HE

The data on table 2 showed that the respondents generally agreed to a high extent on all the variable items concerning the influence of ethical leadership on school management effectiveness. This can be attested to by the total mean which ranged from 3.04 to 3.31 which is higher than the criterion mean of 2.50. Variable item 6 which concerns the school administrator models honesty and integrity in decision-making has the highest total mean of 3.31.

Research Question 3: To what extent does core institutional values influence school management effectiveness in public secondary schools in Rivers State?

Table 3: Mean Ratings on the influence of Core Institutional Values on School Management Effectiveness

S/No	Items	Mean	SD	Remarks
11	The school promotes shared values such as respect, accountability, and excellence.	3.95	0.82	VHE
12	Staff and students understand and uphold the core values of the institution.	3.20	0.93	HE
13	Conflicts are resolved in line with the moral and cultural values of the school.	3.60	1.13	LE
14	Leadership decisions reflect the school's stated mission and values.	3.45	0.92	HE
15	The school consistently reinforces a culture of professionalism	3.22	1.01	HE

The data on table 3 showed that all the core institutional values items considered on research question 3 were all generally agreed upon to a high extent to influence school management effectiveness. Based on the responses of the managers who constituted the respondents of the study on this research question, it is apparent that item 11 which states: the school promotes shared values such as respect, accountability, and excellence with a mean of 3.95 has the highest total mean. This means that this variable item influence school management effectiveness.

Discussion of Findings

On the first research question which considered the extent to which legal compliance influence school management effectiveness in public secondary schools in Rivers State, the researcher discovered that respondents affirmatively agreed to a high extent on all the items expect item 3 which stated that financial expenditures are subject to legal approval and auditing procedures with a low extent agreement. These responses implies that when school managers adhere to established educational laws, policies, and regulatory frameworks, the school functions more efficiently, with clearer roles, accountability, and operational transparency. This finding supports the view of Ezeani and Ofojebe (2019), who asserted that legal compliance enhances procedural justice and reduces conflict in school systems. It also aligns with Adegbesan (2018), who found that regulatory adherence fosters a climate of fairness and discipline necessary for effective leadership.

The second research question analyzed the extent to which ethical leadership influence school management effectiveness in public secondary schools in Rivers State. It was revealed that respondents generally agreed to a high extent on all the variable items concerning the research question. The aggregate mean which ranged from 3.04 to 3.31 is higher than the criterion mean of 2.50. Ethical leadership practices such as transparency, integrity, fairness, and accountability were found to positively impact school operations. This supports findings by Brown and Treviño (2006) and Olagunju (2020), which emphasized that ethical school leaders foster trust, boost staff morale, and create

environments conducive to teaching and learning. In the context of Rivers State, ethical leadership appears to mitigate issues of favoritism, mismanagement, and poor communication.

The third research question determined the extent to which core institutional values influence school management effectiveness in public secondary schools in Rivers State. Based on the analyzed result, it is apparent that all the core institutional values variables considered on research question 3 were all generally agreed upon to a high extent that core institutional values influence school management effectiveness. From the responses of the school managers who constituted the respondents of the study on this research question, it is apparent that item 11 which states: the school promotes shared values such as respect, accountability, and excellence with a mean 3.95 has the highest total mean. Such a high mean reflects that values such as respect for diversity, inclusiveness, accountability, and shared vision were instrumental in guiding school practices. This agrees with the work of Sergiovanni (1992), who argued that strong institutional values bind school communities together and provide a moral compass for leadership decisions. In public secondary schools in Rivers State, such values seem to help shape a professional culture that enhances collaboration and goal attainment.

Contribution to Knowledge

This study contributes to the existing body of knowledge by empirically demonstrating that legal compliance, ethical leadership, and institutional values jointly and significantly predict school management effectiveness in the Nigerian public secondary school context. It also highlights the importance of aligning managerial practice with law, ethics, and values for sustainable school development.

Conclusion

The findings of this study affirm that legal compliance, ethical leadership, and core institutional values are critical to effective school management in public secondary schools in Rivers State. School managers who adhere to legal standards, uphold ethical principles, and cultivate institutional values are more likely to run effective and result-oriented schools. Therefore, fostering legal literacy, promoting ethical conduct, and institutionalizing core values in school management are strategic steps toward achieving better educational outcomes in the public school sector.

Recommendations

Based on the findings and conclusions of this study, the following recommendations are made:

1. The Ministry of Education should provide regular training and sensitization for school managers on the legal frameworks governing school operations to ensure greater compliance and accountability.
2. School leadership development programmes should prioritize ethical behaviour, focusing on fairness, transparency, and moral responsibility.
3. Schools should collaboratively define and promote core values such as respect, excellence, inclusiveness, and accountability. These values should be embedded in school culture and daily practices.

Federal University of Kashere, Gombe State

Abstract

The rapid adoption of Artificial Intelligence (AI) in education presents transformative opportunities for personalized learning, administrative efficiency, and global access. However, the integration of AI into educational systems also raises significant challenges related to equity, ethics, governance, and data management. Policy development is critical to ensuring that AI implementation enhances educational quality while safeguarding ethical principles and social justice. This paper examines the current landscape of AI integration in education, identifies key policy challenges, and proposes a comprehensive framework for effective AI governance. Drawing on global policy documents, academic literature, and conceptual models, the study highlights strategic approaches for policymakers, educational institutions, and technology developers. Findings suggest that successful AI integration requires multi-stakeholder engagement, ethical oversight, capacity building for educators, and robust regulatory frameworks. The paper concludes with actionable recommendations to guide equitable, responsible, and sustainable AI adoption in educational systems.

Keywords: Artificial Intelligence, Policy Development, Education, Governance, Digital Learning, Implementation

Introduction

Artificial Intelligence (AI) is rapidly reshaping education worldwide, transforming teaching, learning, and administration. Through adaptive learning systems, intelligent tutoring, and automated assessments, AI offers opportunities to personalize instruction, enhance efficiency, and expand access to quality learning (Holmes, Bialik, & Fadel, 2021). In both developed and developing countries, AI holds potential to address teacher shortages, support differentiated learning, and optimize resource allocation.

However, the integration of AI also presents significant challenges that demand deliberate policy responses. Ethical risks, including algorithmic bias, data privacy violations, lack of transparency, and unequal access, threaten to undermine educational equity and trust (Williamson & Eynon, 2020). Uneven regulatory environments, limited teacher preparedness, and insufficient institutional capacity further heighten the possibility of ineffective or harmful implementation. Without coherent policy frameworks, AI deployment may deepen existing inequalities or compromise pedagogical and ethical standards.

Robust, context-sensitive policy development is therefore essential. Effective policies must balance innovation with regulation, ensuring that AI tools support pedagogical aims, uphold ethical

norms, and reflect societal values. They should also account for cultural and contextual diversity, promoting locally relevant solutions while drawing from global best practices.

This paper investigates the policy landscape for AI in education by addressing three guiding questions: (1) What major challenges confront policymakers in governing AI integration? (2) What policy frameworks and strategies have been adopted globally? (3) What actionable recommendations can guide ethical and effective AI use in education?

Using an integrative review of academic scholarship, international guidelines, and national policy documents, the study applies conceptual policy analysis to identify opportunities and gaps. The aim is to ensure that AI adoption is technologically viable, pedagogically meaningful, ethically grounded, and socially equitable.

The paper proceeds with a Literature Review, followed by a Theoretical and Conceptual Framework, Methodology, Findings, and Discussion. It concludes with policy recommendations to guide governments, educational institutions, and developers in fostering responsible and sustainable AI integration in education.

Literature Review

Artificial Intelligence (AI) is reshaping global education through adaptive learning systems, intelligent tutoring, automated assessment, and predictive analytics (Holmes, Bialik, & Fadel, 2021). These tools enable personalized learning, streamline administration, and support data-driven decision-making. Although adoption is uneven, rapid in regions like North America and Europe and slower in parts of Africa, Asia, and Latin America due to infrastructural and financial constraints (UNESCO, 2021), AI is increasingly recognized as essential to educational innovation.

Research highlights several benefits. AI enhances learning outcomes by providing real-time feedback, customizing learning pathways, and identifying learners at risk (Holmes et al., 2021). It also relieves teachers of routine tasks, allowing them to focus on mentoring and differentiated instruction (Baker & Smith, 2019). However, these advantages are contingent upon robust policy frameworks that ensure equitable, ethical, and pedagogically sound implementation.

Existing Policy Frameworks and Guidelines

Global organizations have developed policy guidance to steer responsible AI integration. UNESCO's recommendations emphasize inclusivity, fairness, transparency, privacy, and accountability (UNESCO, 2021). Likewise, OECD guidelines call for human-centered AI, ethical design, and strong accountability mechanisms (OECD, 2019). Several national strategies reinforce these principles. China's AI development plan prioritizes AI literacy and intelligent school systems; the European Union emphasizes data protection and ethical compliance; and U.S. state-level policies focus on ethical data use, AI literacy, and teacher capacity (Williamson & Eynon, 2020). Despite these initiatives, many countries struggle with gaps in implementation, monitoring, and regulatory coherence.

Challenges in Policy Development

Four major challenges emerge:

1. **Equity and Access:** AI may widen educational inequalities if students in low-resource settings lack devices, connectivity, or digital literacy (Zawacki-Richter et al., 2019). Policies must confront these disparities to prevent deepened digital divides.
2. **Ethical and Moral Concerns:** AI systems can reproduce biases present in training datasets, leading to discriminatory recommendations or unfair assessments (Buolamwini & Gebru, 2018). Privacy, surveillance, and data misuse further complicate ethical integration, making clear ethical frameworks essential.
3. **Teacher Preparedness:** Many teachers lack the training needed to use AI tools effectively. Without policy-driven professional development, educators may underutilize or misuse AI, undermining pedagogical quality (Holmes et al., 2021).

4. **Regulatory and Governance Gaps:** Few countries have comprehensive governance structures for AI in education. Weak regulation can lead to inconsistent practices, accountability problems, and ambiguous legal responsibilities (Borenstein & Howard, 2020).

Opportunities for Policy-Driven AI Integration

Despite these challenges, policy design offers pathways for constructive integration:

- **Inclusive Frameworks:** Thoughtfully designed policies can address affordability, access, and digital literacy, ensuring equitable participation.
- **Ethical Governance:** Embedding transparency, explainability, and data protection within regulatory systems builds trust and safeguards rights.
- **Teacher Empowerment:** Professional development, certification, and resource support help educators integrate AI meaningfully while maintaining pedagogical control.
- **International Collaboration:** Cross-national knowledge sharing strengthens governance structures and helps countries adapt global best practices to local needs.

Research Gaps

Gaps persist in empirical evaluations of AI policy effectiveness, context-specific frameworks for developing countries, and longitudinal studies tracking long-term impacts on equity and learning outcomes.

The literature shows that AI holds significant transformative potential for education, but effective policy development is crucial. While global and national frameworks emphasize ethics, equity, and accountability, persistent challenges, digital divides, ethical risks, limited teacher capacity, and regulatory gaps, require targeted policy responses. Context-sensitive, ethically grounded, and educator-centered policies provide the strongest foundation for sustainable and equitable AI adoption.

Theoretical Framework

Developing effective policies for AI integration in education requires a framework that links technological innovation with governance, ethics, and learning outcomes. Drawing on public policy and AI governance literature, this paper combines Kingdon's Multiple Streams Framework with the OECD AI Governance Guidelines to create a tailored conceptual model for educational contexts.

Kingdon's Multiple Streams Framework

Kingdon (1995) explains policy development through three streams:

1. **Problem Stream** – Recognition of challenges such as equity concerns, data privacy, and the need for ethical AI use in education.
2. **Policy Stream** – Generation of feasible solutions, including regulations, ethical standards, teacher training, and infrastructure plans.
3. **Politics Stream** – Influence of political will, stakeholder interests, and institutional readiness.

In education, this includes policymakers, school leaders, teachers, parents, and developers.

When these streams align, a policy window opens, enabling effective AI policy formulation. This framework underscores the need for coordinated problem recognition, actionable policy solutions, and stakeholder support.

OECD AI Governance Guidelines

The OECD provides normative principles for responsible AI, emphasizing human-centered values, transparency, accountability, fairness, inclusivity, robustness, and security. Integrating these principles helps ensure AI supports learning, protects rights, and promotes equity.

Integrated Conceptual Framework

The combined model outlines a cyclical process for AI policy development:

1. Identifying context-specific AI challenges and opportunities.

2. Formulating regulations and strategic plans.
3. Engaging stakeholders for legitimacy and feasibility.
4. Implementing policies through training and system deployment.
5. Monitoring outcomes, ethical compliance, and system performance.
6. Iteratively refining policies based on feedback.

This framework supports sustainable, ethical, and context-responsive AI integration in education.

Methodology

This study adopts a conceptual and analytical research design to examine policy development for AI integration in education. Given the emerging nature of AI applications and the limited empirical evidence on policy frameworks, a conceptual approach is appropriate for synthesizing existing scholarship, international guidelines, and national policy documents while identifying gaps and opportunities.

Research Design

The study employs a theoretical–conceptual design suitable for analyzing complex policy issues where empirical data are fragmented or context-dependent. By integrating policy theory, governance principles, and ethical frameworks, the study constructs a coherent model for AI policy development, allowing critical examination of the intersections between technology, ethics, and educational governance.

Data Sources

The analysis draws on secondary data from:

1. **Academic Literature:** Peer-reviewed studies on AI in education, governance, and technology ethics (e.g., Holmes et al., 2021; Buolamwini & Gebru, 2018; Williamson & Eynon, 2020).
2. **International Guidelines:** UNESCO, OECD, and other global bodies offering AI governance principles and education-focused recommendations.
3. **National Policy Documents:** AI strategies from China, the U.S., and EU member states illustrating varied policy approaches.

These sources provide comprehensive theoretical and practical perspectives on AI governance in education.

Analytical Approach

The study uses thematic analysis and conceptual synthesis. Steps include: identifying recurring themes (e.g., challenges, governance gaps, ethical issues), mapping findings onto Kingdon's Multiple Streams Framework and OECD guidelines, and synthesizing insights into a conceptual policy development model.

Justification

A conceptual methodology is appropriate due to the novelty of AI in education, the need for cross-national comparison, and the suitability of theoretical integration for generating actionable policy insights. This approach enables rigorous analysis while informing future empirical research.

Findings

This section synthesizes global policy documents, academic literature, and national AI strategies to identify key challenges, opportunities, and governance strategies for integrating AI in education. The findings highlight the complexity of developing policies that balance innovation, equity, and ethical responsibility.

Key Policy Challenges

a. **Equity and Access**

Significant disparities in digital infrastructure, internet access, and socio-economic conditions hinder equitable AI adoption. Schools in rural and low-income regions, especially in developing countries, often lack the resources needed for AI integration, risking a widening digital divide (Zawacki-Richter et al., 2019). Policies must prioritize infrastructure investment, subsidized access, and digital literacy initiatives.

b. **Ethical Concerns**

AI raises issues related to bias, discriminatory outcomes, privacy breaches, and opaque decision-making (Buolamwini & Gebru, 2018). Weak regulatory systems exacerbate these risks. Policymakers must embed ethics, transparency, and data protection into AI design and implementation.

c. **Teacher Preparedness**

Teachers often lack adequate training to use AI effectively. Without professional development and pedagogical resources, AI tools remain underutilized (Holmes et al., 2021). Policies must emphasize capacity building, certification, and continuous support.

d. **Governance Gaps**

Many countries lack clear legislation and oversight structures for AI in education. Opaque —black-box— systems pose transparency and accountability challenges (Borenstein & Howard, 2020). Policymakers must define governance responsibilities and establish mechanisms for auditing and compliance.

e. **Cultural and Contextual Relevance**

AI systems designed for global markets may not reflect local languages, cultures, or pedagogies. Policies must mandate contextual adaptation to ensure AI enhances learning relevance and inclusivity.

Opportunities for Policy-Driven AI Integration

a. **Advancing Educational Equity**

When supported by strong policy, AI can personalize learning, support diverse learners, and enable targeted interventions. Infrastructure and literacy investments can reduce inequities and expand opportunities.

b. **Strengthening Ethical Governance**

Embedding fairness, transparency, and accountability into AI policies ensures responsible deployment. Ethical audits, oversight committees, and clear regulatory rules help foster trustworthy AI adoption.

c. **Empowering Educators**

Policies that provide AI-oriented training, resources, and peer-support networks enhance teacher confidence and effectiveness. Empowered teachers can integrate AI meaningfully while retaining autonomy in the learning process.

d. **Evidence-Based Policy and Practice**

AI-generated insights allow policymakers to track learner needs, evaluate interventions, and refine policies. Data-driven decision-making can improve system efficiency and educational outcomes when used ethically.

e. **International Collaboration**

Engaging with global guidelines and international partners facilitates policy harmonization, knowledge exchange, and adoption of best practices.

Governance Strategies for Effective AI Integration

1. **Multi-Stakeholder Engagement:** Inclusion of teachers, parents, students, policymakers, developers, and civil society ensures legitimacy and relevance.

2. **Ethics-by-Design:** Ethical safeguards must be embedded during system design and deployment.
3. **Capacity Building:** Structured training for educators and administrators strengthens responsible use.
4. **Monitoring and Evaluation:** Continuous assessment and iterative refinement ensure long-term policy effectiveness.
5. **Localization:** AI tools must be adapted to local cultural, linguistic, and curriculum contexts.
6. **Clear Legal Frameworks:** Defined accountability and compliance standards reduce risks and enhance transparency.

Effective AI policy in education requires a balanced, multi-dimensional approach. While AI offers transformative potential, policies must address equity, ethics, teacher readiness, and governance to ensure safe, equitable, and meaningful integration.

Discussion

The findings of this study reveal the interconnected roles of technological innovation, ethical imperatives, and governance structures in shaping AI integration in education. Interpreting these findings through ethical frameworks, governance theory, and global policy experiences offers insight into emerging opportunities, challenges, and strategies for effective policymaking.

Ethical Frameworks and AI Policy

Ethics remain central to the responsible use of AI in education. Four major ethical traditions guide effective policy development:

Virtue ethics emphasizes fostering moral and intellectual virtues. AI tools should support critical thinking, creativity, empathy, and collaboration rather than narrowly optimizing efficiency or standardized outcomes.

Deontological ethics foreground rights, duties, and autonomy. Policies must protect learner privacy, ensure informed consent, and demand transparency in algorithmic decisions to uphold dignity and fairness.

Consequentialism requires weighing the broader impacts of AI adoption. While AI can expand access to education and improve learning outcomes, it can also reinforce inequities if poorly regulated. Policies should maximize benefits while preventing bias and discriminatory practices.

Communitarian (Ubuntu) ethics stress relational well-being and collective values. AI systems should be culturally relevant, promote collaboration, and strengthen inclusive learning communities.

Embedding these ethical principles within policy frameworks ensures that AI enhances human-centered educational goals.

Governance Theory and Policy Implementation

Governance theories highlight the need for multi-level, participatory, and adaptive policy structures. Kingdon's Multiple Streams Framework shows that effective policy emerges when problems, solutions, and political will align. International experience affirms that countries succeed when policies are inclusive, flexible, and clearly regulated.

Participatory governance - involving teachers, students, parents, and developers—ensures relevance and strengthens public trust, as seen in Finland and Singapore.

Adaptive governance supports continuous improvement through monitoring and iterative evaluation. The European Union exemplifies this through evolving ethical and regulatory mechanisms.

Regulatory clarity reduces ambiguity and enhances accountability. Nations such as Canada and the UK demonstrate that clear oversight improves trust and compliance.

Comparative Global Policy Experiences

Global experiences further demonstrate that policy effectiveness depends on aligning ethics, governance, and context:

- **China** prioritizes AI literacy but faces challenges in ethics and equity.
- **The EU** emphasizes human-centric design, transparency, and strong data protection.
- **The United States** advances AI literacy and teacher training but struggles with fragmented state-level approaches.
- **Developing countries** face infrastructural and capacity constraints, making international collaboration essential.

Abstract

The study examined Private school Principals ethical leadership behaviour on administration of private secondary schools for sustainable National Development. The study adopted a descriptive survey design, three (3) research questions guided the study. The population of the study consists of 120 (One hundred and twenty) Private schools principals in Owerri Municipal Council. The entire population of 120 (One hundred and twenty) Private School principals were used as sample for the study. The study adopted a purposive sampling technique for this study. The instrument for data collection was a self-structured questionnaire titled Principals Ethical Leadership Behaviour on Administration of School Questionnaire (PSPELBASQ). The instrument adopted four-point scale of Very high extent to very low extent. The face and content validity of the instrument were done by two experts in measurement and evaluation and one expert from Educational Administration & Foundations. Cronbach Alpha reliability co-efficient method was used for reliability test which yielded reliability co-efficient of 0.81. Mean and standard deviation were used to analyze the research questions. Findings revealed that principals' ethical leadership behaviour on administration of private secondary schools for sustainable National development enhances the administration of secondary schools with respect to decision making, supervisory instruction and communication ethical leadership behaviours. It was recommended that Private secondary school principals should constantly display ethical leadership behaviour in the discharge of their administrative functions. This will help create a positive school climate which is an essential component for administration of schools.

Keywords: Principals, Ethical Leadership Behaviour, Private Secondary Schools and Sustainable National Development

Introduction

Education has been regarded as the instrument for sharpening the intellectual powers of man. It is the key to human and capital development and the key to national development. Education is seen as an important means of transmitting the skills and knowledge needed by individuals to participate in the society. It is also required in the contribution to the development of a country's economic, political and social development. In the secondary school level of education, the principal is the head of the school. It is also the responsibility of the principals to provide the appropriate leadership practices which entails effective administration of the Secondary education. The Secondary Education's broad goals of preparing people for useful living in the society and for higher education have made it imperative that it should among others, supply trained manpower, inspire its students with the desire for self-

improvement and achievement of excellence, raise the generation of people who can think for themselves, respect the view and feelings of others and respect the dignity of labour (FRN, 2004).

The school principal is the leader and gives the necessary leadership functions for the achievement of educational goals. The principal as the leader is responsible for all that happens in the school. principal as the leader is responsible for all that happens in the school. The principal behaviour is expected to be guided by ethical principles as indicated by the National Association of School Psychologists (NASP, 2010) and they include: respecting the dignity and rights of all persons, showcasing professional competence and responsibility, fostering honesty and integrity in professional relations, showcasing responsibility and commitment to school, families, community and the society, maintaining professionalism, among others. As ethical leaders guided by ethical principles, school principals should be good role models for their staff by displaying ethical behaviours themselves first. This will enable their staff to adopt ethical values and norms more easily (Eskender, 2015; Sarıkaya & Erdoğan, 2016). SchoolPrincipal is someone that shows the way or influences someone or people to do things or think in a particular way or to contribute voluntarily to the achievement of group tasks in a given situation (Eskender, 2015). He or she should have a philosophy of life, personal traits and qualities that lead to action with desirable character and which seems to be of benefit to him or her and others in bid for successful career as principal of the school (Chike-Okoli, 2017). Akpakwu (2017) sees the principal as the single administrative and academic head, who is responsible for the operation of the school. The principal carries out administrative and instructional functions in the school through an effective leadership style and ethical leadership behaviour.

Principal Ethical leadership behaviour can also be defined as leadership that is directed by respect for ethical beliefs and values and for the dignity and rights of others. It is thus related to concepts such as trust, honesty, consideration, charisma and fairness (McQueeny, 2016; Reilly, 2006). The Centre for Ethical Leadership (CEL, 2013) opined that ethical leadership behaviour involves leading in a manner that respects the rights and dignity of others; a concept that is at times in direct conflict with more traditional models of leadership. Ethical leadership is perceived to be a role modelling leadership, enabling employees to do the right thing by asking the right questions (Freeman & Stewart, 2016). Downe, Cowell and Morgan (2016) perceive ethical leadership practices to emanate either from the nature and behaviour of the leader as a person, encouraging emulation, or from the systems and practices that they set up to regulate conduct on their behalf. Northhouse (2016) identifies the cardinal principles and indicators of ethical leadership as: respect for others; service to others; justice for others; honesty towards others; and building community. Ethical leadership is positively linked with favorable employees' outcomes including being effective positive attitudes and behaviour (Chen & Hou, 2016; Ng & Feldman, 2015). Principals' ethical leadership behaviour according to Akpakwu (2016) focuses attention on principals' conducts towards planning and improving instructional activities in the school, provision of resources for teachers, teacher evaluation, group dynamics - working with groups, and utilizing various supervisory techniques to ensure that instructional objectives are achieved. The researchers interest on principal ethical leadership behaviour will focus on decision making leadership behaviour, Instructional supervisory leadership behaviour and Communication leadership behaviour.

Decision making is one important managerial task of school principals. Decision making as defined by Lussier cited in Akpakwu (2017) is the process of selecting a course of action that will solve a problem. Ethical decision-making behaviour refers to the process of evaluating and choosing among alternatives in a manner consistent with ethical principles (Akpakwu, 2017). Principals' ethical decision-making behaviour also focuses on principals' ability to utilize a shared decision-making process to make sound decisions regarding students and staff that exercise good and rationale judgment. Decisions must be made by principals when they are faced with any problem. Good decisions result in the selection of the appropriate goals and course of actions that increase performance, while bad decisions result in lower or poor performance in educational establishments. The principal must be fair and take other people's views and opinions into consideration when taking decisions affecting teachers

in the school (Cherkowski, Walker & Kutsyuruba, 2015). This calls for participatory decision-making process in the school.

Akpakwu (2012) and Dempsey (2013) identified the following steps involved in ethical decision making: Recognize an issue or concern and the duty to act or become involved. This implies that the principal must identify the problem and also draw attention of the parties' concerns and define the problem - including the principles, standards, and values involved – and identify fundamental objectives as well as potential conflicts and risks.

Principals' Ethical Instructional Supervisory Leadership Behaviour is to ensure effectiveness of teaching and learning delivery in the secondary schools demands that teachers should be constantly supervised during classroom instructions. Principals perform this role/function through instructional supervision. According to Kochlar (2015), Makokha (2015), Okolo (2015), Onuma (2016), Sule, Ameh and Egbai (2015), instructional supervision is one of the critical administrative functions of a school administrator that involves overseeing and guiding the teaching and learning process in an academic institution. Kochlar, Makokha and Okolo (2018) studies further sees instructional supervision as those activities which are primarily and directly concerned with studying and improving the conditions which surround the learning and growth of pupils, and also include whatever is done to improve on the teachers' ability and competence to deliver lessons to improve on pupils' learning. Eya and Chukwu (2012) saw instructional supervision in school merely as a process for teachers' improvement purposes which include among other things ensuring that teachers perform their assigned functions. There are many reasons for instructional supervision in schools. Some of these according to Ogunu (2018) are: to make sure that teachers are performing the duties which they are employed to do; assisting teachers to develop and utilize methods and materials which will improve the progress of a child and improve teachers' professional effectiveness; to know the performance of teachers recruited; to discover special abilities possessed by the teachers in school; to provide opportunities for teachers development; to know the effectiveness of classroom management by teachers; to appraise the performance of the school through the use of competent and committed teachers; and to identify the needs of teachers in the school.

School Principal Maintaining effective communication system among students, teachers and other non- teaching staff is one of the important functions of principals in the secondary school. Where effective communication system is highly projected in an organization including the school system then it is possible that the aims, objectives and goals of such organizations will be achieved and likewise enhance good performance. The extent to which a principal establishes and maintains good and effective communication flow using ethical standards, to that extent he is able to accomplish his set goals.

Failure to appropriately communicate leads to poor teacher commitment and friction between workers or subsystems, with organizational failure as the resultant effects. Any administrator or principal who wishes to avoid a disappointing situation, conflicts or disorder must have to ethically communicate with staff as it is the epitome of effective school administration. Communication as defined by Udeozor (2014) as the act of passing relevant information to the person who needs to know, or who, is in a position to use that information because it affects his work. It involves the means and process of transmitting message, ideas and information from one individual to another and also among members in a group. Communication is the unifying means by which organization members are linked together to achieve a central purpose and objective. Communication helps to link all the various organization activities and however the performance of all functions of the principal such as planning, organizing, directing, controlling and coordinating depends on effective system of communication. All organization leaders should device means or way of communicating with subordinates for effective communication. However, a broken-down communication ignites mutual distrust, suspicions, resentment, gossips, insecurity and fear (Udeozor, 2014). According to Årlestig (2018), communication is a multidimensional process which requires frequent use of dialogues and conversations in the school organization.

Blasé and Blasé (2000) opined that principal _who applied ethical principles in decision making often used an inquiry approach with teachers and they frequently solicited teachers _advice about instructional matters. Alimi and Akinfolarin (2017) opined that Principals' instruction supervisory behaviour assists school heads to improve classroom instructions. In essence, a principal that demonstrates ethical instruction supervisory leadership behaviour is one who is hardworking, have accurate knowledge of what goes on in the school and are interested in teachers _classroom instructional delivery. The principal is approachable, kind, considerate and willing to take advantage of teachers' special skills (Makokha, 2015). The studies of Okolo (2015), Sule, Ameh and Egbai (2015) and Onuma (2016) found that there was a significant high positive relationship between instruction supervisory practice of classroom observation, checking of teachers_lesson notes and preparation, monitoring of teachers_ attendance and teacher effectiveness/performance. Igbo (2002) confirmed that the quality of students learning was directly related to the quality of classroom instruction which is determined through teacher commitment and instructional supervision. Ensley (2014) study found that leadership role performed by principals showed high level of instruction leadership responsibilities in instruction supervision in the school. Crawford-Patterson (2008) supporting the above finding, also discovered that principals' communication practices positively related and influenced the school improvement work. Arlestig (2008) on communication between principals and teachers in successful schools found that leadership communication in schools is related to everyday activities of teachers and individual students' work. In successful schools, principals and teachers communicated more frequently about issues related to teaching and learning. These principals made more classroom visits and provided more frequently feedback on teachers' professional role. Ensley (2014) found that leadership role performed by principals showed high level of instructional leadership responsibilities in communication networks in the school. Principals that demonstrate ethical communication leadership behaviour recognize the importance of good communication and communicate effectively with teachers in the school organization (Kline, 2000; Arlestig, 2008). Miles, Castrence and Fox (2006) confirmed that for efficiency in the school organization, principals as facilitators must demonstrate such ethics like valuing transparency, valuing flexibility, and valuing diversity while communicating to staff. Aspects of principals_ ethical communication leadership behaviour that positively relates to teachers_ commitment according to Kline (2000) and Arlestig (2008) includes treating teachers with respect and sensitivity to their rights and duties, compassionate in talking with teachers as a way of showing a good listener who avoids prejudgments, use of effective communication channels in order to prevent distrust among teachers, use of good gestures to praise teachers teaching task and conveying empathy and warmth when communicating with staff and students, among others.

Statement of the Problems

The primary objective of every principal is to administer his school in such a way that the educational objectives are achieved. The principal as chief custodian of all administrative, academic and extra teaching and non-teaching, students and facilities in order to achieve instructional goals and quality education. The ethical leadership behaviours exhibited by principals in form of their ethical instructional leadership behaviour, ethical decision-making leadership behaviour, ethical instructional supervisory leadership behaviour, among others, must be acceptable to the teachers. A significant challenge for principals is to identify the situations in their schools, such as school culture, how it affects the students and the type of leadership behaviors principals adopt in order to choose a path for the improvement of the schools. The principal is the critical person when it comes to efforts to improve the quality of the school. Since a school is known to be an instrument of change and reform in the society, the principal is pivotal in driving reforms and changes (Uyanga, 2018). This responsibility is very obligatory and principals are expected to be the catalysts for change and deploying managerial skills for implementing change within the school. Thus, the principal is the key supporting agent for change to achieve success in the school. It is against this backdrop that this study examines Principals ethical leadership behaviour on administration of private secondary schools for sustainable National development.

Purpose of the Study

The purpose of this study was to examine Principals ethical leadership behaviour on administration of private secondary schools for sustainable national development in Imo State. Specifically, the study seeks to;

- i. examine the extent to which Private schools' principals' ethical decision-making leadership behaviour enhances administration of private secondary schools for sustainable national development in Imo State,
- ii. examine the extent to which principals' ethical instruction supervisory leadership behaviour enhances administration of private secondary schools' sustainable national development in Imo State
- iii. examine the extent to which principals' ethical communication leadership behaviour enhances administration of private secondary schools for sustainable national development in Imo State

Research Questions

1. To what extent does principals' ethical decision-making leadership behaviour enhance administration of private secondary schools for sustainable national development in Imo State?
2. To what extent does principals' ethical instruction supervisory leadership behaviour enhance administration of private secondary schools' sustainable national development in Imo State?
3. To what extent does principals' ethical communication leadership behaviour enhance administration of private secondary schools' sustainable national development in Imo State?

Methodology

The study adopted a descriptive survey design. According to Nworgu (2023), this type of research design involves a well-detailed critical examination of a situation to find what it is and how it is. This makes the research design suitable for the study. The population of the study consists of 120 (One hundred and twenty) Private schools principals in Owerri Municipal Council. The entire population of 120 principals was used as the sample size using census sampling techniques. The instrument titled Principals Ethical Leadership Behaviour on Administration of Private Secondary Schools Questionnaire (PELBAPSSQ) was used for data collection. The instrument contains 15 items and designed to elicit information from research questions. It is design using four-point scale of Very High Extent (VHE), High Extent (HE), Low extent (LE) and Very High Extent (VHE). The face and content validity of instrument was validated by two experts in measurement and Evaluation and one expert in Education administration and Foundations. Cronbach Alpha Reliability Coefficient method was used to test the reliability of the items and a reliability coefficient at 0.81 was obtained. The researcher with the help of research assistances distributed copies of the questionnaire to respondents and was retrieved immediately. The data were collated using the mean and standard deviation to answer the research questions.

Results

Research Question One: To what extent does principals' ethical decision-making leadership behaviour enhance administration of private secondary schools for sustainable national development in Imo State.

Table 1: Mean and Standard Deviation on principals' ethical decision-making leadership behaviour enhance administration of private secondary schools.

S/N	Items	Mean	SD	Remarks
1	Integrity in creating an enabling environment where teachers value each other's ideas	3.09	0.74	High Extent
2	Honestly models and promotes open and inclusive dialogue	3.10	0.81	High Extent
3	Accepts teachers' professional judgements and decisions in the school	3.00	0.63	High Extent

4	Supportive in allowing teachers implement decisions unanimously taken at meetings without procrastinating	3.04	0.72	High Extent
5	Adopts effective style in decision making improves teachers work in school	3.00	0.63	High Extent

Results in table 1 showed that all the items scored above 2.50 were accepted. This implies that Integrity in creating an enabling environment where teachers value each other's ideas, Honestly models and promotes open and inclusive dialogue, Accepts teachers' professional judgements and decisions in the school, Supportive in allowing teachers implement decisions unanimously taken at meetings without procrastinating and Adopts effective style in decision making improves teachers work in school are principal effective style in decision making which improves teachers work in school.

Research Question two: To what extent does principals' ethical instruction supervisory leadership behaviour enhance administration of private secondary schools' sustainable national development in Imo State.

Table 2: Mean and Standard Deviation on principals' ethical instruction supervisory leadership behaviour enhances administration of private secondary schools

S/N	Items	Mean	SD	Remarks
6	Ensures that teachers show good knowledge of the subject matter	3.12	0.84	High Extent
7	Competent in ensuring that teachers conduct effective and up to-date assessment for reinforcing students learning	3.02	0.61	High Extent
8	Engages teachers in workshops and seminars as a way of boosting their efficiency	3.08	0.71	High Extent
9	Reliable in monitoring and observing classroom instruction regularly	3.00	0.63	High Extent
10	Sincere in applying the principles guiding effective instructional supervision for improving teachers' performance	3.02	0.61	High Extent

Results in table 2 showed that all the items scored above 2.50 were accepted. The implies that Ensures that teachers show good knowledge of the subject matter, Competent in ensuring that teachers conduct effective and up to-date assessment for reinforcing students learning , Engages teachers in workshops and seminars as a way of boosting their efficiency , Reliable in monitoring and observing classroom instruction regularly and Sincere in applying the principles guiding effective instructional supervision for improving teachers' performance are does principals' ethical instruction supervisory leadership behaviour enhance administration of public secondary schools'.

Research Question 3: To what extent does principals' ethical communication leadership behaviour enhance administration of private secondary schools' sustainable national development in Imo State.

Table 3: Mean and Standard Deviation on principals' ethical communication leadership behaviour enhances administration of private secondary schools.

S/N	Items	Mean	SD	Remarks
11	Convey empathy and warmth when communicating to staff and students	3.05	0.84	High Extent
12	Conveys genuine respect as a way of enabling teachers maintain a feeling of integrity and personal control	3.01	0.61	High Extent
13	Always express issues clearly in concise language when communicating to teachers	3.04	0.71	High Extent
14	Willing to use telephones to communicate and reach out to teachers on urgent matters that need immediate response and attention	3.13	0.63	High Extent
15	Uses effective communication mode and channels in order to prevent distrust	3.21	0.61	High

among teachers

Extent

Results in table 3 showed that all the items scored above 2.50 were accepted. The implies that Convey empathy and warmth when communicating to staff and students, Conveys genuine respect as a way of enabling teachers maintain a feeling of integrity and personal control, Always express issues clearly in concise language when communicating to teachers, Willing to use telephones to communicate and reach out to teachers on urgent matters that need immediate response and attention and Uses effective communication mode and channels in order to prevent distrust among teachers are the principals' ethical communication leadership behaviour enhance administration of public secondary schools'.

Discussion

Based on the findings it showed that ethical decision-making leadership behaviour enhances administration of private secondary schools for goal attainment in Imo State. The finding of this present study supports that of Blasé and Blasé (2000) opined that principal _who applied ethical principles in decision making often used an inquiry approach with teachers and they frequently solicited teachers _advice about instructional matters.

Results in research question two showed that principals in secondary schools applied the ethical principles or rules in their instructional supervision. this result is in accord with the findings of Alimi and Akinfolarin (2017) opined that Principals' instruction supervisory behaviour assists school heads to improve classroom instructions. In essence, a principal that demonstrates ethical instruction supervisory leadership behaviour is one who is hardworking, have accurate knowledge of what goes on in the school and are interested in teachers _classroom instructional delivery. The principal is approachable, kind, considerate and willing to take advantage of teachers' special skills (Makokha, 2015). The studies of Okolo (2015), Sule, Ameh and Egbai (2015) and Onuma (2016) found that there was a significant high positive relationship between instruction supervisory practice of classroom observation, checking of teachers_lesson notes and preparation, monitoring of teachers_ attendance and teacher effectiveness/performance. Igbo (2002) confirmed that the quality of students learning was directly related to the quality of classroom instruction which is determined through teacher commitment and instructional supervision. Ensley (2014) study found that leadership role performed by principals showed high level of instruction leadership responsibilities in instruction supervision in the school.

Also, finding of the study indicates that principals in secondary schools showed ethical principles of communication with the teachers. The ethical communication leadership behaviour which impacted positively on administration improve the administration in many of the secondary schools. The result is in line with the finding of Crawford-Patterson (2008) supporting the above finding, also discovered that principals' communication practices positively related and influenced the school improvement work. Arlestig (2008) on communication between principals and teachers in successful schools found that leadership communication in schools is related to everyday activities of teachers and individual students' work. In successful schools, principals and teachers communicated more frequently about issues related to teaching and learning. These principals made more classroom visits and provided more frequently feedback on teachers' professional role. Ensley (2014) found that leadership role performed by principals showed high level of instructional leadership responsibilities in communication networks in the school. Principals that demonstrate ethical communication leadership behaviour recognize the importance of good communication and communicate effectively with teachers in the school organization (Kline, 2000; Arlestig, 2008). Miles, Castrence and Fox (2006) confirmed that for efficiency in the school organization, principals as facilitators must demonstrate such ethics like valuing transparency, valuing flexibility, and valuing diversity while communicating to staff. Aspects of principals_ ethical communication leadership behaviour that positively relates to teachers_ commitment according to Kline (2000) and Arlestig (2008) includes treating teachers with respect and sensitivity to their rights and duties, compassionate in talking with teachers as a way of showing a good listener who avoids prejudgments, use of effective communication channels in order to prevent distrust among

teachers, use of good gestures to praise teachers teaching task and conveying empathy and warmth when communicating with staff and students, among others.

Conclusion

The study concluded that principals' ethical leadership behaviour on administration of private secondary schools for sustainable National development enhances the administration of secondary schools with respect to decision making, supervisory instruction and communication ethical leadership behaviour. It was concluded that effective decision making improves teachers work in school. Principal ensures that teachers conduct effective and up-to date assessment for reinforcing students learning and conveys genuine respect as a way of enabling teachers maintain a feeling of integrity and personal control.

Recommendations

Based on the findings of the study the following recommendations are made:

1. Private secondary school principals should constantly display ethical leadership behaviour in the discharge of their administrative functions. This will help create a positive school climate which is an essential component for administration of schools.
2. Private school Principals should foster ethical conducts in their decision making through active teachers' participation in decision making process which stands to impact greatly on teachers.
3. Private school Principals should improve their mode of communication in schools to aid effective teachers' commitment. This will foster ethical leadership behaviours that will boost effective communication practices in school for teachers' job commitment.

Abstract

The study examined Private school Principals ethical leadership behaviour on administration of private secondary schools for sustainable National Development. The study adopted a descriptive survey design; three (3) research questions guided the study. The population of the study consists of 120 (One hundred and twenty) Private schools principals in Owerri Municipal Council. The entire population of 120 (One hundred and twenty) Private School principals were used as sample for the study. The study adopted a purposive sampling technique for this study. The instrument for data collection was a self-structured questionnaire titled Principals Ethical Leadership Behaviour on Administration of School Questionnaire (PSPELBASQ). The instrument adopted four-point scale of Very high extent to very low extent. The face and content validity of the instrument were done by two experts in measurement and evaluation and one expert from Educational Administration & Foundations. Cronbach Alpha reliability co-efficient method was used for reliability test which yielded reliability co-efficient of 0.81. Mean and standard deviation were used to analyze the research questions. Findings revealed that principals' ethical leadership behaviour on administration of private secondary schools for sustainable National development enhances the administration of secondary schools with respect to decision making, supervisory instruction and communication ethical leadership behaviours. It was recommended that Private secondary school principals should constantly display ethical leadership behaviour in the discharge of their administrative functions. This will help create a positive school climate which is an essential component for administration of schools.

Keywords: Principals, Ethical Leadership Behaviour, Private Secondary Schools and Sustainable National Development

Introduction

Education has been regarded as the instrument for sharpening the intellectual powers of man. It is the key to human and capital development and the key to national development. Education is seen as an important means of transmitting the skills and knowledge needed by individuals to participate in the society. It is also required in the contribution to the development of a country's economic, political and social development. In the secondary school level of education, the principal is the head the school. It is

also the responsibility of the principals to provide the appropriate leadership practices which entails effective administration of the Secondary education. The Secondary Education's broad goals of preparing people for useful living in the society and for higher education have made it imperative that it should among others, supply trained manpower, inspire its students with the desire for self-improvement and achievement of excellence, raise the generation of people who can think for themselves, respect the view and feelings of others and respect the dignity of labour (FRN, 2004).

The school principal is the leader and gives the necessary leadership functions for the achievement of educational goals. The principal as the leader is responsible for all that happens in the school. Principal as the leader is responsible for all that happens in the school. The principal behaviour is expected to be guided by ethical principles as indicated by the National Association of School Psychologists (NASP, 2010) and they include: respecting the dignity and rights of all persons, showcasing professional competence and responsibility, fostering honesty and integrity in professional relations, showcasing responsibility and commitment to school, families, community and the society, maintaining professionalism, among others. As ethical leaders guided by ethical principles, school principals should be good role models for their staff by displaying ethical behaviours themselves first. This will enable their staff to adopt ethical values and norms more easily (Eskender, 2015; Sarıkaya & Erdoğan, 2016). SchoolPrincipal is someone that shows the way or influences someone or people to do things or think in a particular way or to contribute voluntarily to the achievement of group tasks in a given situation (Eskender, 2015). He or she should have a philosophy of life, personal traits and qualities that lead to action with desirable character and which seems to be of benefit to him or her and others in bid for successful career as principal of the school (Chike-Okoli, 2017). Akpakwu (2017) sees the principal as the single administrative and academic head, who is responsible for the operation of the school. The principal carries out administrative and instructional functions in the school through an effective leadership style and ethical leadership behaviour.

Principal Ethical leadership behaviour can also be defined as leadership that is directed by respect for ethical beliefs and values and for the dignity and rights of others. It is thus related to concepts such as trust, honesty, consideration, charisma and fairness (McQueeny, 2016; Reilly, 2006). The Centre for Ethical Leadership (CEL, 2013) opined that ethical leadership behaviour involves leading in a manner that respects the rights and dignity of others; a concept that is at times in direct conflict with more traditional models of leadership. Ethical leadership is perceived to be a role modelling leadership, enabling employees to do the right thing by asking the right questions (Freeman & Stewart, 2016). Downe, Cowell and Morgan (2016) perceive ethical leadership practices to emanate either from the nature and behaviour of the leader as a person, encouraging emulation, or from the systems and practices that they set up to regulate conduct on their behalf. Northhouse (2016) identifies the cardinal principles and indicators of ethical leadership as: respect for others; service to others; justice for others; honesty towards others; and building community. Ethical leadership is positively linked with favorable employees' outcomes including being effective positive attitudes and behaviour (Chen & Hou, 2016; Ng & Feldman, 2015). Principals' ethical leadership behaviour according to Akpakwu (2016) focuses attention on principals' conducts towards planning and improving instructional activities in the school, provision of resources for teachers, teacher evaluation, group dynamics - working with groups, and utilizing various supervisory techniques to ensure that instructional objectives are achieved. The researcher's interest on principal ethical leadership behaviour will focus on decision making leadership behaviour, Instructional supervisory leadership behaviour and Communication leadership behaviour.

Decision making is one important managerial task of school principals. Decision making as defined by Lussier cited in Akpakwu (2017) is the process of selecting a course of action that will solve a problem. Ethical decision-making behaviour refers to the process of evaluating and choosing among alternatives in a manner consistent with ethical principles (Akpakwu, 2017). Principals' ethical decision-making behaviour also focuses on principals' ability to utilize a shared decision-making process to make sound decisions regarding students and staff that exercise good and rationale judgment. Decisions must be made by principals when they are faced with any problem. Good decisions result in

the selection of the appropriate goals and course of actions that increase performance, while bad decisions result in lower or poor performance in educational establishments. The principal must be fair and take other people's views and opinions into consideration when taking decisions affecting teachers in the school (Cherkowski, Walker & Kutsyuruba, 2015). This calls for participatory decision-making process in the school.

Akpakwu (2012) and Dempsey (2013) identified the following steps involved in ethical decision making: Recognize an issue or concern and the duty to act or become involved. This implies that the principal must identify the problem and also draw attention of the parties' concerns and define the problem - including the principles, standards, and values involved – and identify fundamental objectives as well as potential conflicts and risks.

Principals' Ethical Instructional Supervisory Leadership Behaviour is to ensure effectiveness of teaching and learning delivery in the secondary schools demands that teachers should be constantly supervised during classroom instructions. Principals perform this role/function through instructional supervision. According to Kochlar (2015), Makokha (2015), Okolo (2015), Onuma (2016), Sule, Ameh and Egbai (2015), instructional supervision is one of the critical administrative functions of a school administrator that involves overseeing and guiding the teaching and learning process in an academic institution. Kochlar, Makokha and Okolo (2018) studies further sees instructional supervision as those activities which are primarily and directly concerned with studying and improving the conditions which surround the learning and growth of pupils, and also include whatever is done to improve on the teachers' ability and competence to deliver lessons to improve on pupils' learning. Eya and Chukwu (2012) saw instructional supervision in school merely as a process for teachers' improvement purposes which include among other things ensuring that teachers perform their assigned functions. There are many reasons for instructional supervision in schools. Some of these according to Ogunu (2018) are: to make sure that teachers are performing the duties which they are employed to do; assisting teachers to develop and utilize methods and materials which will improve the progress of a child and improve teachers' professional effectiveness; to know the performance of teachers recruited; to discover special abilities possessed by the teachers in school; to provide opportunities for teachers development; to know the effectiveness of classroom management by teachers; to appraise the performance of the school through the use of competent and committed teachers; and to identify the needs of teachers in the school.

School Principal Maintaining effective communication system among students, teachers and other non- teaching staff is one of the important functions of principals in the secondary school. Where effective communication system is highly projected in an organization including the school system then it is possible that the aims, objectives and goals of such organizations will be achieved and likewise enhances good performance. The extent to which a principal establishes and maintains good and effective communication flow using ethical standards, to that extent he is able to accomplish his set goals.

Failure to appropriately communicate leads to poor teacher commitment and friction between workers or subsystems, with organizational failure as the resultant effects. Any administrator or principal who wishes to avoid a disappointing situation, conflicts or disorder must have to ethically communicate with staff as it is the epitome of effective school administration. Communication as defined by Udeozor (2014) as the act of passing relevant information to the person who needs to know, or who, is in a position to use that information because it affects his work. It involves the means and process of transmitting message, ideas and information from one individual to another and also among members in a group. Communication is the unifying means by which organization members are linked together to achieve a central purpose and objective. Communication helps to link all the various organization activities and however the performance of all functions of the principal such as planning, organizing, directing, controlling and coordinating depends on effective system of communication. All organization leaders should device means or way of communicating with subordinates for effective communication. However, a broken-down communication ignites mutual distrust, suspicions, resentment, gossips, insecurity and fear (Udeozor, 2014). According to Ärlestig (2018), communication

is a multidimensional process which requires frequent use of dialogues and conversations in the school organization.

Blasé and Blasé (2000) opined that principal _who applied ethical principles in decision making often used an inquiry approach with teachers and they frequently solicited teachers _advice about instructional matters. Alimi and Akinfolarin (2017) opined that Principals' instruction supervisory behaviour assists school heads to improve classroom instructions. In essence, a principal that demonstrates ethical instruction supervisory leadership behaviour is one who is hardworking, have accurate knowledge of what goes on in the school and are interested in teachers _classroom instructional delivery. The principal is approachable, kind, considerate and willing to take advantage of teachers' special skills (Makokha, 2015). The studies of Okolo (2015), Sule, Ameh and Egbai (2015) and Onuma (2016) found that there was a significant high positive relationship between instruction supervisory practice of classroom observation, checking of teachers' lesson notes and preparation, monitoring of teachers _ attendance and teacher effectiveness/performance. Igbo (2002) confirmed that the quality of students learning was directly related to the quality of classroom instruction which is determined through teacher commitment and instructional supervision. Ensley (2014) study found that leadership role performed by principals showed high level of instruction leadership responsibilities in instruction supervision in the school. Crawford-Patterson (2008) supporting the above finding, also discovered that principals' communication practices positively related and influenced the school improvement work. Arlestig (2008) on communication between principals and teachers in successful schools found that leadership communication in schools is related to everyday activities of teachers and individual students' work. In successful schools, principals and teachers communicated more frequently about issues related to teaching and learning. These principals made more classroom visits and provided more frequently feedback on teachers' professional role. Ensley (2014) found that leadership role performed by principals showed high level of instructional leadership responsibilities in communication networks in the school. Principals that demonstrate ethical communication leadership behaviour recognize the importance of good communication and communicate effectively with teachers in the school organization (Kline, 2000; Arlestig, 2008). Miles, Castrence and Fox (2006) confirmed that for efficiency in the school organization, principals as facilitators must demonstrate such ethics like valuing transparency, valuing flexibility, and valuing diversity while communicating to staff. Aspects of principals _ ethical communication leadership behaviour that positively relates to teachers _ commitment according to Kline (2000) and Arlestig (2008) includes treating teachers with respect and sensitivity to their rights and duties, compassionate in talking with teachers as a way of showing a good listener who avoids prejudgments, use of effective communication channels in order to prevent distrust among teachers, use of good gestures to praise teachers teaching task and conveying empathy and warmth when communicating with staff and students, among others.

Statement of the Problems

The primary objective of every principal is to administer his school in such a way that the educational objectives are achieved. The principal as chief custodian of all administrative, academic and extra teaching and non-teaching, students and facilities in order to achieve instructional goals and quality education. The ethical leadership behaviours exhibited by principals in form of their ethical instructional leadership behaviour, ethical decision-making leadership behaviour, ethical instructional supervisory leadership behaviour, among others, must be acceptable to the teachers. A significant challenge for principals is to identify the situations in their schools, such as school culture, how it affects the students and the type of leadership behaviors principals adopt in order to choose a path for the improvement of the schools. The principal is the critical person when it comes to efforts to improve the quality of the school. Since a school is known to be an instrument of change and reform in the society, the principal is pivotal in driving reforms and changes (Uyanga, 2018). This responsibility is very obligatory and principals are expected to be the catalysts for change and deploying managerial skills for implementing change within the school. Thus, the principal is the key supporting agent for change to achieve success in the school. It is against this backdrop that this study examines Principals

ethical leadership behaviour on administration of private secondary schools for sustainable National development.

Purpose of the Study

The purpose of this study was to examine Principals ethical leadership behaviour on administration of private secondary schools for sustainable national development in Imo State. Specifically, the study seeks to;

- examine the extent to which Private schools' principals' ethical decision-making leadership behaviour enhances administration of private secondary schools for sustainable national development in Imo State,
- examine the extent to which principals' ethical instruction supervisory leadership behaviour enhances administration of private secondary schools' sustainable national development in Imo State
- examine the extent to which principals' ethical communication leadership behaviour enhances administration of private secondary schools for sustainable national development in Imo State

Research Questions

- To what extent does principals' ethical decision-making leadership behaviour enhance administration of private secondary schools for sustainable national development in Imo State?
- To what extent does principals' ethical instruction supervisory leadership behaviour enhance administration of private secondary schools' sustainable national development in Imo State?
- To what extent does principals' ethical communication leadership behaviour enhance administration of private secondary schools' sustainable national development in Imo State?

Methodology

The study adopted a descriptive survey design. According to Nworgu (2023), this type of research design involves a well-detailed critical examination of a situation to find what it is and how it is. This makes the research design suitable for the study. The population of the study consists of 120 (One hundred and twenty) Private schools principals in Owerri Municipal Council. The entire population of 120 principals was used as the sample size using census sampling techniques. The instrument titled Principals Ethical Leadership Behaviour on Administration of Private Secondary Schools Questionnaire (PELBAPSSQ) was used for data collection. The instrument contains 15 items and designed to elicit information from research questions. It is design using four-point scale of Very High Extent (VHE), High Extent (HE), Low extent (LE) and Very Low Extent (VLE). The face and content validity of instrument was validated by two experts in measurement and Evaluation and one expert in Education administration and Foundations. Cronbach Alpha Reliability Coefficient method was used to test the reliability of the items and a reliability coefficient at 0.81 was obtained. The researcher with the help of research assistances distributed copies of the questionnaire to respondents and was retrieved immediately. The data were collated using the mean and standard deviation to answer the research questions.

Results

Research Question One: To what extent does principals' ethical decision-making leadership behaviour enhance administration of private secondary schools for sustainable national development in Imo State.

Table 1: Mean and Standard Deviation on principals' ethical decision-making leadership behaviour enhance administration of private secondary schools.

S/N	Items	Mean	SD	Remarks
1	Integrity in creating an enabling environment where teachers value each other's ideas	3.09	0.74	High Extent
2	Honestly models and promotes open and inclusive dialogue	3.10	0.81	High Extent
3	Accepts teachers' professional judgements and decisions in the school	3.00	0.63	High Extent
4	Supportive in allowing teachers implement decisions unanimously taken at meetings without procrastinating	3.04	0.72	High Extent
5	Adopts effective style in decision making improves teachers work in school	3.00	0.63	High Extent

Results in table 1 showed that all the items scored above 2.50 were accepted. This implies that Integrity in creating an enabling environment where teachers value each other's ideas, Honestly models and promotes open and inclusive dialogue, Accepts teachers' professional judgements and decisions in the school, Supportive in allowing teachers implement decisions unanimously taken at meetings without procrastinating and Adopts effective style in decision making improves teachers work in school are principal effective style in decision making which improves teachers work in school.

Research Question two: To what extent does principals' ethical instruction supervisory leadership behaviour enhance administration of private secondary schools' sustainable national development in Imo State.

Table 2: Mean and Standard Deviation on principals' ethical instruction supervisory leadership behaviour enhances administration of private secondary schools

S/N	Items	Mean	SD	Remarks
6	Ensures that teachers show good knowledge of the subject matter	3.12	0.84	High Extent
7	Competent in ensuring that teachers conduct effective and up to-date assessment for reinforcing students learning	3.02	0.61	High Extent
8	Engages teachers in workshops and seminars as a way of boosting their efficiency	3.08	0.71	High Extent
9	Reliable in monitoring and observing classroom instruction regularly	3.00	0.63	High Extent
10	Sincere in applying the principles guiding effective instructional supervision for improving teachers' performance	3.02	0.61	High Extent

Results in table 2 showed that all the items scored above 2.50 were accepted. The implies that Ensures that teachers show good knowledge of the subject matter, Competent in ensuring that teachers conduct effective and up to-date assessment for reinforcing students learning, Engages teachers in workshops and seminars as a way of boosting their efficiency, Reliable in monitoring and observing classroom instruction regularly and Sincere in applying the principles guiding effective instructional supervision for improving teachers' performance are does principals' ethical instruction supervisory leadership behaviour enhance administration of public secondary schools'.

Research Question 3: To what extent does principals' ethical communication leadership behaviour enhance administration of private secondary schools' sustainable national development in Imo State.

Table 3: Mean and Standard Deviation on principals _ethical communication leadership behaviour enhances administration of private secondary schools.

S/N	Items	Mean	SD	Remarks
11	Convey empathy and warmth when communicating to staff and students	3.05	0.84	High Extent
12	Conveys genuine respect as a way of enabling teachers maintain a feeling of integrity and personal control	3.01	0.61	High Extent
13	Always express issues clearly in concise language when communicating to teachers	3.04	0.71	High Extent
14	Willing to use telephones to communicate and reach out to teachers on urgent matters that need immediate response and attention	3.13	0.63	High Extent
15	Uses effective communication mode and channels in order to prevent distrust among teachers	3.21	0.61	High Extent

Results in table 3 showed that all the items scored above 2.50 were accepted. The implies that Convey empathy and warmth when communicating to staff and students, Conveys genuine respect as a way of enabling teachers maintain a feeling of integrity and personal control, Always express issues clearly in concise language when communicating to teachers, Willing to use telephones to communicate and reach out to teachers on urgent matters that need immediate response and attention and Uses effective communication mode and channels in order to prevent distrust among teachers are the principals' ethical communication leadership behaviour enhance administration of public secondary schools'.

Discussion

Based on the findings it showed that ethical decision-making leadership behaviour enhances administration of private secondary schools for goal attainment in Imo State. The finding of this present study supports that of Blasé and Blasé (2000) opined that principal _who applied ethical principles in decision making often used an inquiry approach with teachers and they frequently solicited teachers _advice about instructional matters.

Results in research question two showedthat principals in secondary schools applied the ethical principles or rules in their instructional supervision. this result is in accord with the findings of Alimi and Akinfolarin (2017) opined that Principals' instruction supervisory behaviour assists school heads to improve classroom instructions. In essence, a principal that demonstrates ethical instruction supervisory leadership behaviour is one who is hardworking, have accurate knowledge of what goes on in the school and are interested in teachers _classroom instructional delivery. The principal is approachable, kind, considerate and willing to take advantage of teachers' special skills (Makokha, 2015). The studies of Okolo (2015), Sule, Ameh and Egbai (2015) and Onuma (2016) found that there was a significant high positive relationship between instruction supervisory practice of classroom observation, checking of teachers' lesson notes and preparation, monitoring of teachers_ attendance and teacher effectiveness/performance. Igbo (2002) confirmed that the quality of students learning was directly related to the quality of classroom instruction which is determined through teacher commitment and instructional supervision. Ensley (2014) study found that leadership role performed by principals showed high level of instruction leadership responsibilities in instruction supervision in the school.

Also, finding of the study indicates that principals in secondary schools showed ethical principlesof communication with the teachers. The ethical communication leadership behaviour which impacted positively on administration improves the administration in many of the secondary schools. The result is in line with the finding of Crawford-Patterson (2008) supporting the above finding, also discovered that principals' communication practices positively related and influenced the school improvement work. Arlestig (2008) on communication between principals and teachers in successful schools found that leadership communication in schools is related to everyday activities of teachers and individual students' work. In successful schools, principals and teachers communicated more frequently about issues related to teaching and learning. These principals made more classroom visits and provided more frequently feedback on teachers' professional role. Ensley (2014) found that leadership role

performed by principals showed high level of instructional leadership responsibilities in communication networks in the school. Principals that demonstrate ethical communication leadership behaviour recognize the importance of good communication and communicate effectively with teachers in the school organization (Kline, 2000; Arlestig, 2008). Miles, Castrence and Fox (2006) confirmed that for efficiency in the school organization, principals as facilitators must demonstrate such ethics like valuing transparency, valuing flexibility, and valuing diversity while communicating to staff. Aspects of principals' ethical communication leadership behaviour that positively relates to teachers' commitment according to Kline (2000) and Arlestig (2008) includes treating teachers with respect and sensitivity to their rights and duties, compassionate in talking with teachers as a way of showing a good listener who avoids prejudgments, use of effective communication channels in order to prevent distrust among teachers, use of good gestures to praise teachers teaching task and conveying empathy and warmth when communicating with staff and students, among others.

Conclusion

The study concluded that principals' ethical leadership behaviour on administration of private secondary schools for sustainable National development enhances the administration of secondary schools with respect to decision making, supervisory instruction and communication ethical leadership behaviour. It was concluded that effective decision making improves teachers work in school. Principal ensures that teachers conduct effective and up-to date assessment for reinforcing students learning and conveys genuine respect as a way of enabling teachers maintain a feeling of integrity and personal control.

Recommendations

Based on the findings of the study the following recommendations are made:

15. Private secondary school principals should constantly display ethical leadership behaviour in the discharge of their administrative functions. This will help create a positive school climate which is an essential component for administration of schools.
16. Private school Principals should foster ethical conducts in their decision making through active teachers' participation in decision making process which stands to impact greatly on teachers.
17. Private school Principals should improve their mode of communication in schools to aid effective teachers' commitment. This will foster ethical leadership behaviours that will boost effective communication practices in school for teachers' job commitment.

Abstract

The poor performance of secondary school students in business subjects necessitates this study to rate secondary school management entrepreneurship skill training and motivation as strategies for effective teaching of the subjects in secondary schools in Cross River State. Two research questions directed the study and two hypotheses were tested at 0.05 level of significant. Survey research design was adopted and the entire population of 200 secondary school teachers of entrepreneurship education in the area was used without sampling. A 5-point rating scale questionnaire with 30 items which was validated by three experts was used for data collection. Pearson Product Moment Correlation Coefficient was used to analysed the data which yielded a value 0.78. Data collected were analysed with mean and standard deviation to determine the closeness of the respondents' mean while z-test was used to test the hypotheses at 0.05 level of significance. Results show that the respondents rated the two strategies as effectively utilized and did not differ significantly in their views as a result of gender and years of teaching experience. Therefore, the researcher concluded that teacher related factors may be disengaging with students' poor performance in the entrepreneurship.

Keyword: Secondary school, Management, Entrepreneurial, Skill, Motivation and Creative

Introduction

School management is a complex exercise in the process of education. It demands talent, skills, energy and ability from teachers to manage classroom because it directly deals with the behaviors of learners. Human behavior is the most complex phenomenon. School administrator's principals and teachers with high practical vision, strategies, skills and knowledge can manage school effectively (Isiozor, 2021).

Management of secondary school education as a co-ordination of all the resources of an organization through the process of planning, organizing, directing and controlling in order to attain organizational objective or organizational effectiveness.

Secondary education is equally of considerable importance in the Nigerian education system. Secondary education is the education given to a child between the ages of 11-18 years. In Nigeria, secondary schools are regarded as the principal vocational institutions intended to prepare students

entry into various trade areas through the acquisition of skills. It is the form of education children receive after primary education and before tertiary stage. In other to realize fully the contributions of education to the achievement of national educational goals, emphasis is placed on the broad goals of secondary education. The broad aims of secondary education according to Federal Republic of Nigeria (FRN, 2013), are the preparation of students for useful living within the society and for higher education. It also provides technical knowledge and vocational skills, inspire desire for self-improvement and achievement. In other words, those to be admitted into different institutions of higher learning must have successfully completed secondary education (Nompapa, 2009). The successful transition of this process is inter-connected with the effectiveness of the classroom instruction and school administrator management approach.

The management of the school has to foster understanding of inclusion and the development of skills and the practices needed among the staff. The school has to create policies that foster inclusive practice in order to address the learning needs of all learners better. The school principal is an active member of the inclusive school community with responsibilities such as the establishment, development, management, support and monitoring of support systems in the school. Important in this respect is to setup an effective teacher support team (WCE) manual on Education Support Team, 2003). Management according to Anyanwu (2010) is a —social process that places a few individuals in leadership position of an organization or system at a particular period and location to make decisions. Management is the utilization of available human and material resources through co-operative efforts in accomplishing the functions of planning, organizing staffing, directing, and controlling. Similarly, it is the process of planning, organization, directive, control and evaluation to accomplish preferred objectives through co-ordination or use of human and material resources (Onye, 2012). Management is the coordination of peoples' effort for the purpose of accomplishing goals and objectives by using available resources effectively and efficiently resources encompass human, material, technological and finance which are supposed to be deployed a manipulated for reaching organizational outcome. It includes planning, organization, staffing, leading/directing and controlling of an organization to accomplish goals or achieve targets (Wikipedia in Uchendu and Akuegwu, 2016). The United Nations General Assembly (2002) passed resolution 15/254 proclaiming the United Nations Decade of Education for sustainable Development starting from 2005 to 2014. It was against this background that member states were urged to integrate education for sustainable development into their educational plan at all levels of education.

Sustainable develop is perceived as that development that satisfied the needs of the current generation without endangering the ability of future generation to meet their own need (Nwangwu and Ezugworie, 2013). Nigeria has been contracted with developmental challenges since it is independence in 1960. These challenges could be traced to poor educational policies that were not structured to meet the economic and human capital in Nigeria education and economy. This resulted to high rate of unemployment in the nation. According to Nwangwu et al (2013), in a bid to reduce this unemployment and create a pool of graduates who could be employers of labour and not job seekers that entrepreneurship education has become necessary in educations system. The rate of unemployment in Nigeria is alarming. Unemployment is the inability for following workers to find gainful employment. This implies when a person is ready to work but cannot find any job.

According to Oduma (2012), innovative skills requisite for entrepreneurship success include the ability to: introduce a new product, introduce a new method of production, open new market, explore a new sources of supply of raw materials and carry out new types of organization. In support, Okoli and Binoumote (2015) stated that innovative skills are ability to bring the best ideas into reality, create new wealth, figure out how to make product work better, combine ideas into new value, interact with other firms for positive innovation, attain overall best performance, gain access to technology on innovative in small scale business, add value to customer's satisfaction, and meet customers' needs. Similarly, for effective management of small scale business, Chinoye in Okoli and Binoumote indicated that the entrepreneur must ensure that he is well equipped and able to carry out innovative activities, which include: basic research activity, applied research activity, and development research activity

among others. Okoli and Binoumote stated that the acquisition of these skills will enable the business education graduates to function effectively in an environment of strong market forces and complex technological advancement.

Unemployment exists partly because most of the products of educational system look for jobs that do not exist. According to Ademilyyi in Okoli and Binoumote pointed out that most business education graduates lack the ability to succeed in small scale enterprise. There is therefore the need to identify those involve skills which may enhance the promotion effective management of small scale business practice. Eze (2011) stated that innovative skills are collaborative skills needed by an innovator to develop business idea, and successfully implement such ideas. An innovator is used too widely to describe an individual. Innovators are creative thinkers. In other words, individuals who are able to generate creative ideas that becomes the basis of innovations. Sometimes, however, —innovatorsl can also be called —innovative leadersl.

Innovative leaders are creative visionaries who have big ideas and, most importantly, can motivate people around them to turn those ideas into reality. Additionally, Davidson (2011) averred that innovative leaders do not even need to be the person who creates the idea behind an innovation. Often, they simply recognize a great idea, perhaps devised by a subordinate and envision the pat that leads to that idea becoming a reality. In order to succeed as an entrepreneur, an innovative leader needs a range of skill such as imagination and communication, and problem solving skills.

Entrepreneur according to Ardichvili, Richard, and Sourav in Agbo (2011) is an individual who organizes and operates an enterprise for personal gain. Ardichivili et al (2014) stated that the entrepreneur pays current prices for the materials consumed in the business, for the use of the land, for the personal services he employs, and for the capital he requires. The authors further added that the entrepreneur contributes his own initiative, skill land ingenuity in planning, organizing, and administering the enterprise. The authors emphasized that the entrepreneur also assumes the chance of loss and gain consequent to unforeseen and uncontrollable circumstances, this definition stresses the basic aspects of being an entrepreneur regardless of the field. First, entrepreneurs create something new of value. The creation has to have value to the entrepreneur and value to the audience for which it is developed. Assuming the necessary risks is the second aspect of being an entrepreneur. The entrepreneur also assumes the change of loss and gain consequent to unforeseen and uncontrollable circumstances, the net residue of the annual receipts of the enterprise after all costs have been paid is retained for himself. In the context of this study, entrepreneurs are individuals who undertake small scale business so as to create economic value to themselves and the entire society.

Rating

A rating is the evaluation or assessment of something in terms of quality. It can also be seen as the classification nor ranking of someone or something based on a comparative assessment of their quality standard, or performance. According to Hornby (2006), rating is the evaluation or assessment of something in terms of quality and quality or some combination of both. Hornby (2006), rating is the evaluation or assessment of something in terms of quality and quantity or some combination of both. Hornby further described rating to involve forming an opinion of the amount or quality of something after thinking about it carefully. Rogets (2010) saw rating as a term which refers to the appraisal of the characteristics, significance, importance or related value of a thing Okoli (2007) defied rating as a process whereby parts, particularly with reference t programmers based on the collection of data, with a view to determine the quality of task performance. Okoli stated that to rate goes beyond Characterisation of an item (efficiency). In the context of this study, rating is a systematic way of determining the entrepreneurial skills needed by business education graduates for effective management of small scale businesses using data collected from entrepreneurs.

Entrepreneurial Skills

Entrepreneurial refers to the intentional creation or transformation of organization for the purpose of creating or adding value through organization of research (Bird in Ezeani, Ifeonyemetalu &

Ezemoyih, 2012). Entrepreneurial has to do with the creation and development of economic ventures. It involves an application of energy and passion towards the creation of an enterprise and this includes: the willingness to take calculated risks, team work, and creative skills to marshal needs resources.

Skill on the other hand is the ability to perform some tasks creditably (Adeyemo, 2009). Adeyemo further viewed skill as basic ability and the means by which man adjusts to life. In the work place, skill is what the workers give in exchange for remuneration. Agoha (2011) defined skills as the ability to perform an activity that is related to some meaningful exercise, work or job. Bleak in Uzor and Ike (2010) described skill as ability to do something well, gained through training and experience. Uzor and Ike also defined skill as one's personal competencies in the performance of specific tasks acquired after a period of training or experience. In a similar vein, Daniel in Ejeka and Mgbeonyebi (2016) defined skill as learned responses, often as a result of specific training which afford someone the ability to perform a particular task and achieve a particular objective. Ofem et al (2023) asserted that managing entrepreneurial in a generic sense involves instrumentality of planning, organizing, directing, coordinating, budgeting, and controlling during teaching and learning processes.

According to Chell (2013), skill referred to proficiency in performance and may be enhanced by practice and training. Chell went further to state that skills are multidimensional constructs; and comprise the cognitive – knowledge and what is learnt; the affective – emotional expression and what is experienced, the behaviour – action at strategic, tactical and personal levels and the context – sectoral, occupational, job and tasks level. Binumote and Okoli (2015) through of skill as a quality of performance which does not depend solely upon a person's fundamental, innate capacities but must be developed through training, practice and experience. As defined by Vanpatten and Benati (2010), skill refers to ability to do rather than underlying competence or mental representation.

Entrepreneurship skills are individuals' ability to turn ideas into action (European Skills Panorama, 2014). Entrepreneurial skills are skills needed to succeed in business, most especially in small scale business (Adeyemo, 2009). Adeyemo further defined entrepreneurial skills as basic skills necessary to enable one start, develop, finance and succeed in one's home enterprise. Entrepreneurial skills according to Agbonifoh in Adeyemo (2009) are skills relating to identifying business opportunities and receiving sustainable income from these opportunities. The acquisition of entrepreneurial skills means combining personal characteristics, financial resources within one's environment and taking advantage of them for rewarding outcome. Ezeani, Osita and Exemoyih (2012) saw entrepreneurial skills as simply business skills which individuals acquire to enable them effectively function in the turbulent business environment as entrepreneurs or self-employed.

Entrepreneurial skills can be defined as the ability to create something new with value by devoting the necessary time and effort, assuming the accompanying financial, psychic and social risks, and receiving the resulting rewards of monetary and personal satisfaction and independence (Hisrich & Peters in Adeyemo, 2009). Entrepreneurial skill is the ability of an individual to exploit an idea and create an enterprise (Small or Big) not only for personal gain but also for social and development gain (Olagunju in Oyefesobi, Adetunji & Ayedun, 2018). Formal descriptions/definitions characterize entrepreneurial skills as ability to have self-belief, boldness, tenacity, passion, empathy, readiness to take expert advice, desire for immediate result, visionary and ability to recognize opportunity (Salgado-banda in Mohammad, Shahzad and Mohd, 2016). Salgado-banda stated that an array of possible entrepreneurial skills encompasses the perception of economic opportunities, technical and organisational innovations, command over scarce resources, taking responsibilities for internal management and for external advancement of the firm in all aspects (for teaching enterprise).

Entrepreneurial skills therefore are individual characteristics including attitude and behaviour, which allow the entrepreneur to achieve business success (Sarwoko, Surachman, Armanu and Hadiwidjojo, 2013). The authors further described entrepreneurial skills as set of high-level characteristics involving personality traits, skills and knowledge. The EU Entrepreneurial Skills (2014) saw entrepreneurial skills as a combination of a range of technical, management and personal skills. Entrepreneurial skills are skills needed by an entrepreneur to succeed in business. Entrepreneurial skills are the basic skills necessary to enable one start, develop, finance and succeed in one's enterprise.

According to Hisrich and Peters (2010), entrepreneurial skill is the ability to create something new with value by devoting the necessary time and effort, assuming the accompanying financial, psychic and social risks, and receiving the resulting rewards of monetary and personal satisfaction and independence.

Entrepreneurial skills are simply business skills, which one acquires to enable one function one function effectively in the turbulent business environment as an entrepreneur (Folahan & Omoriyi in Ezeani, 2012). This means that entrepreneurial skills provide an understanding of the main areas one need to know about in order to run a successful business. For the purpose of this study, entrepreneurial skills are abilities business education graduate need for effective management of small scale business.

Statement of problem

Despite the national aspirations for vocational education especially at the secondary school levels in Nigeria for more than three decades, reports have shown that secondary school leavers do not sufficiently possess the basic skills and knowledge for success in employment and further education (Ofoha, 2011). This reflects the reports of Kiadese (2005) and Adetayo (2006) that the teaching of business subjects in Nigeria is ineffective.

Several strategies like curriculum revision and retraining of teachers, motivation of teachers, public relations activities, funding, supply of modern technological equipment and facilities, among others, are utilised in the education sector to improve teaching and learning effectiveness. The researchers are worried that despite all these, secondary school students continue to perform poorly in entrepreneurship education

The purpose of the study

The main purpose of the study was to determine educational managers' rating of the entrepreneurial skill retraining and motivation strategies for job creation in post covid-19 era. Specific early, the study determined the rating of

1. Secondary school management strategies on teacher retraining on entrepreneurial skills in post covid-19
2. Motivation of teachers as strategy for encouraging entrepreneurial skill training?

Research Questions

The following research questions directed the study;

1. What is the rating of secondary school management strategies on the entrepreneurial skill training post covid-19?
2. What is the rating of teachers' motivation as strategy for encouraging entrepreneurial skill training?

Statement of hypothesis

The following null hypotheses were formulating and tested at 0.05 level of significance.

- Ho₁: The mean response of male and female teachers do not significantly differ on secondary school management strategy entrepreneurial skill training in post covid-19 era
- Ho₂: There is no significant different in the respondents mean rating on the motivation of teachers as strategy for encouraging entrepreneurial skills training.

Method

The study was a descriptive survey method designed to assess the level of secondary school management of entrepreneurial skill training and motivation strategies for job creation in post covid-19 era. Ofoha (2011) and Nworgu in Ezenwafor and Onwochei (2015) who maintained that the descriptive survey is suitable for studies that aim at collecting data on and describing in a systematic manner, the characteristics, features or facts about a given population. The study was carried out in Cross River State. the population of the study comprised 255 teachers in public secondary schools. There was no

technique due to the management size of the population. The data for the study was collected using and instrument titled: Secondary School Management] of Entrepreneurial Skill Training Questionnaire (SSMESTQ). It has two sections A and B. Section A describes respondents' background information. Categories include: gender, name of school and status. Section B was used to answer the research questions the questionnaire was structured on a 5-point rating scale of Highly Effective, Effective Fairly Effective, Ineffective and Highly ineffective.

The instrument was validated by three experts' one each from the department of educational management, measurement and evaluation and entrepreneurship education unit all from university of Calabar. The reliability of the instrument was established distributed it on 20 teachers in public secondary school who were not part of the study population. Data collected were analyze using Pearson Product Moment Correlation which yielded co-efficient reliability value of 0.79.

The instrument was administered on the respondents by the researchers and two research assistants, all the copies of the instrument was dually filled and returned. The means ($\bar{x}$) was used to answer the research questions while z-test was used to test the null hypotheses at 0.05 level of significance. Decision rule any items with mean ratings ranging from 4.50 – 5.00 were rated highly effective, those between 3.50 and 4.49 were rated effective and those between 2.50 – 3.49 fairly effective. Items with mean rating between 1.50 and 2.49 were rated ineffective and those with 0.50 – 1.49 were rated highly ineffective. The means for a given cluster was used to answer the research questions for the hypotheses testing, where the calculated z was less than z critical, it implies that the variable has no significant influence in the views of the respondents and the null hypothesis was accept but where the calculated z was greater/higher than the z-calculated, meaning that the variable has a significant influence in the respondents' mean rating score and hence the null hypotheses was rejected.

Presentation/Results

Research Question 1: What is the rating of secondary school management strategies on entrepreneurial skill training in post covid-19 Era.

Table 1: Mean rating of respondents" on secondary school management strategies on entrepreneurial skill training in post covid-19 Era N = 2

S/N	Area of Training	X	SD	Decision
1	Sending entrepreneurial teachers on in-service training from time to time update their knowledge	3.86	1.05	E
2	Empowering entrepreneurial teachers with ICT resources in their offices	3.73	1.05	E
3	Instituting training and retraining when entrepreneurial teachers begin to exhibit lack of interest in their jobs.	3.95	1.01	E
4	Induction courses to be integrated as part of entrepreneurial teachers training programme	3.45	1.08	FE
5	Ensuring adequate budgetary provision for training and retraining of entrepreneurial teachers	3.84	1.14	E
6	Involving experts and resource persons in the field of vocational and technical education in entrepreneurial teacher conference	3.44	1.10	FE
7	Organizing working/orientation on periodic basis for entrepreneurial teachers	3.94	1.06	E

8	Encouraging entrepreneurial teachers to engage in personal upgrading such as internet browsing, reading relevant books and journals and playing active roles in relevant professional associations.	3.86	1.08	E
9	Involvement of private individuals or organisations (NGO's) for grants in aid in entrepreneurial teacher training and retraining programmes	4.10	1.08	E
10.	Providing modern instructional materials and ensuring training and retraining programmes on their usage	4.03	0.97	E
11.	Instituting training and retraining when there is low productivity of entrepreneurial teachers	4.19	0.96	E
Mean of means				3.85

Table 1 shows that the respondents rated the implementation of training and retraining of entrepreneurship education teachers as a strategy for effective teaching of entrepreneurial skill in secondary schools in the area of study as effective. The mean of 9 out of the 11 items ranged between 3.73 and 4.19 and mean of means of 3.85 confirmed this.

Research Question 2: What is the rating of teachers' motivation as strategy for encouraging entrepreneurial skill training?

Table 2: Mean rating of respondents" on teachers" motivation as strategy for encouraging entrepreneurial training. N = 255

S/N	Items on teacher motivation	X	SD	Decision
1	Encouraging business teachers to belong to professional associations	4.02	1.03	E
2	Attaching promotion of business teachers t professional attainment	3.76	1.08	E
3	Assigning varied and challenging tasks and responsibilities to business teachers	3.78	0.99	E
4	Enlighterning business teachers on the opportunities/need for professional advancement	4.23	0.96	E
5	Attaching increase in salary of entrepreneurship education teachers to professional growth	3.83	1.03	E
6	Providing orientation for business teachers to understand that effort at professional attainment is attractively rewarded	3.47	1.01	E
7	Equitably rewarding effort at professional attainment	3.55	1.03	E
8	Enabling active participation of business teachers in business education curriculum development and revision encouraging business teachers'	3.94	0.83	E
9	Encouraging business teachers' participation in the publication of articles in professional journals	3.21	1.05	FE

10.	Soliciting involvement of professional bodies and business oriented organizations in support of business teachers professional growth	3.83	1.01	E
11.	Instituting advanced academic programmes for entrepreneurship teachers	3.91	1.08	E
12	Giving opportunity to business teachers to participate in setting work objectives and making some operational decisions that may affect them in the discharge of this duties	3.29	1.06	FE
13	Making professional attainment a prerequisite for enjoyment of bonuses and incentives for business teachers	3.85	1.09	E
Mean of means				4.06

Table 2 shows that the respondents rated the implementation of motivation of entrepreneurship teachers as effective. Out of the 15 items, the mean ratings of 10 were between 3.55 and 4.23 which mean effective while only 3 were rated fairly effective. The mean of means of 4.06 confirmed the respondents' rating as effective.

The mean of means of 4.06 which falls within the real limit of 3.50 and 4.49 indicates that teachers of entrepreneurship subjects in the area of study rated the utilisation of motivation of entrepreneurship teachers for professional growth as effective.

Hypothesis One (H₀₁)

The mean response of male and female teachers do not significantly differ on secondary school many management strategy on the entrepreneurial skill training in post-covid-19 Era.

Table 3: Z – test analysis on the effect of gender on the respondents' mean on secondary school management strategy on the entrepreneurial skill training based gender

Variables	No	Df	X	SD	z-cal	z-crit	SL	Decision
Male	113	113	47.67	16.13	1.82	1.96	0.05	NS
Female	155	144	45.28	18.36				

Table 3 data analysis indicate that the z-cal of 1.82 is less than the z-critical of 1.96. This implies that gender has no significant effect on the mean ratings of the respondents. Hence, the hypothesis is accepted.

Hypothesis Two (H₀₂)

There is no significant different between in the respondents' mean rating on the motivation of teachers as strategy for encouraging entrepreneurial skills training.

Table 4: z – test analysis on the influence of experience on respondents' mean rating of the motivation strategies for encouraging entrepreneurial skills training.

Variables	No	Df	X	SD	z-cal	z-crit	SL	Decision
0-5yrs	73	74	63.73	19.36	36-0.33	1.96	0.05	NS
5-10 yrs	185	186	64.63	20.11				

Data in table 4 revealed that z-cal 01-0.33 is less than z-critical of 1.96. This indicates that years of experience has no significant effect/influence on the mean ratings of respondents. Therefore, the null hypothesis is accepted/agreed upon.

Conclusion

Based on the findings of the study, the researchers conclude that teacher factors may be unconnected with students' poor performance in business subjects in the area of study.

Recommendations

Based on the findings and conclusion of this study, the researchers recommend that school administration in the area of study should maintain the level of implementation of the two strategies.

1. Government should ensure consistent retraining of education managers and to ensure that they are abreast of trends in the changing society.
2. School managers in the area and others should identify other suitable strategies for effective teaching of entrepreneurial subjects and ensure their effective functioning.
3. Government should adequately fund suitable strategies for effective teaching of entrepreneurial subjects at all school levels.

Abstracts

The study examined strategies for re-thinking quality education for ethics and value system for national development. The study adopted literature research. It highlighted the effects of the degradation of ethics and values in Nigerian Educational system menace such as making individuals to be selfish, greedy and corrupt, fallen standard of education, increase in crime rate, insecurity, ethnicity, poor governance leading to economic hardship among others. Finally, the study concluded with the strategies for ethics and value for rethinking quality education for a productive society in Nigeria such as every social institution like the family, church, mosque, school and the government should take the culture of hard work, punctuality, self-discipline, humility, leadership by examples and so on seriously, and preach or lead campaigns against quick-rich syndrome, corruption, examination malpractice, violence, insolence among others for a productive Nigeria society.

Keywords: Education, ethics, strategies and value.

Introduction

Education is a process of inculcating ethics and values to equip the learner with a kind of life that is satisfying to the individual in accordance with the cherished values and ideals of the society (National Council of Education Research and Training, 2003). It is an important instrument of change in the intellectual and social outlook of any society (Federal Republic of Nigeria, 2013). Bolarin (2005) observed that many academics have articulated their individual reasons for education, but the ultimate end point is that, it is a requirement for societal formation, social change, societal leadership, human transformation and continuous process of growth and national development. In other words, education is seen as a powerful instrument that add values to the life of citizens and make them functional members of the society

Rethinking quality education for ethical and values systems is crucial for sustainable national development. This involves integrating ethical considerations and values into the curriculum, teaching methods, and overall educational experience to cultivate responsible citizens and promote positive societal change.

Conceptual Review

For clarity, some concepts within the write up were considered, such as education, ethics and value

Education

The word education is derived from the Latin *Educo*, which means educate, train. Education is a process of acquiring information. It means teaching and learning. Education has effects on human mind, character and physical abilities. The history of education begins with the human history itself. Education is also a way to become civilized individuals, and it maximizes human potentials.

Culture and cultural heritage can be transmitted by education, because the main occupation of man is to pass knowledge, skills and attitude from one generation to another. Kanu cited in Okere and Ofoego (2019) described education as an act, a process and a product. As an act, education involves various activities which aim at producing the acceptable man. As a process, it is guided by procedures that aim at producing capable human beings. As a product, educational activities and processes result in the production of acceptable, self-reliant, dependable, effective and efficient citizens.

Zubay and Soltis (2005) in their view, pointed out that education, itself, is essentially a moral undertaking because, —it is concerned with the development of human beings and human interactions. Teachers and school administrators impact how young people make sense of themselves and their world, respond to others, and how to carry out their roles as citizens, employees, family members, and friends.

Matthew and Obiesili (2022) noted that in ancient Greece, some philosophers' views on education such as Socrates, Plato and Aristotle contributed to the development of our present educational system. In general, they all believed that the purpose of education is to improve humankind. Socrates' method is still used in modern educational practices. In this method, teachers ask some questions to improve the intellectual abilities of students and students try to answer these questions by using their reasons. Today's educational theories are based on the philosophies of these philosophers. Plato, who was the founder of idealism, claimed that the aim of education was to develop individual's abilities to better serve society. He also was the founder of Academy, the first university of the world. For him, both men and women had the right to education. He claimed that there were different stages of education. According to him, education was a key element for a society. On the other hand, Aristotle who was the father of realism believed that only citizens could be educated.

He believed that an educated person was a fulfilled person. He defended theoretical, practical and technical education. Education helps the development of bodily and mental faculties. Education builds character, gives knowledge, and helps progressing of State. Education makes a man complete and it also plays an important role in developing society and State. Schools are basic frameworks of education. School helps children to become good citizens and human beings. This is possible only by ethical education, so teaching ethics in school is important.

Ethics

Ethics is a branch of philosophy which deals with the morality of human actions or the norms of human behaviour. It deals with the morality of human actions or the norms of human behaviour. Ethics studies what is the proper course of action for man (Kanu, 2018). It studies right and wrong in human behaviours. It is a method by which we categorize our values and pursue them. Ethics is the very nature of man because, it is our means of deciding a course of action, without which, our actions would be meaningless and aimless. To the extent we pursue rational ethical standard, we will be able to correctly organize our goals and actions to accomplish our most pressing values. We act morally in order to realize full human well-being in the order of a created nature that is, ethics establishes the grounds for good relationship with others and God.

There are three meanings of ethics. First, ethics is commonly taken as a synonym for morality, the universal values and standards of conduct that every rational person wants every other to follow. Secondly, ethics is a well-established branch of philosophy that studies the sources of human values and standards, and struggle to locate them within theories of human individual and social condition. Thirdly,

professional ethics, and it is not universal nor is it ethical theory; it refers to the special codes of conduct adhered to by those who are engaged in common pursuit. Professional ethics is an integral part of a profession (Matthew & Obiesili, 2022).

Section 23 of the Nigerian constitution (1999) provides that the national ethics shall be discipline, integrity, dignity of labour, social justice, religious tolerance and patriotism. However, the lived experience of Nigerians is quite different from the constitutional provisions on ethics and values for the country. There is a lot of indiscipline in every facet of life in the country. Integrity is no longer cherished by many people. The get rich quick syndrome and pursuit of easy money has reduced the dignity of labour. There is high level of religious intolerance and the love for the country is waning. Many Nigerians have no respect for our institutions and national symbols. There is therefore a great need for ethics and value re-orientation.

Also, the National Economic Empowerment and Development Strategy (NEEDS) (2004) recognized this need, and stated that value re-orientation was one of the four key strategies of the NEEDS programme.

The approach was to lead a campaign to re -instill the virtues of honesty, hard work, selfless service, moral rectitude, and patriotism. Unfortunately, throughout the period of the NEEDS, very little was done to actualize the campaign. Worthy to note that ethics and values re-orientation is a re-assessment, take a look again and put something back on course because it has gone off-course. Education has gone off course in Nigeria and the values expected from it lost. There is therefore the need to redeem education in Nigeria through ethic and value re-orientation in the system now. Re-orientation is to bring back the lost values in the school system of education in Nigeria (Magaji, 2014).

Values

Values is defined as the collective conception of what is considered good, desirable, proper or bad, undesirable, and improper in a culture. Values is central to human behaviour and development. Values guides the choices we make and the way it influences the behaviour of everyone in the society. According to Mukherjee (2020), values is socially approved desires and goals that are internalized through the process of conditioning, learning or socialization and that becomes subjective preferences, standards and aspirations. Lehner and Kube (2020) also saw values as an integral part of the personal philosophy of life by which we generally mean the system of values by which we live. The philosophy of life includes our aims, ideals, manner of thinking and the principles by which we guide our behaviour. Values, generally perceived, means those standards or principles which the society collectively hold as valuable and therefore to be imbibed by its members (Nwabuani, 2010).

Bodurin (2009) noted that values is basic beliefs and attitude in a society whether of individual or groups which is considered worthwhile and which serves as guide to choices and behaviour in daily life. Esu (2009) further defined values as ideals that guide or qualify your personal conduct, interaction with others, and involvement in your career. Values helps one to, and informs one on how he or she can conduct one's life in a meaningful way. On his part, Bolarin (2009) after broad consideration of various definitions of values, defined values to mean trait, practices, acts, ideals, beliefs, attitudes, and principles that a group or society considers to be of merit, worthwhile, dear, acceptable and right. Values is linked to beliefs and attitudes and guides human behaviour (Rennie, 2007). Nwosu (2013) identified societal values as follows:

- a. Honesty and integrity
- b. Humility and obedience
- c. Moderation and the golden mean
- d. Hard work and reverence for achievement
- e. Purity and chastity

Honesty: This deals with character and is associated with one's speech, actions, attitudes and projected thoughts. When the above attributes are conditioned by the principle of right and wrong as pre-

determined by the society, one is said to exhibit honesty and integrity. Honesty and integrity predispose a person to exhibit exemplary moral character.

Humility and Obedient: They are also necessary for human development: A humble and obedient person offer selfless services to others because he is convinced, he is not better than others. Humility is the quality of having a modest or low view of one's importance. While obedience refers to submission to established rules and codes of conducts so that society can operate in a peaceful atmosphere and order.

Moderation: This is necessary for human development. Moderation means to be reasonable and balanced in actions and opinions. Moderation involves temperance and is in line with Golden mean principle which requires one not to engage in extremes. In all spheres of life –Politics, economy, social, etc. Extremism is abhorred in human conduct. Excessive quest for power in politics is frowned at, avarice and love of money is the root cause of evil. Excessive eating of food and drunkenness are condemned. In the same manner, religious fanaticism and obnoxious ethnocentrism do not receive accolades in human society.

Hard work and reverence for achievement: This is a core value among the Nigerian society. Hard work means constantly, regularly, or habitually engaged in earnest and energetic work. Hard work is one of the cardinal principles of human growth and development. Hard work builds character; you learn discipline and to be focused, manage your time and resources. In addition, hard work always accomplishes something, draws attention, brings new opportunities and blesses others. An adage says, —He who does not work, should not eat! Above all, hard work is important because it leads to high productivity, increased revenue, improvement in the living conditions of the individual, national development and decreased social vices.

Purity: This means freedom from immorality, especially of a sexual nature. Nigerian society has room for purity and therefore, any human community that is not built on cultural norms and ethos is bound to fail. For example, in Nigerian society, premarital sexual relationships, indecent dressing, indecent body exposure and other social ills are frowned at. Schools and colleges must mount large campaigns against indecent, dressing. There is need for change in our attitudes and behaviours if we must realize human development. Obviously, there is a dying moral culture and an ethical failure leading to total collapse of societal values.

All this total up to high rate of moral and behavioural rottenness. While supporting this view, Aremu (2014) claimed that our value system is grossly eroded, parents no longer have time to take good care of their children. Aremu (2014) stressed that inter-personal contacts have been replaced with e parenting. A situation where a parent asks the children on phone: Have you eaten? Are you in bed? What are you doing? etc., simply shows e-parenting and the children in return will put up e-behaviour and that usually results in e-consequences.

Nigeria Core Public Values

The core values of Nigeria that have been weakened over the years need to be strengthened in order to achieve a productive society. NEEDS (2004) described Nigeria as a multi-ethnic society, with a value system that is derived from the diversity of its people, religion and culture. These core values NEEDS identified include respect for elders, honesty and accountability, co-operation, industry, discipline, self-confidence and moral courage. The above core values are grossly compromised in the present Nigeria socio-economic and political contexts to the extent that this has constituted a serious moral problem. Their excessive compromise has manifested in greed, corruption, dishonesty, violent crimes, political killings, drug peddling, and so many other anti-social behaviours capable of jeopardizing all sincere efforts directed at stimulating national development or achieving a productive society. From this weak perspective, Dike (2005) called for the strengthening of ethics and values education in schools as corruption drives and shapes social values in Nigeria, and for some individuals

the quest for easy money is a justification for violating the laws of the land and distorting official policies directed toward national and sustainable development. Given this circumstance, the imperative for ethics and values education cannot be over emphasized as they involve education for character and for good moral values. This implies the teaching of respect and responsible adult life to the citizens. It is for good character and moral development which will lead to a healthy nation.

Enu and Esu (2011) emphasized that the fundamental moral values every responsible nation should teach its citizens include respect for constituted authority and sanctity of life, responsibility, values of honesty, fairness, tolerance, prudence, self-discipline, helpfulness, compassion, cooperation and courage, alongside some fundamental procedural values looked upon as basic ingredients of democracy. They include the rule of law, equality of opportunity, due process, representative government, checks and balances and democratic decision-making. These are the underlying democratic values that guarantee democratic stability.

Importance of Ethical and Values-Based Education

The Importance of Ethical and Values-Based Education includes the following:

- **Character Development:**
Ethical education helps shape character, fostering qualities like empathy, integrity, and responsibility, which are essential for a functional society.
- **Sustainable Development:**
Integrating ethics and values into education is vital for achieving sustainable development goals by promoting responsible consumption, environmental stewardship, and social justice.
- **Social Cohesion:**
By emphasizing shared values like respect, tolerance, and cooperation, ethical education can contribute to social cohesion and national unity.
- **Active Citizenship:**
A value-oriented education system can empower individuals to become active and responsible citizens, capable of contributing to their communities and the nation.
- **Combating Social Issues:**
By addressing issues like corruption, violence, and inequality through education, a values-based approach can help mitigate negative social trends.

Strategies for Re-thinking Quality Education in Nigeria

- **Integrate Ethics and Values:**
Infuse ethical considerations into all subjects and learning experiences, not just in dedicated "ethics" classes.
- **Promote Critical Thinking:**
Encourage students to analyze ethical dilemmas, evaluate different perspectives, and make informed decisions.
- **Foster Empathy and Compassion:**
Create learning environments that encourage students to understand and connect with the experiences of others.
- **Develop Global Citizenship:**
Help students understand their roles and responsibilities as global citizens, promoting intercultural understanding and cooperation.
- **Involve the Community:**
Engage parents, community leaders, and other stakeholders in the process of shaping ethical and values-based education.
- **Teacher Training:**
Provide teachers with the necessary training and resources to effectively integrate ethical and values-based education into their teaching practices.

- **Focus on Experiential Learning:**
Incorporate activities like community service, project-based learning, and real-world simulations to provide practical application of ethical principles.
- **Continuous Evaluation:**
Regularly assess the effectiveness of ethical and values-based education programs and make necessary adjustments.
By rethinking education in this way, nations can cultivate a generation of ethical and responsible citizens who are equipped to address the challenges of sustainable development and build a more just and prosperous futures

Effects of Degradation of Ethics and Values in the Education

Matthew and Obiesili (2022) observed that in this materialistic world which values only worldly possessions and demeans the essence of character, it needs to be asked how one can develop and maintain self-awareness and self-consciousness during the course of our life. Almost two decades ago, words such as jealousy, distrust, corruption, abuse, were highly unlikely to be heard of. Today, these words have become an everyday occurrence. What does this tell us about society, individuals and the nation? A society unappreciative of moral values, ethics and proper mannerism is not worth living in. Lack of morals and ethics has resulted in individuals being selfish, greedy and corrupt. On the other hand, lack of respect, civility and proper etiquette have made it difficult for many young people to maintain healthy relationships and interactions with others.

Despite morals and ethics being of great importance, the individuals in the modern society do not observe them, and as a result, many negative things can be seen. First, failure to act in a moral and ethical way has resulted in many people being greedy and less concerned about humanity. What differentiates humans from animals is the ability to act in a humane way, and ethical and moral values are the strongest tools of ensuring a person is better than an animal. When individuals fail to observe the acceptable moral and ethical values in the society, it means that they can do anything, even harming their fellow human beings as long as they can benefit personally. This is the case in the business world. Some businesses have been found guilty of offering unsafe products to customers. Also, failure of individuals observing moral and ethical values has resulted in cases of crime rising, such as homicide, theft, rape drug trafficking and so on. Due to deterioration of morals and ethics, most of the individuals in the modern society engage in criminal behaviours without fear. Young people are easily joining criminal gangs which terrorize innocent citizens through rape, stealing, murder, and engaging in internet fraud also known as —yahoo yahoo!, hook-up i.e. prostitution and other demeaning activities just to make ends meet.

The sum total of the effects of degradation of ethics and moral values is numerous as a lot of negative consequences are discernible. Among these problems is the stunted economic growth which the country is experiencing due largely to hyper inflation, low capital utilization and decline in foreign investments. The country is enmeshed in foreign debts and corruption prevalent among the political class. As such, a lot of money is siphoned into foreign accounts while the citizens of the country suffer in abject poverty. No public utility or infrastructure is functioning due to this moral recklessness. In the past one year under the present administration of President Tinubu, economic hardship has increased, tax net has widened, economy slowed down as many businesses are winding down due to high cost of doing business in Nigeria resulting in unemployment and retrenchment of workers, and high cost of petroleum products even when there exist of four refineries owned by the Federal Republic of Nigeria and a private one owned by Dangote Petroleum Refinery.

Furthermore, there is the danger of insecurity. Lives of farmers and people are threatened from time to time by terrorists like bandits, Boko Haram, miscreants, kidnappers and hired assassins. Cases of armed robbery attacks are rampant. Abogunrin (1994) surmised that —the loss of the sense of security in human existence today is due to injustice, violence, the sinister aspects of the present-day politics, religious wars, economic problems, unemployment, etc. The nation has been plunged into series of

violent attacks from different militant groups, and this paint a picture of a nation that is incapable of solving its problems.

Also, the education sector is not left behind in moral decadence. In this area, things have fallen apart. Educational institutions which are supposed to be the bedrock of moral instructions have been hit by this canker orchestrated by poor funding. The issues of strikes and industrial actions in our institutions are damning. This culminates in half-baked graduates with little or nothing to show at the end of the day. It equally accounts for high incidence of cultism in our tertiary institutions. Again, on the part of the students, loss of morals has made a good number of them not be studious but engage most of their time surfing the net for things that are not beneficial to their studies. When it is time for examinations, you see them engaging in examination malpractice. Some even go to the extent of —sorting their lecturers in order to pass.

One can go on and on with the devastating effects of the rubbishing of ethics and moral values as it cuts across all sectors. The truth, therefore, is that the demeaning of ethics and moral values remains the cause of the problems facing us as a nation and until urgent steps are taken to remedy it, Nigeria will continue to wallow in this moral mess as productivity continues to dwindle.

Conclusion

It is an obvious fact that the rate of moral decadence in Nigeria is disturbingly alarming and this has affected the educational sector of the nation. Based on this, there is need for ethical and value re-orientation with a view to actualizing our potentials and harnessing our resources, both human and material, for a greater, purposeful, egalitarian and productive society. In this regard, ethics and value education must be given a pride of place in our society. Every social institution like the family, church, mosque, school and the government should take the culture of hard work, punctuality, self-discipline, humility, leadership by examples and so on seriously, and preach or lead campaign against quick-rich syndrome, corruption, examination malpractice, violence, insolence and other social vices affecting the nation's productivity and putting her in bad light among comity of nations.

Recommendations

The following recommendations were made:

1. emphasizing the fundamental moral values every responsible nation should teach its citizens include respect for constituted authority and sanctity of life, responsibility, values of honesty, fairness, tolerance, prudence, self-discipline, helpfulness, compassion, cooperation and courage, alongside some fundamental procedural values looked upon as basic ingredients of democracy.
2. There is need for change in our attitudes and behaviours if we must realize human development. Obviously, there is a dying moral culture and an ethical failure leading to total collapse of societal values.
3. By emphasizing shared values like respect, tolerance, and cooperation, ethical education can contribute to social cohesion and national unity.
4. Engage parents, community leaders, and other stakeholders in the process of shaping ethical and values-based education.
5. Incorporate activities like community service, project-based learning, and real-world simulations to provide practical application of ethical principles

Abstract

This paper focused on re-engineering effective secondary education for leadership, values re-orientation and sustainable national development. Effective secondary education is an approach to secondary (high school-level) education that focuses on practical, applicable knowledge and skills that prepare students for real-world challenges, employment, or further education. To achieve sustainable national development, education must be practical, value-driven, and skill-oriented. This paper aims to explore the concept of effective education and highlights the importance of incorporating both effective learning and values re-orientation into Nigeria's secondary education system. The concepts of values re-orientation and sustainable national development were emphasized. The author emphasized that for effective education to promote leadership, values re-orientation, and sustainable national development, it must be properly managed. The aspects of education that require management, the reasons for managing education, and the importance of these practices within the context of effective secondary education were discussed. Efforts were also made to explore how effective secondary education should be managed to achieve sustainable national development, as well as to assess the public's expectations of its graduates.

Keywords: *Re-engineering, effective secondary education, values re-orientation, sustainable national development, leadership.*

Introduction

Education is a means of instilling values that prepare individuals to lead fulfilling lives in alignment with the ideals and principles upheld by their society. It serves as a key driver of transformation in both the intellectual and social spheres of any community (Federal Republic of Nigeria, 2014). While various scholars have presented different perspectives on the purpose of education, there is a shared consensus that it plays a critical role in shaping society, promoting social change, developing leadership, transforming individuals, and fostering ongoing growth and national progress. Education is a designed act in the transmission of knowledge, information and understanding Kumar (2020). This act in itself makes education a fundamental right to every citizen including the physically challenged children. Therefore, the right to education has provided the individual the opportunity to be empowered and to control the course of his or her life and be respected with dignity. Kumar (2020) with education, the individual acquires all the rights because it is considered as a precondition for exercise of all other human rights. In other words, civil and political rights assume relevant form and substance only when a person is educated. Since education enhances social mobility and freedom of individuals from discrimination based on social status, it equally raises people's sense of reasoning and productivity. Tanka (2018), as other social and economic parameters are promoted

through education; it shows that an educated person has greater opportunities to involve in the education of their children. Edem & Afangideh (2019) education is seen as the aggregate of all processes, social in nature, available under specialized settings, selected and controlled by which an individual, develops knowledge, skills culture, attitude and insights in the cognitive, affective and psychomotor domains of learning, that are vital for his/her survival as a person and as a member of the society as well as the enhancement of his/her life and the society. Essentially, education is viewed as a powerful tool that enhances the quality of life for citizens and this is achieved at both the basic, secondary and tertiary levels of education. Secondary education is the bridge between basic and tertiary education.

Secondary education is a structured stage of learning with the primary purpose of equipping students with the knowledge, skills, values, and attitudes necessary to become effective and productive members of society. It serves as a crucial bridge between primary and tertiary education and acts as an entry point into the workforce for those who, for various reasons, do not proceed to higher education. Nsude and Chukwu (2021) described secondary education as the foundation of the entire educational system, noting that it aligns with the adolescent years a pivotal time when individuals make significant life and career decisions. The authors emphasizes that this level of education greatly influences both the quality and quantity of students entering higher institutions, which are responsible for producing the nation's skilled workforce. He also highlights that in India, secondary education is regarded as a complete phase in itself, not just preparation for higher learning. At its conclusion, students should be ready to assume life's responsibilities and engage in meaningful employment if they choose. Secondary education as viewed by Ejimonu (2020) is the spring board from where all the students of higher education take off and all primary education leaders must pass through it to become useful to themselves and society. The secondary education aims at preparing an individual for useful living within the society and higher education as contained in section 4 subsections 18 of the national policy on education (2004). According to Nwonkwo and Idungafa (2020) secondary education is the education that helps children to acquire basic knowledge, skills and development of higher mental faculty. This viewpoint is echoed in the revised Nigerian Secondary School Curriculum, which incorporates academic, vocational, technical, and entrepreneurial education to ensure secondary education in Nigeria is both practical, outcome-oriented and value-oriented. According to the FRN (2014), every Nigerian student who completes secondary education is expected to demonstrate certain behaviours and attributes, reflecting the values they have acquired, in order to thrive in the workforce.

Value refers to the importance or usefulness assigned to something by individuals. In this context, value is linked to the practical benefits of effective secondary education in Nigeria. The positive growth of individuals, groups, or entire societies is influenced by the values they uphold. Education that holds true value is both meaningful and effective. It possesses utility, quality, and is appreciated for its intrinsic benefits. Such education blends knowledge with practical skills, empowering individuals to be productive, support national development, and even create employment opportunities for others. As a result, it becomes a key foundation for leadership and long-term national progress. According to Arikpo (2017), effective education equips graduates to actively contribute to productivity, leadership roles, and the sustainable development of the nation.

Effective education is a meaningful form of learning that equips individuals for a productive life both in the present and in the future. As explained by Adewale in Agbowuro, Saidu, and Junwan, (2017), effective education offers a comprehensive learning experience that emphasizes problem-solving, critical thinking, and informed decision-making in response to real-world challenges. It enables learners to gain relevant knowledge, skills, and attitudes necessary for innovation, and serves as a catalyst for global relevance, peaceful coexistence, sustainable development, and societal progress. It is a powerful tool that empowers both current learners and those seeking self-improvement to become effective and productive members of society. In Nigeria, secondary school graduates are expected to demonstrate the benefits of effective education. However, for effective secondary education to effectively promote leadership, values re-orientation, and sustainable national development, it must be properly managed. Educational management involves the strategic planning, organizing, leading,

coordinating, and controlling of human, financial, and material resources to achieve educational objectives efficiently. It ensures that resources allocated to the education sector are utilized optimally to fulfill the goals at every level of the system. Thus, managing effective secondary education effectively is essential for cultivating quality leadership, instilling proper values, and driving sustainable national development. No country can truly progress without embracing effective secondary education as a foundation for these outcomes. Education, therefore, must be administered with excellence to develop individuals who can think critically, act responsibly, and make sound judgments. The decline observed in Nigerian society today such as poor leadership, lack of respect for elders, erosion of the dignity of labour, wrong value systems, materialism, and social issues like kidnapping can be traced to a loss of core educational values. This troubling trend has had a significant negative influence on the youth. There is an urgent need to address this through a re-orientation of values, made possible by a well-managed, re-engineered and effective secondary education system.

Value re-orientation as opined by Nsude and Chukwu (2021) involves reassessing and realigning something that has deviated from its proper path. In Nigeria, education has strayed from its intended course, and the values it was supposed to impart have been lost. This recognition that the values once associated with Nigerian secondary education no longer reflect the current reality highlights the urgent need for value re-orientation within the system. The values upheld today are questionable, which underscores the importance of implementing effective secondary education to restore these core principles. Value re-orientation aims to make education meaningful once again by emphasizing the right values, knowledge, attitudes, and skills necessary for effective leadership and sustainable national development. It seeks to reinstate the lost values within Nigeria's secondary education system. To maintain progress and ensure the education system stays aligned with its goals, regular evaluation of secondary education is essential. This process acts as a safeguard to confirm that the values taught at this level are of high quality and relevant to the needs of both learners and society, both now and in the future. Therefore, re-engineering effective secondary education is key to fostering leadership, facilitating value re-orientation, and promoting sustainable national development.

Sustainable national development can be viewed as the capacity of a nation in discovering and utilizing new ideas, new innovations, new technologies and techniques to improve the quality of life of citizens in economic, social, political, and environmental 594 dimensions without impairing the ability of the future generation to enjoy the quality of life and opportunities for a long time (Walson & Ajekere, 2020). This simply means the ability of a particular country to plan and achieve betterment and improvements in its socio-economic, political cultural and environmental lives both now and in the future. This indicates that the process of attaining sustainable national development begins with discovery and developing the potentials imbued in human and natural capital of the nation, and rooted in the consistent and efficient utilization and effective management of the human and natural resources of the nation. Sustainable national development is a regulation of the means of living that provides for sufficient and adequate improvement on the previous ways of living in response to contemporary exigencies of life with the full awareness of needs to act in ways and manners which would ensure continued existence and adequate comfort to the succeeding generation (Nwankwo, 2023). Sustainable development of any nation can only be achieved through acquisition of basic skills, knowledge, right attitude, good leadership and desirable values, through effective management of effective secondary education (Kumar, 2020). Managing effective secondary education is attributed to designing, planning, organizing, leading and controlling of resources such as people, machinery, raw materials, information, skills and finances to achieve the targeted goals.

A careful examination of the Nigerian secondary education curriculum clearly shows that graduates from this level should possess enhanced values, provided the curriculum content is effectively delivered and well understood by the students (FRN, 2014). In essence, students completing secondary education are expected to contribute meaningfully and productively to societal activities. Nsude and Chukwu (2021) explain that this contribution involves the ability to apply acquired knowledge, skills, and attitudes to identify, seek out, and utilize available resources. It also includes the capacity to innovate, create wealth for oneself and others both now and in the future, and thereby support national

development. However, it seems that the Nigerian secondary education system currently produces graduates who are unemployed and lack the skills to make significant contributions after graduation. Ibe and Igwe (2020) observed that the economic sector shows little evidence of the benefits of effective secondary education, as many graduates are left wandering without paid jobs, which are scarce. Ifedile and Ofoegbu (2021) agreed, noting widespread concern over the quality of effective education given to Nigerian secondary school students due to the high unemployment rate among graduates.

The current state of values in secondary education is questionable, making value re-orientation necessary to restore its effectiveness by emphasizing the right values, knowledge, and skills essential for national development. Thus, this paper aims to explore how Nigerian secondary education can be made effective to promote leadership, value re-orientation, and sustainable national development, focusing on effective secondary education, values, and their re-orientation.

Effective education refers to learning that holds meaningful value for the individual, the community, and the nation. Magaji (2014) defines effective education as the type of education that provides learners with valuable knowledge while equipping them with the necessary skills and attitudes to be productive and effective in their roles. In this sense, effective education is value-based, instilling lifelong principles that guide the learner and contribute to the sustainable development of both the individual and the nation. Value in education represents the benefits and significance it provides to learners, communities, and society at large. This importance can be seen through indicators such as economic growth, improved health, increased employment opportunities for graduates, progression of secondary school students to higher education institutions, and overall improvements in various aspects of life within individuals, communities, and societies. Kumar (2020) further emphasizes that effective education goes beyond merely completing a specific course of study. It encompasses the development of the whole person throughout their entire life, promoting a balanced growth of physical, mental, and spiritual abilities.

Value re-orientation in Nigerian secondary education acknowledges that the values traditionally associated with this level of education have significantly declined. This re-orientation aims to restore education to its value-based, effective form. Magaji (2014) identifies three key components of effective education: the inputs, the expected outcomes, and the ultimate goals. Teachers are expected to contribute value-based inputs that foster the development and progress of students, as well as support sustainable national development. Students who undergo effective education are expected to exhibit certain qualities. According to Ikonne (2022), these include patriotism, loyalty, politeness, kindness, acceptance, courage, friendliness, trustworthiness, and dependability. Additionally, Ikonne highlights attributes such as competence, diligence, discipline, orderliness, integrity, selflessness, cooperation, and unity. Effective education is meant to nurture individuals who appreciate and uphold the values deemed important by their society. Although different people may prioritize different values, the broader goal is to produce learners who are both productive and aligned with societal ideals. The nation, in turn, expects its education system to produce graduates who are knowledgeable, skilled, and able to contribute to sustainable national development. Kumar (2020) emphasized the role of effective education in shaping individuals who take on responsibilities, lead enterprises, and influence societal character. Effective education's purpose is to empower young people to become independent thinkers rather than simply echo others' ideas.

Good and honest individuals are the outcome of value-based effective education. Graduates who have undergone such education are not expected to betray their communities by misappropriating public funds meant for the welfare of the people. Leaders in Nigeria's various economic sectors must demonstrate that they embody the principles of value-effective education. It is important to recognize that leadership grounded in these values can significantly improve society. What Nigeria and the world urgently need, as Kumar (2020) emphasized, are men and women of integrity those who cannot be bought or swayed, and who remain genuinely truthful and honest at their core. Management involves the processes of planning, organizing, coordinating, directing, leading, and controlling resources to achieve objectives effectively and efficiently. The author believes that for value-effective secondary education to promote value-based leadership and national development, it must be properly managed.

Educational management specifically refers to the planning, organizing, directing, and coordinating of human, financial, and material resources to accomplish organizational goals. According to Ebony and Nsude and Chukwu (2021), educational management focuses on ensuring that the resources allocated to education are effectively utilized and optimized to achieve educational goals and objectives efficiently. It aims to prevent resource wastage or failure in meeting educational targets, align resources to support intended educational outcomes, avoid distractions in program implementation, provide a framework for assessing school performance, and establish standards for enhancing educational quality by ensuring the provision of appropriate resources.

Effective secondary education can be effectively managed to promote leadership, value re-orientation, and sustainable national development. No country can progress without adopting and properly managing value-based effective education. Walson and Ajekere, (2020) identified key elements managed in schools to include the curriculum and instruction, staff, students, physical facilities, finances, and school-community relationships. Njoku (2015) emphasized that coordinating these components is essential for achieving educational goals. To rapidly enhance leadership quality, value re-orientation, and sustainable development, a nation must have a relevant curriculum focused on effective education, qualified and competent teachers, adequate teaching resources, well-maintained school facilities, effective classroom supervision, positive school-community relations, sufficient funding, and efficient management of resources. It is the responsibility of school principals and teachers to ensure these resources are properly utilized to meet educational objectives. Education cannot achieve its goals if not well-managed. Effective education management involves thorough planning and control of human and material resources, fairness, proper maintenance, clear communication, transparency in administration, and proactive planning (Fafunwa in Nsude & Chukwu, 2023). For secondary education to be both effective and productive, the principal who holds the highest managerial role in the school system plays a crucial role. The principal administers the school by giving daily guidance to staff to ensure the successful implementation of effective curriculum, which ultimately produces citizens capable of contributing effectively to society.

When managed effectively and efficiently, effective secondary education is highly valuable because it provides students with the knowledge and skills necessary to be productive and contribute meaningfully to society, ultimately fostering national development. However, Nsude and Chukwu (2021) observed that effective secondary education in Nigeria has deteriorated, limiting its ability to be truly productive and effective. The researchers identified issues such as poor management and insufficient funding as key challenges. Nsude and Chukwu emphasized that these problems have led to Nigerian secondary schools producing graduates who lack the essential knowledge, attitudes, and skills needed to positively impact societal development. Therefore, addressing this concerning situation requires a strong commitment to re-orient the Nigerian secondary education system towards becoming truly effective. Magaji (2014) argues that the decline seen in Nigerian society is largely due to the erosion of educational values. He also noted that the creation of agencies such as the Economic and Financial Crimes Commission (EFCC) and the Independent Corrupt Practices Commission (ICPC) represent attempts to compel citizens to uphold positive values for the betterment of Nigeria and to reject wrongdoing. These serves as clear evidence that values have been significantly eroded and continue to be lost within the education sector and other areas of society, potentially undermining good leadership and sustainable national development;

- a. *Examination Malpractice:* The abuse of examination known as examination malpractice has rendered useless the intended purpose of examination results. Okocha in Chidobi and Okenwa (2015) saw it as —a national embarrassmentsl and has made nonsense of most certificates issued in almost all levels of our education sector. At the secondary level, examination malpractices start at internal examinations and graduate to external examinations like the West African Examination Council (WAEC), the National Examination Council (NECO) and the Unified Tertiary Matriculation Examination (UTME). Therefore, efforts should be made by all and sundry to eradicate it so as to ensure effective secondary education for leadership and sustainable national development.

- b. *Inadequate and Demoralized Personnel:* Teachers that drive effective secondary education in Nigeria seem to be unhappy, dissatisfied and demoralized. Salaries are not regularly paid and most times, teachers are owed arrears of salaries. Again, there are also incompetent and uncertified teachers existing in Nigerian secondary schools. Such teachers are cheaters and quacks and will be incapable of driving effective secondary education for leadership, values, re-orientation and sustainable National development.
- c. *Corruption and Lack of Transparency in Government:* Fraud and stealing from government coffers have become tradition in Nigeria. Money that would have been used finance our educational system is always diverted to private advantages. How can this ugly scenario lead to effective secondary education for leadership, values reorientation and sustainable National development? We profess effective secondary education, but the will power to pursue it is dangerously lacking. Nigeria by all standards is rich, but incapable of using effective secondary education to effect good leadership and sustainable national development. According to Oluwo (2014) we have good educational plans but no will power and managerial ability to effectively implement them.
- d. *Inadequate funding:* This has become a major problem in financing education in Nigeria. Whereas the UNESCO is suggesting that 26% of the nation's budget should go to education, Nigeria is budgeting as low as 8%. Oluwo (2014) is in agreement with Okenwa (2015:68) when he note that it is because of this poor funding that we have insufficient facilities in schools' irregular payment of teachers' salaries and low morale of teachers. All these will lead to poor teaching and learning and cannot lead to sustainable national development.
- e. No regular school calendars in many schools due to constant strikes by teachers in public schools. How can a nation whose educational system is characterized by constant strike achieve sustainable national development?
- f. *Poor Policy Implementation:* Nigeria government is known for the formulation of laudable policies but in most cases these policies are either not implemented or left half-way. Chidiobi and Okenwa (2015) lamented that inconsistencies in policies are one of the biggest problems facing Nigerian education system. No nation can drive good leadership, values reorientation and sustainable national development through effective secondary education without effective implementations of its noble educational policies.
- g. Low quality teachers due to the absence of Teachers Training Colleges (TIC) which were the good foundation for training teachers who kept value as a requirement in education.
- h. Organized —Export of young girls to foreign leads for prostitution. The National Agency for Prohibition of Traffic in persons (NAPTIC) has been fighting the war to stop this ugly trade but due to loss of value in homes, schools and society, merchants of this trade and the young girls who are the stock in trade are finding ways to avoid being caught and remain in the trade.
- i. *Inadequate Science and Technological Tools:* No nation can drive sustainable national development through effective management of effective secondary education without embracing science and Technology. Science and Technology are vital components of effective education. Oluwo (2014) noted that Technological education leads to the acquisition of practical skills as well as basic scientific knowledge. Technology makes a difference between developed and developed countries because it is technology that can revolutionize industry and bring changes in the way people do things. Inadequate science and technological tools are major erosion facing secondary education lacks adequate technological facilities to enhance effective management of effective secondary education for sustainable national development. This may be as result of the government inability to have value and to provide technological facilities for effective education in secondary schools.

Re-engineering Effective Secondary Education for Sustainable National Development

A lot of challenges hinder effective management of effective secondary education for leadership, value reorientation and sustainable national development, but efforts should be made to ensure that secondary education system should be organized and managed to achieve values re-

orientation and sustainable national development especially in this era of economic recession and massive unemployment. Effective management is central in realizing effective sustainable secondary education as the paper is geared towards identifying and discussing ways through which effective education could be achieved and sustained. Therefore, effective secondary education can be achieved using the following under listed approaches and strategies:

1. Adequate funding.
2. Facilities/physical infrastructures should be provided and maintained.
3. Human resources management should be enhanced.
4. Time management.
5. Effective curriculum

There's a popular saying, —better soup na money kill am, meaning that the quality of anything depends largely on the financial investment behind it. Anugom (2019) highlighted funding as one of the critical challenges facing education in Nigeria, stressing that it demands immediate attention. The Nigerian government's inadequate funding of the education sector calls for urgent reform. Since effective secondary education requires substantial financial resources, it is essential that sufficient funds are allocated and well-managed to support effective teaching and learning, helping students acquire the knowledge, attitudes, and skills needed to be productive and effective members of society. Allocating only 8% of the national budget to education is insufficient and unacceptable. To ensure the effective management of effective secondary education, funding should not be the sole responsibility of the government. Parents, individuals, and non-governmental organizations must be actively involved in supporting education financing. Since the government alone cannot bear the cost of education at all levels, collaboration is necessary. These stakeholders, including alumni, should be represented on school-based committees to increase their involvement and commitment. The quality of education delivered in schools is closely linked to the availability of educational resources, which, in turn, is directly influenced by the level of funding. Sufficient financial support ensures the provision of necessary facilities, equipment, and the hiring of competent, skilled personnel all of which are vital to delivering high-quality education.

The provision and maintenance of facilities and physical infrastructure are essential for the effective re-engineering and management of effective secondary education in Nigeria, which is key to achieving sustainable national development. The availability of tools such as computers, word processors, internet access, automated teller machines, micrographic equipment, along with sufficient classroom buildings, laboratories, and libraries, is crucial. These resources serve as vital inputs that directly influence the quality of education. No country can attain lasting national development without integrating adequate facilities into the teaching and learning process. To address this, there should be collaborative efforts among alumni associations, non-governmental organizations, philanthropists, parents, and the government to supply and support educational infrastructure. Once these facilities are provided, it becomes the duty of school principals to oversee their proper usage and upkeep. Additionally, the local community should take an active role in safeguarding school property against vandalism. Strengthening human resource management is also necessary to ensure that all available resources are utilized effectively and responsibly.

Effective human resource management is essential for achieving effective secondary education in Nigeria. It is the skills of people that enable the proper use of educational facilities for teaching and learning. To manage effective secondary education successfully, schools need staff who are not only intellectually capable but also emotionally stable, morally upright, and proficient in teaching methods. There is also a strong need for continuous professional development through regular training and retraining of staff to help them meet the objectives of effective education. Teachers should be equipped with modern technological skills, including the use of computers and the internet, to enhance effective teaching and learning, ultimately producing graduates who are both capable and productive. Additionally, classroom activities must be closely monitored to prevent teaching malpractice and ensure instructional quality. Effective secondary education aimed at promoting leadership, value re-orientation,

and sustainable national development cannot be achieved without qualified, committed teachers who uphold high moral standards and demonstrate creativity. Furthermore, leadership training and value re-orientation should be embedded into the curriculum of effective education. This integration will help students internalize the values needed to become responsible citizens. Education that focuses on character building, skill development, entrepreneurship, and job creation will prepare learners to contribute meaningfully to society both now and in the future.

Time management plays a crucial role in the effective administration of effective secondary education. With a wide range of subjects scheduled on the school timetable, no single teacher should dominate or overextend their time in the classroom. For effective education to be efficiently managed, school principals must ensure that teachers arrive on time, use their allotted class periods appropriately, and avoid encroaching on the time allocated to others. Instances of absenteeism and poor teaching practices should be closely monitored and addressed with appropriate disciplinary measures in line with professional standards. Teachers who are negligent or unproductive should face consequences. This is because, what the system needs are true educators, not individuals who undermine the profession. To drive effective secondary education that fosters leadership, instills core values, and supports sustainable national development, schools require teachers who are hardworking, focused, creative, morally upright, adaptable, emotionally balanced, intelligent, and skilled in effective teaching methods. These qualities should not only be expected but also recognized and rewarded appropriately to encourage excellence in the education sector.

An effective curriculum is essential for effective teaching and learning in secondary schools, as it serves as the foundation for achieving the goals and objectives of education. To this end, a well-structured curriculum should be implemented; one that goes beyond academic learning to include vocational, technical, and entrepreneurship education. This approach will ensure that, upon graduation, students are not only employable but also capable of becoming self-reliant and creating job opportunities for themselves and others. The curriculum should be broadened and enriched to support a comprehensive and integrated form of effective secondary education. It must offer a diverse selection of subjects and practical trade options to meet the varied interests and needs of students, ultimately preparing them to contribute meaningfully to society.

Conclusion

Effective secondary education provides learners with meaningful content that imparts lasting knowledge, skills, and values. It aims to shape individuals in a way that these attributes become a permanent part of their lives. Graduates of such value-driven education should embody qualities like trustworthiness, reliability, loyalty, and patriotism. They should also be hardworking, productive, and prepared to take on leadership roles that contribute positively to the growth of their society and nation. Without a solid foundation in effective secondary education, individuals may lack the capacity to thrive, and true sustainable national development would remain out of reach. For a nation to achieve sustainable development, its education system must be practical, value-driven, and rich in knowledge and skills. Effective secondary education can only be realized when there is a strong emphasis on value re-orientation and efficient management of the entire education system. This requires the proper allocation and utilization of financial resources, human capital, facilities, a relevant and practical curriculum, and effective time management, all essential to advancing national development through functional secondary education. The need for value re-orientation in Nigerian secondary education highlights the gap between the values the system is meant to instill and the reality currently experienced. Today's values are increasingly being questioned, underscoring the urgent need to realign and reinforce core values within the secondary education framework.

Abstract

This study investigated the relationship between principals' faith-based ethical techniques and their administrative effectiveness in private secondary schools in Rivers State. Two research questions and two hypotheses guided the study. A correlational survey design was adopted. The population consisted of 672 private senior secondary schools' principals in Rivers State, from which a sample of 251 was proportionally selected using multistage sampling across 15 Local Government Areas (LGAs). Data used in the study were collected using two validated instruments: The Faith-Based Ethical Techniques Questionnaire (FBETQ) and the Administrative Effectiveness Questionnaire (AEQ), with reliability coefficients of 0.89 and 0.81 respectively. The data were analyzed using Pearson Product Moment Correlation and simple linear regression. Findings revealed that principals' moral guidance techniques significantly predicted administrative effectiveness ($r = .548, p < .001$), accounting for 30% of the variance. Similarly, community engagement techniques were also significant predictors ($r = .473, p < .001$), explaining 22.3% of the variance. The study concluded that faith-based ethical leadership enhances administrative competence and institutional discipline. Based on the findings, this study recommended that moral guidance and community engagement should be deliberately integrated into leadership practices and training programmes to improve school governance and goal attainment.
Keywords: Faith-based ethics, moral guidance, community engagement, administrative effectiveness, school leadership.

Introduction

Secondary education plays a crucial role in preparing learners for meaningful living and further education. According to the Federal Republic of Nigeria (FRN, 2013), the goals of secondary education are to develop individuals who can contribute productively to society and pursue tertiary education. These goals are largely dependent on effective school leadership, particularly the role of the principal, who serves as the chief promoter of the school's values and ethical standards (Mendoza & Melchor, 2024). The principal is more than an administrative figure. He or she is a moral leader expected to model integrity and ensure a positive school climate. Effective principals foster ethical behaviour among staff and students, cultivate trust, and uphold the moral standards needed to guide the school

community. Ujata (2024) emphasised that ethical behaviour is vital for national development, while Amadi (2013) argued that students' everyday experiences in schools offer opportunities for moral development and life learning.

A critical component of such ethical leadership is the integration of faith-based ethical techniques into school administration. These techniques are grounded in religious beliefs and serve as moral compasses for decision-making and leadership. Mijah and Sirari (2024) explained that faith-based ethical strategies help students build responsibility, morality, and accountability. These strategies, when employed effectively, can strengthen a school's institutional culture, creating an environment marked by respect, mutual trust, and spiritual well-being (Ghanem as cited in Nyaga & Muasa, 2024).

Faith-based ethics refer to moral principles and values derived from religious doctrines and traditions. These values shape behaviour by offering a framework for distinguishing between right and wrong. When applied in educational leadership, faith-based ethics can support spiritual growth, personal discipline, and moral awareness among students. Yildrin and Durdaji (2020) observed that school principals who embrace these techniques can positively influence not only students' academic and moral development but also societal well-being. Principals who apply faith-based ethics foster inclusive school cultures where discipline, fairness, and responsibility are promoted. They also create spaces for spiritual and character development by incorporating moral teachings into curricular and extracurricular activities. Steyn (cited in Shula et al., 2022) noted that ethical school leadership is visible when trust, respect, and dignity are reflected in the interactions between staff and students.

Ethics can be broadly defined as the study of moral values rooted in culture, religion, and professional conduct. It guides the development of enduring principles such as fairness, honesty, and accountability. Unobunjo (2022) remarked that no society can progress without a moral foundation, and this applies equally to school systems. Therefore, when principals embed faith-based values in school operations, they not only uphold administrative order but also help students form ethical identities. A direct connection exists between faith-based ethical practices and administrative effectiveness. Principals who integrate spiritual values into school culture are better positioned to model appropriate behaviour, manage conflicts justly, and inspire both staff and students. Njoku (2016) affirmed that faith-based ethics promote moral and spiritual development, which are foundational goals of education. When teachers observe ethical leadership, their morale, commitment, and performance improve, further enhancing students' learning outcomes. In contrast, the absence of such moral leadership may result in disorganisation, reduced staff motivation, and poor student discipline. Wey-Amaewhule and Ogbonnaya (2024) remarked that principals who fail to supervise instructional practices ethically may demoralise teachers, leading to ineffective classroom delivery. Therefore, faith-based ethical techniques such as moral guidance and community engagement are strategic tools for school leadership.

Moral guidance entails modelling virtuous behaviour, setting clear expectations, and fostering a values-based school climate. Han (cited in Hakizayezu & Andala, 2022) noted that ethical leadership encourages transparency and trust, while Lilian and Afianmagbon (2025) argued that principals must integrate academic excellence with spiritual growth. This dual mandate makes administrative effectiveness a matter of both competence and character. Principals are expected to communicate ethical expectations clearly, apply rules justly, and address issues like bullying or dishonesty in ways that reflect both justice and compassion (Igbozuruike et al., 2017).

Community engagement is another vital ethical practice. It involves building inclusive partnerships between schools and their surrounding communities. Luchuo et al. (2022) defined it as a respectful collaboration that empowers stakeholders and supports positive development. Faith-based schools, in particular, often rely on religious networks and moral teachings to strengthen community ties. Through initiatives such as community outreach, parental involvement, and culturally responsive leadership, principals can make school management more transparent and responsive. Adogame (cited in Ifenatuora et al., 2021) asserted that integrating faith with leadership can promote discipline and shared values. Similarly, Galvin (2023) found that schools practicing faith-based ethics often benefit from strong family and community engagement. These partnerships reinforce moral values at home and in school, supporting students' emotional and social development.

Administrative effectiveness is realised when school leaders apply moral frameworks that support efficient decision-making, staff motivation, and student discipline. Nebo and Afianmagbon (2025) defined administrative effectiveness as the ability to fulfil both academic and spiritual mandates. Principals who model honesty, fairness, and respect can influence school culture positively and support goal attainment. They also promote inclusivity, transparency, and a safe learning environment for all stakeholders. In Rivers State, there is growing concern about the decline in moral values among students and the apparent inability of some principals to uphold ethical standards (Igbozuruike et al., 2017; Amadi, 2013). The rising incidences of examination malpractice, drug abuse, dishonesty, and general indiscipline in secondary schools. These behaviours undermine the goals of secondary education and question the ethical leadership capacity of school administrators.

Despite the significance of moral guidance and community engagement, many principals appear to neglect their ethical leadership responsibilities. Nebo and Afianmagbon (2025) noted that moral failure among school leaders compromises both academic performance and spiritual development. Eremie and Amadi (2020) expressed discontent with the neglect of community-focused services that once cultivated honesty, diligence, and social responsibility in students. Similarly, Ozah (2024) criticised the lack of a moral evaluation framework among school principals, arguing that ethical lapses in leadership can lead to flawed policies and poor administrative outcomes. These concerns necessitate greater awareness and intentional adoption of faith-based ethical techniques by school leaders. Ethical school leadership must go beyond policy compliance; it should involve a lived commitment to values that build trust, foster inclusion, and support moral behaviour. When principals embrace these values, they can positively influence both staff performance and student discipline, ultimately enhancing school effectiveness. However, there appears to be a gap in the integration of faith-based ethical principles in school administration in Rivers State. This shortfall may be contributing to the erosion of moral standards and diminishing administrative effectiveness. A deliberate focus on moral guidance and community engagement, which are two essential faith-based ethical techniques, may help principals improve school governance. Therefore, this study seeks to investigate the relationship between principals' faith-based ethical techniques and their administrative effectiveness in private secondary schools in Rivers State.

Statement of The Problem

Principals are expected to provide ethical leadership that promotes integrity, discipline, and administrative effectiveness in schools. However, many secondary schools in Rivers State face rising cases of examination malpractice, substance abuse, indiscipline, and other forms of moral decline. These issues suggest a weakening of the moral foundation expected in schools, particularly those with a faith-based orientation. Admittedly, faith-based ethical techniques such as moral guidance and community engagement are essential tools for promoting ethical conduct and administrative order, however many school principals appear not to apply them effectively. This failure may be arising from a lack of awareness, inadequate training, or disregard for ethical leadership responsibilities. Without the integration of faith-based values into the curriculum and school culture, many schools may struggle to cultivate the discipline and accountability necessary for achieving educational goals. Moreover, administrative effectiveness is often compromised when ethical values are absent in school leadership practices. There is growing concern therefore, that the non-application of faith-based ethics may be contributing to the erosion of students' moral behaviours and poor governance in schools. Given these challenges, this study seeks to examine the relationship between principals' use of faith-based ethical techniques and their administrative effectiveness in private secondary schools in Rivers State.

Research Questions

The following research questions guided the study.

1. To what extent do principals' moral guidance techniques predict their administrative effectiveness in private secondary schools in Rivers State?

2. To what extent do principals' community engagement techniques predict their administrative effectiveness in private secondary schools in Rivers State?

Hypotheses

The following hypothesis were tested at 0.05 significance level

1. There is no significant predictive relationship between principals' moral guidance techniques and their administrative effectiveness in private secondary schools in Rivers State.
2. There is no significant predictive relationship between principals' community engagement techniques and their administrative effectiveness in private secondary schools in Rivers State.

Methodology

This study adopted a correlational survey research design. The design was deemed appropriate because the study aimed to examine the relationship between principals' faith-based ethical techniques, with focus on moral guidance and community engagement, and their effects on principals' administrative effectiveness in private secondary schools in Rivers State. The target population for this study comprised all 672 principals of registered private secondary schools across the 23 Local Government Areas (LGAs) of Rivers State (Rivers State Ministry of Education, 2025). Using Taro Yamane's (1967) formula at a 5% margin of error, a sample size of 251 principals was determined. To ensure equitable geographical representation, 15 LGAs were purposively selected, and the sample of principals was proportionally drawn from population. Accordingly, Obio/Akpor and Khana LGAs contributed 37 and 27 principals respectively. Emohua contributed 20, Etche 19, Ahoada East 16, and Ahoada West 15. In addition, Keana and Port Harcourt contributed 16 principals each, Gokana 15, Andoni and Abua/Odual 14 each, Asari-Toru 12, Degema 11, Eleme 10, and Akuku-Toru 9 principals. A multistage sampling technique was adopted. The researchers compiled private secondary school lists in each of the 15 selected LGA. Each school was coded, and a simple random sampling method was employed to select proportional number of schools from which the principals were drawn. This process produced a final sample of 251 respondents.

Two validated, self-developed instruments were used for data collection: The Faith-Based Ethical Techniques Questionnaire (FBETQ) and the Administrative Effectiveness Questionnaire (AEQ). The FBETQ consisted of Section A, which contained items used to obtain demographic information of the respondents, and Section B, which comprised 14 items used to assess principals' use of moral guidance and community engagement. AEQ contained 12 items used to measure administrative competence, leadership effectiveness, and school operational efficiency. Both instruments were validated by experts in educational management and psychometrics in University of Port Harcourt. Their reliability was confirmed using the Cronbach Alpha method, which yielded coefficients of 0.89 for FBETQ and 0.81 for AEQ, indicating strong internal consistency. A total of 251 copies of the instruments were distributed, and 243 valid responses were retrieved and used for data analysis. The data were analysed using Pearson Product Moment Correlation to determine the strength of the relationships, and simple linear regression analysis to assess the predictive influence of the faith-based ethical techniques on administrative effectiveness. All hypotheses were tested at the 0.05 level of significance. To interpret the strength of the relationships observed, the correlation coefficients were assessed using the scale recommended by Schober, Boer, and Schwarte (2018): .00–.10 = negligible correlation, .11–.39 = weak correlation, .40–.69 = moderate correlation, .70–.89 = strong correlation, and .90–1.00 = very strong correlation.

Research Question One: To what extent do principals' moral guidance techniques predict their administrative effectiveness in private secondary schools in Rivers State?

Table 1: Simple Regression Analysis for Moral Guidance Techniques as Predictor of Administrative Effectiveness

Predictor	R	R ²	Adjusted R ²	Std. Error	B	β	t	p
Moral Guidance Techniques	.548	.300	.296	10.52	1.58	.548	8.57	.000**

Dependent Variable: Administrative effectiveness.

Table 1 presents a regression analysis showing how principals' moral guidance techniques predict their administrative effectiveness. The correlation coefficient ($R = .548$) suggests a moderate positive relationship, while the R^2 value (.300) indicates that 30 percent of the variation in administrative effectiveness is explained by moral guidance techniques. The standardized beta value ($\beta = .548$) reflects the strength of the predictor, and the t-value (8.57) is statistically significant at $p < .001$, confirming the predictor's importance.

H₀₁: There is no significant predictive relationship between principals' moral guidance techniques and their administrative effectiveness in private secondary schools in Rivers State.

Table 2: Test of Moral Guidance Techniques as a significant Predictor of Administrative Effectiveness

	Sum of Squares	Df	Mean Square	F	Sig.
Regression	8133.315	1	8133.315	73.441	.000 ^b
Residual	18937.610	241	110.746		
Total	27070.925	242			

a. Dependent Variable: Administrative effectiveness
b. Predictors: (Constant), Moral guidance techniques

$P < 0.05$

Table 2 provides the ANOVA result testing the predictive significance of moral guidance techniques. The F-statistic (73.44) and the p-value (.000) confirm that the model is statistically significant. This indicates that moral guidance techniques meaningfully explain variance in administrative effectiveness, justifying their inclusion in the model.

Research Question Two: To what extent do principals' community engagement techniques predict their administrative effectiveness in private secondary schools in Rivers State?

Table 3: Simple Regression Analysis for Community Engagement Techniques as Predictor of Administrative Effectiveness

Predictor	R	R ²	Adjusted R ²	Std. Error	B	β	t	p
Community Engagement Techniques	.473	.223	.219	11.09	0.91	.473	7.01	.000**

Dependent Variable: Administrative effectiveness.

The analysis in Table 4 showed a correlation coefficient of $R = .473$. The result indicates a moderate positive relationship. The R^2 value of .223 shows that community engagement techniques account for 22.3% of the variance in administrative effectiveness in private secondary schools.

H₀₂: There is no significant predictive relationship between principals' community engagement techniques and their administrative effectiveness in private secondary schools in Rivers State.

Table 4: Test of Community Engagement Techniques as a significant Predictor of Administrative Effectiveness

	Sum of Squares	df	Mean Square	F	Sig.
Regression	6047.789	1	6047.789	49.192	.000 ^b
Residual	21023.136	241	122.942		
Total	27070.925	242			

a. Dependent Variable: Administrative effectiveness
b. Predictors: (Constant), Community engagement techniques

P < 0.05

Table 4 contains the ANOVA result for community engagement techniques. The F-value (49.19) and p-value (.000) show that the regression model is statistically significant. This supports the hypothesis that community engagement techniques are a meaningful predictor of administrative effectiveness among principals.

Discussion of Findings

The findings from the regression analysis indicate that principals' moral guidance techniques significantly predict their administrative effectiveness in private secondary schools in Rivers State. The observed Pearson correlation coefficient of $r = .524$ signified a moderate positive relationship between the two variables. This suggests that when principals adopt and consistently apply moral guidance practices such as ethical decision-making, fairness in leadership, value-based supervision, and integrity, they are more likely to be administratively effective. This result confirms the theoretical expectations that moral guidance serves as a cornerstone for school leadership effectiveness. Principals who demonstrate moral clarity and fairness in their conduct often foster a climate of trust, mutual respect, and accountability, all of which are central to school effectiveness. When leadership is value-driven, it transcends superficial compliance and promotes behavioural transformation in both staff and students.

This finding is in line with Wey-Amaewhule and Ogbonnaya (2024), whose study affirmed that ethical leadership techniques driven by fairness and open communication enhance teachers' morale, foster professional trust, and improve institutional effectiveness. They also reported that principals who displayed respect and upheld moral standards during supervision activities were more likely to encourage high teacher-performance and achieve desired educational outcomes. The current result of this study reinforces their assertion by providing statistical evidence affirming that moral guidance positively influence administrative behaviour.

In the same vein, Nwabueze (2022) reported that principals' ethical attributes such as diligence, honesty, and accountability have meaningful associations with improved administrative outcomes in secondary schools in Enugu State. His study revealed that leaders who consistently model ethical behaviour inspired similar behavioural standards among staff, thereby contributing to operational stability and coherence. Thus, the finding in this present study supports his claim that moral grounding is essential to effective school management.

Furthermore, Hakizayezu and Andala (2022), observed that principals who are guided by ethical frameworks anchored in fairness, honesty, and justice are better able to manage their institutions with effectiveness. This correlation becomes even more relevant within the context of Rivers State, where reports from Weli and Emelole (2023) highlighted a moral decline among students manifested in examination malpractice, drug use, and other unethical behaviours. The present result implies that moral guidance by school heads can serve as both a preventive and corrective force in combating such challenges.

By contrast, in school systems where leadership is primarily administrative without a strong ethical foundation, it is common to witness lapses in accountability and inconsistent rule enforcement. This is echoed by Unobunjo (2022) who observed that administrative systems that lack moral clarity are unlikely to sustain developmental progress. Hence, the moderate predictive strength ($r = .524$) recorded in this study validates the strategic importance of moral leadership in achieving not only institutional

goals but also social transformation among students. The result of this study further showed revealed a Pearson correlation coefficient of $r = .458$ and a p-value of .000, indicating a moderate positive and statistically significant relationship between principals' community engagement techniques and their administrative effectiveness. This result led to the rejection of the null hypothesis and confirmed that community engagement is a significant predictor of administrative effectiveness among principals in private secondary schools in Rivers State.

This result resonates strongly with the idea that community engagement is a strategic component of faith-based ethical leadership. Schools that actively involve parents, religious stakeholders, community leaders, and civic institutions tend to enjoy stronger institutional trust and social capital. According to Lucho et al. (2022), community engagement supports mutual respect, social justice, and responsiveness to stakeholders' expectations, all of which are essential for effective school administration. Adogame, as cited in Ifenatuora et al. (2021), further emphasized that community participation in educational processes enhances student behaviour and builds collective responsibility. Their study established that where school principals intentionally foster partnerships with the community, discipline issues decrease while accountability and transparency increase. Galvin (2023) reported that family and community involvement significantly impacts students' mental well-being, social adjustment, and academic resilience. Galvin's work observed that in schools where parents were empowered and seen as partners, there was a notable and greater alignment between home and school values, leading to improved institutional performance. The current study aligns with this, confirming that community engagement is not a peripheral task but a structural pillar of leadership success in private schools. Conversely, Matovu and Atim (2020) observed that lack of proper community engagement by school leadership often results in increased resistance to school policies, low parental involvement, and weak communal trust. This reaffirms that community disengagement can become a risk factor for ineffective administration. When school leaders fail to cultivate mutual partnerships with their communities, they not only lose moral support but may also face difficulty enforcing behavioural expectations among students.

Additionally, Ghanem, as cited in Nyaga and Muasa (2024), contended that school leaders who emphasize inclusive engagement tend to build morale and loyalty among staff and students. The benefits of such a positive atmosphere tend to transcend the school compound, as it helps in shaping perceptions of the school in the broader society. Thus, the significance of the correlation ($r = .458$) in this study mirrors this broader observation, affirming that a well-engaged school community can serve as a critical driver for administrative cohesion and image building. The findings of this study also corroborate the views of Steyn (as cited in Shula et al., 2022), who observed that effective school administration is nurtured when principals support both internal and external relationships with dignity, trust, and compassion. His work particularly emphasized the role of community engagement in enhancing not only students' conduct but also teachers' job satisfaction and commitment.

It is important to note that in the context of Rivers State, where private schools operate within highly dynamic and culturally diverse communities, engagement strategies must be deliberate and context-sensitive. Ozah (2024) raised concerns about school heads who fail to develop frameworks for evaluating the ethical and social implications of their policies. Such oversight weakens their leadership credibility and compromises administrative outcomes. In this light, strengthening community ties is essential, as it not only helps to improve school-community relationships, communication, and decision-making, but also enhances the legitimacy of the school and the principal in the eyes of the public. This strengthens the idea that community engagement should not be limited to consultation or public relations, but must include genuine partnership, where schools work collaboratively with their communities to co-create moral standards and behavioural expectations. When principals actively promote school-community interaction such as through parent forums, religious events, and social outreach programs they not only enhance transparency but also model the values they wish to instil in students (Manafa, 2020; Womemi, 2024). Therefore, this moderate but statistically meaningful relationship between community engagement and administrative effectiveness provides a compelling case for embedding community-based strategies into principal leadership training. Rather than

perceiving community interaction as a public relations task, educational policymakers and private school proprietors in Rivers State should prioritize it as an indispensable part of value-based school leadership.

Conclusion

Based on the findings, this study concludes that moral guidance and community engagement as faith-based techniques significantly influence principals' administrative effectiveness in private secondary schools in Rivers State. The findings revealed moderate and statistically significant relationships, indicating that principals who integrate ethical values rooted in faith demonstrate stronger leadership performance. The results affirm that faith-based ethical leadership enhances not only institutional discipline but also enhanced administrative outcomes. Therefore, incorporating moral principles into school leadership is vital to promoting holistic development and achieving educational goals.

Recommendation

Based on the recommendations, the following findings are proffered.

1. Principals should integrate faith-based moral guidance into daily administrative decisions to promote fairness, integrity, and discipline across the school environment.
2. School proprietors and education stakeholders should prioritize training programmes that strengthen principals' ethical leadership capacity, especially in faith-based moral education and community engagement.
3. Private secondary schools should establish structured platforms for community involvement, including parent forums and local partnerships, to reinforce mutual accountability and support.
4. Education policymakers should develop guidelines that encourage ethical leadership practices, ensuring that school heads align administrative goals with moral and spiritual values.

Abstract

The main purpose of this study was to investigate the experience of public secondary school teachers on workplace sexual harassment and the implications for sustainable national development. One research question and one research hypothesis were formulated to guide the study. The study was carried out in the Enugu State. The population for the study 9764 public secondary school teachers. Proportionate stratified sampling technique was used to a sample of 977 respondents. A 17 items structured questionnaire developed by the researchers and titled Workplace Sexual Harassment Questionnaire (WSHQ) was used as the instrument for data collection. The instrument was validated by three experts, one expert in Measurement and Evaluation; and two experts in Educational Management, all from the Faculty of Education, Enugu State University of Science and Technology. The reliability of the instrument was determined using Cronbach alpha method. The instrument yielded reliability indices coefficient of 'r' .78, which shows suitability of the instrument for the study. Copies of questionnaire were administered and retrieved by the researchers and 3 research assistants using direct delivery approach. Mean and standard deviation were used to answer the research question. The null hypothesis was tested using z-test statistics at .05 level of significance. From the result of the findings of the study, it was concluded that both male and female teachers were sexually harassed at work in public secondary schools in Enugu State. It was therefore, recommended among others that development partners should work with Post Primary School Management Board and the State Ministry of Education to design interventions on workplace sexual harassment. This will enable victims to speak up and seek adequate redress as well as build positive organizational culture in the schools devoid of such abusive behaviours.

Keywords: Sexual harassment, secondary school, workplace, sustainable development

Introduction

A teacher is a person who displays his or her knowledge of a subject and helps guide students' learn, by taking a curriculum and presenting it in the most interesting and applicable way (Aguba & Ogbuabor, 2021). Also, Hamza, Sani and Abubakar (2010) defined a teacher as all those persons in schools who are responsible for the education of students. Teachers are crucial to ensuring an effective education. The ability of teachers to effectively discharge their responsibilities will position the country for a sustainable national development.

Sustainable Development Goal (SDG) is a global development framework initiated by the United Nations (UN) General Assembly when it adopted the 2030 Agenda for Sustainable Development

in 2015 (Agbedahin, 2019). According to Mensah (2019) sustainable development is progressive transformation process through which nations meets their current needs without compromising their capacity to cater for the future. The SDG 4 aspires to achieve inclusive and equitable quality education and promoting lifelong learning opportunities for all. To achieve this secondary school teachers are pivotal and need to perform optimally. However, one of the factors that can affect teachers' performance, even when requisite resources are provided for teachers to effectively operate is workplace sexual harassment.

Workplace sexual harassment is a pervasive problem in many institutions including the secondary schools in Enugu State. Mabuza (2020) defined sexual harassment as requests for sexual favours or unwelcome sexual behaviour that is bad enough or happens often enough to make you feel uncomfortable, scared or confused and that interferes with your work or your ability to participate in extracurricular activities. In line with the above definition, Equal Employment Opportunity Commission (EEOC, 2016) defined sexual harassment as unwelcome verbal, visual, or physical conduct of a sexual nature that is severe or pervasive and affects working conditions or creates a hostile work environment. Unlike rape and domestic violence, sexual harassment in the workplace has only recently been recognized as a social problem (Alagappan & Marican, 2014).

Hersch (2015) noted that sexual harassment at work includes sexual teasing, jokes, remarks, questions; sexual looks, gestures; deliberate touching, leaning, cornering; pressure for dates; letters, calls, sexual materials; stalking; pressure for sexual favours; and actual or attempted rape or assault. Also, Hejase (2015), identified several forms of sexual harassment such as sexual innuendoes, suggestive comments, jokes of a sexual nature, sexual propositions or sexual threats, sexual suggestive objects or pictures, graphic commentaries, suggestive or insulting sounds, leering, whistling or obscene gestures, unwanted physical contact, including touching, pinching, brushing the body, coerced sexual intercourse or assault. Such conduct can be humiliating and may constitute a health and safety problem.

Sexual harassment is a sensitive issue in the workplace. Obviously, the absence of sexual harassment complaints at work may not necessarily mean the absence of sexual harassment. Usually, victims of sexual harassment may feel that there is no point in complaining due to fear of social implications, fear that nothing will be done about it, concern that the complainant will be subjected to being ridiculed, and fear of reprisals (Jahan, 2013). Workplace sexual harassment have been predicated on the notion that sexual harassers are males and victims are females (Harrison, 2012). The victims could also be men. Both male and female teachers could suffer from sexual harassment in secondary schools. There is, however, limited evidence on sexual harassment towards male teachers (Powell & Henry, 2017). Men also account for between 16% and 17% of all sexual harassment charges filed with the EEOC annually (Equal Employment Opportunity Commission [EEOC] 2019). Scarduzio, Wehlage, and Lueken (2018) maintained that these estimates may be highly conservative as male victims of sexual harassment are often reluctant to report their experiences, more than female victims.

It has been reported that people who are sexually harassed at work, fare worse physically and psychologically than people who are not (Cesario, 2020). Mabuza (2020) observed that teachers do suffer sexual harassment from learners mostly through sending teachers nude pictures and sexual gestures that lure teachers into having sex. Moradeke (2014) reported that females are more sexually harassed than males in the workplace. It is pertinent to establish how sexual harassment influence teachers' productivity in secondary schools in Enugu State.

The researchers are worried because workplace bullying is an antithesis of productivity. A bullied teacher may not put in his best in teaching. This is because his integrity and psychological setup are hurt. In this era of technological advancement, teachers' psychological setting has to be sound and adequate for them to deliver quality education to students. Workplace sexual harassment is an aspect of educational management and administration that appears to have been neglected over the years. Much is not known about sexual harassment of teachers at work. If teachers are exposed to high rate workplace sexual harassment, there is likelihood that their productivity will be low and *viz-à-viz* if the rate of exposure is low. It is against this background that this study sought to investigate the teachers' experience of workplace sexual harassment in public secondary schools in Enugu State.

Research question

To what extent does teachers experience workplace sexual harassment in public secondary schools in Enugu State?

Research hypothesis

The null hypothesis stated below, which was tested at 0.05 level of significance guided the study.

H₀₁: There is no significant difference between the mean ratings of male and female teachers on the extent to which they experience workplace sexual harassment.

Research method

Survey research design was used for the study. A survey research design, according to Nworgu (2015) is a design in which data are collected from a relatively large number of people or items considered to be representative of the entire group. The justification for using a survey research design is that questionnaire, will be used to collect data from the sample that represents the population concerning existing condition and that an opinion of the sample will be used to make generalization to the entire population.

The study was conducted in Enugu State. It covers all the public secondary schools in the state. The population for the study was nine thousand seven hundred and sixty-four (9,764) secondary school teachers in Enugu State (Enugu State Ministry of Education, 2021). This number is made up of 3,016 male and 6,748 female teachers. The sample size for the study was nine hundred and seventy-seven (977) secondary school teachers. This sample comprised 301 male and 676 female secondary school teachers. This represents 10% of the population of the study. Proportionate sampling technique was used to select the sample (Nworgu, 2015).

A structured questionnaire titled Workplace Sexual Harassment Questionnaire (WSHQ) developed by the researchers was used as the instrument for data collection. The instrument consists of two sections. Section 1 is on the demographic data of the respondents. Section 2 consists of 17 items which focused on sexual harassment. The questionnaire has response mode of Very High Extent (4), High Extent (3), Low Extent (2) and Very Low Extent (1).

The instrument was face-validated by three research experts. The validators are one research expert in Measurement and Evaluation in the Department of Mathematics and Computer Education and two research experts in Educational Management, all from the Faculty of Education, Enugu State University of Science and Technology (ESUT). During validation, the items were scrutinized in terms of clarity of the instruction to the respondents, proper wording of items, appropriateness and adequacy of the items in addressing the problem, purpose of the study and the hypotheses of the study. Out of 15 items submitted for the validation, 4 items were modified, while 3 items were removed, which reduced the items to 12. However, 5 new items were introduced, bringing the total number to 17 items.

The reliability of the instrument was carried out by administering 40 copies of the instrument to secondary school teachers (20 male teachers and 20 female teachers), in Ebonyi State, which is outside the area of the study but share similar characteristics with the population of the study. To ascertain the internal consistency of the instrument, Cronbach alpha method was used to compute the reliability estimate of the items, which yielded reliability index of 0.78, indicating that the instrument was reliable and suitable for the study.

The instrument for data collection was distributed to the respondents and retrieved by the researchers with help of three research assistants. The research assistants were briefed in a one-day seminar on the method of administering and retrieving the instrument. Each participant in the data collection was assigned to a particular education zone. Direct delivery and retrieval were used in distributing 977 questionnaires. This will help the researchers to recover the instruments from the respondents without losing any.

The research question was answered using mean and standard deviation (SD). The decision rule for interpreting the result was based on the values of the calculated mean. Responses on the research question were considered high, when the mean is 2.50 and above; and low when it is less. This is derived from the mean of the weights of the response options, i.e $(4+3+2+1)/4 = 10/4=2.5$. The hypothesis on the other hand, was tested with z-test. The z-test is considered appropriate for testing the hypotheses because the sample size was large (more than 30) and only two levels of an independent variable (gender) were involved in each of the hypotheses (Nworgu, 2015). The hypotheses on the other hand, were tested at 0.05 level of significance. The null hypotheses can only be rejected if and only if the z-statistic is less than or equal to 0.05, otherwise accept (Idoko, 2011).

Results

Research question: to what extent does teachers experience workplace sexual harassment in public secondary schools in Enugu State?

Table 1: mean scores of male and female teachers on the extent workplace sexual harassment.

S/ N	I feel uncomfortable to an extent to work if someone:	Male Teachers 301		Female Teachers 676		Total 977		
		X	SD	X	SD	X	SD	Dec.
1	constantly Leer at me.	2.50	1.31	2.56	1.15	2.53	1.23	HE
2	tries to brush sexual part of my body.	2.75	1.28	3.25	1.24	3.00	1.26	HE
3	attempts to friendly path my body.	2.50	1.31	3.25	1.07	2.88	1.19	HE
4	attempts to squeeze parts of my body.	2.75	1.17	3.44	0.89	3.10	1.03	HE
5	attempts to friendly pinch me.	2.63	1.19	2.81	0.83	2.72	1.01	HE
6	tries to place arm around me.	2.63	1.19	2.88	0.81	2.76	1.00	HE
7	attempts catching me alone for a quick kiss.	2.88	1.25	3.31	1.19	3.10	1.22	HE
8	makes explicit proposition backed by threats.	2.88	1.25	3.31	1.19	3.10	1.22	HE
9	makes sexual comments about me.	2.63	1.19	3.19	1.28	2.91	1.24	HE
10	shows me nude pictures.	2.50	1.07	3.13	1.20	2.82	1.14	HE
11	talks about sex all the time in my presence.	2.38	1.30	3.00	1.32	2.69	1.31	HE
12	addresses me by a "pet name".	2.13	0.99	2.56	0.89	2.35	0.94	LE
13	observes me lustfully.	2.63	1.41	3.25	1.24	2.94	1.33	HE
14	gives me a romantic smile.	2.25	0.89	2.69	1.19	2.47	1.04	LE
15	wears sexy dress	2.38	1.06	2.69	0.87	2.54	0.97	HE
16	embraces me in public.	2.63	1.19	2.88	0.72	2.76	0.96	HE
17	talks to me with a romantic voice.	2.25	0.89	2.50	1.10	2.38	0.99	LE
Cluster mean		2.55	1.17	2.98	1.07	2.77	1.12	HE

Table 1 above shows the mean scores and standard deviation of male and female teachers on experience of sexual harassment in public secondary schools in Enugu State. Both groups expressed having experienced sexual harassment in all the items except 12, 14, and 17. The cluster mean of 2.77 and standard deviation of 1.12, indicate that both groups experienced sexual harassment at work in public secondary schools in Enugu State.

Research hypothesis: H_{01} : There is no significant difference between the mean ratings of male and female teachers on the extent to which they experience workplace sexual harassment in public secondary schools in Enugu State.

Table 2: z-test of significant difference between the mean scores of male and female teachers on the extent of workplace sexual harassment experience.

Group	N	Mean	SD	DF	Z-cal	Z-crit.	Dec.
Male teachers	301	2.55	1.17	975	5.44	1.96	Reject Ho1
Female teachers	676	2.98	1.07				

Table 2 above presents z-test analysis of the mean difference in response opinions of male and female teachers regarding the extent sexual harassment influences teachers productivity in Enugu state. The result shows that the calculated z-value (5.44) was more than the critical value (1.96). Hence, the null hypothesis was rejected. Therefore, there is significant difference between the mean ratings of male and female teachers on the extent to which sexual harassment influences teachers' productivity in public secondary schools in Enugu State. This implies that sexual harassment influences female teachers' productivity more than their male counter parts.

Discussion of the Findings

The finding has shown that male and female teachers are sexually harassed at work in public secondary schools in Enugu State. This implies that workplace sexual harassment is not targeted at a particular gender. This opposes the view of Moradeke (2014) who stated that victims of workplace sexual harassment are females. High rate of sexual harassment in secondary schools as portrayed by this finding engenders organizational conflict and also affects teachers' health outcomes which negatively impacts their productivity. The finding agrees with Powell and Henry (2017) that there is limited evidence on sexual harassment towards male teachers. The implication is that if teachers are constantly harassed sexually at work, they would be unhappy and cannot give their best in the process of teaching.

The findings also revealed that sexual harassment influences female teachers' productivity more than their male counterparts. This means that even though both male and female teachers are prone to sexual harassment in public secondary schools in Enugu State, female teachers are more endangered. Also, this implies that perpetrators of sexual harassment in public secondary schools in Enugu State are more of males. This finding agrees with the findings of Scarduzio, Wehlage, and Lueken (2018) that male victims of sexual harassment are often reluctant to report their experiences, more than female victims.

Conclusion

From the findings of this study, it can be inferred that both male and female teachers experience workplace sexual harassment in public secondary schools in Enugu State, Nigeria. Hence, without adequately addressing the menace of workplace sexual harassment in the public secondary schools, Enugu State cannot boast of good quality secondary education, and without good quality education, the state cannot achieve the sustainable development goals. As increase in population explosion continues, there is every need to consciously manage the relationships that exist among secondary school personnel in the state.

Recommendations

Based on the findings, the following recommendations were proffered.

1. Development partners should work with Post Primary School Management Board and the State Ministry of Education to design interventions on workplace sexual harassment. This will enable victims to speak up and seek adequate redress.
2. School administrators should organized regular workshops on organizational culture for their teachers. This will help to build positive organizational culture for the schools devoid of such abusive behaviours like sexual harassment.

Abstract

The study investigated prevalence of students' dropout in public secondary schools in Ebonyi State. Three research questions guided the study. The population of this study comprised all the 120,882 students in 222 public secondary schools in Ebonyi State. The instrument tagged Prevalence of Students Dropout Scale (PSDS) was used to collect data from the respondents. The instrument incorporated other useful data from the Students' Annual Census Report Chart, Students Records. The instrument was presented for face validation by three experts, one expert from Measurement and Evaluation option of Science Education Department and two experts from Educational Administration and Planning (option) in the Department of Educational Foundations, all in Ebonyi State University. The reliability of the instrument using Cronbach Alpha Analysis yielded a coefficient of 0.76. The data collected was analyzed using frequency and percentage to answer the research questions 1, 2 and 3 on prevalence of students' dropout. Graphs were also used to illustrate the results. The findings among others revealed that the prevalence of students' dropout from public secondary schools by education zones, recorded high students' dropout in Abakaliki, Afikpo and Onueke zones in Ebonyi State. The finding is indeed worrisome and could be detrimental to the future of Nigerian students, especially in Ebonyi State. Among other recommendations, special intervention fund should be made available by the State government to revive the schools that are about to collapse and possibly cater for the educational needs of students in order to reduce high prevalence of students' dropout from public secondary schools in Ebonyi State.

Keywords: Secondary school and prevalence of students' dropout.

Introduction

A student who completes secondary school is likely to acquire some measures of competency, life skills and lifelong education required to become useful in Nigeria. This has become necessary since Nigeria government, across the world have demonstrated commitment in the development of secondary schools by providing them with reading materials, home grown feeding programmes, building of classrooms, equipping schools with computers, employed more teachers, among others. However the efforts of Nigeria government to ensure that every individual in society receives basic education seems to be jeopardized with many students likely to drop out of school.

School dropout has become a critical issue confronting the education system across the world, Nigeria inclusive. School dropout could be defined as a student's untimely removal from school (Achilike & Achilike, 2016). A dropout is a student who abandons school before the end of the final

year of the educational stage or cycle in which the individual is enrolled (UNESCO 2013). When some students drop out of the school, they may find it difficult to go back to the school and such could deny them the opportunity to receive a diploma or certificate of completion. In other words, there is no doubt that any student who withdraws from school prematurely ends up not obtaining any certificate of graduation. According to Ajaja (2012), the concept of dropout in the educational system has piqued the curiosity of many academic professionals and the general public in terms of potential solutions. In the school context, the term "dropout" could be refers to individuals who quit school without permission from the administration, either to attend another school or to stay at home. It is also necessary to note that dropping out of the school cannot just happen without some related causes.

The causes of school dropout affecting the education system in Nigeria may be numerous. Accordingly, the major social causes of dropping out of school include reduced political participation, increased demand for social services, increased crime rates and poor levels of health (Azam, 2007). Others are lower earnings, teeming youth unemployment, prospects of unholy behaviours and greater likelihood of health problems (Thurton, Donaldson, Coladarci and Davis, 2006 Ogiri, 2016). It is clear from the foregoing, that by dropping out of school, most students severely limit their chances of economic and social well-being in the future. This is in tandem with the view of Maton & Moore, (2010) that the problem of dropping out of school indeed has negative consequences on both the individual and society and therefore needs to be the concern of every member of the society. In addition, dropout is not a mere problem that affects an individual but it is a problem that affects the entire community as it has been noticed that certain dropouts get involved in crime and other social vices (Jamil, Waters and Soyibo, 2010). This has become a worrisome situation because (UNESCO, 2013) reported that the population of dropouts in secondary school is alarming across the world. This by implication may result in low levels of secondary school completion. With the UNESCO report of dropout and non-completion of secondary school education, many individuals leave school without obtaining even the most fundamental skills. Failure to complete secondary school not only limits future career opportunities for children but also represents a significant drain on the limited resources that countries have for the provision of secondary education. However, Ogiri, (2016) opines that a study of this nature is pertinent and crucial as it is meant to raise awareness concerning school dropout and to understand more specifically the phenomenon of school dropout in public secondary schools, especially in Ebonyi State.

In Ebonyi State, the case of school dropout is a critical issue affecting many secondary schools. It is also necessary to note that school dropout of students in secondary schools has been observed to exist. It is very common to see secondary school aged children on the streets and public places in Ebonyi State during school hours; even during exams. Observably, the schools in Ebonyi State showed that every year some students for one reason or the other stop coming to school. The challenge so far is to ascertain if the existence of school dropout could be prevalent. Prevalence is something that exists or is very common at a particular time or in a particular place (Hornby, 2010). Prevalence is the percentage to which a population is affected with a particular problem. In this paper, prevalence means the percentage of students' dropout mostly in Ebonyi State. However, to the best knowledge of the researchers, past related studies supporting this study remains largely unexplored with different socio-cultural background and methodology. Again, the prevalence of school dropout among secondary school students has not been widely ascertain. It is on this ground therefore, that investigating on the prevalence of students' dropout in public secondary schools in Ebonyi State becomes necessary.

Statement of the Problem

The overarching idea of Nigeria's educational system is centered on two fundamental issues: integrating the individual into a sound and successful citizen, and providing equitable educational opportunities for all citizens at levels of education mostly in secondary school. Secondary school is an important component of the Nigerian educational system. As a result, secondary education has been treated seriously from its inception, not only as a necessary certification for decent jobs, but also as a gateway to sound higher education, both academic and professional. However, it has been observed that secondary school dropout rates in Ebonyi State seem to be increasing. Every educational zone in the

state is seen to have experience dropout of students in secondary school. It is very common to see secondary school aged children on the streets and public places in Ebonyi State during school hours; even during exam. Observably, some schools showed that every year some students for one reason or the other stop coming to school. Efforts by the teachers and school authorities appear not yielding any positive result to keep some of these students in school or help those who have dropped out to come back to school. Many studies may have been conducted on issues related to school dropout in Nigeria but it seem that the prevalence of school dropout among secondary school students has not been widely explored especially in Ebonyi State. This however inspired the interest of the present study to investigate on students' dropout in public secondary schools in Ebonyi State

Purpose of the Study

The following specific purposes guided the study:

- (1) Ascertain prevalence of students' dropout in public secondary schools in Ebonyi State by education zone.
- (2) Determine the prevalence of secondary school dropout in Ebonyi State Local Government Areas.
- (3) Determine the gender distribution of students dropping out of public secondary schools in Ebonyi State.

Research Questions

The following research questions guided the study

- (1) What is prevalence of dropout in secondary schools in Ebonyi State by education zones
- (2) What is the prevalence of students dropping out of secondary school in Ebonyi State by Local Government Area?
- (3) What is the gender distribution of secondary school dropouts in Ebonyi State?

Methods

Ethical Considerations

The researchers adhered to the ethical consideration of conducting research in the secondary school education board, Ebonyi State, Nigeria. The researchers ensured that the useful information of the respondents of this study were strictly confidential

Design of the study

The researchers adopted a descriptive survey research design which was used to elicit information from the respondents based on the research objectives of this study. It also seek to collect data and describe in a systematic manner what exists or absence of what is being investigated (Ali, 2006; Nworgu 2015). This design is deemed appropriate for this study because it merely examined the prevalence of students dropping out of secondary schools in Ebonyi State, with no variable modification.

Study Area and population

The study was carried out in secondary schools in Ebonyi State which is one of the states in the South Eastern region of Nigeria. The state is famously known as the "Salt of the Nation," called after massive salt lake deposits at Okposi and Uburu Communities in Ebonyi State's Ohaozara Local Government Area (FGN, 2015). The population of this study comprised all the 120,882 students in 222 public secondary schools in Ebonyi State.

Instruments of the Study

The instrument tagged Prevalence of Students Dropout Scale (PSDS) was used to collect data from the respondents. The instrument incorporated other useful data from the Students' Annual Census Report Chart, and Students Records (SEB, 2019/2020) academic session.

Validation of the Instrument

The instrument was presented for face validation by three experts, one expert from Measurement and Evaluation option of Science Education Department and two experts from Educational Administration and Planning (option) in the Department of Educational Foundations, all in Ebonyi State University. The necessary corrections were acknowledged before incorporated it in the final version of the instrument.

Reliability

The reliability of the instrument was trial tested and further subjected to Cronbach Alpha Analysis which yielded a coefficient of 0.76.

Method of Data Collection

The researchers used six research assistants; two for each of the zones Afikpo zone, Onueke and Abakaliki zones. In order to gain access to the respondents (teachers) two letters of introduction were collected from the Head, Department of Educational Foundations, Ebonyi State University, Abakaliki. A letter was presented to Chief Supervising Principals (CSPs) of the three education zones requesting for the release of the zones' annual census reports on students enrolment form 2015 to 2019 academic sessions. These letters help in gaining access to the information as regards this study..

Data Analysis

After the returned copies of the questionnaire were cross-checked for completeness of responses, the data collected was analyzed using frequency and percentage to answer the research questions 1, 2 and 3 on prevalence of students' dropout. Graphs were also used to illustrate the results

Results

The results of data analyses are presented in tables under the research questions as follows:

Research Question One. What is Prevalence of Dropout from Secondary Schools in Ebonyi State by Zones?

Table1: Summary of Prevalence of Students' Dropout from 2015- 2019/20 Sessions by Zones

Zones	Sessions Prevalence (%)			
	2016/2017	2017/2018	2018/2019	2019/2020
Abakaliki	2.84	12.98	-11.71	26.35
Afikpo	6.8	0.68	13.56	-0.85
Onueke	-11.22	4.03	0.88	10.16

Figure 1: Bar Chart illustration of the Students' Dropout by Educational Zones in Ebonyi State

Table 1 show that Prevalence of students' dropout from public secondary schools in Ebonyi State from 2015 to 2019/20 academic sessions by Zones. In 2016, 2017 and 2019 Abakaliki Zone recorded prevalence rate of 2.84%, 12.98% and 26.35% respectively for students' dropout from Public Secondary Schools. In 2018, the table showed -11.71% which indicated no record of students' dropout in the public secondary schools in the Zone. The result is illustrated in figure 1. Afikpo Zone in 2016, 2017 and 2018 recorded 6.8%, 0.68% and 13.56% respectively as prevalence of students' dropout from all the public secondary schools in 2019, -0.85% was recorded which indicated no record of students' dropout in the public secondary schools in Zone. Figure 1 depicts the end product. In 2017, 2018, and 2019, the recorded prevalence of student dropout from all public secondary schools in Onueke Zone was 4.03 percent, 0.88 percent, and 10.16 percent, respectively. In 2016, the table shows -11.22% which indicated no record of students' dropout from public secondary schools in the Zone.

Research Question Two. What is the prevalence of students' drop out from secondary schools in Ebonyi State by Local Government Areas?

Table 2: Summary of Prevalence of Students' Dropout from 2015- 2019 Sessions by LGAs

LGAs	2016	2017	2018	2019
ABAKALIKI	2.66	1.31	4.95	15.23
EBONYI	4.61	21.47	-	16.84
IZZU	15.28	-3.69	-	46.84
OHAUKWU	-22.4	27.54	-	34.29
AFIKPO NORTH	3.47	1.84	12.69	-2.9
AFIKPO SOUTH	7.29	-0.62	22.0	3.60
IVO	4.6	-8.88	1.09	-11.23
OHAOZARA	5.93	3.54	10.62	12.78
ONICHA	12.67	-0.98	17.72	-2.84
EZZA NORTH	-13.06	-1.28	4.55	20.16
EZZA SOUTH	-14.21	-6.09	-2.74	14.23
IKWO	-21.57	19.17	6.64	10.73
ISHIELU	9.78	-0.98	-8.64	-11.81

Figure 2: Bar Chart illustration of the Students' Dropout by LGAs in Ebonyi State

Table 2 shows that prevalence of students' dropout from public secondary school in Ebonyi State from 2016 to 2019 academic sessions by Local Government Areas. In 2016, 2017, 2018 and 2019, Abakaliki LGA recorded prevalence rate of 2.66%, 1.31%, 4.95% and 15.23% respectively for students' dropout from public secondary schools in Ebonyi State shows that prevalence of students dropout is gradually dwindling by every session and attention needs to give them. In 2016 and 2019 showed prevalence rate of 15.28% and 46.84%, for students' dropout need urgent intervention by the government and stakeholders in public secondary schools in Izzi LGA. Ohaukwu in 2017 and 2019 recorded second highest prevalence of students' dropout from public secondary schools in Ebonyi state 27.54% and 34.29% show that attention should be given to them to curtail increase in dropout in the LGA. Ohaozara LGA in 2016 to 2019 sessions recorded prevalence of students' dropout in all the years and it calls for attention to dwindle the dropout rate. In 2016 and 2018, Onicha LGA recorded prevalence rate of 12.67 and 17.72 showed that effort of government and others are not enough to reduce prevalence of students' dropout from public secondary school in the LGA. Ezza North LGA in 2018 and 2019 shows 4.55% and 20.16% deserved to tackle students' dropout prevalence rate. In 2017, 2018 and 2019 respectively, the table shows that 19.17%, 6.645 and 10.74% recorded year to year increase in prevalence of students' dropout from public secondary school in Ikwo LGA.

Research Question Three. What is the prevalence of Students Dropout from Public Secondary School in Ebonyi State by Students' Gender

Table 3 Prevalence of Students' Drop out from Public Secondary School by Gender

Table 5.1 Prevalence of Students					Drop out from Public Secondary School by Gender									
GENDE R	2015 NO (%)		2016 NO(%)		Prevalenc e	2017 NO(%)		Prevalenc e	2018 NO(%)		Prevalence	2019 NO (%)		Preval ence
MALE	31955	48.592	31085	48.102	(0.49%)	29210	50.847	(1.62)	27548	43.890	(6.95%)	23844	52.967	(5.25)
FEMALE	33806	51.407	33538	51.897	(0.49)	28236	49.152	(2.74)	34765	55.790	(6.64)	26853	47.032	(8.76)

Figure 3: Bar Chart illustration of Students' Dropout from Public Secondary School by Gender

Table 3 shows that the male prevalence of dropout from public schools in 2016, 2017, 2018 and 2019 was 0.49%, 1.62%, 6.96% and 5.24% respectively. The female students' dropout from Public Secondary School was 0.49%, 2.74%, 6.64% and 8.76%. This reveals that female students dropped out more from Public secondary school in the years of the study cumulatively.

Discussions

Prevalence of Students' Dropout from Public Secondary Schools in Ebonyi State by Zones.

The result shows on Prevalence of Students' Dropout from Public Secondary School in Ebonyi State from 2015 to 2019 academic sessions by educational zones recorded high in 2016, 2017 and 2019 in Abakaliki Zone. In Afikpo Zone, in 2016, 2017 also recorded high prevalence rate of students' dropout from all the public secondary schools in the zone. Onueke Zone in 2017, 2018 and 2019 recorded prevalence of students' dropout from public secondary schools in the zone. The high prevalence of school dropout of students recorded in public secondary schools in Ebonyi State by zones is indeed a worrisome situation that may affect the progress of the country and the general society. This is because education is the key to national development and so, any attempt to take it for granted could be disastrous to the future well-being of Nigerian students mostly in Ebonyi State. Therefore, the finding of this study is in tandem with the view of Maton & Moore, (2010) that the problem of dropping out of school exist and it has negative consequences on both the individual and society. In addition, dropout of school is not a mere problem that affects students alone but it is a problem that affects the entire community as it has been noticed that students that dropouts of school get involved in crime and other social vices (Jamil, Waters and Soyibo, 2010). The finding of this study further agreed with the (UNESCO, 2013) reported that the population of dropouts in secondary school is alarming across the world. This by implication may result in low levels of secondary school completion. With the UNESCO report of dropout and non-completion of secondary school education, many individuals leave school without obtaining even the most fundamental skills. Failure to complete secondary school not only limits future career opportunities for children but also represents a significant drain on the limited resources that countries have for the provision of secondary education.

Prevalence of Students' Dropout from Public Secondary Schools in Ebonyi State by Local Government Areas

The result shows on the Prevalence of Students' Dropout from Public Secondary School in Ebonyi State from 2015 to 2019 academic sessions by Local Government Areas. In 2016, 2017, 2018 and 2019, Abakaliki LGA recorded prevalence rate of students' dropout from public secondary schools in the Local Government Area. The rate of dropout in 2016 and 2019 shows that there was high

prevalence rate of students' dropout that needed corroborative urgent attention by the government stakeholders and state ministry of education to come for aid of the LGA before grasses will take over the school premises due to high rate of dropout from schools in Izzi LGA. The result also shows in Ohaukwu in 2017 and 2019 recorded second highest prevalence of students' dropout from public secondary schools in Ebonyi state and serious attention should be given to them to curtail increase in students' dropout in the LGA etc. Onicha LGA also recorded prevalence rate of students' dropout from schools and effort of governments and others are not enough to reduce prevalence of students' dropout from public secondary school in the LGA. The point is that anything, including the high rate of dropping out of school which affected students mostly in the rural or local areas is becoming a critical issue of concern. This could be very dangerous to the future of the students if not addressed. This by implication tends to limit the students chances of economic and social well-being in the future. However, Ogiri, (2016) opines that a study of this nature is pertinent and crucial as it is meant to raise awareness concerning school dropout and to understand more specifically the phenomenon of school dropout in public secondary schools, especially in Ebonyi State.

Prevalence of Students' Dropout from Public Secondary Schools in Ebonyi State by Gender

The data mainly demonstrates that the male student frequency of dropout schools in 2016, 2017, 2018, and 2019 was significant, particularly in 2018 and 2019. This is consistent with Juneja's (2001) observation that if a school is considered too far away from home, young girls drop out more frequently due to their vulnerability to sexual harassment by rapists (Colclough et al., 2000; Nekatibeb, 2002). During the study period, the female prevalence of students dropping out of public secondary schools was significantly greater than the male prevalence of students dropping out of public secondary schools. In a practical approach, the government must consider sensitization to support girl-child education.

Conclusion

In conclusion, prevalence of students' dropout from public secondary schools by education zones, local Government Areas and gender recorded students' dropout in Abakaliki, Afikpo and Onueke zones. However, Onueke, Izzi, Onicha, Ezza North and others recorded greater percentage of students' dropout from public schools and the percentage of female students' dropout is more than male students.

Recommendations

Based on findings of this study, the following recommendations were made:

1. Special intervention fund should be made available by the state government to revive the schools that are about to collapse and possibly cater for the educational needs of students in order to reduce high prevalence of students' dropout from public secondary schools in Ebonyi State.
2. Considering the high prevalence of students' dropout from public secondary schools by Local Government Areas, in Ebonyi State, there should be awareness campaign on the danger of dropping out of school. In addition, Authorities of Local government areas with the support of State government, NGOs/corporate organizations should introduce free education and scholarships to the students who are prone to drop out of the school in Ebonyi State.
3. Government at all levels should give adequate attention to gender related issues and most importantly protect the right of female students by allowing law to take its course on abuse of female students and that will encourage them to bounce back in their numbers to school for learning.

Limitations of the study

Like other quantitative studies, one of the limitations of this study is the inability of the researchers to cover more years of information related to the prevalence of school dropout in Ebonyi State.

Again, the inability of using complex research analytical tools (i.e., using both quantitative and qualitative approach) in this study may not give the generalizability of the findings.

Abstract

This study investigated the Administration of Ethical Standards in School Supervision for Sustainable National Development in Public Secondary Schools in Umuahia Education Zone of Abia State, Nigeria. The study adopted the descriptive survey research design with a total population of 662 individuals that comprised 56 Principals, 112 Vice Principals, and 494 teachers from Public Secondary Schools in Umuahia Education Zone. The study's sample size was 170, chosen through simple random sampling. It comprised 60 principals/vice principals and 110 teachers. The instrument used for the collection of data was a 19-item self-structured questionnaire titled; —Administration of Ethical Standard in School Supervision for Sustainable National Development in Public Secondary Schools in Umuahia Education Zone of Abia State, Nigeria Questionnaire (AESSSNDPSQ) which was validated by two experts from Education Measurement and Evaluation and Education Management and Planning, Imo State University, Owerri. The reliability of the instrument was established at $r = 0.82$ using the Cronbach Alpha statistical tool. Two research questions guided the study. Mean and standard deviation were used to analyse research questions 1 and 2, structured on a 4-point scale of Very High Extent VHE, High Extent HE, Low Extent LE, and Very Low Extent VLE with a mean point of 2.50. The findings revealed that the respondents indicated the extent of the ethical standards administered in school supervision in public secondary schools as being high, with a cluster mean of 2.5, and that the respondents agreed to a high extent with the strategies to be administered to implement ethical standards in school supervision in public secondary schools. Based on the findings, it was recommended that the government should provide continuous professional development (CPD) in ethical leadership and decision-making through partnership with the teachers' training institutions or educational consultants, the supervisors should schedule regular feedback forums where teachers can express concerns or suggest improvements, there is need to maintain regular monitoring and evaluation to ensure that ethical practices are sustained and conduct an orientation programme for appointed government officials to lead by example.

Keywords: Administration, Ethical Standard, School Supervision, Secondary School, Sustainable National Development.

Introduction

Education is viewed as an indispensable catalyst that strongly influences nations' development and economic fortunes and the quality of life of their people. In Nigeria, education is the instrument par

excellence for national development (FGN, 2013). The Nigerian nation believes that education is the vehicle that can drive the country to national development (Kalu and Nwaneri, 2019). They further state that the relevance of education to an individual and the Nigerian society cannot be overemphasized, as it permits all spheres of human endeavours. Anyaogu (2021) sees education as the eyes, the way, and the means for the development of any nation. Therefore, an individual masters his environment and acquires the necessary equipment for living a worthwhile life. Isiozor (2019) asserted that secondary education occupies a very unique position in the education system in Nigeria, because it is that level that determines the academic and professional career of students. Anyaogu (2021) noted that secondary education is the education children receive after primary education and before the tertiary level. The duration of study at this level is six years.

According to the Federal Government of Nigeria (2013), the goals of secondary education are to prepare students for useful living within society and to prepare them for higher education. Specifically, secondary education is aimed to provide opportunity for qualitative education for primary school leavers, offer diversified curriculum to cater for the differences in talents of the pupils, develop Nigeria cultural heritage, produce a generation of people who respect the dignity of labour, foster Nigeria unity and to inspire its students with the desire for achievement and self-improvement both at school and in later life. Anyanwu, as cited in Isiozor, Emeribe, and Anyanwu (2017), states that quality education is a functional and sustainable system that serves the needs of individuals and enables them to facilitate the development of their nation. Education, therefore, is of quality if it has the potential to produce individuals who can render useful services to their country and themselves. To this effect, quality education is a tool for sustainable development. Isiozor et al (2017) added that national development means the level of improvement sustained over a period in the economic, social, and political sectors of a nation, resulting in traceable better welfare of the citizens. Kalu and Nwaneri (2019) view education as that which forms the bedrock of development, adding that to develop, there must be relevant education of all citizens, both in quality and quantity. Isiozor (2019) asserted that only the provision of qualitative education can guarantee the accomplishment of the secondary education goals. Olowonwfa and Orieha, as cited in Akuchie and Amataobi (2020), asserted that to achieve the educational goals as enunciated in her National Policy on Education, the educational system must be reliable. The reliability of the educational system can only be achieved through proper and effective school supervision.

The concept of supervision is common to all professions and occupations. This implies that no organisation can function effectively without effective supervision (Jeremiah and Queensoap, 2024). Supervision is defined by Babalola, as cited in Jeremiah and Queensoap (2024), as the interaction between at least two persons for the improvement of activities. It is a formative, supportive, and developmental process directed to improve and promote growth and development. According to Aja-Okorie and Oko (2021), School supervision can be described as the development of an authentic helping relationship between teachers and supervisors. It involves providing a guide for teachers to facilitate improved performance on the job. They further affirm that supervision is a service to help teachers improve instruction. Supervision influences the quality of teachers in service delivery. Aja-Okorie and Oko (2021) see supervision as a phase of school administration, which deals primarily with the achievement of all the appropriate selected instructional expectations of education services. Okeke, Njoku, and Obasi (2019) defined administration as the range of activities connected with organising and supervising the way our institution or organisation functions. Furthermore, it is the guidance, leadership, and control of a group effort towards the achievement of expected goals. Anukam, as cited in Anyaogu (2021), emphasised that the process involves decision making, organising, communicating, directing, coordinating, and evaluation carried out to achieve the organisational goal. Isiozor and Odu (2021) see supervision as a process of assisting, directing, stimulating, and motivating teachers to embrace the teaching and learning process in educational institutions. According to Oku, Emenalo & Okeke as cited in Akuchie and Amataobi (2020), school supervision therefore becomes a veritable tool for proper monitoring, guidance, direction and integration of available human and material resources for school utilization as well as an important component of quality control strategy in education for the maintenance of high educational standard in Nigeria. Akuchie and Amataobi (2020) asserted that school

supervision leads to high productivity in the educational system as it enables the efficient and effective utilisation of the available resources to achieve the goals and objectives of education in Nigeria via teaching and learning. Agbajeola (2019) asserted that maximum productivity is achieved when the resources are prepared, aligned, and used for their intended purpose with learners. Okeke and Uwazuruike, as cited in Akuchie and Amataobi (2020), maintained that the supervisor's primary function is to oversee and coordinate school activities. According to Nwaokugha and Danladi (2016), Supervisors assist, guide, and mentor fellow teachers on their day-to-day activities to enhance effective service delivery, and inspectors obtain information and disseminate it to stakeholders in the education industry. This practice is a fundamental norm for effective service delivery and a core and determinant issue on the workability or otherwise of the government's innovations and policies in education that target possible review or change of gear that can bring in the much-desired change or result in the education system. Nwakpa in Aja-Okorie and Oko (2021) states that supervision is a way of stimulating, helping and improving, guiding, refreshing, encouraging, and overseeing teacher in their tasks. From the foregoing, supervision extends beyond finding faults in service delivery but includes providing guidelines for improvement more cordially.

According to Eziugo, cited in Ojeka (2024), there are two main types of supervision: internal and external supervision. Internal supervision is more effective, their reasons being that it helps the less effective and inexperienced teachers to improve their teaching. The internal supervision is more regular and effective because the internal supervisors are always with the teachers; they do not schedule visits like the external supervisors. On the other hand, external supervisors are educators and administrators from the Ministry of Education, the Education Board, etc. Aja-Okorie and Oko (2021) define internal supervision as all efforts of designated school officials towards providing leadership to the teachers and other educational workers in the improvement of instruction. This could suggest the following: stimulation of professional growth and development of teachers, selection and revision of educational objectives, materials of instruction, methods of teaching, and the evaluation of instruction. Aja-Okorie and Oko (2021) further asserted that in secondary schools, internal supervision is the functional role of the principal, dean of studies, and the sectional heads of departments or those delegated to do so. According to Isiozor and Odu (2021) supervisor role connotes opportunities for teachers to be groomed through discursive critical study of classroom interaction to carry out their teaching tasks in line with professional codes of conduct. Tedla, as cited in Ojeka (2024), asserted that teachers' supervision is one of the best ways principals enhance and upgrade teachers' profession, maintain school standards, and ensure checks and balances. Edomwande and Anakah (2020) asserted that a 21st-century principal can juxtapose visionary, instructional, and managerial leadership to support changes and stability.

Supervision becomes imperative for monitoring the factor resources for the pursuit of maintaining standards and quality. Supervision is generally aimed at improving teaching-learning situations and identifying the demanding needs of the school to find appropriate solutions (Abdullahi, Omosidi, Sheu & Abdulkareem as cited in Abdullahi and Adebayo, 2019). According to Jeremiah and Queensoap (2024), reports from school supervision and inspection provide feedback for regulatory agencies, which are used as quality control mechanisms to modify or otherwise the content area, methodology, teacher production and utilisation, school plant management, and other related aspects of the school programme. Nwaokugha and Danladi (2016), maintained that constant surveillance of the activities of teachers, students, parents and host communities of educational institutions is necessary because, in addition to admitting constant changes, the education industry bristles with thorny social, economic, moral, and political, scientific and general issues that consistently demand the attention of stakeholders and the general public as to ensure that the objectives upon which schools and educational institutions are established are achieved. Fatimah (2022) concluded that a supervisor must have the competence to guide and motivate teachers to use technology in learning to achieve effective and efficient educational goals.

The primary obligation of supervision is to fulfill the responsibility of professional development of teachers. Professional improvement is a basic requirement of successful supervision as it facilitates teachers with supervisors' expertise and educates them in the art of instruction (Saeed and Ain, 2022).

According to the National Council of Education Research and Training, as cited in John-Nelson, Ihunwo, and Ohanyiri (2025) asserted that the process of education inculcates ethics and values to equip the learner with a kind of life that is satisfying to the individual under the cherished values and ideals of the society. According to Kanu, as cited in John-Nelson, Ihunwo, and Ohanyiri (2025), ethics is a branch of philosophy that deals with the morality of human actions or the norms of human behaviour. Ethics studies the proper course of action for man. Ethics is primarily concerned with those actions that fall within the sphere of humankind's morality. Many humans work throughout their lives to earn a living. This employment is sometimes called —professionsl, and the acts of people while engaged in these enterprises fall into the scope of ethics. Professional ethics, which emerged along with the process of professionalisation, addresses the —rightl and —wrongl actions pertinent to a certain profession (Demirtas, 2011). Ethical standards include integrity, competence, confidentiality, and responsibility. The purpose of this Code of Conduct is to establish and maintain standards for supervisors and to inform their supervisees and organisations seeking their services, as well as members of the public (www.hult.edu/en/ashridge/). Professional ethics refers to the ethical principles and standards that govern the behaviour and decisions of professionals in their specific fields. These principles and standards are established to ensure that professionals act with integrity, honesty, and accountability while providing services to their clients, customers, or stakeholders (<https://edukedar.com>). Hazi, as cited in Gordon (2019), described classroom visitation, curriculum work, and staff development as three functions of supervision, and predicted increased regulation of all three functions —because these three aspects of supervision are interconnected and focus on teacher quality and student learning. Wiles as cited in Gordon (2019), a supervisor should exhibit a belief in the worth of all individuals, respect for the wishes and feelings of others, the will to see that all live and work in harmony, plus skill in working with individuals and groups in such a way that these ends are promoted.

Ethical considerations in school supervision are crucial to maintaining professional integrity, supporting teacher development, ensuring student welfare, and fostering a positive learning environment. Glickman, Gordon, and Ross-Gordon (2014) asserted that supervision should be aimed at growth rather than punitive measures. Ethical supervision supports continuous professional learning and reflective practice. Atik (2017) found that ethical issues related to confidentiality, privacy, and avoidance of multiple relationships appeared in supervision. According to Koçyiğit (2022), the most challenging factors were conducting supervision, supervision methods, techniques, evaluation, and the focus of supervision. The supervisor encounters ethical problems such as confidentiality and privacy, emergency, evaluation process, unprofessional behaviour of the supervisee, and multiple relationships. Shapiro and Stefkovich (2016) asserted that supervisors must respect their autonomy while guiding instructional improvement. Ethical supervision involves recognising and avoiding any conflicts that could influence decisions or evaluations. Wiles, as cited in Gordon (2019), proposed that the supervisor promote human relations by developing self-confidence, inspiring self-confidence in others, and respecting others. He believed the supervisor should promote teacher creativity and teacher leadership. Supervisors should bring teachers, pupils, and parents together in collaborative efforts toward a common purpose (Gordon, 2019). According to Kelly, Diamond, Davis and Whalen (2019), supervisors should serve as role models for supervisees in evaluating the rights and responsibilities of both parties and ensuring the welfare of both their clients and themselves.

Implementing ethical standards in school supervision is vital to fostering a just, respectful, and effective educational environment. Shapiro and Stefkovich (2016) asserted that school leaders and supervisors should undergo ethical leadership training to model and enforce ethical behaviours. Glanz (2014) maintained that supervision should be objective, fair, and transparent. Clear criteria for evaluation and feedback should be used. To maintain a sustainable accountability system, According to Issa-Onilu (2024), the National Orientation Agency (NOA) shall organise a compulsory orientation programme on the National Values Charter for all appointed and elected government officials. This programme is critical for building a competent, ethical, practical public service. Issa-Onilu (2024) further asserted that by providing essential training, fostering an understanding of roles and responsibilities, and promoting a culture of accountability and continuous improvement, it will ensure

that government officials are well-prepared to serve the public and contribute to the effective functioning of government institutions. The main purpose of this study is to investigate the administration of ethical standard in school supervision for Sustainable National Development in public secondary schools in Umuahia Education Zone of Abia State, Specifically, the study sought to ascertain the extent that ethical standards are administered in school supervision and the extent agreed with the strategies to implement ethical standards in school supervision in public secondary schools in Umuahia education Zone in Abia State.

Statement of the Problem

Supervision is a major aspect of personnel administration in the education system. Supervision in secondary schools is carried out with the hope of ensuring the quality and effectiveness of teaching and learning activities. Ethical considerations in school supervision are crucial to maintaining professional integrity, supporting teacher development, promoting inclusive practices, ensuring student welfare, and fostering a positive learning environment. Unfortunately, these efforts have not yielded better results in maintaining competent, ethical, sustainable practical public service. Given the above premise, this study seeks to investigate the administration of ethical standards in school supervision for Sustainable National Development in public secondary schools in Umuahia Education Zone of Abia State.

Research Questions

To what extent are the ethical standards administered in school supervision in public secondary schools in the Umuahia education zone of Abia State?

To what extent do you agree with the strategies to implement ethical standards in school supervision in public secondary schools in Umuahia education zone in Abia State?

Methodology

The study adopted the descriptive survey research design with a total population of 662 individuals that comprised 56 Principals, 112 Vice Principals, and 494 teachers from Public Secondary Schools in Umuahia Education Zone. The study's sample size was 170, chosen through simple random sampling. It comprised 60 principals/vice principals and 110 teachers. The instrument used for the collection of data was a 19-item self-structured questionnaire titled; —Administration of Ethical Standard in School Supervision for Sustainable National Development in Public Secondary Schools in Umuahia Education Zone of Abia State, Nigeria Questionnaire (AESSSNDPSQ) which was validated by two experts from Education Measurement and Evaluation and Education Management and Planning, Imo State University, Owerri. The reliability of the instrument was established at $r = 0.82$ using the Cronbach Alpha statistical tool. Two research questions guided the study. Mean and standard deviation were used to analyse research questions 1 and 2, structured on a 4-point scale of Very High Extent VHE, High Extent HE, Low Extent LE, and Very Low Extent VLE with a mean point of 2.50.

Results and findings

Research Question 1

To what extent are the ethical standards administered in school supervision in public secondary schools in the Umuahia education zone of Abia State?

Table 1. Mean scores and standard deviation of responses on the extent of ethical standards administered in school supervision in public secondary schools in the Umuahia education zone of Abia State.

S/N	Ethical standards	VHE	HE	LE	VLE	$\bar{X}$	STD	Decision
1.	The use of rubrics and clear performance indicators when conducting classroom observations	20	32	79	39	2.2	.44	LE
2.	Handling sensitive information about teachers, students, and the school with discretion.	59	65	26	20	3.0	.60	HE
3	Possess the necessary skills and knowledge to guide and support educators effectively	19	46	65	40	2.3	.45	LE
4	Acknowledging teachers' expertise in subject areas.	39	65	46	20	2.7	.45	HE
5	Ensuring teachers use culturally responsive pedagogy and equitable practices in diverse classrooms.	72	66	19	14	3.2	.87	HE
6	Foster a culture of trust and respect within the school community	49	39	38	44	2.6	.54	HE
7	Applying consistent assessment standards and avoiding bias.	20	26	65	59	2.0	.32	LE
8	Transparency in their decision-making processes and being accountable for their actions	34	25	51	60	2.2	.44	LE
9	Advocating for equitable access to resources and opportunities for all students	39	79	32	20	2.8	.51	HE
10	Recognize and avoid any conflicts that could influence decisions or evaluations.	40	60	49	21	2.7	.51	HE
11	Maintenance of appropriate professional boundaries with staff and students	34	38	40	58	2.3	.45	LE
12	Encouraging collaborative goal-setting and offering constructive feedback to help teachers improve.	17	29	62	62	2.0	.32	LH
13	Fostering an inclusive environment where everyone feels valued and respected	27	47	45	51	2.3	.45	LH
Cluster mean and Standard deviation						2.5	.5	HE

Expected mean = 2.50

HE = High Extent

LE = Low Extent

No. of Respondents = 170

The data analysis presented in Table 1 revealed that it is only items 2, 4, 5, 6, 9, and 10 in the table has a mean above the expected mean of 2.50. The respondents indicate the extent of the ethical standards administered in school supervision in public secondary schools in the Umuahia education zone of Abia State as being high, with a cluster mean of 2.5

Research Question 2

To what extent do you agree with the strategies to implement ethical standards in school supervision in public secondary schools in Umuahia education zone in Abia State?

Table 2. Mean scores and standard deviation of responses on the extent of the strategies to be administered to implement ethical standards in school supervision in public secondary schools in Umuahia education zone in Abia State

S/N	Items	VH E	HE	LE	VLE	$\bar{X}$	STD	Decision
14.	Conduct training sessions and workshops to familiarise staff with the code.	62	57	28	31	2.9	.60	HE
15.	Partner with teacher training institutions or educational consultants to offer structured workshops	53	63	30	24	2.9	.60	HE
16.	Schedule regular feedback forums where teachers can express concerns or suggest improvements.	70	49	28	23	3.0	.63	HE
17.	Designate an ethics officer or committee to handle complaints and inquiries.	59	55	31	25	2.9	.60	HE
18.	Conduct an orientation programme for appointed government officials to lead by example	48	61	33	28	2.8	.5	HE
19.	Conduct periodic ethics climate surveys among staff and students	72	54	20	24	3.0	.63	HE
Cluster mean and Standard deviation						2.9	.6	HE

Expected mean = 2.50 HE = High Extent LE = Low Extent No. of Respondents = 170

From Table 2, the results of the findings revealed that items 14 to 19 have mean values above the criterion mean value of 2.50, as evidenced in the mean values of 2.9, 2.9, 3.0, 2.9, 2.8, and 3.0. The findings revealed that the respondents agreed to a high extent with the strategies to be administered to implement ethical standards in school supervision in public secondary schools in Umuahia education zone in Abia State with a cluster mean of 2.9.

Discussion of Results

The results of the findings revealed that the extent of the ethical standards administered in school supervision in public secondary schools in the Umuahia education zone of Abia State was high, with a cluster mean of 2.5. The findings revealed ethical violations such as clear performance indicators when conducting classroom observations (2.2), possess the necessary skills and knowledge (2.3), applying consistent assessment standards and avoiding bias (2.0), maintenance of appropriate professional boundaries with staff and students (2.3), encouraging collaborative goal-setting and offering constructive feedback to help teachers improve (2.0) and fostering an inclusive environment where everyone feels valued and respected (2.0). Similar to the findings of this study, Koçyigit (2022) found that ethical issues related to confidentiality, privacy, and avoidance of multiple relationships appeared in supervision. The findings of Gordon (2019) are in tandem with this study, which revealed that a supervisor exhibit a belief in the worth of all individuals, respect for the wishes and feelings of others, the will to see that all live and work in harmony, plus skill in working with individuals and groups in such a way that these ends are promoted. The finding also conforms to Shapiro and Stefkovich (2016), who asserted that supervisors must respect their autonomy while guiding instructional improvement. According to Kelly, Diamond, Davis, and Whalen (2019), supervisors should serve as role models for supervisees in evaluating the rights and responsibilities of both parties and ensuring the welfare of both their clients and themselves. The above-mentioned findings were per the research of U-Sayee and Adomako in Saeed and Ain (2022) about principal supervision, which was encumbered by a lack of resources for teachers, inexperienced teachers, nonprofessional behaviour of teachers,

The findings of this study revealed that the respondents agreed to a high extent with the strategies to be administered to implement ethical standards in school supervision in public secondary schools in Umuahia education zone in Abia State, with a cluster mean value of 3.1. This conforms to Shapiro and Stefkovich (2016), who asserted that school leaders and supervisors should undergo ethical

leadership training to model and enforce ethical behaviours. According to Issa-Onilu (2024), the National Orientation Agency (NOA) organises a compulsory orientation programme on the National Values Charter for all appointed and elected government officials. This programme is critical for building a competent, ethical, practical public service. Issa-Onilu (2024) further asserted that by providing essential training, fostering an understanding of roles and responsibilities, and promoting a culture of accountability and continuous improvement, it will ensure that government officials are well-prepared to serve the public and contribute to the effective functioning of government institutions. This study agrees with the findings of Saeed and Ain (2022) that regular feedback from the head as a supervisor helps the teachers improve and gain excellence in their work. The researcher believes that supervisors should take precautionary measures to avoid ethical problems, for this is an important professional responsibility.

Conclusion

Based on the result of this study, it was established that implementing ethical standards in school supervision is vital to fostering a just, respectful, and effective educational environment. In secondary schools, where students are at a formative stage and educators are managing both academic and developmental guidance, ethical supervision helps uphold professionalism, trust, and fairness. A comprehensive approach to implementing ethical standards in school supervision involves leadership commitment, staff training, transparent systems, and continuous reflection. Ethics must be embedded in school culture, not just enforced through policy.

Recommendations

Based on the findings, the following are the recommendations proffered;

The government should provide continuous professional development (CPD) in ethical leadership and decision-making through partnership with the teachers' training institutions of educational consultants. The supervisors should schedule regular feedback forums where teachers can express concerns or suggest improvements.

There is a need to maintain regular monitoring and evaluation to ensure that ethical practices are sustained.

Conduct an orientation programme for appointed government officials to lead by example

DIGITALIZATION OF THE RECRUITMENT AND SELECTION OF ACADEMIC STAFF OF COLLEGES OF EDUCATION IN NIGERIA

Dr. Ezeneme, Ebele Victoria
Department of Political Science
Nwafor Orizu College of Education, Nsugbe

Abstract

Digitalization has significantly transformed various sectors worldwide, and the educational sector in Nigeria is no exception. This study explored the impact of digitalization on the recruitment and selection processes for academic staff in Nigerian Colleges of Education. Historically, these processes were manual and paper-based, involving face-to-face interactions and physical advertisements. However, with the advent of digital technologies, such as online job portals, electronic applications, and advanced data analytics, there has been a notable shift towards digitalization. This transition promises increased efficiency, broader reach, and improved accuracy in candidate assessment. The study adopted a qualitative approach, utilizing secondary data sources, including academic journals, government documents, and relevant publications. Theoretical insights from the Diffusion of Innovations theory were used to understand the stages of digital adoption and its challenges. Key findings showed that while digitalization offers numerous benefits, such as streamlined application processing and enhanced candidate screening through AI. The included limited technological infrastructure, disparities in digital access, data privacy concerns, and the need for digital literacy among staff and candidates. To enhance digital recruitment, Colleges of Education should expand job postings to digital platforms, adopt application management systems, integrate automated screening tools, and invest in virtual interview infrastructure. Additionally, electronic onboarding systems can streamline hiring and improve new staff integration. This paper suggests that Colleges of Education should expand their recruitment and selection, strategies to include digital platform such as job boards, social media and professional methods.

Keywords: Digitalization, Recruitment, Selection, Colleges of Education

Introduction

Digitalization has revolutionized various sectors across the globe, significantly impacting how organizations operate and deliver services. The educational sector, particularly in Nigeria, has not been left behind in this digital wave. The recruitment and selection of academic staff in Colleges of Education in Nigeria is one such area that has experienced notable transformation due to digitalization (Emmanuel, 2024). Recruitment and selection are critical functions within educational institutions, as they directly influence the quality of education delivered. According to Onah and Anikwe (2016), the ability to attract, identify, and retain competent academic staff is essential for maintaining high educational standards and fostering a productive learning environment. Traditionally, these processes in Nigerian Colleges of Education were predominantly manual, involving considerable paperwork, face-to-face interviews, and physical advertisements. However, the advent of digital technologies has introduced new methods and tools, significantly altering these conventional practices. Digitalization in recruitment and selection involves a range of activities, from online job postings and electronic applications to the use of advanced data analytics and artificial intelligence (AI) in candidate screening and assessment (Odili, Daudu, Adefemi, Ekemezie & Usiagu, 2024). These technologies offer several advantages, including broader reach, efficiency, cost-effectiveness, and improved accuracy in identifying suitable candidates. They also present challenges such as the need for technological infrastructure, digital literacy, and concerns regarding data privacy and security.

Recruitment and selection processes in Nigerian Colleges of Education can be traced back to the colonial era when formal education systems were first introduced. During this period, the recruitment of academic staff was primarily influenced by the British educational model, with a strong emphasis on qualifications and experience. Selection processes were largely manual, involving rigorous scrutiny of academic credentials and personal interviews conducted by colonial administrators and educationists (Odor, Martins-Emesom, & Bakwuye, 2019). In the post-independence era, the Nigerian educational system underwent significant expansion, leading to the establishment of numerous Colleges of Education across the country (Imam, 2012). The recruitment and selection of academic staff during this period were characterized by increased autonomy, with individual institutions developing their own procedures and criteria. Despite this decentralization, the processes remained predominantly manual, relying heavily on physical advertisements, written applications, and face-to-face interactions. The late 20th century and early 21st century marked the beginning of a gradual shift towards digitalization in various sectors, including education. The introduction of computers and the internet provided new opportunities for streamlining administrative functions, including recruitment and selection (DigitalDefynd, 2024; Yamin, 2019). However, Nwokike, Abasili and Ezeneme (2023) state that the adoption of digital tools in Nigerian Colleges of Education was initially slow, hindered by factors such as limited technological infrastructure, inadequate funding, and resistance to change among staff.

The turn of the 21st century brought about a more concerted effort towards digital transformation in Nigeria's educational sector. Government initiatives and policies aimed at promoting ICT integration in education played a crucial role in this shift. For instance, the National Information Technology Development Agency (NITDA) was established in 2001 to drive ICT development and implementation across various sectors (Irele, 2021). Additionally, the National Policy on Information and Communication Technology in Education, launched in 2010, provided a framework for incorporating digital tools into teaching, learning, and administrative processes (Federal Ministry of Education, 2019). These initiatives created a conducive environment for the digitalization of recruitment and selection processes in Nigerian Colleges of Education. Online job portals and electronic application systems began to emerge, offering more efficient and accessible platforms for both institutions and prospective candidates. The use of email and other electronic communication methods also became commonplace, replacing traditional mail and face-to-face interactions in many instances. In recent years, the adoption of more advanced digital technologies has further transformed recruitment and selection practices in Nigerian Colleges of Education. The use of AI and machine learning algorithms for candidate screening and assessment has become increasingly popular, enabling institutions to process large volumes of applications quickly and accurately (Okatta, Ajayi & Olawale, 2024). Video interviews and virtual assessment centers have also gained traction, especially in the wake of the COVID-19 pandemic, which necessitated a shift towards remote and online interactions.

Despite these advancements, the digitalization of recruitment and selection processes in Nigerian Colleges of Education is not without challenges. One of the primary issues is the digital divide, with disparities in access to technology and internet connectivity across different regions of the country (Okoye & Umeifekwem, 2023). This divide can limit the reach of digital recruitment efforts and exclude potential candidates from remote or underserved areas. Additionally, concerns about data privacy and security have emerged as critical considerations, particularly with the increasing reliance on digital platforms for handling sensitive information (Olaoye & Adedokun, 2023). Moreover, the success of digitalization efforts depends on the digital literacy of both staff and candidates. Ensuring that academic staff possess the necessary skills to navigate and utilize digital tools effectively is essential for maximizing the benefits of these technologies. Training and capacity-building initiatives are therefore crucial components of the digital transformation journey in Nigerian Colleges of Education. This study aims to provide a comprehensive analysis of these dynamics, offering insights and recommendations for enhancing the recruitment and selection of academic staff in Nigerian Colleges of Education in the digital age.

Concept Clarifications

Digitalization

Digitalization has profoundly transformed the global landscape across myriad aspects of life in recent decades. Industries have undergone seismic shifts, adopting advanced technologies to streamline processes, enhance productivity, and create new market opportunities. Communication has been revolutionized, enabling instantaneous global connectivity and fostering unprecedented levels of collaboration and knowledge sharing. Governments and organizations alike have embraced digital tools to improve service delivery, governance, and decision-making processes. Education and healthcare have also seen significant advancements through digital platforms, expanding access to learning resources and medical expertise. Social interactions and cultural exchanges have transcended geographical boundaries, fostering a more interconnected and inclusive global community. As digitalization continues to evolve, its impact on economies, societies, and individual lives grows ever more profound, promising further innovations and challenges as we navigate an increasingly digital future. Parviainen, Tihinen, Kääriäinen and Teppola (2017) state that digitalization has been recognized as a transformative force reshaping both society and business in the foreseeable and distant future. Its impact is projected to be profound, often likened by various scholars to the magnitude of the industrial revolution. This comparison underscores the far-reaching implications of digital technologies across sectors, from manufacturing and finance to healthcare and education, fundamentally altering how organizations operate and interact with stakeholders in a globally connected environment.

Digitalization refers to the interaction between digital technologies and both the social and institutional processes, converting traditional methods and systems into digital formats. This transformation integrates digital tools and platforms into existing social structures and institutional frameworks, aiming to enhance efficiency, accessibility, and connectivity (Calderon-Monge & Ribeiro-Soriano, 2023). It involves leveraging technologies such as artificial intelligence, cloud computing, and data analytics to streamline operations, improve decision-making, and facilitate seamless interaction between individuals, organizations, and governmental bodies in the digital ecosystem. Wirtz, Weyerer, and Heckerroth (2022) emphasized that digitalization is significantly impacting organizations, triggering disruptive changes within firms and their immediate business environment. This phenomenon is accelerating the obsolescence of current business models, compelling companies to swiftly adapt or face the risk of becoming irrelevant in rapidly evolving markets. The integration of digital technologies is reshaping operational strategies, customer interactions, and market dynamics, challenging traditional paradigms and demanding innovative approaches to sustain competitive advantage in the digital era.

Digitalization signifies the comprehensive integration of digital technologies into various aspects of daily life, spanning processes, organizational structures, businesses, and broader societal realms. It involves the widespread adoption and application of digital tools and platforms aimed at enhancing efficiency, connectivity, and accessibility across sectors. This transformation encompasses several key elements: the digitization of information and processes, automation of tasks through artificial intelligence and robotics, and the leveraging of data-driven insights to foster innovation, streamline decision-making, and optimize overall operations. In practical terms, digitalization empowers organizations to digitize their workflows and operations, enabling seamless communication, collaboration, and resource management. Businesses increasingly utilize cloud computing, Internet of Things (IoT) devices, and advanced analytics to drive productivity gains and operational efficiencies. Similarly, governments leverage digital technologies to enhance public service delivery, improve governance frameworks, and engage citizens more effectively (Baykal, 2020). At a societal level, digitalization facilitates greater connectivity and access to information, transforming how individuals interact, learn, and participate in economic and social activities. It underpins the emergence of digital economies and ecosystems, where online platforms and digital marketplaces enable new business models and consumer behaviours. Moreover, digitalization plays a pivotal role in addressing global challenges such as sustainability, healthcare access, and inclusive economic growth by enabling innovative solutions and scalable interventions (Mihu, Pitic & Bayraktar, 2023).

Recruitment and Selection

Recruitment is defined as the process of generating a pool of qualified candidates for a particular job. This process involves various activities aimed at attracting potential candidates who possess the necessary skills, qualifications, and experience for the job (Adjei-Bamfo, Yeboah-Assiamah & Bawole, 2018). The recruitment process can include job postings, advertising, networking, and other strategies to reach a wide audience of potential applicants. On the other hand, selection is described as the process of making a 'hire' or 'no hire' decision with respect to each applicant for a job. Selection involves a series of steps to evaluate and choose the best candidate from the pool of applicants generated during the recruitment phase. This process typically includes reviewing resumes, conducting interviews, administering tests, and assessing candidates' qualifications against the job requirements (Oyadiran, Ishaq & Agunbiade, 2023). Job analysis helps in creating a detailed job description and specification, which serve as the criteria for evaluating candidates during the selection process.

Recruitment and selection processes as critical components of human resource management (Ahmad, 2020). The primary objective of recruitment is multifaceted: it involves seeking out or exploring potential candidates, evaluating their qualifications and suitability, inducing their interest, and ultimately obtaining their commitment to fill positions necessary for the successful operation of the organization. Selection goes beyond merely choosing the best candidate from a pool of applicants. It is a complex process that involves picking individuals who possess the relevant qualifications to fulfill specific job roles within the organization (Imam, 2012). The selection process aims to achieve a harmonious balance between what the applicant can do and desires to do and what the organization needs. This ensures that the chosen candidates are not only capable but also motivated and aligned with the organization's goals, leading to a more effective and cohesive workforce.

Colleges of Education

Colleges of education (COEs) are crucial teacher education institutions responsible for preparing educators for Nigerian schools. These institutions occupy a significant position as the third tier in Nigeria's tertiary educational framework (Ezugoh, Adesina, & Yakubu, 2020). They play a pivotal role in shaping the academic and professional development of future teachers, equipping them with the necessary knowledge, skills, and pedagogical techniques essential for effective teaching and learning in the country's educational system. College of education" refers to a tertiary institution or teacher training college primarily dedicated to teaching or conducting research tailored to the requirements of early childhood, primary, secondary, or higher education and training sectors (Law Insider (2024).

Methodology

This study adopted a qualitative approach, primarily utilizing secondary data sources. These sources included academic journals, online government documents, gazettes, and other relevant publications. The focus was on examining the effect of digitalization on the recruitment and selection processes for academic staff in Colleges of Education in Nigeria. By analyzing these various secondary sources, the study aimed to provide a comprehensive understanding of how digital tools and platforms are transforming traditional recruitment and selection methods, identifying both the benefits and challenges associated with these changes.

Theoretical Framework

The Diffusion of Innovations Theory (DOI) was adopted for this work, developed by Everett Rogers in 1962, explains how, why, and at what rate new ideas and technology spread through cultures. The theory posited that innovation diffusion is a process that occurs over time through a series of stages: knowledge, persuasion, decision, implementation, and confirmation. This framework is highly relevant in understanding the effect of digitalization on the recruitment and selection of academic staff in Nigerian Colleges of Education. In the context of Nigerian Colleges of Education, the knowledge stage involves awareness of digital recruitment and selection tools. Institutions must disseminate

information about the benefits and functionalities of digital systems. This can be achieved through workshops, seminars, and training sessions aimed at familiarizing faculty and administrative staff with digital tools and platforms.

Once knowledge is acquired, the next stage is persuasion, where stakeholders form an attitude towards the innovation. In Nigerian Colleges of Education, it is crucial to address concerns and demonstrate the advantages of digitalization, such as increased efficiency, transparency, and the ability to reach a wider pool of candidates. Success stories from other institutions and pilot projects can be effective in persuading stakeholders. The decision stage involves the commitment to adopt or reject the innovation. For Colleges of Education, this may involve administrative decisions to allocate resources towards digital infrastructure, selecting suitable digital platforms, and incorporating digital processes into existing recruitment policies. The decision to adopt digital recruitment systems must be supported by a clear implementation strategy. The implementation stage is where the actual integration of digital tools into the recruitment process takes place. Nigerian Colleges of Education need to invest in the necessary technological infrastructure, provide training for staff, and ensure that the digital tools are user-friendly and accessible. This may involve setting up online application systems, digital interview platforms, and databases for candidate information. In the final stage, confirmation, the institution evaluates the outcomes of the digital recruitment process and seeks reinforcement for the decision. Continuous monitoring and feedback mechanisms are essential to ensure that the digital systems are functioning as intended and to make any necessary adjustments. Success in this stage can lead to the institutionalization of digital recruitment practices and pave the way for further innovations.

The Diffusion of Innovations Theory can be applied to digitalize recruitment and selection in Nigerian Colleges of Education through integrated strategies. Awareness and training programs are essential. Regular training sessions can enhance digital literacy among administrative and academic staff, ensuring proficiency with digital tools. Awareness campaigns can highlight the benefits of digital recruitment, addressing initial resistance. Implementing pilot projects in a few departments can demonstrate the benefits and effectiveness of digital processes. Feedback from these pilots can refine the tools before a full-scale rollout. Resource allocation is crucial. Colleges must allocate budgets to procure necessary hardware and software, invest in reliable internet connectivity, and ensure robust cybersecurity to protect sensitive data. Developing and updating recruitment policies to incorporate digital procedures is vital. These policies should be transparent and provide clear guidelines. Regular monitoring and evaluation ensure effectiveness, with metrics established to evaluate success and updates based on feedback. Engaging stakeholders, including faculty, administrative staff, and prospective candidates, is key. Addressing concerns, providing support, and involving them in the transition fosters acceptance and smoother implementation.

Challenges of Digitalization on the Recruitment and Selection of Academic Staff in Nigeria Colleges of Education

Among Nigerian Colleges of Education, the advent of digitalization has promised transformative possibilities for the recruitment and selection of academic staff. However, this transition is not without its challenges. This research examines the numerous barriers hindering the full adoption of digital practices in this context.

Limited Reach and Visibility: Many colleges of education in Nigeria still rely on traditional methods for advertising job openings, such as physical postings and word-of-mouth, rather than leveraging digital platforms. This limited reach can restrict the pool of potential candidates to those within immediate geographic proximity or those who are already connected with the institution (Baykal, 2020). The lack of digital advertising reduces the diversity and inclusivity of the applicant pool. Institutions may miss out on highly qualified candidates who are beyond their immediate area but are interested in the roles. This constraint hinders the ability of colleges to attract top talent and fosters a narrow perspective in institutional culture.

Inefficiencies in Application Processing: With a reliance on paper-based application systems, there are inherent inefficiencies in the processing and management of applications. Manual handling of

applications increases the risk of errors and delays (Ahmed, Omotunde, Atoloye & Olayemi, 2021). The slow and cumbersome nature of processing applications can lead to extended recruitment cycles, affecting the institution's ability to fill vacancies promptly. This inefficiency also places additional administrative burdens on HR staff, potentially leading to burnout and decreased job satisfaction among employees.

Challenges with Automated Screening Tools: Many colleges do not use automated screening tools to filter and manage applications. This absence of digital tools results in reliance on manual review processes, which can be time-consuming and prone to human error (Albassam, 2023; Odili, Daudu, Adefemi, Ekemezie, & Usiagu, 2024). The lack of automated screening tools can perpetuate biases and inconsistencies in the selection process, leading to less objective and fair evaluations of candidates. Institutions might inadvertently overlook qualified candidates due to the limitations of manual sorting and filtering.

Virtual Interview Challenges: While the adoption of virtual interviews has increased, not all colleges are equipped with the necessary infrastructure or digital literacy to conduct effective virtual interviews. Technical issues, such as poor internet connectivity and inadequate software, can disrupt the interview process (Miller, Thakkar, & Das, 2024; Yunusa, Sanusi, Dada, Oyelere, Agbo, Obaido, & Aruleba, 2021). Technical disruptions during virtual interviews can hinder communication, resulting in a less effective assessment of candidates' skills and suitability. The lack of face-to-face interaction may also make it difficult to evaluate candidates' interpersonal skills and cultural fit, which are critical aspects of the recruitment process.

Inadequate Electronic Onboarding Systems: The onboarding process in many institutions still relies on traditional methods, such as in-person orientations and printed handbooks, rather than utilizing digital onboarding systems (Jeske & Olson, 2021). The absence of electronic onboarding tools can lead to inconsistent onboarding experiences for new hires, potentially causing confusion and delays in their integration into the institution. Inefficient onboarding can affect new employees' early engagement and productivity, impacting their overall experience and retention.

Conclusion

Digitalization has brought transformative changes to the recruitment and selection processes in Nigerian Colleges of Education. The shift from traditional, manual methods to digital platforms has introduced significant improvements in efficiency, reach, and accuracy. Online job postings, electronic applications, and advanced data analytics have streamlined the recruitment process, enabling institutions to attract and evaluate a diverse pool of candidates more effectively. The benefits of digitalization are evident in the broader reach of job advertisements, reduced administrative burdens, and the ability to process applications more quickly. The use of AI and machine learning tools has enhanced candidate screening and assessment, leading to more precise matches between candidates' skills and job requirements. Additionally, digital tools have the potential to overcome geographical and logistical barriers that previously limited recruitment efforts. However, this digital transformation is not without its challenges. The digital divide in Nigeria, characterized by uneven access to technology and internet connectivity, can hinder the effectiveness of digital recruitment efforts, particularly in remote or underserved areas. Concerns about data privacy and security are also significant, necessitating robust measures to protect sensitive information. Furthermore, the success of digital recruitment relies heavily on the digital literacy of both staff and candidates, making training and capacity-building essential. To fully realize the benefits of digitalization, Nigerian Colleges of Education must invest in technological infrastructure, address digital divide issues, and ensure data security. Providing comprehensive training for staff and candidates will also be crucial in maximizing the effectiveness of digital recruitment tools. By overcoming these challenges and embracing digital innovation, institutions can enhance their

recruitment processes, ultimately contributing to improved educational outcomes and the overall quality of education in Nigeria.

Suggestions

In order to successfully navigate the challenges posed by digitalization in the recruitment and selection of academic staff within Nigerian colleges of education, it is imperative to adopt a strategic approach focused on fostering digital literacy, improving infrastructure, and ensuring robust data security measures. The following recommendations are tailored to address these critical areas and promote effective integration of digital technologies:

6. Colleges of education should expand their recruitment strategies to include digital platforms such as job boards, social media, and professional networks. Leveraging these platforms can significantly enhance the visibility of job openings and attract a broader and more diverse pool of candidates beyond immediate geographic areas. This approach not only improves the chances of finding highly qualified candidates but also fosters a more inclusive institutional culture by tapping into a wider range of applicants.
7. They should invest in digital application management systems. These systems can streamline application processing, reduce the risk of errors, and accelerate recruitment cycles. Automation in application handling not only minimizes administrative burdens but also enhances the overall efficiency of the recruitment process, ultimately improving the institution's ability to fill vacancies promptly.
8. To overcome the limitations of manual review processes, colleges should incorporate automated screening tools. These tools can assist in filtering and managing applications more objectively and efficiently. By reducing human error and bias, automated screening can ensure fairer evaluations of candidates and help institutions identify the most suitable individuals for the roles.
9. To improve the effectiveness of virtual interviews, colleges should invest in robust digital infrastructure and provide training to staff on virtual interview best practices. Ensuring reliable internet connectivity and using up-to-date software can minimize technical disruptions and facilitate smoother communication during interviews.
10. They should transition to electronic onboarding systems. These systems can provide a consistent and streamlined onboarding process, including digital orientation modules and online handbooks. Effective electronic onboarding can help new employees integrate more quickly and smoothly into the institution, improving their early engagement and productivity.

Abstract

This work assesses Ethical Standards in School Supervision for Sustainable National Development in Nigeria. Supervision is the process of helping, guiding, advising and stimulating growth in subordinates in order to improve on the quality of his work. The Scope of School Supervision was examined; the purpose, importance, key ethical standards and unethical practices to avoid were considered. In addition, the consequences of unethical behavior in supervision was looked into and the ways of promoting ethical conduct. Lastly school supervision standard was examined including key areas covered by supervision standards in supervision. It was concluded that Schools where unethical practices in schools cannot produce disciplined and quality graduates. This reduces the value of our school products, based on the standard by which we judge human behavior. In other words, moral rules, promoting those things thought of as good and minimizing or avoiding those things thought as bad learnt at early age at home and school. It was recommended among others that School supervisors should create a positive and productive learning environment where all individuals are treated with respect and dignity.

Keyword: Ethical Standards, School Supervision, Sustainable National Development

Introduction

Educational system as an investment lies in its capability to continuously serve its targeted beneficiaries (students, teachers, parents, employers of labor and the society at large) and consistently remain relevant. Educational stakeholders are saddled with the responsibility of managing the educational system with the challenge of making schools as good as expected through supervision with professional ethics. School supervision is an indispensable variable in the teaching learning process which has brought about ethical standards in the teaching profession in the world general and Nigeria in particular. The history of supervision for improving educational programmes which helps teachers to achieve both qualitative and quantitative instructional delivery could easily be deduced that supervision is life wire of any educational system. Igbo, (2002) looked at supervision as the process of helping, guiding, advising and stimulating growth in subordinates in order to improve on the quality of his work. Supervision involves the stimulation of professional growth and the development of teachers, the selection and revision of educational objectives, materials of instruction and methods of teaching and evaluation of instruction with fairness (Ethics) for a better future. Ethical standards in school supervision emphasize the principle of fairness, respect, and confidentiality, ensuring a supportive and

professional environment for supervisor, educators and students for a conducive teaching/ learning environment. This paper exposes you to the nitty gritties of ethical standards in school supervision for Sustainable National Development in Nigeria.

Concept Clarification

What are Ethical Standards?

Ethics is derived from the Greek word —ethos, meaning the science of morality that regulates human conduct. Ethics, though ancient in its origin, has in recent time and clime become a novel and compelling topic, both in its theoretical and practical engagements. Globally, issues of ethics are legion (Shambe, 2017). Implementation of ethical values could be seen as moral principles and practices that govern a person's behavior or the person's way of conducting an activity. It is the branch of knowledge that deals with moral principles affecting how people make decisions and live their lives.

Ethical standards are guidelines that promote good behavior and positive image for individual and organizations. Ethical standards encompass principles like fairness, kindness, integrity, honesty, respect, responsibility and trustworthiness. These standards help individuals and organizations make sound judgments and decisions in various situations. These standards guide supervisors in their interactions with teachers and students, ensuring a positive and productive learning environment. Ethical standards also include those that enjoin virtues of honesty, compassion, and loyalty. They include standards relating to rights, such as the right to life, the right to freedom from injury, and the right to privacy. Nevertheless, unethical behaviors occur when decisions enable an individual or organization to gain at the expense of the larger society (Wuese, 2023). Unethical behaviors can include issues like favoritism, unfair assessment practices, and exploitation of students. Unethical issues relates to issues concerning rape, indiscipline, dishonesty, gangsterism, staff criticism, gossip, sexual harassment and molestation related to abuse of office, plagiarism, drug abuse, cultism, intimidation, bribery and corruption, embezzlement of funds, greed, stealing, murder, assault, slander, fraud, examination malpractices and any kind of malpractice of sort, kidnapping, among others (TRCN, 2013).

Ethical problems have forced various governments in Nigeria since the 1976 administration to introduce one form of legislation or the other to curb this monster. Since, 1997 and up to date, Nigeria had consistently been listed as one of the corrupt countries in the world by Transparency International. In its 2001 annual corruption index released by Transparency International (TI), Nigeria was second to the Asian country of Bangladesh (Iorbee, 2021). Other factors as highlighted in the study include: lack of facilities, gender, age, marital status with its responsibility, inability to cope with stress, employment status, nature of employment, income level, lack of morals and education status distribution, work experience and commitment to organization. These unethical practices have great consequences on school supervision for sustainable national development in Nigeria. This could lead to lack of attractiveness of investment opportunities to foreign investor especially in education sectors in Nigerian and the world at large. On the other hand, the cost of attracting foreign investment will become higher in Nigeria vis-à-vis other parts of the world. That is why in most public organization and professions in Nigeria there is code of conduct which are ethical principles that guides people's actions, behavior and their relationships with other people and their job. Failure to maintain good work ethics in schools, it has great consequences on school supervision for Sustainable National Development in Nigeria.

Importance of Ethical Standards

Ethical standards are of immense importance and can be found in the following ways:

- a. Building trust: Ethical behavior builds trust between individuals, organizations, and the public.
- b. Promoting positive relationship: Ethical standards help foster positive relationships based on respect and fairness.
- c. Ensuring accountability: Ethical standards provide a framework for holding individuals and organizations accountable for their actions.

- d. Protecting stakeholders: ethical standards help protect the rights and interests of all stakeholders, including employees, customers, and the public.

Some of the key ethical standards in school supervision are

- Honesty and integrity: Supervisors should be truthful and act with integrity in all their dealings.
- Fairness and impartiality: All individuals, including teachers and students, should be treated fairly and without bias.
- Respect for dignity and rights: Supervisors should respect the dignity and rights of all individuals, including their right to privacy and freedom from harm.
- Professional competence and responsibility: Supervisors should possess the necessary skills and knowledge to carry out their duties effectively and responsibly.
- Confidentiality: Information shared in supervision sessions should be treated confidentially.
- Avoiding conflicts of interest: Supervisors should avoid situations where their personal interest might conflict with their professional responsibility.
- Due process: Supervisors should uphold the principles of due process and protect the civil and human rights of all individuals

As school supervisors there are some Unethical practices to be avoided, these include the following as outlined by Kuna (2015) as truancy, lateness to school, cheating at examination, improper dressing, drug abuse, lying and lateness to school and lessons. At tertiary level, lecturers extortion of money from students, conduct of armchair research, sexual harassment by both lecturers and students, plagiarism, delaying unduly the marking and release of examination results, and leaking examination questions among others. These unethical conducts disturb the minds of teachers and students, which interfere with the learning of both the students and their peers (Kater, 2019). Notwithstanding, solutions to unethical behavior must focus on changing people by employing the following approaches as identified by Jingi, (2022); values related, economics, legal/judicial sanctions, religious, managerial, leadership, family, socio-cultural, educational, training and development, police/armed forces reforms, motivation, modernization, development and multi-dimensional approaches. Practice of learning and work ethics is a good determinant of qualitative education.

Promoting Ethical Conduct

To foster ethical behavior in school supervision, schools and educational institutions should

- iv. Develop and implement a clear code of ethics for supervisors
- v. Provide training and professional development on ethical leadership and unethical conduct
- vi. Regularly evaluate and monitor the ethical conduct of supervisors

By upholding high ethical standards, school supervisors can create a positive and productive learning environment where all individuals are treated with respect and dignity. School ethical behavior and standards is expected of all – be it teachers, staff, lecturers or teaching staff, non-teaching staff, students and likewise their parents and guardians.

Who is a School Supervisor?

A school supervisor could be the principal of a school, or a senior member of staff of a school checking the efficiency of work done in the school. It is also a person that is involved in an evaluative, long-term relationship between a —more senior member of a profession and —a more junior member of that same profession (Bada, 2010). The school supervisor is selected by the head office or ministry to do the work of supervision in a school be it a primary, secondary or tertiary institution (Akuta 2025). The primary responsibility of supervisors is to see that high ethical standards are maintained and that schools are run in accordance with the laid down regulations.

What is School Supervision?

Supervision in a school system implies the process of ensuring that policies, principles, rules, regulations and methods prescribed for purposes of implementing and achieving the objectives for education are effectively carried out. Mbahan (2010), viewed school supervision to involve the use of expert knowledge and experience to oversee, evaluate and coordinate the process of improving teaching and learning in schools. School Supervision involves the stimulation of professional growth and the development of teachers, the selection and revision of educational objectives, materials of instruction and method of teaching and evaluation of instruction (Naabo, 2012).

School supervision occupies a unique place in the entire education system. Just as the personality of each supervisor differs from the other, the supervisory strategies adopted are varied and so their effects on the educational system. The supportive and educative process of supervision is aimed toward assisting supervisees in the application of theory and techniques to their works (Association for Counselor Education and Supervision, 2003). The supervision of personnel and materials in order to ensure the set minimum standards are attained, sustained and seen to meaningful impact on Nigeria and society at large. The effective improvement of instructional delivery and maintenance of standards in the school system are enhanced through regular internal and external supervision. According to Atooye (2022) schools are presently supervised by two categories of people, viz: (i) internal supervisors those within-the school, supervisors as principals, vice-principals and heads of departments: (ii) external supervisors those outside the school, supervisors as the formally designated officials from the inspectorate division of the Ministry of Education and the various Area or Zonal Education Offices.

Having a Quality supervisor is important because it will ensure that goods services produced in a school are of highest possible ethical standard, as well as protecting buyers from purchasing sub-standard products which will be half baked graduates (Mbahon, 2023). Quality supervision is a baseline standard in education which can be measured on a scale of reference. It is an expression of standard or a means by which a certain set standard in education can be achieved. It could easily be deduced therefore that quality in education is a totality of the combination of such indispensable variables such as quality teachers, quality instructional materials and quality infrastructure (classrooms, seats, tables, chalkboards etc.). Others include, favorable teacher/pupils ratio, favorable pupils/classroom ratio and quality instructional supervision. All these and more surely results to quality product (student) who is exposed to a balanced and result oriented education. A supervisor who is well prepared for his/ her job should not only face the challenges of supervision but the challenge of professional ethical standards to administer supervisory roles through technical and administrative service in any school set up, that is, primary, secondary or tertiary education.

Forms of School Supervision

To Egbebi and Harbau (2019) supervision of schools can take different forms which are:

1. **Full scale supervision:** This form of supervision covers all that concerns the school system. After the conduct of this form of supervision, a report is usually compiled, published and forwarded to the appropriate education agency that is responsible for the implementation of the recommendations of such report. In most cases this form of supervision lasts for days (3-5 days depending on the school size and the area to cover).
2. **Routine supervision:** This involves routine visits to schools by designated school supervisors to inspect selected aspect of the school that require urgent attention and help solve the problem on the spot. The report in this form of supervision is usually not published.
3. **Follow-up Supervision:** This form of supervision is mostly carried out after a full or routine supervision to ascertain the extent which the observations and recommendations made during a full or routine supervision have been implemented.

The Purpose of School Supervision

According to Rumum (2021), school supervision includes all efforts of school officials directed to provide leadership to the teachers and other educational workers in the improvement of instruction. The effective school research identifies schooling practice and characteristics which supervisors use in doing their jobs associated with measurable improvements in student achievement and excellence among student achievement. These —effective school practices— include elements of schooling associated with ethical and clearly defined curriculum; focused classroom instruction and management, firm consistent discipline, close monitoring of student performance; and strong instructional leadership as follows:

9. To acknowledge that teachers are individuals and professionals with different needs and interests.
10. To define supervision as an art and science.
11. To consider that taken together, passion for learning and reflective practice provides modeling and the basis for individual perception and insight.
12. To maximize individual growth through reflective practice and professional dialog.
13. To provide time and support for growth and change.
14. To encourage self-initiated professional/ ethical development.
15. To develop an educational environment characterized by collaboration cooperation, and communicating yielding a supportive, non-threatening environment to foster professional growth.
16. To assert that all faculty have a professional responsibility to continually learn and improve.

Scope of School Supervision

For the purpose of educational development in Nigeria, the scope of school supervision to Eya and Leonard (2012)) include:

Instructional work: Within this scope, the designated supervisor aims at various areas of improving the existing quality of instructions given. For this the supervisor focus on method of teaching adopted for different subjects, audio-visual aids that are used, school time table, allocation of duties among teachers, students' class works and its corrections, teachers' lesson notes, diaries and scheme of work.

Co-Curricular Activities: Under this, the designated supervisor focuses on how various co-curricular activities are organized in relation to their need and importance to education. These activities include; dramatics, games and sports, school magazines, excursions, field trips, picnics, and library services

Records and register: The designated supervisor has to focus on all school records and attendance register of both staff and students by checking admission register, staff and students' attendance register, the cash book, the log book, the stock register, the movement book, and the receipt book.

The School Environment: In this, the supervisor focuses on the level of discipline among staff and students, inter-relationships between individuals, general behavior of students, plantation of trees, morale of classrooms, hygienic condition of school toilets, school beautification, and relationship between the school and host community

Management: The management of school is also an important area of concern to designated school supervisors without which all efforts of overall improvement of teaching and learning process will be jeopardized. The supervisor therefore need to focus on the cooperation of teachers and members of the host community, the ability of the head of the school to run the school, the coordination and cooperation between teachers and head teacher in organizing school programs, achievements and failures of the school, and how duties and responsibilities are rendered by heads and members of various sub-committees for different school programs.

Guidance to teachers: The work of a designated supervisor is not only to oversee but also to guide the teachers and head-teachers in their inputs in ensuring quality education. Here, the supervisor focuses on the innovation of teachers, remedial instructions, community mobilization and support and organizing seminars, conferences, workshops and in-service trainings.

Importance of School Supervision Standards

School supervision standards are of immense importance to the all stakeholders in the educational sectional sector as follows

5. **Improved teaching and learning:** Supervision helps teachers enhance their skills and improve the quality of instruction, leading to better student outcomes.
6. **Enhanced Accountability:** Standards provide a framework for holding teachers and school administrators accountable for their performance.
7. **Effective Resource Management:** Supervision ensures that resources are used effectively and efficiently to support teaching and learning.
8. **Positive school culture:** Supervision can foster a collaborative and supportive environment that promotes professional growth and student well- being.

Challenges of School Supervision in Nigeria

The challenges facing effective and successful school supervision in Nigeria as outlined by Omorobi (2020) include:

1. Finance: Inadequate financing of the inspectorate unit or department of ministries of education affects the performance of designated supervisors. This can be in form of non-payment of supervisory staff allowances and inadequate funding of the unit or department as a whole.

2. Unqualified Supervisors: Sometimes, there is a wrong assumption that all teachers are qualified supervisors. This has led to the appointment of teachers that are not professionally trained for the purpose of school supervision by using years of service as yardstick for selecting school supervisor. Although, one of the 6 criteria for supervising a school system is teaching experience, but this must be reinforced with relevant academic knowledge and training in education quality control and assurance. If this is not taken into consideration, the art of school supervision will be reduced to mere school visitation.

3. Transportation: The unavailability of functional vehicles at the disposal of school supervisors and poor conditions of roads in the rural parts of the country are militating factor against effective school supervision especially in the raining season. Also some areas such as the coastal areas are usually inaccessible to supervisors. These conditions therefore will limit the role of school supervision in developing education in Nigeria.

4. Lack of Follow-up Supervision: Owing to the current complex nature and rapid expansion of the educational sector, supervisory staffs find it difficult to cover their supervisory jurisdiction even for the first time let alone a follow up supervision.

5. Fault Finding Mission: When the sole aim of supervision is premised on finding the faults of the teachers and head-teachers, it kindles fear in students, teachers and the head-teacher. This will certainly threaten the school development owing to the fact that school supervision is basically for enhancing and improving the quality of instructions given within the school perimeter.

4. Casual supervision: This is carried out by one designated supervisor without any form of formal arrangement. Under this form of supervision, no report is given to the school authorities, but a secrete or confidential report is compiled and forwarded to the appropriate education agency for actions.

5. Certification Supervision: This type of supervision is carried out to affirm the standard and readiness of a school to conduct external examinations such as West African Senior Secondary Certificate examination (WASSCE)

6. Fact Finding Supervision: This type of supervision is carried out to gather information about all sorts of report or petitions against a particular school

7. Internal Supervision: This type of supervision involves qualified an experience head-teachers and teachers in a particular school. They focus on the school work, teachers' behavior and students' attitude to learning. It is carried out under a cordial atmosphere and suggestions for improvements are politely given due to the fact that those supervised are known colleagues.

Key Areas covered by School Supervision Standards

1. Teacher performance and development: Monitoring teacher effectiveness in the classroom and providing feedback for improvement. Also, assessing teacher knowledge, skills, and classroom management strategies and ensuring teachers have access to professional development opportunities
2. Curriculum and instruction: Ensuring the curriculum is implemented effectively and aligned with educational goals and supervising the use of appropriate teaching methods and materials. Also, Monitoring student learning and providing support for struggling learners
3. School environment and operations: Maintain a safe and conducive learning environment for students and staff. Overseeing the use and maintenance of school facilities and resources and ensuring adherence to school policies and procedure
4. Professional Growth and collaboration: Fostering a culture of continuous improvement and collaboration among staff. Providing opportunities for teachers to learn from each other and share best practices
5. Accountability and evaluation: Evaluating the effectiveness of teaching and learning practices. Assessing the overall performance of the school and identifying areas for improvement and ensuring that school resources are used effectively and efficiently

Examples of supervisory activities

1. classroom observations and feedback sessions
2. reviewing lesson plans and instructional materials
3. providing guidance and support to teachers on curriculum and teaching strategies
4. organizing professional development workshops and training sessions
5. monitoring student progress and providing support for struggling learners
6. ensuring compliance with school policies and procedures

In conclusion, school supervision exists nearly everywhere. Supervision was and is a key tool to ensure that all school staffs are respected and treated with dignity in line with the ethical standards (rules and regulations) set for proper smooth running of the school and are followed properly. Schools where unethical practice is highly in operation cannot produce disciplined and quality graduates. This reduces the value of our school products, based on the standard by which we judge human behavior. In other words, moral rules, promoting those things thought of as good and minimizing or avoiding those things thought as bad learnt at early age at home and school.

Concept of Sustainable National Development

Sustainable National Development describes the practice for sustainability (Amadi, 2014). Sustainable National Development is the practice of learning how to achieve global and local sustainable communities through the constant provision of desirable educational needs to the people of young generation in a way that it will be meaningful in their future aspirations. It is said that a country cannot grow beyond its education system, this therefore implies that Sustainable National Development

is educational growth that is integrated with economic, scientific, political and home based technological expansion which collectively indicates the level of individual development in terms of increased skills and capacities, greater freedom for self actualization, creativity, self-discipline, responsibility, and general well-being of the society (UNESCO, 2005). The focus of Sustainable Development is to promote lifelong learning process that transcends beyond the four walls of the school premises because it is usually directed towards imparting knowledge, providing job satisfaction, and upholding the tenets of sustainability.

To achieve Sustainable National Development in education, there are statements which are formulated to guide and describe the patterns, skills and attitudes of its participants during and after the completion of an educational program. The goals of Sustainable National Development to Oghiagbephan (2018) are extractions from the seventeen (17) United Nations' (UN) Sustainable Development Goals (SDG) that were aimed to be achieved by 2030, which include:

1. Ensuring inclusive healthy lives and promote well-being of all at all ages
2. Achieving gender equality and empowering all women and girls
3. Clean water sanitation
4. Decent work and economic growth
5. Sustainable cities and communities
6. Strongly institutionalized peace and justice
7. Partnership for goals

The goals of Sustainable National Development highlighted above shows the major areas of sustainability in the education sector of any nation as well as covering issues in teaching and learning such as climate change, bio-diversity, poverty eradication, and sustainable consumptions. The achievement of these is likely to ease the burden of insecurity, violence, unemployment and other associated social vices.

Challenges facing Sustainable Educational Development in Nigeria

There exist myriads of challenges facing the quest of attaining Sustainable National Development right to quality education which is worthy of emulation and to be sustained. However, this has failed due to neglect of the use of proper ethical standards in supervision, lack of trained supervisors to handle supervision, lack of supervision knowledge, poor job motivation, unqualified or inexperienced human resources in the education sector and total absence of interest in the teaching and learning profession (Bourn & Hunt, 2017). Furthermore, the role of gender disparities and socio-cultural beliefs in access to basic education is a militating factor against the development of Sustainable Nation in Nigeria (UNESCO, 2005). Another major problem is the inability of most public primary, secondary and tertiary institutions to have supervisors at each level to supervise the students in totality (Wanjegbar 2024).

Ethical Standards in School Supervision for Sustainable National Development

Effective school supervision affords stakeholders in the education sector a democratic and co-operative involvement under capable, understanding and discerning administrators. Supervision should be effectively done in line with the laid down rules and regulations, each person involved in the teaching and learning process must be willing to assume certain level of supervisory responsibilities. Schools should focus on ensuring quality teaching, learning, and overall school operations. These standards address areas like teacher performance, curriculum implementation, and the learning environment, aiming to create a supportive and effective educational experience. Supervisors should avoid favoritism and discrimination: showing preference for certain teachers or students based on personal relationships or other irrelevant factors, unfair assessment practices: grading students unfairly or inconsistently or assessing the on skills not taught or practiced, exploitation of students: taking advantage of students for personal gain or benefit, neglecting professional duties: failing to fulfill professional responsibilities or providing inadequate supervision and lack of transparency: not being open and honest about decisions and actions.. Therefore, for Sustainable National Development to be

achieved through effective school supervision, school supervision must be a continuous, comprehensive and in line with the rules and regulatory process designed to cover all scopes of school supervision as highlighted earlier in this paper by embracing all educational experiences through primary, secondary and tertiary educational institutions.

Conclusion

This paper examined ethical standards in school supervision for Sustainable National Development in Nigeria. It established that ethical standards are guidelines that promote good behavior and positive image for individual and organizations, the paper noted that school supervision is aimed at improving the quality of instructions given in educational institutions. Also, the paper examined the forms, purpose, scope, and importance in school supervision; it looks at the challenges confronting school supervision for Sustainable National Development in educational institutions which include poor funding, deteriorating infrastructure, and unqualified designated supervisors among others. Conclusively, the paper concludes that effective school supervision provides an honest accurate and definite report on: the teachers observed and; educational values obtained from the expenditure of public funds. Consequently, sustainable National Development lies with how functional those that are saddled with the responsibility of school supervision are on the job.

Recommendation

1. School supervisors should create a positive and productive learning environment where all individuals are treated with ethical integrity, that is, respect and dignity.
2. Designated school supervisors should endeavor to make follow-up supervision to ensure that recommendations have been implemented
3. Government should provide statutory authority, prestige and resources to school supervisors in order to continuously work with teachers to develop, maintain and evaluate goals of education for sustainable education development.

LECTURERS' EXPERIENCE, EFFECTIVE INSTRUCTIONAL DELIVERY AND STUDENTS' ACADEMIC PERFORMANCE IN FACULTY OF EDUCATION, ABIA STATE UNIVERSITY UTURU

Ugwojegbe, Nancy Chidinma (PhD)

&

Nwachinemere James Paul (Ph.D)

Department of Educational Management,
Abia State University, Uturu.
seonstonez@gmail.com

Abstract

The study lecturers' experience, effective instructional delivery and students' academic performance was carried out in Abia State University, Uturu. The research employed ex-post-facto research design. Ex-post-facto research design with a population of 159 lecturers'. A researcher self-developed instrument titled —Lecturers' Experience, Effective Delivery of Instruction and Students Academic Performance was used to solicit information from the respondents. The instrument was validated by two experts from the Department of Educational Administration and Planning and one expert from the Department of Psychology with major in Measure and Evaluation, all from Faculty of Education, Abia State University, Uturu. Cronbach alpha statistic was used to determine the reliability index which yielded a coefficient alpha of 0.79. Data was analyzed using mean rating to answer the research questions and linear regression to test the hypotheses at 0.05 level of significance. The study revealed that lecturers' experience and effective delivery of instruction to a high extent determines the academic performance of students as indicated by the respondents mean rating and SD of 2.72 and 0.72 for male and 2.62 and 0.89 for female lecturers respectively. The null hypothesis was rejected as the alternative hypothesis accepted as a result of the t-cal. value of 0.68 > t-crit. value of 1.96 indicating that significant difference does not exist between experience, effective instructional delivery and quality performance of students academically. Based on the findings of the study, the researchers recommended that Professional development of lecturers' should be encouraged among lecturers in order to ensure quality job delivery. That adequate provision and accessibility of development fund is made available to lecturers' so as to improve their academic experience.

Introduction

Lecturers remain vital elements in the university educational system of any nation because they develop the economy. Lecturers' could be seen as person or group of persons trained to inculcate right values, attitudes, norms and sound discipline to learners in order to contribute effectively to the development of their nation. Modebelu (2017) defined lecturers as group of individuals trained specifically to impart knowledge and skills to children, youth, and adult to enable them develop healthier attitude and live in harmony with all others. This means that lecturer is persons who pilot the daily instructional activities, transformation of students' attitudes, skills, new concepts and innovativeness among the university learners. To Aladejana (2014), lecturers are seen as individuals who have the prerequisite academic qualifications required to teach in schools. Our deduction from the above is that lecturers' are those individuals who are professionally certified through educational training to inculcate right values, ideas, new concepts and skills to learners in order to be useful to self and the society at large.

Lecturers' are the foundation of any given economy and therefore the pivot on which education compass revolves. Ashimole in Ogedi, Onweh and Onweh (2024) asserted that instruction and learning depends largely on teachers such that lecturer's number, quality and devotion determine the effectiveness of the overall educational arrangement, development and growth. This implies that the lecturers' remains a sound source of implementation of educational curriculum thus enhance quality performance of the learners.

The quality of education of a nation could be determined by the quality of her lecturers. The most important factor in improving students' performance in economics is by employing seasoned qualified lecturers in all higher institutions of learning. In education, lecturers' experience remains the key factor in personnel policies and quality educational outcome and sustainability and as such promotes their effectiveness in discharging their duties. Klitgaard and Hall (2014) are of the view that inexperienced instruction is less effective if compared with experienced ones who has taught for over ten years. This becomes obvious that lecturer must possess a professional knowledge base and exhibit knowledge of subject matter. Successful lecturers should have a vast repertoire of instructional strategies and techniques that reflects their knowledge of the subject. Supporting this idea, Shek (2015) aptly opined that lecturers' are those that consciously reflect upon, conceptualize and apply understanding from one lecture experience to the next.

Cogently, experience is a vital measure through which professionalism in the university system can be assured. Vyas and Veer (2005) defined experience as the sign, result and the reward of that interaction between organism and environment which when it is carried to the full, is a transformation of interaction into participation and communication. This entails that experience is self-sufficiency and individual quality that gives meaning into event or phenomenon. Wright, Mccarthy and Meekison (2003) opined that experience is a subjective and holistic phenomenon was users construct the eventual interaction within a given environment. Put differently, experience is the knowledge of an event or subject gained through involvement or exposure to such event. This makes experience dynamic and interaction centred. Experience therefore is very essential in order for a lecturer to understand the rudiments of instructional planning, instructional delivery as well as instructional evaluation.

More-importantly, lecturers' experience is vital pre-requisite for students' attainment of educational goals, such lecturers' experience becomes a salient measure towards equipping students in terms of cognitive, affective and psychomotor domain which in return enhance their performance academically. Federal Republic of Nigeria in the National Policy on Education (FRN, 2014) succinctly recognizes the importance of lecturer by stating that no nation education system can be greater than the standard of their lecturers. This is an indication that lecturer remain the major factor needed for the success of any educational system, and their quality of instructional delivery is undoubtedly one of the most important measures in shaping the instruction/learning and students' performance.

Lecturers' experience is a relevant factor in human resource policies. This is so because the idea is that experience gained over time enhances the knowledge, skills and attitude of educational workforces (lecturers) as such productivity in terms of students' performance, quality in education and accomplishment of curriculum activities is attained.

Academic performance by students has always been a subject of interest to educational institutions. Academic performance refers to how well a student is accomplishing his or her task (Scott, 2013). Ipem, (2012) defined academic performance as performance of students in various subjects offered in the school over a specified period of time. Educational sector as a production circle measures its productivity through students' academic performance. This shows that an educational industry can be seen to have achieved a high level of production when its students' performance is at a high pace and could be seen as unproductive when its students' performance is at low pace. Ajuo in Fasasi (2014) opined that students' academic performance in both internal and external examinations has been used to determine excellence in teacher's effectiveness. Students' academic performance thus deals with improved value, attitude and preparedness to meet the required standard set by the school. Mushtaq and Kalm (2012) maintained that lecturers are ultimately responsible for translating educational policies and principles into action based on practice during interaction with the students which enhance students'

performance. It is worthy to note that lecturers with higher experience in a given subject area contributes greatly to academic performance of students

Statement of the problem

Lecturers' experience and effective instructional delivery remains one of the major factors that enhance students' academic performance in secondary schools. One of the major problems confronting various universities is poor recruitment of qualified and experienced lecturers. The ideal situation in the university education should incorporate planning activities toward recruiting qualified and well experienced lecturers in universities, lecturers' professional development through on-the-job training, in-service training, off-the-job training, pre-service programme, seasonal orientation of new and old lecturers, constant encouragement of lecturers to attend conferences and seminars in other to develop them.

However, the problem of lecturers' inability to develop professionally through in-service training, on-the-job training, poor ability to set high expectation among students, inability to manage classroom activities, lack of orientation among new and old lecturers, recruitment of unqualified lecturers, lack of fund to attend conferences by lecturers, inability of lecturers to harmonize, introduce, culminate and evaluate instructional materials, and poor attitude of lecturers towards advancing in their profession remain a major problem in university education. The problem of this study put in question form is: how does lecturers' experience and instructional effectiveness relates to students' academic performance in Abia State University, Uturu?

Purpose of the Study

The purpose of the study is to determine how lecturers' experience effective instructional delivery influences academic performance of students' in Abia State University, Uturu. Specifically, the following objectives guided the study. They are:

1. Ascertain the extent to which lecturers' experience and effective instructional delivery influences students' academic performance.
2. Ascertain the extent lecturers' qualification influences students academic performance.

Research Questions

The following research questions were asked to guide the study. They are:

1. to what extent does lecturers' experience and effective instructional delivery influences students' academic performance?
2. to what extent does lecturers' qualification influences students' academic performance?

Hypotheses

The following null hypotheses were formulated and tested at 0.05 level of significance to guide the study. They are:

Ho1: there is no significant difference in the mean rating of lecturers' experience and effective instructional delivery on students' academic performance.

Ho2: significant difference does not exist between lecturers' qualification and students' academic performance.

Methodology

The research employed ex-post-facto research design. Ex-post-facto research design is ideal for conducting social research when it is not possible or acceptable to manipulate the characteristics of human participants. It is a substitute for true experimental research and can be used to test hypotheses about cause and effect or correlational relationship, where it is not practical or ethical to apply a true experimental or even quasi-experimental design (Cohen, Manion and Morison in Ogedi, 2017). The choice of the researcher employing ex-post-facto design is that; the event of study has already taken place and as such the researcher cannot manipulate nor have control over the independent variable. The

population of the study was 159 lecturers from the Faculty of Education, Abia State University, Uturu. The sample size for the study was 159 lecturers. There were no sampling techniques for the study since the population of the study was controllable and manageable by the researchers. A researcher self-developed instrument titled —Lecturers' Experience, Effective Instructional Delivery and Students Academic Performance Questionnaire' (LEEIDSAPQ). The instrument for data collection was validated by two experts from the Department of Educational Administration and Planning and one expert from Science Education Precisely Measurement and Evaluation all from Faculty of Education, Abia State University, Uturu. The essence of the instrument validation by these three experts validation is to ensure general test format, relevance, suitability and clarity of the instrument. The experts' corrections and suggestions were effected as the final draft of the instrument that was administered to the respondents. The reliability of the instrument was determined using Cronbach Alpha statistics which yielded a reliability index of 0.79 which is reliable. Data was analyzed using mean rating to answer the research questions and linear regression to test the hypotheses at 0.05 level of significance.

Data Analysis

Research question 1

To what extent does lecturers' experience and effective instructional delivery influence students' academic performance?

Table 1: Mean rating of lecturers' response on experience and effective instructional delivery on students' academic performance.

S/n	Variable	Male (X ₁)	SD	Remark	Female (X ₂)	SD	Remark
1.	Lecturers' with lower years of experience from 0-5 years perform better in delivery of instruction effectively than lecturers with average experience?	2.80	0.78	High Extent	2.50	0.69	High Extent
2.	Lecturers' with average years of experience from 6-10 years perform better in delivery of instruction effectively than lecturers' with lower experience?	2.85	0.69	High Extent	2.80	0.91	High Extent
3.	Higher years of experience from 10 years and above perform greatly well in instructional delivery than lecturers' with average years of experience?	2.68	0.75	High Extent	2.50	0.78	High Extent
4.	Early-career experience by lecturers' has a clear-payoff in their effectiveness in instructional delivery?	2.72	0.77	High Extent	2.81	0.81	High Extent
5.	Lecturers' high experience is systematically related to his/her productivity level in the university system?	2.56	0.95	High Extent	2.51	0.82	High Extent
	Pooled Mean	2.72	0.79		2.62	0.89	

Key Decision: Mean rating of 3.0 and above is regarded as Very High Extent; 2.99-2.50 High Extent; 2.49-2.0 Low Extent and 1.99 and below as Very Low Extent.

Table 1 shows that the pooled mean and SD of 5 questionnaire items for male lecturers' were 2.72 and 0.97 which is High Extent while the female lecturers has a pooled mean and Sd of 2.62 and 0.89 which

is also High Extent. We therefore conclude based on the respondent's view that lecturers' experience and effective delivery of instruction has an influence on students' academic performance.

Hypothesis 1

There is no significant difference in the mean rating of male and female lecturers' experience and effective instructional delivery on students' academic performance.

Table 2: t-test Analysis of mean ratings of male and female lecturers on experience, effective instructional delivery and students' academic performance

Status	N	X	SD	df	t-cal.	t-crit.	Remark
Male	72	2.72	0.79	157	0.68	1.96	NS
Female	87	2.62	0.87				

Data in Table 2 reveal a t-calculated value of 0.68 and the t-critical value of 1.96 at degree of (df) of 157. Since the t-calculated value of 0.68 is less than t-critical value of 1.96, the hypothesis of no significant difference was not rejected. Therefore, there is no significant difference between male and female lecturers perception on lecturers experience and effective instructional; delivery on students' academic performance.

Research question 2

To what extent does lecturers' qualification influences students' academic performance?

Table 3: Mean rating of lecturers' response on lecturers' qualification on students' academic performance.

S/n	Variable	Male (X)	SD	Remark	Female (X)	SD	Remark
1	Lecturers' with higher qualification is a good measure for students' academic performance?	2.78	0.71	High Extent	2.80	0.69	High Extent
2.	Students taught by lecturers who acquired PhD before joining education profession performs better than students under the instruction of lecturers' with M.Ed?	2.73	0.86	High Extent	2.78	0.91	High Extent
3.	Lecturers' who started with NCE certificate could be more experienced than lecturers' who started M.Ed certificate?	2.61	0.70	High Extent	2.72	0.78	High Extent
4.	Lecturers' professional development enhances their experience and ensures good academic performance by students?	2.79	0.84	High Extent	2.71	0.81	High Extent
5.	Lecturers' who attend conferences, seminars and workshop is likely to be well experienced than those who do not attend?	2.77	0.67	High Extent	2.55	0.82	High Extent
Pooled Mean		2.73	0.76		2.71	0.80	

Table 3 shows that the pooled mean and SD of 5 questionnaire items for male lecturers' were 2.73 and 0.76 which is High Extent while female lecturers has a pooled mean and SD of 2.71 and 0.80 which is also High Extent. We therefore conclude based on the respondent's view that lecturers' qualification and effective delivery of instruction has a relationship with students' academic performance.

Hypothesis 2

Significant difference does not exist between lecturers' qualification and students' academic performance.

Table 4: t-test Analysis of mean ratings of male and female lecturers on experience, effective instructional delivery and students' academic performance

Status	N	X	SD	df	t-cal.	t-crit.	Remark
Male	72	2.72	0.76	157	0.14	1.96	NS
Female	87	2.62	0.80				

Results in Table 4. reveal a t-calculated value of 0.14 and the t-critical value of 1.96 at degree of (df) of 157. Since the t-calculated value of 0.14 is less than t-critical value of 1.96, the hypothesis of no significant difference was not rejected. Therefore, there is no significant difference between the mean ratings male and female lecturers' qualification on students' academic performance.

Findings of the study were:

- Lecturers' experience and effective delivery of instruction to a high extent determines the academic performance of students as indicated by the respondents mean rating and SD of 2.72 and 0.72 for male and 2.62 and 0.89 for female lecturers respectively.
- Qualification of lecturers' influences delivery of instruction thus determines students' academic performance to a high extent as indicated by the mean rating and SD of 2.73 and 0.76 for male lecturers and 2.71 and 0.80 for female lecturers.
- The null hypothesis was rejected as the alternative hypothesis accepted as a result of the t-cal. value of 0.68 > t-crit. value of 1.96 indicating that significant difference does not exist between experience, effective instructional delivery and quality performance of students academically.
- The result of the analysis shows that significant difference does not exist between qualification of lecturers and students' academic performance as evidenced by t-cal. value of 0.14 > t-critical value of 1.96.

Conclusion

Based on the result of the study, the following conclusions emerged:

- Experience among lecturers' remains vital in delivery of instruction effectively as well as facilitate quality academic performance.
- Lecturers' qualification remains a factor of effective instructional delivery and students' outstanding academic performance.
- Professional development of lecturers' plays a vital role in improving lecturers' experience in delivery of instructional content effectively.
- Significant difference does not exist between lecturers' experience, effective delivery of instruction and students' academic performance.

Recommendation

Based on the findings and conclusion reached by the researchers, the following recommendations were made;

- Professional development of lecturers' should be encouraged among lecturers in order to ensure quality job delivery.
- Experience lecturers' should be assigned more courses in university community in other to ensure that instruction is effectively delivered. More so, knowledge of course content should be considered before assigning any course to any lecturer.

Abstract

This study investigated the influence of job satisfaction on teachers' job performance in public secondary schools in Benue State, Nigeria. Key variables examined included staff welfare, physical facilities, principals' leadership styles, staff promotion, and staff training-factors identified as critical to both teacher satisfaction and performance. the study adopted a descriptive survey design. The teachers and principals from 304 government-owned population comprised 4,888 teacher secondary schools, with a sample of 370 participants selected using a multistage sampling technique. Data were collected using a researcher-developed questionnaire (JSTJPQ), whose reliability was confirmed through a pilot test using Cronbach's Alpha. Descriptive statistics mean and standard deviation) were used to analyze research questions, while Chi- square tests where employed to test the hypotheses at a 0.05 significance level. Findings revealed that all the variables significantly influenced teachers job performance. Specifically, staff welfare, had strong positive effects, while leadership style, school location, promotion, and training also played significant roles. The study concludes that enhancing job satisfaction through targeted improvements in these areas can send to better teacher performance. It recommends strategic policy actions focused on staff welfare, leadership, equitable promotion, and continuous

Keywords: Influence, Job satisfaction, Teacher's Performance.

Introduction

Background to the Study

Generally, workers may come to organizations with expectations of having their personal needs met, such as a good working environment, welfare packages, and other incentives. Welfare packages, physical facilities, instructional materials, and other amenities positively impact teachers' job performance and overall productivity. In many organizations like schools, a teacher's effectiveness often seems to be influenced by the conduciveness of the school atmosphere or the prevailing school climate. In order to achieve the goals and objectives of the educational system, an appropriate and conducive school climate is necessary to ensure teachers' Job performance within the school.

Job satisfaction refers to an employee's comfort level with their workplace. In the teaching profession, indicators of teachers' job satisfaction include the prompt payment of monthly salaries, staff promotions, favourable school conditions, and a supportive working environment (Adams & Martinez 2021). Dissatisfaction sets in easily when these conditions are not met. According to Abdul (2018), job satisfaction is the willingness to achieve organizational goals, conditioned by the ability to meet individual needs. When a worker is dissatisfied, it might be due to a lack of motivation, resulting in diminished interest in the job, absenteeism, reduced commitment to work, among other factors. When motivation, interest or encouragements are absent a corresponding decline in output is likely. Teachers are more likely to perform at their best when their incentives are promptly addressed.

Job performance is an individual's fulfilment of specific objectives according to definer standards and descriptions (Anderson & Clark, 2018). It encompasses behaviours and actions managed by employees that contribute to an organization's goals. Performance is heavily reliant on job satisfaction. A highly motivated teacher is more likely to achieve optimal results. Therefore, being motivated and encouraged is crucial for putting forth one's best effort.

Job performance may vary from satisfactory to unsatisfactory depending on the group's ability to work efficiently and effectively to achieve organizational aims and objectives (Amali 2013). However, teachers' job satisfaction could result from a combination of indices such as welfare packages, physical facilities, instructional materials, leadership styles, school location, staff promotions and staff training (Adeyemi, 2015).

Staff welfare may encompass a comprehensive array of strategies aimed at ensuring the physical, emotional, and psychological well-being of employees, nurturing a supportive work environment that extends beyond job-related concerns Adams & Martinez (2022). This comprehensive approach may include mental and emotional well-being, work-life balance, and personal/familial needs. It seems to involve fair compensation, benefits, health, and wellness support, professional development, and fostering a positive workplace culture (Jones & Brown, 2020). For teachers, robust staff welfare measures seem to positively influence job satisfaction, motivation, and teaching performance (Robinson, 2018). Competitive salaries, recognition, and equitable compensation incentivize commitment, enthusiasm, and effective classroom management. A supportive work environment reduces stress and burnout, enhancing mental well-being and physical health, ultimately contributing to teaching excellence and staff retention (Anderson & White, 2021). Comprehensive staff welfare programs may encourage teacher growth through professional development, enhancing classroom practices, resulting in improved student learning outcomes. Balancing work and personal life prevents burnout and strengthens teacher-student relationships, positively impacting student engagement and achievement (Thompson, 2022). Effective communication with administrators and parents, facilitated by staff welfare, fosters a cooperative school climate, boosting collective efficacy, morale, and student success. Within this interconnected framework, prioritizing staff welfare leads to thriving educators, subsequently elevating teaching quality and positively shaping the educational landscape as a whole.

Apart from staff welfare Physical facilities may also improve teachers' job performance. Physical facilities within educational institutions encompass school buildings.

classrooms, libraries, laboratories, and infrastructure that contribute to learning (Dok 2015). Modern schools necessitate well-equipped facilities like laboratories, libraries, conducive classrooms, and ICT resources (Miller, 2019). The arrangement and aesthetics of classrooms seem to influence

teacher morale and student engagement. Adequate teaching tools, modern technology, and reliable internet access may enhance educators' effectiveness and enable diverse teaching techniques (Johnson & Martinez, 2020). Safety measures, including emergency exits and security systems, may ensure a secure environment for teaching and learning. Facilities designed for comfort, including ergonomic furniture, proper lighting, and ventilation, seems to positively influence teachers' well-being and teaching performance (Roberts, 2018). Thoughtfully designed shared spaces and meeting rooms encourage collaboration among educators, fostering a sense of community and innovation (Turner & White, 2019). Spaces for parent-teacher interactions facilitate transparent communication and collaboration, enabling comprehensive student support. Well-designed facilities may create an environment conducive to effective education as well as the efficient use of instructional materials.

Promotion in the educational context involves elevating an employee to a higher position with increased responsibilities, better compensation, and enhanced working conditions (Clark, 2022). From the employee's perspective, it signifies moving to a higher grade with greater salary and duties, while from the employer's perspective, it involves filling higher posts with the most suitable individuals from within the organization (Adams & Thomson, 2023). Promotion is driven by public interest, but fairness is essential to avoid perceptions of injustice. It differs from upgrades or transfers, with promotion having inherent motivational value (Adeyemi, 2015). Essential elements of promotion include position, duties, responsibility, pay, and title changes (Adeogun, 2015). Promotion positively influences teachers' motivation, engagement, job satisfaction, and overall performance (Adeyemi, 2015). It may bring acknowledgment and appreciation, fostering commitment and enthusiasm. Teachers in higher roles serve as role models, impacting respect and interactions with students, colleagues, and parents (Adams & Martinez 2021). Promotion requires aligning individual aspirations with institutional goals, leading to enhanced performance and a sense of purpose. Evaluations and feedback may play a crucial role in the promotion process, guiding staff training and performance improvement (Adams & Thompson 2023).

Staff training is a pivotal component of human resource management, aimed at enhancing the abilities of educators and the educational institution as a whole. It may involve continuous learning to improve knowledge, skills, and attitudes, fostering scholarly values and creativity (Adeyemi, 2021). Education's goal is to develop students' knowledge, skills, and character, while teachers are required to possess mastery, professional training, health, and dedication (Anderson & Martinez, 2023). Comprehensive training empowers educators with contemporary teaching methods, technology integration, and innovative strategies, resulting in improved competencies and classroom management (Brown, 2019).

Training enhances teachers' confidence, motivation, and willingness to innovate, aligning them with the evolving educational landscape (Anderson & Clark Johnson, 2019). Collaboration among educators during training encourages knowledge exchange and innovative problem-solving, contributing to a cohesive educational environment. Effective training positively impacts student learning outcomes by refining instructional approaches and facilitating personalized learning (Adams & Thompson, 2023). High-quality training initiatives may promote teacher retention, institutional excellence, and a reputation for pedagogical excellence (Anderson & White, 2020). However, training's effectiveness lies in its relevance, design, and on-going execution to address educators' evolving needs and challenges in the dynamic educational sphere (Anderson, White & Johnson, 2021). Against this background, the researcher is investigating the influence of job satisfaction on teachers' job performance in public secondary schools in Benue State.

Statement of the Problem

Job satisfaction is a crucial factor that seems to influence employees' overall job performance and organizational effectiveness. Education is the corner one of development, and teachers play a pivotal role in shaping the future. Understanding the connection between job satisfaction and job performance may help educational institutions enhance teaching quality and ultimately contribute to the holistic development of students. Over the years, there seem to be a noticeable decline in the

performance of school teachers, which has potentially influence negatively the academic achievement of secondary school students. This decline in teacher performance may, have been attributed to several factors including inadequate motivation, low compensation, poor working editions, and at commitment within the teaching profession. This may have led to poor performance, premature exits from teaching, recruitment of under-qualified educators, and a general lack of dedication to the profession. Consequently, some teachers have sought employment in other sectors, such as oil companies and banking, due to more favorable salaries, benefits, and working conditions. The deterioration of the professional standards of the Nigerian school system can be attributed to poor staff welfare, poor school physical facilities, poor 'instructional materials, principals leadership styles, school location staff, inconsistency in promotion and staff training..

Despite government efforts to enhance the working conditions of secondary school teachers, such as wage increases, job security provisions, and promotion based on merit, these initiatives may have not yield a significant improvements in teachers job performance. This contrasts with other sectors where similar policies have had a positive impact. Secondary school teachers often exhibit disenchantment with their work lives, as evidenced by frequent strikes, absenteeism, truancy, and a pursuit of alternative sources of income. Moreover, the absence of essential school facilities like classrooms, workshops, libraries, and sports amenities further hampers job satisfaction and effective teaching and learning.

The Leadership style of school principals also contributes to the problem. Many principals are perceived to adopt an autocratic leadership approach, hindering open communication and collaboration between teachers and administrators. This strained relationship may potentially undermines teachers' job performance. Despite various attempts by the government to improve teachers job performance through strategies like salary Increments, job security, and fostering positive relationships among educators, these endeavors may have not yielded the desired outcomes. Given these challenges, there exists a need to investigate the impact of job satisfaction on teachers' job performance in public secondary schools in Benue State. Understanding the role of job satisfaction influencing teacher performance may provide insights into potential solutions to address the decline in educational standards and ensure a conducive learning environment for students.

Objective of the Study

The objective of this study is to examine the influence of job satisfaction on teachers' Jeb performance in public secondary schools in Benue State. Specifically, the study seek to:

ascertain the influence of staff welfare on teachers' job performance in public secondary schools in Benue State.

identify the influence of staff promotion on teachers' job performance.

Investigate the influence of staff training on teachers' job performance.

Research Questions

The following research questions are raised to guide the study:

To what extent does provision of staff welfare influence teachers' job performance in public secondary schools in Benue State in Benue State Local Government Areas?

To what extent does school location influence teachers" job performance in public secondary schools in Benue State?

To what extent does staff promotion influence teachers' job performance in public secondary schools in Benue State?

To what extent does staff training influence teachers' job performance in public secondary schools in Benue State?

Hypotheses

The following null hypotheses are formulated and will be tested at 0.05 level of significance:

Staff welfare have no significant influence on teachers job performance in tablic secondary schools in Benue State

Staff promotion has no significant influence on teachers' job performance in public secondary schools in Benue State.

Staff training has no significant influence on teachers' job performance in public secondary schools in Benue State.

Research method

A descriptive survey design was utilized for this study. This design was selected due to its suitability for examining a sample of the population and drawing conclusions that can be generalized to a larger group. Collection of data often through questionnaires-to interpret existing conditions, qualities, or perceptions within a given population. The present study was well-aligned with this approach. as it required data collection from a representative sample of schools and teachers to investigate the influence of job satisfaction on teachers job performance in public secondary schools in Benue State.

Several reasons justified the choice of a descriptive survey design for this research Firstly, the design facilitated the examination of a sample and enabled generalization to the broader population. Secondly, the use of questionnaires proved effective in gathering data on existing conditions, qualities, and perceptions. In this study, data were collected from representative samples of schools, teachers, and principals to assess the impact of job satisfaction on teachers' job performance. The use of a survey design provided efficiency allowing for the collection of data from a large number of participants within a relatively some period.

Descriptive statistics, including the mean and standard deviation were used to the questions. Items with a mean rating ranging from 3.50 to 4.00 were interpreted as High Extent (VHE); those with a mean rating from 2.50 to 3.49 were classified as High Extent (H mean rating from 1.50 to 2.49 was considered Low Extent (LE); and a mean rating from 1.00 to was categorized as Very Low Extent (VLE).

To test the hypotheses, the Chi-square (χ^2) goodness-of-fit test was employed at a level of significance. According to the decision rule, if the p-value obtained from square test was less than the alpha level of 0.05, the result was deemed statistically significant. In such cases, the null hypothesis was rejected, indicating a significant influence of the fim under investigation. Conversely, if the p-value was greater than or equal to 0.05, the result was not statistically significant, and the null hypothesis was retained.

The Chi-square statistic was chosen because it is an appropriate inferential stat tool for analyzing non-parametric data of this nature. its application allowed for the eff testing of associations between categorical variables relevant to the study.

Results And Biscussion Analysis and Interpretation

A total of 370 copies of the questionnaire were taken to the field and administered to 370 respondents, with 369 copies of the questionnaire returned. The questionnaires was approximately 49.73%. The presentation, analysis, and interpretation of data were structured based on seven research questions and seven hypotheses that guided the study.

The research questions were analysed using mean and standard deviation

Research Question One: To what extent does provision of staff welfare influence teachers job performance in public secondary schools in Benue State 'n Bepxe Stare Local Gov Areas?

Table 1: Mean and Standard Deviation of Respondents on influence staff welfare teachers' on job performance in public secondary schools.

S/N	Items Description	VHE	HE	LE	VLE	N	(x ²)	SD	decision
1	When teachers feel adequately compensated and supported, this increases their dedication to teaching	43	105	146	75	369	2.31	0.93	VLE
2	Prompt payment of teachers' salaries motivates them to perform effectively.	116	213	40	-	369	3.21	0.62	HE
3	When teachers have access to relevant training, workshops, and developmental programs, and development programs, these improve their.	101	203	65	-	369	3.21	0.62	HE
4	When the salaries of the teachers are neglected, teachers performance will	116	213	65	-	369	3.21	0.65	HE
5	Provision of good residential accommodation increase teachers' performance.	101	203	65	-	369	3.21	0.62	HE
							3.00	0.69	HE

Deviation

Source: Field Work 2025.

The analysis of Table 1 reveals that respondents generally agreed that staff welfare has a significant influence on teachers' job performance in public secondary schools. The cluster mean of 3.00 and standard deviation of 0.69 indicates a High Extent (HE) perception overall. Four of the five items had mean scores above 3.00, all falling within the High Extent range, suggesting strong agreement that prompt salary payment, access to professional development, salary consideration, and residential accommodation positively impact performance. Item 1. however, recorded a lower mean of 2.31, categorized as Low Extent (LE), indicating that fewer respondents felt that general compensation and support alone substantially increased teaching dedication. This outlier may reflect variability in how compensation is experienced across schools. Nonetheless, the overall responses support the conclusion that aspects of staff welfare-particularly tangible provisions like timely salaries and professional development opportunities-contribute meaningfully to enhanced job performance among teachers.

Research Question Two: To what extent does staff promotion influence teachers' job performance in public secondary schools in Benue State

Table 2: Mean and Standard Deviation of Respondents on influence staff promotion on teachers' on job performance in public secondary schools.

S/N	Items Description	VHE	HE	LE	VLE	N	(x)	SD	decision
1.	Staff promotion acknowledges hard, dedication and competence of	43	105	146	75	369	2.31	0.93	VLE
2.	Staff promotion expose teachers to new academic new academic environment	116	213	40	-	369	3.21	0.62	HE
3.	Staff promotion open doors to further career advancement and professional growth.	101	203	65	-	369	3.21	0.62	HE
4.	Teachers are promoted serve as role models for their colleagues, inspiring them to	116	213	40	-	369	3.10	0.65	HE
5.	Staff promotion help teachers to improve on educational ideas	101	203	65	-	369	3.21	0.62	HE
Cluster Mean/Standard							3.00	0.69	HE

Deviation

Source: Field Work 2025.

Table 3 provides data on how staff promotion influences teachers' job performance in public secondary schools, with a cluster mean of 3.00 and a standard deviation of 0.69, indicating a High Extent (HE) of influence overall. Most of the items suggest that staff promotion positively impacts various aspects of teachers' professional lives. Specifically, respondents agreed that promotion exposes teachers to new academic environments (M = 3.21), opens opportunities for career advancement (M = 3.21) helps in improving educational ideas (M = 3.21) and enables promoted teachers to serve as role models (M = 3.1) These findings highlight that promotion not only supports individual growth but also contributes to a culture of professional excellence. However, one item (Item 31), which emphasizes recognition of hard work and dedication as a motivational factor, received a low mean score (M = 2.31) rated as Very Low Extent (VLE). This indicates that while promotion is seen as beneficial for development, it may not be effectively perceived as a reward for effort and competence. Therefore, while staff promotion significantly influences performance, its motivational impact could be enhanced by ensuring fairness, transparency, and merit-based recognition.

Testing Hypotheses

Chi-square was used in testing the hypotheses at 0.05 alpha level of significance

Hypothesis One: Staff welfare have no significant influence on teachers' job performance in public secondary schools in Benue State

Table 4: Chi-Square Test of Influence of Staff welfare on teachers' Job performance in secondary schools

Response Options	Fo	Fe	a	df	X ^{2-cal}	Asymp. Sig.	Remarks
VHE	-	-				0.000	
HE	40	123					
LE	213	123	0.05	3	122.260a		S, Reject H ₀
VLE	116	123					
Total(N)	369						

The Chi-square test result ($\chi^2 = 122.260$, $p = 0.000$) shows a significant influence of staff welfare on teachers' job performance in secondary schools. Since the p-value is less than 0.05, the null hypothesis is rejected, indicating the staff welfare meaningfully impacts how well teachers perform their duties.

Hypothesis Two:, Staff promotion has no significant influence on teachers' job performance in public secondary schools in Benue State

Table 2 Chi-Square Test of Influence of Staff promotion on teachers' job performance in secondary schools

Response Options	Fo	Fe	a	df	X ^{2-cal}	Asymp. Sig.	Remarks
VHE	92	92.3				0.000	
HE	178	92.3					
LE	76	92.3	0.05	3	186.574 ^a		S, Reject H ₀
VLE	23	19.3					
Total(N)	369						

The chi-square test result ($\chi^2 = 186.574$, $p = 0.000$) reveals a significant influence of staff promotion on teachers's job performance in secondary schools. Given that p-value is less than 0.05, the null hypothesis is rejected, indicating that promotion practices-such as recognition, career advancement, and exposure to new opportunities-significantly impact teachers' motivation and effectiveness in their roles.

Hypothesis Seven. Staff training has no significant Influence on teachers' job performance in public secondary schools in Benue State

Table 6: Chi-Square Test of Influence of Staff training on teachers' job performance in secondary schools

Response Options	Fo	Fe	a	df	X ^{2-cal}	Asymp. Sig.	Remarks
VHE	92	92.3				0.000	
HE	178	92.3					
LE	76	92.3	0.05	3	186.574 ^a		S, Reject H ₀

VLE	23	19.3
Total(N)	369	

The Chi-square test result (186.574, p 0.000) reveals a significant influence of staff training on teachers' job performance in secondary schools. As the p -value is less than 0.05, the null hypothesis is rejected, indicating that staff training-such as in-service programs, workshops, and professional development opportunities-meaningfully affects how well teachers perform their duties in public secondary schools in Benue State.

Discussion of Findings

In this study, 3 hypotheses were formulated and tested at the 0.05 alpha level of significance. The findings are discussed in line with the research questions and hypotheses.

The first finding indicates that staff welfare has a significant influence on teachers' job performance in secondary schools in Benue State, Nigeria. This finding aligns with research conducted by Omoregbe, Kehinde, and Adejumo (2015), which revealed that remuneration significantly affects job performance. It also showed that communication has a significant effect on job satisfaction. Similarly, Fadeyi, Sofoluwe, and Gbadeyan (2015) found a significant relationship between increased teachers salaries, promotion, and their job performance.

The second finding reveals that staff promotion significantly influences teachers' job performance in secondary schools in Benue State, Nigeria. This supports the findings of Abdul (2018), who concluded that salary, promotion, and relationships with colleagues significantly affect teachers job satisfaction.

The third finding indicates that staff training significantly influences teachers job performance in secondary schools in Benue State, Nigeria. This aligns with the work of Monyamane (2020), who found that secondary school teachers in Botswana's Central Region were significantly satisfied with the provision of professional development. Similarly, Essien, Akpan, Okon, Edem, and Obot (2016) reported a positive, albeit small, relationship between teachers' participation in in-service training, seminars, and workshops, and student academic performance social studied.

Summary, Conclusion-And-Recommendations

Summary

The study focused on the influence of job satisfaction on teachers' job performance in public secondary schools in Benue State, Nigeria. The variables examined included staff welfare. A descriptive survey design was adopted for the study. The population consisted of 4,888 teachers and principals from 304 government-owned public secondary schools in Benue State, as reported by the Benue State Teaching Service Board. The sample comprised 370 participants, selected using a multistage sampling technique that ensured representation across various regions and school types. To collect data, the researcher developed a structured questionnaire titled the Job Satisfaction and Teacher's Job Performance Questionnaire (JSTJPQ). To determine the reliability of the instrument, a pilot test was conducted in two secondary schools in Nasarawa State, where 20 teachers were randomly selected. Their responses were analyzed using Cronbach's Alpha, which confirmed the internal consistency of the instrument, appropriate for the continuous response am

Descriptive statistics, including the mean and standard deviation, were employed to analyze responses to the research questions. Mean scores were interpreted using a four-point scale: 3.50-4.00 as Very High Extent (VHE), 2.50-3.49 as High Extent (HE), 1.50-2.49 as Low Extent (LE), and 1.00-1.49 as Very Low Extent (VLE).

The Chi-square statistical test was selected to test the hypotheses at the 0.05 level of significance, as it is suitable for analyzing non-parametric, categorical data, The analysis revealed that

all seven independent variables had a significant influence on teachers' job performance. Specifically, the findings showed that staff welfare significantly influences teachers' job performance.

Furthermore, principals' leadership styles were found to significantly affecting teachers' motivation and performance. Staff promotion emerged as a motivational factor that boosts performance through recognition and advancement opportunities. Finally, staff training, particularly in-service training and professional development programs, was shown to significantly enhance teacher performance. These findings collectively suggest that improving job satisfaction through targeted organizational and professional supports can positively influence teacher performance in public secondary schools in Benue State.

Conclusion

This study concludes that staff welfare, staff promotion, and staff training significantly influence teachers' job performance. These findings collectively suggest that improving job satisfaction through targeted organizational and professional support can positively impact teacher performance in public secondary schools in Benue State."

Recommendations

Based on the findings of this study on the influence of job satisfaction on teachers' job performance in public secondary schools in Benue State, the following recommendations are made:

1. **Improve Staff Welfare:** The government and school administrators should prioritize staff welfare by ensuring timely payment of salaries, provision of housing allowances, health benefits, and other incentives to enhance job satisfaction and performance among teachers. Special consideration should be given to teachers posted to remote or hard-to-reach schools through the provision of incentives, transportation allowances, and better infrastructure to minimize the negative impact of school location on performance.
2. **Ensure Fair and Timely Promotion:** Staff promotion should be based on merit, dedication, and experience. A transparent and consistent promotion policy will motivate teachers to put in their best, knowing that their efforts will be recognized and rewarded.
3. **Enhance Staff Training and Professional Development** Regular in-service training, workshops, and seminars should be organized for teachers to update their knowledge and skills. Professional development should be a continuous process to ensure teachers remain effective and motivated.

Abstract

Over the past decade, the concept of inclusive education has gained global acceptance. However, ensuring the educational development of children with special needs remains a significant challenge for teachers, necessitating intervention. This study explored institutional management variables and their impact on teachers' instructional delivery in special needs schools in Cross River State, specifically focusing on the relationship between professional development, instructional supervision, and instructional delivery. The study employed a correlational research design and involved a population of 191 teachers from 26 special needs schools in the state, using a census method. A questionnaire, titled "Institutional Management Variables and Teachers' Instructional Delivery Questionnaire (IMVTIDQ)," was used for data collection. The instrument comprised two sections: Section A gathered demographic data, while Section B assessed institutional management variables and teachers' service delivery. The questionnaire was based on a four-point Likert scale, and its validity was confirmed by experts from the Department of Educational Management and Measurement and Evaluation at the University of Calabar. Reliability was established through a trial test on 20 teachers outside the study area, yielding a high Cronbach Alpha coefficient ranging from .81 to .83. Data analysis was conducted based on the null hypotheses that guided the study. Pearson Product Moment Correlation analysis was employed to test the hypotheses. All hypotheses were tested at a 0.05 level of significance. The findings revealed a significant positive relationship between professional development, instructional supervision, and teachers' instructional delivery in special needs schools. This highlights the importance of continuous professional development and effective instructional supervision in improving teachers' effectiveness. Based on these findings, it is recommended that educational authorities in Cross River State invest in tailored professional development programs to enhance teachers' pedagogical and classroom management skills.

Keywords: Institutional Variables, Instructional Delivery, Professional Development, Instructional Supervision, Special Needs Schools.

Introduction

Education plays a fundamental role in empowering individuals, fostering social development, and driving national growth by equipping learners with the essential knowledge, skills, and values necessary for meaningful societal contributions. In Nigeria, secondary education acts as a critical transition between basic education and higher learning, preparing students for tertiary education,

vocational training, and holistic personal development, thereby contributing to economic progress. This underscores the significance of education at this level (Ejom, Onyebu, Eji, & Ayi, 2024; Ngene, Oweikpodor, & Obona, 2025).

Special needs schools are educational institutions specifically structured to support learners with disabilities or learning challenges by providing specialized teaching methods, resources, and support systems. These schools implement Individualized Education Plans (IEPs), utilize assistive technologies, and employ trained professionals such as special education teachers and counselors to address the varied needs of students with physical, intellectual, emotional, or sensory impairments. Their primary objective is to establish an inclusive environment that nurtures academic, social, and personal growth while preparing students with the necessary life skills for independence and integration into society. The effectiveness of teachers' instructional delivery plays a vital role in achieving these goals (Obona, Uguba, Otuu, & Ejom, 2025).

In the context of special needs schools, teachers' service delivery refers to the quality, consistency, and effectiveness with which educators carry out their responsibilities to address the diverse cognitive, emotional, and physical needs of students with disabilities. As noted by Madukwe, Dede, and Obona (2024), service delivery entails fulfilling designated tasks to achieve specific educational goals. Koko and Nabie (2019, as cited in Obona, Udang, & Egwu, 2023) describe it as the execution of responsibilities within a defined timeframe. Ayoro, Onyeike, and Jack (2023) further emphasize that teachers' service delivery reflects their meaningful contributions toward the realization of school objectives. Thus, effective service delivery transcends classroom teaching—it includes cultivating a responsive, inclusive, and equitable learning environment that ensures all learners, regardless of ability, can succeed.

The effectiveness of teacher service delivery in special needs schools is evaluated using several interconnected indicators. These include the development of individualized instructional plans that align with each student's unique learning profile to enhance academic performance; the application of adaptive teaching methods and the integration of technology to cater to various learning styles and challenges; and the fostering of collaborative relationships among educators, parents, and specialists to create a holistic support system. These strategies not only improve academic outcomes but also promote social and emotional development, contributing to equitable and long-term success for students with disabilities (Garcia & Patel, 2023). Furthermore, service delivery encompasses teachers' ability to manage inclusive classrooms, communicate effectively with stakeholders, and ensure the overall growth and inclusion of students. As noted by Onaolapo, Olajiga, and Onaolapo (2019), the quality of service delivery is ultimately determined by the extent to which educational goals are achieved.

In recent years, the concept of inclusive education has gained widespread acceptance as a transformative approach to teaching and learning. It emphasizes creating an inclusive school culture, formulating supportive policies, and developing practical strategies that promote the participation of all learners (Angeloska Galevska & Ilic Pesic, 2018). Effective teacher service delivery is therefore crucial, as it underpins the creation of learning environments that are responsive, nurturing, and capable of addressing the complex needs of learners with special educational requirements.

Inclusive education practices have been adopted across schools in Nigeria, supported by government policies and legislation aimed at providing appropriate education and support for children with special needs according to their abilities. This shift has led to a steady increase in the enrollment of students with disabilities in mainstream classrooms. Consequently, teachers are now responsible for instructing and evaluating students with special needs alongside their typically developing peers. However, concerns have been raised about the declining quality of teacher service delivery, drawing attention from researchers and education stakeholders (Ayoro, Onyeike, & Jack, 2023; Onaolapo et al., 2019; Okoye, 2017; Obona et al., 2023). Assessing the progress of students with disabilities remains a significant challenge, and teachers frequently express the need for clear guidance on implementing assessment practices within inclusive settings (Angeloska Galevska & Ilic Pesic, 2018). Teachers, particularly those in special education, face numerous obstacles, including insufficient administrative support, limited resources, and low morale. Similarly, Aiyeloso (2016) identified systemic challenges in

Nigeria's special education system, such as inadequate funding, deteriorating infrastructure, poor working conditions, and the absence of incentives for teachers in special schools.

The situation is particularly alarming in special needs schools across Cross River State, where numerous teachers exhibit poor attitudes toward their duties. Many report to work late, while some frequently skip work and classes altogether. Additionally, a number of teachers fail to maintain healthy professional relationships with their students. Some students have complained that certain teachers prioritize selling personal goods during official hours, neglecting their instructional responsibilities. This clearly indicates a decline in teacher performance, which has had far-reaching negative effects on the quality of individuals produced by the education system. Over time, this trend has contributed to a rise in graduate unemployment, moral decay, a lack of respect for authority, increased drug abuse, and an unhealthy dependency on Western nations (Babalola, 2007 as cited in Odigwe, 2019; Oluwaseun, 2016).

Additional issues include truancy among teachers, irregular attendance, poor classroom management, and neglect of administrative responsibilities. These lapses in professionalism and dedication severely compromise the quality of educational service delivery and have raised alarm among stakeholders. Such inefficiencies contribute to low morale among staff, high rates of absenteeism, and hinder the grooming of capable future leaders who are crucial for national development (Luthans, 2002 as cited in Obona et al., 2023; Kinyua & Munyi, 2018; Oluwaseun, 2016 as cited in Obona et al., 2023). Immediate intervention is therefore necessary to prevent further deterioration of educational standards for learners with special needs.

Teachers' job performance has remained a key concern for educational stakeholders and researchers alike. Evidence suggests that teachers are more likely to perform effectively when they operate in a conducive environment with appropriate working conditions (Obona, Udang, & Egwu, 2023). This highlights the need for efficient management of institutional variables to enhance instructional delivery and overall service quality in special needs schools across Cross River State.

Institutional management variables refer to the key organizational and administrative elements within a school system that influence its operations and effectiveness. Arop, Ekpang, and Owan (2018) describe school management variables as distinctive attributes that set schools apart and influence teacher effectiveness. These variables, which must be carefully studied and managed, are categorized by Oregano (2020) into extrinsic (pull) factors which are external incentives like better salaries, job security, and leadership as well as intrinsic (push) factors which refers to internal dissatisfactions such as stress, poor management, and bureaucracy. Barnard and Rodgers (2018) emphasized that push factors often result from frustration with internal conditions. Proper management of these variables, including leadership, work environment, administrative support, communication, staff development, and motivation, is crucial for achieving overall school effectiveness and sustainability. These variables collectively shape the teaching and learning environment and significantly impact teachers' motivation, performance, and instructional delivery. However, this study will examine professional development, and instructional supervision.

Professional Development and Teachers' Service Delivery

Professional development refers to administrative strategies aimed at enhancing the knowledge and skills of employees to improve job performance. In the educational context, it involves equipping teachers with updated instructional techniques and strategies, thereby boosting their competence and effectiveness, which ultimately leads to improved student learning outcomes (Akinwale, 2020). To remain relevant and effective in addressing evolving educational challenges, teachers must engage in continuous professional development. School principals are instrumental in facilitating such opportunities not only for teachers but also for the broader staff, including themselves. This commitment fosters a culture of lifelong learning within the school environment.

One of the key strategies for improving the capacity of special education teachers is the provision of targeted training for both pre-service and in-service educators. Such training helps them operate effectively in inclusive settings alongside their general education counterparts (Drelick et al.,

2024; Norwich & Nash, 2011, as cited in Alsudairy, 2024). Research has consistently shown that well-structured training programs enhance teachers' competencies, which in turn lead to increased job satisfaction and a higher level of commitment.

Sultana (2013) investigated the impact of training on workforce productivity among 250 employees in Dhaka and found a significant positive relationship. In a related study, Okeleke, Uzoka, and Oladejo (2017) examined the link between training, demographic factors, and job performance in public colleges of education in Southwest Nigeria. Their large-scale study involving 4,080 participants revealed a strong correlation between professional development and staff performance. Nevertheless, the focus on tertiary institutions underscores the need for further research within the secondary school context, which this study seeks to provide. Additionally, Mduma and Mkulu (2021) conducted a mixed-methods study in Nyamagana District, Tanzania, to evaluate the role of professional development in teacher performance. Based on a sample of 91 educators, their findings confirmed that training significantly enhances teaching strategies and overall job effectiveness. This supports the current research's emphasis on the importance of professional development in Nigerian secondary schools.

Instructional Supervision and Teachers' Service Delivery

Instructional supervision involves the systematic evaluation and improvement of teaching practices through classroom observations, mentoring, and constructive feedback. It serves as a key mechanism for enhancing teacher effectiveness and ensuring high instructional quality. According to Asiyai (2020), consistent and supportive supervision in Nigerian secondary schools contributes significantly to teachers' professional growth, improves lesson delivery, and boosts student academic performance. Supervision plays a crucial role in strengthening the educational system by improving teachers' job performance. It encompasses offering guidance, evaluative support, and feedback aimed at enhancing instructional practices and professional behavior (Sergiovanni & Starratt, 2007). When supervision is characterized by collaboration and constructive dialogue, it tends to increase teachers' motivation and satisfaction (Glickman, Gordon, & Ross-Gordon, 2014). Such a supervisory approach promotes continuous professional development and helps teachers adapt to emerging educational needs.

Empirical studies support the positive relationship between instructional supervision and teacher performance. In Nigeria, Ofoegbu and Alonge (2016) used a survey design to assess the impact of supervision on job performance in public secondary schools. Drawing data from 200 teachers, their findings revealed that regular supervisory visits especially those offering constructive feedback and developmental assistance greatly improved teachers' effectiveness. Similarly, Mette et al. (2017) examined teachers' perspectives on culturally responsive teaching and the influence of supervision on their instructional decisions. Conducted in two culturally diverse U.S. schools using a qualitative case study method, the research showed that effective supervision encouraged teachers to adopt culturally relevant teaching approaches. However, the study also found that the success of supervision depended on the supervisor's understanding of cultural dynamics and their ability to provide tailored support. In instances where supervision was rigid or disconnected from teachers' needs, it led to reduced engagement and weaker performance.

In Malaysia, Azumi and Abu Bakar (2018) used a mixed-methods design to investigate the effects of instructional supervision on teacher performance. The study involved 150 teachers in a quantitative survey and included interviews with 20 teachers and 10 supervisors for the qualitative component. Findings indicated that mentorship, regular feedback, and ongoing professional development significantly improved instructional performance. Teachers emphasized the value of having approachable and supportive supervisors, noting that such leadership fostered a positive, motivating work atmosphere.

The results of the literature review revealed that there is a relationship between the identified independent sub-variables and the dependent variable, namely teachers' service delivery. However, several gaps were observed in the reviewed literature, particularly in terms of geographical location, research scope, and methodology. Notably, most of the cited studies were conducted in foreign countries or in regions of Nigeria other than the study area. Furthermore, the methodologies,

instruments, and procedures employed in those studies differ from those adopted in the present research. In light of these identified gaps, the researchers deemed it necessary to undertake the current study titled "Institutional Management Variables as Correlate of Teachers' Instructional Delivery in Special Needs Schools in Cross River State." Thus, this study aims to bridge the gap in the literature and contribute meaningfully to the existing body of knowledge.

Statement of the problem

Special needs schools are educational institutions specifically established to support learners with disabilities or learning challenges by providing specialized teaching methods, resources, and support systems. Teachers in these schools are expected to deliver instruction to learners with diverse abilities, interests, and educational needs, while also managing them effectively within the classroom and broader school environment.

However, it has been observed that many teachers in special needs schools in Cross River State tend to exhibit unprofessional behaviors that hinder effective service delivery. For instance, some teachers frequently arrive late to school, others absent themselves from classes, and some engage in personal business ventures during official school hours often to the detriment of the special needs students under their care. Over the years, these developments have become a significant concern to the government and have prompted educational researchers to investigate the underlying factors contributing to such poor attitudes and job performance. In response, the Cross River State Government has introduced several measures, including the provision of textbooks, recruitment of more teachers, renovation of classroom facilities especially through the Universal Basic Education (UBE) platform and the prompt payment of monthly salaries.

Despite these efforts, teachers in special needs schools continue to underperform in their professional roles. There appears to be no noticeable improvement in student behavior, classroom engagement, interpersonal relationships, or terminal examination outcomes. This persistent challenge has led the researcher to question whether the root of the problem lies in the management of institutional variables. Therefore, the central problem of this study is expressed in the form of a question: What is the relationship between institutional management variables and teachers' instructional delivery in special needs schools in Cross River State? The desire to answer this question is what gave rise to this study.

Purpose of the Study

This study investigated relationship between institutional management variables and teachers' instructional delivery in special needs schools in Cross River State. Specifically, the study sought to find out the relationship between:

1. Professional development and teachers' instructional delivery in special needs schools in Cross River State.
2. Instructional supervision and teachers' instructional delivery in special needs schools in Cross River State.

Research hypotheses

The following hypotheses guided study:

1. Professional development does not significantly relate to teachers' instructional delivery in special needs schools in Cross River State.
2. Instructional supervision does not significantly relate to teachers' instructional delivery in special needs schools in Cross River State.

Methodology

The study adopted a correlational research design. This design was deemed appropriate for the study as it aimed to investigate the relationship between institutional management variables teachers' instructional delivery. The population of this study comprised all the 191 teachers in 26 special need

schools in Cross River State. Census method was used in this study. A census is a study of every unit, everyone or everything when the size of the population is small. Therefore, census method was adopted in involving the entire population of 191 teachers found in all the special need schools in the study area.

The instrument used for data collection was a questionnaire titled —Institutional Management Variables and Teachers' Instructional Delivery Questionnaire (IMVTIDQ).¹ The instrument consisted of two sections. Section A was designed to collect demographic data, including age, gender, marital status, and educational qualifications. Section B contained 18 items that measured the sub-variables of Institutional Management Variables, specifically professional development, instructional supervision and teachers' service delivery. The questionnaire was structured on a four-point Likert scale: Strongly Agree (SA), Agree (A), Disagree (D), and Strongly Disagree (SD). Before administering the questionnaires, the items were submitted to research experts for validation. These experts included three lecturers from the Department of Educational Management and Measurement and Evaluation, Faculty of Educational Foundation Studies, University of Calabar. Based on their input, irrelevant items were either removed or modified. Of the 24 items initially designed, six were discarded, leaving 18 items for the final study. Reliability, of the instrument was established through a trial test conducted on 20 teachers selected outside the study area. Data collected were coded and subjected to a reliability test using the Cronbach Alpha coefficient. The reliability coefficient obtained ranged from .81 to .83, indicating a high level of reliability. Statistically, the instrument was deemed appropriate for data collection.

To ensure effective data collection, 7 research assistants were recruited and trained on the study's objectives and proper administration of the questionnaires. Prior to distribution, permission was obtained from school administrators, and the respondents were briefed on the purpose of the study. They were assured that all information provided would be used strictly for research purposes and treated with confidentiality. The researchers and assistants distributed the questionnaires and later collected them. The study achieved a 100% questionnaire return rate. Upon collection, the questionnaires were reviewed to ensure completeness. They were then organized based on the variables they were designed to measure. Positively worded items were scored as follows: Strongly Agree (SA) = 4 points, Agree (A) = 3 points, Disagree (D) = 2 points, and Strongly Disagree (SD) = 1 point. For negatively worded items, the scoring pattern was reversed. Respondents' scores on the sub-scales were summed and analyzed using appropriate statistical tools. Data analysis was conducted based on the null hypotheses that guided the study. Pearson Product Moment Correlation analysis was employed to test the hypotheses. All hypotheses were tested at a 0.05 level of significance.

Results and discussion

Hypothesis one

Professional development does not significantly relate to teachers' instructional delivery in special needs schools in Cross River State. The two variables in this hypothesis are professional development and teachers' instructional delivery. Pearson Product Moment Correlation was used to test the hypothesis and the result of the analysis is presented in Table 1. Table 1 showed the correlation coefficient between professional development and teachers' instructional delivery. The correlation coefficient is statistically significant for teachers' service delivery ($r = .64$, $p < .05$). Since $p(.000)$ is less than $p(.05)$, hypothesis one is rejected in terms of teachers' teachers' instructional delivery. The result of the analysis implied that there is a statistically positive significant relationship between professional development and teachers' instructional delivery in special needs schools in Cross River State.

Table 1

Summary of correlation between professional development and teachers' instructional delivery in special needs schools in Cross River State. (N=191)

Variables	$\bar{X}$	S.D	r	Sig.

Professional development	19.38	3.40		
Teachers' Instructional delivery	19.18	4.38	.64*	.000

*Significant at $p < .05$ $df=189$

Hypothesis two

Instructional supervision does not significantly relate to teachers' instructional delivery in special needs schools in Cross River State. The two variables in this hypothesis are instructional supervision and teachers' instructional delivery. Pearson Product Moment Correlation was used to test the hypothesis and the result of the analysis is presented in Table 2. Table 2 showed the correlation coefficient between instructional supervision and teachers' instructional delivery. The correlation coefficient is statistically significant for teachers' service delivery ($r = .86$, $p < .05$). Since $p(.000)$ is less than $p(.05)$, hypothesis two is rejected in terms of teachers' teachers' instructional delivery. The result of the analysis implied that there is a statistically positive significant relationship between instructional supervision and teachers' instructional delivery in special needs schools in Cross River State.

Table 2

Teachers' instructional delivery	19.18	4.38	.86*	.000

*Significant at $p < .05$ $df=189$

Discussion of findings

Hypothesis one which stated that, professional development does not significantly relate to teachers' instructional delivery in special needs schools in Cross River State, was rejected while the alternate hypothesis was accepted. The findings indicate a significant high positive relationship between professional development and teachers' instructional delivery suggesting that as teachers engage more in professional development activities, their effectiveness in delivering instruction improves. This result is not surprising because professional development equips teachers with updated knowledge, innovative teaching strategies, and improved pedagogical skills, all of which are essential for effective classroom practice. Also, the implication is that continuous investment in relevant and well-structured professional development programs can lead to enhanced teaching quality, which ultimately supports improved student learning outcomes.

The finding of this study is consistent with those of Sultana (2013), who investigated the impact of training on workforce productivity among 250 employees in Dhaka and found a significant positive relationship. Similarly, the result aligns with the study by Okeleke, Uzoka, and Oladejo (2017), which examined the relationship between training, demographic factors, and job performance in public colleges of education in Southwest Nigeria, revealing a strong correlation between professional development and staff performance. Furthermore, it corroborates the findings of Mduma and Mkulu (2021), who reported that training significantly enhances teaching strategies and overall job effectiveness.

Hypothesis two which stated that, instructional supervision does not significantly relate to teachers' instructional delivery in special needs schools in Cross River State, was rejected while the alternate hypothesis was accepted. The findings reveal a significantly high positive relationship between instructional supervision and teachers' instructional delivery, indicating that effective supervision

practices are strongly associated with improved teaching performance. This finding is not surprising because regular and constructive instructional supervision provides teachers with feedback, guidance, and support that help refine their teaching methods and classroom management skills. The implication is that when school leaders strengthen supervisory systems by ensuring that supervision is continuous, supportive, and focused on professional growth, it can lead to enhanced instructional quality and better student learning outcomes.

The finding agrees with that of Ofoegbu and Alonge (2016), who used a survey design to assess the impact of supervision on job performance in public secondary schools. Their study revealed that regular supervisory visits particularly those that offered constructive feedback and developmental assistance greatly improved teachers' effectiveness. Similarly, Mette et al. (2017) found that effective supervision encouraged teachers to adopt culturally relevant teaching approaches. However, their study also emphasized that the success of supervision depended on the supervisor's understanding of cultural dynamics and their ability to provide tailored support. Furthermore, the finding aligns with that of Azumi and Abu Bakar (2018), who reported that mentorship, regular feedback, and ongoing professional development significantly enhanced instructional performance. Teachers in their study highlighted the importance of having approachable and supportive supervisors, noting that such leadership fostered a positive and motivating work environment.

Institutional Management Variables and Teachers' Instructional Delivery in Special Needs Schools in Cross River State: Implication for Sustainable National Development

The findings of this study have important implications for sustainable national development, particularly in the context of inclusive education. The positive relationship between institutional management variables, specifically professional development, instructional supervision and teachers' instructional delivery in special needs schools in Cross River State highlights the critical role of effective school management in enhancing educational outcomes for learners with special needs. Sustainable national development depends largely on the capacity of the education system to equip all learners, including those with disabilities, with the skills and knowledge needed to participate fully in society. Therefore, investing in continuous professional development and strengthening instructional supervision practices in special needs schools will not only improve teaching quality but also promote equity, inclusion, and human capital development which are key pillars of national growth and sustainability.

Conclusion

This study highlights the significant relationship between institutional management variables, specifically professional development and instructional supervision, and teachers' instructional delivery in special needs schools in Cross River State. The findings underscore the importance of ongoing professional development and effective instructional supervision in enhancing teachers' ability to deliver quality instruction to students with special needs. These variables provide teachers with the necessary skills, knowledge, and support to improve their teaching effectiveness. Therefore, it is essential for educational administrators and policymakers to prioritize and strengthen professional development programs and supervisory practices in special needs schools to ensure that teachers are adequately equipped to meet the diverse needs of their students, ultimately contributing to improved educational outcomes and inclusive education.

Recommendations

Based on the findings of the study, the following recommendations are made:

1. Educational authorities should assist school administrators in Cross River State to invest in continuous, tailored professional development programs for teachers in special needs schools to enhance their pedagogical and classroom management skills.

2. School heads should focus on implementing regular, constructive instructional supervision in special needs schools, and always provide teachers with targeted feedback, mentorship, and ongoing developmental support to improve instructional delivery and student performances.

Contribution to knowledge

This study contributes to knowledge by highlighting the significant role of institutional management variables, specifically professional development and instructional supervision, in enhancing teachers' instructional delivery in special needs schools in Cross River State. The findings provide empirical evidence that effective professional development and regular instructional supervision are key factors that improve the teaching practices and overall performance of teachers in special education settings. This research adds to the existing body of literature by emphasizing the importance of these management practices in the context of special needs education, offering insights that can guide educational policy, teacher training programs, and school management strategies aimed at improving the quality of education for students with disabilities.

Federal University of Education, Zaria

&

Dr. Maigari Martha
National Identity Management Commission, Abuja

Abstract

This paper underscores the critical role of ethical and values education in fostering sustainable national development, with a particular focus on Nigeria. In the context of global environmental, social, and economic challenges, education serves as a pivotal tool for cultivating responsible citizens equipped to address issues such as corruption, inequality, and environmental degradation. The integration of ethical principles and core values into curricula is essential for nurturing civic responsibility, social cohesion, environmental stewardship, and good governance. Despite widespread recognition of its importance, current educational systems often prioritize academic achievement over moral and ethical development, hindered by curricular limitations, resistance to change, inadequate teacher training, and lack of supportive policies. To re-engineer ethical and values education effectively, the paper advocates for comprehensive curriculum reform, enhanced teacher professional development, community engagement, and the development of robust assessment frameworks. Embedding ethics into all levels of education through policy reforms and stakeholder collaboration can foster a culture of integrity, social justice, and sustainability. The proposed strategies aim to produce a generation capable of making informed, ethical decisions that promote societal well-being and environmental resilience. Ultimately, re-engineering ethical and values education is vital for Nigeria's journey toward sustainable development, ensuring that future leaders and citizens uphold principles of justice, responsibility, and stewardship, thereby contributing to a more equitable and sustainable nation. This holistic approach emphasizes the transformative power of education in shaping a resilient society committed to long-term sustainability.

Keywords: Ethical and Values Education, re-engineer, environmental stewardship, sustainable national development and community engagement.

Introduction

In the 21st century, the imperative for sustainable national development has gained heightened attention due to escalating environmental challenges, social inequalities, and economic disparities. The transition towards sustainability necessitates not only technological advancements and policy reforms but also a profound transformation in the educational landscape. The United Nations Sustainable Development Goals (SDGs), particularly Goal 4, emphasize the need for inclusive and equitable quality education that promotes lifelong learning opportunities for all (United Nations, 2015). Central to achieving these goals is the integration of ethical and value education into educational frameworks.

Ethical education focuses on instilling moral values and principles that guide individuals in making decisions that honor the dignity of all human beings and promote societal welfare. Likewise, value education emphasizes the cultivation of personal and collective values that drive positive behavior and social responsibility. According to Nussbaum (2010), ethical education contributes significantly to

the formation of well-rounded individuals equipped to engage in democratic processes and contribute to the common good. In the context of national development, fostering ethical and value-driven citizens is crucial for addressing systemic issues such as corruption, inequality, and environmental degradation.

Research indicates that ethical and value education can lead to enhanced civic engagement and social cohesion (Dewey, 1997). Educating individuals about their responsibilities within their communities cultivates a sense of accountability and encourages participatory governance. Key works in this field, such as those by Hepburn (2018), argue that responsible citizens are more inclined to advocate for sustainable practices and resist actions detrimental to society and the environment.

Additionally, the academic discourse surrounding sustainability education underscores the necessity of incorporating ethics and values into educational curricula. According to Tilbury (2011), the integration of sustainability into education should encompass a critical examination of values, ethics, and their implications for future generations. By fostering an ethical worldview, educational institutions can equip learners with the critical skills needed to navigate ethical dilemmas and contribute to sustainable practices across various domains of life—from politics and business to community engagement and environmental stewardship.

Despite the recognition of its importance, the current state of ethical and value education varies significantly across different regions and educational systems. In many contexts, curricula are predominantly focused on academic achievement and technical skills, with limited attention to moral and ethical dimensions (Osler & Starkey, 2005). This gap highlights the urgent need for educational reform aimed at re-engineering curricula to emphasize ethical and value education as foundational pillars for fostering sustainable national development.

The convergence of ethical education and sustainable development presents a critical opportunity for re-engineering national educational frameworks. Educators, policymakers, and stakeholders must collaborate to embed ethical considerations into educational practices, fostering a generation of individuals capable of making sustainable choices and advocating for collective welfare. This study aims to provide a comprehensive analysis of the role of ethical and value education in driving sustainable national development, offering insights and recommendations for integrating these principles into educational policies and practices.

The pursuit of sustainable national development has emerged as a critical discourse in the face of numerous global challenges, including environmental degradation, economic inequality, and complex societal issues. Sustainable development, as defined by the Brundtland Commission (1987), is —development that meets the needs of the present without compromising the ability of future generations to meet their own needs. Achieving this balance requires an educational approach that not only imparts technical knowledge but also cultivates ethical consciousness among learners.

The Role of Education in Sustainable Development

Education plays a pivotal role in fostering sustainable development. The United Nations Educational, Scientific and Cultural Organization (UNESCO, 2014) emphasizes the importance of education in achieving the Sustainable Development Goals (SDGs), particularly Goal 4: —Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all. Within this context, ethical education serves as a foundation for shaping responsible global citizens equipped to tackle pressing challenges.

Ethical Education Reengineering for Sustainable National Development in Nigeria

Sustainable national development in Nigeria requires a multifaceted approach, integrating economic growth, social equity, and environmental resilience (United Nations, 2015). A crucial yet often overlooked element is the ethical dimension of education. Ethical education reengineering involves re-evaluating and redesigning educational curricula to instill values that promote sustainability, social responsibility, and good governance. This paper explores how this approach can support sustainable national development in Nigeria.

The Importance of Ethical Education

Ethical education encompasses the teaching of moral principles, values, and decision-making processes that guide individuals in their interactions with others and the environment. The primary objectives of ethical education include fostering critical thinking, promoting social responsibility, and encouraging environmentally sustainable practices (Hahn & Preuss, 2014).

Research indicates that ethical education is a catalyst for positive change within societies. According to Hunt & Vasquez (2011), ethical education enhances civic engagement, nurtures empathy, and fosters a commitment to social justice. By equipping individuals with the ethical tools necessary for navigating complex societal dilemmas, educational institutions can facilitate the emergence of a generation dedicated to sustainable practices and responsible governance.

Ethical education is an essential pillar for re-engineering national development strategies aimed at sustainability. By fostering ethical awareness and responsibility among students, educational systems can cultivate a generation of leaders and citizens equipped to address today's pressing global challenges. The integration of ethical education into curricula, teacher training, and community engagement is vital for empowering individuals to contribute positively to society and the environment. With concerted efforts from educators, policymakers, and communities, ethical education can become a cornerstone of sustainable national development.

Ethical education encompasses teaching values, principles, and moral responsibilities that guide individuals in making decisions beneficial to society and the environment (Gini, 2004). In Nigeria, a country facing challenges such as corruption, environmental degradation, and social inequality, fostering a strong ethical foundation is critical. Ethical education encourages citizens to act thoughtfully and responsibly, enhancing civic engagement and community welfare (Haidt, 2012).

Re-engineering Ethical Education

1. Curriculum Development

Integrating Ethics into the Curriculum: The Nigerian education system should incorporate ethics as a standalone subject, emphasizing topics such as environmental ethics, social justice, and corporate responsibility (Osher et al., 2016). This can help students cultivate a comprehensive understanding of the consequences of their actions on society and the environment.

Experiential Learning: Implementing project-based and service-learning experiences can help students connect ethical theories with real-world challenges, fostering a sense of responsibility and community belonging (Kraft & Bilal, 2016).

2. Teacher Training

Professional Development: Educators must undergo training that equips them with the tools to teach ethical concepts effectively (Moral Education, 2019). Workshops and continuous professional development programs should focus on ethics education methodologies and the importance of role modeling ethical behavior.

3. Community Involvement

Partnerships with Local Organizations: Schools should collaborate with NGOs, local businesses, and community leaders to promote ethical values and sustainability initiatives, bridging the gap between education and community practice (Brown & Michael, 2018).

4. Policy Framework

Government Support: The Nigerian government should create policies that mandate the integration of ethical education across all levels of the schooling system. Such frameworks should also encourage ethical behavior in governance and corporate responsibility, promoting accountability (Odum, 2021).

Impacts on Sustainable National Development

1. **Enhanced Civic Responsibility:** An emphasis on ethical education can produce citizens who are more aware of their civic duties and are motivated to participate in democratic processes, thus strengthening governance (Okwu & Oyinloye, 2018).
2. **Social Cohesion and Justice:** Ethical education encourages respect for diversity and promotes social justice, which is essential in a multicultural society like Nigeria (Tutu, 2014). Teaching values of empathy, equity, and respect can help reduce conflicts and foster unity.
3. **Environmental Stewardship:** Educating youth about environmental ethics can instill a sense of responsibility towards nature, encouraging sustainable practices that can mitigate ecological degradation (Sengupta et al., 2020).
4. **Combating Corruption:** By instilling strong ethical principles in future leaders, the likelihood of corrupt practices may diminish, leading to better governance and accountability (Transparency International, 2019).

Values Education: Re-engineering for Sustainable National Development

In an era marked by escalating environmental concerns and social challenges, the concept of sustainable national development has gained unprecedented significance. The United Nations defines sustainable development as a process that meets the needs of the present without compromising the ability of future generations to meet their own needs (United Nations, 1987). Achieving this balance hinges on a fundamental shift in education, particularly through the promotion of values education.

Values education refers to the systematic approach to teaching and learning that emphasizes moral and ethical principles, fostering the development of positive attitudes and behaviors among individuals (Bray, 2008). It aims to cultivate citizens who not only possess knowledge and skills but also demonstrate empathy, social responsibility, and a commitment to the common good. In this study, we explore how values education can be re-engineered as a core component of national development strategies, emphasizing its potential to produce engaged, responsible citizens capable of addressing the challenges of our time.

Values education encompasses a multitude of teachings that focus on developing personal and social values aligned with ethical standards. Rath, Harmin, and Simon (1978) define values as beliefs or principles that guide behavior and decision-making. Values education facilitates a profound understanding of concepts such as respect, compassion, integrity, and justice. It equips students to navigate complex ethical challenges and fosters civic responsibility essential for sustainable development.

The Intersection of Values Education and Sustainable Development

Sustainable development is fundamentally rooted in the principles of equity, justice, and responsible stewardship of resources. Values education emerges as a natural ally in promoting these principles, as it encourages individuals to prioritize the well-being of both current and future generations (Tilbury, 2011). As noted by Tilley (2021), education focused on values can enhance awareness of socio-environmental issues, ultimately driving positive social change.

The Importance of Ethical and Values Education in National Development Fostering Responsible Citizenship

Values education plays a critical role in shaping responsible citizens who are engaged in their communities and committed to democratic principles. Research has shown that students who receive values-based education are more likely to participate in civic activities, develop empathy toward others, and possess a strong sense of social responsibility (Sherrod et al., 2002). By fostering active civic engagement, values education contributes to social cohesion and sustainable community development.

Promoting Environmental Stewardship

With climate change posing an existential threat, instilling a sense of environmental stewardship through values education is more crucial than ever. According to UNESCO (2014), education for sustainable development must incorporate ethical considerations concerning the environment, highlighting the need for teaching values that promote conservation, respect for nature, and sustainable practices. Values education encourages individuals to make informed and responsible decisions regarding their consumption habits and environmental impact.

Addressing Social Inequalities

Values education has the potential to address systemic inequalities by fostering inclusion and understanding among diverse populations. Values such as empathy, respect, and justice can challenge biases and promote tolerance, enabling students to engage constructively with issues related to social justice (Hollander & Zinkler, 2018). By fostering an understanding of global citizenship, values education lays the groundwork for a more equitable and inclusive society.

Challenges of Ethical and Values Education: Re-engineering for Sustainable National Development

The integration of ethical and values education into national development frameworks aimed at achieving sustainability presents various challenges. Despite the recognition of its significance, several barriers hinder effective implementation. This analysis outlines the key challenges faced in promoting ethical and values education, with appropriate citations and references.

1. Curricular Limitations

One of the most significant challenges is the fragmentation and lack of coherence in current educational curricula, which often prioritize academic performance and standardized testing over the integration of ethical and values education. Many educational systems operate under rigid structures that do not allow for the incorporation of values-based learning (Osler & Starkey, 2005). This gap can diminish the potential impact of values education on students' ethical development.

2. Resistance to Change

Resistance from educators, administrators, and policymakers can impede the introduction of values education programs. Many educational institutions prioritize traditional forms of education focused on cognitive skills, often perceiving ethical and values education as secondary or less important (Schwartz, 2019). This tendency can lead to a lack of buy-in and support for initiatives aimed at embedding ethics and values into the curriculum.

3. Insufficient Teacher Training and Resources

The effective delivery of values education requires teachers who are equipped with the necessary knowledge, skills, and confidence to address ethical issues in the classroom. However, many teachers lack adequate training in ethical pedagogy and values education, leading to inconsistent implementation (Meyer & Dawkins, 2017). Additionally, insufficient resources can limit opportunities for teachers to engage in professional development.

4. Lack of Clear Policy Frameworks

The absence of clear national policies that prioritize ethical and values education can create ambiguity and hinder the integration of these principles within existing educational systems. Many countries lack comprehensive guidelines or dedicated resources that specify how values education should be implemented across various levels of education (Wilson, 2015). This lack of direction can lead to varying degrees of commitment and effectiveness in different institutions.

5. Cultural and Contextual Differences

Values education must often navigate diverse cultural contexts and differing societal values, making it challenging to establish a uniform curriculum. Disparities in cultural perspectives on ethical behavior can lead to tensions in the classroom and community. In multicultural societies, educators may struggle to address a range of values and beliefs without alienating specific groups (Hollander & Zinkler, 2018).

6. Assessment Challenges

Evaluating the effectiveness of values and ethical education presents unique challenges. Traditional assessment methods often do not capture the nuances of ethical reasoning or value development among students (Cohen & Hough, 2018). The lack of appropriate assessment tools can lead to difficulties in demonstrating the impact of values education on student behavior and community involvement.

7. Short-Term Focus of Educational Systems

Many educational systems operate under pressures for immediate results, leading to a short-term focus on measurable academic outcomes rather than long-term ethical and value development (Tilbury, 2011). This focus can undermine the integration of values education, which often requires a long-term commitment to fostering a culture of ethical awareness and responsibility.

The Way Forward for Ethical and Values Education: Re-engineering for Sustainable National Development

The path forward for enhancing ethical and values education as a means of achieving sustainable national development involves a multifaceted approach that integrates policy reforms, curriculum development, teacher training, community engagement, and assessment methods. Below are key strategies and recommendations to advance this agenda:

1. Integrate Values Education into National Curriculum Frameworks

To promote ethical and values education effectively, it is essential to integrate these principles into the national curriculum across all education levels. A well-defined curricular framework should outline how ethical and values education will be incorporated into various subjects, fostering interdisciplinary connections. Policy makers should develop and implement comprehensive guidelines that mandate the inclusion of values education in school curricula, ensuring that ethical considerations are embedded in subjects such as science, social studies, and literature (United Nations Educational, Scientific and Cultural Organization [UNESCO], 2014).

2. Enhance Teacher Training and Professional Development

Teachers play a crucial role in delivering values education. Providing adequate training and resources is essential to equip educators with the necessary skills and confidence to teach ethical principles effectively. Ongoing professional development programs should focus on pedagogical strategies for addressing ethical issues and facilitating values discussions. Education authorities must invest in teacher training programs that emphasize the importance of values education and provide practical strategies for its implementation (Hahn & Preuss, 2014).

3. Foster Community and Stakeholder Engagement

Engaging communities and stakeholders in the implementation of ethical and values education is vital. Partnerships with local organizations, businesses, and community leaders can create a supportive environment for values-based initiatives. Service-learning projects can further enrich the educational experience by connecting students with community issues. Schools should actively involve parents, community members, and local organizations in the design and implementation of values education programs to ensure that these initiatives are relevant and culturally sensitive (Bray, 2008).

4. Develop Robust Assessment Frameworks

To measure the effectiveness of values education, it is important to develop assessment frameworks that evaluate students' understanding and application of ethical principles. Traditional assessment methods

may not adequately reflect the impact of values education on student behavior and decision-making. Education systems should design assessment tools that account for the complexities of ethical reasoning and values application, ensuring that evaluations are aligned with the goals of values education (Cohen & Hough, 2018).

5. Strengthen Policy Frameworks

A clear and coherent policy framework supporting ethical and values education at national and local levels is essential. Policymakers must prioritize the integration of values education into broader educational reforms and development strategies. Governments should establish policies that recognize the importance of ethical and values education as a foundational component of sustainable development, allocating resources and support for its implementation across educational institutions (Wilson, 2015).

6. Promote Research and Best Practices

Ongoing research is critical to understanding the best practices in values education and its impact on sustainable development. Establishing research networks among educational institutions can facilitate the sharing of experiences, successes, and challenges faced in implementing values education. Educational institutions and researchers should collaborate to conduct studies that assess the effectiveness of different approaches to values education, disseminating findings to inform practice and policy (Meyer & Dawkins, 2017).

Conclusion

Reengineering ethical and Value Education in Nigeria is essential for promoting sustainable national development. By redefining curricula, enhancing teacher training, fostering community involvement, and establishing supportive policy frameworks, Nigeria can cultivate a generation of ethical citizens. This transformation will equip individuals with the values and skills necessary for contributing positively to society, ultimately leading to a more sustainable and equitable nation.

Abstract

Education they say is light. It is also said that if you say education is expensive or costly, then try illiteracy. On the basis of these, many experts or professionals in various disciplines in education profession and even the common man conceive this importance of education and the massive quest for academic knowledge have been discovered to exploit others in need of the academic knowledge and the accruing certificates negatively, in negligence to the ethical order and values in education which is one of the basic lessons in Education expertise. The problem that bothers this paper is the unbecoming increase in the negligence of ethical values in education especially amongst stakeholder in Higher Education cadre. The study finds out that this problem keeps growing at alarming heights on daily basis. It is on this background, that the paper aims at addressing the unethical actions of stakeholders in education mostly in institutions of higher learning. It hence, recommends among other things that formidable and disciplinary leadership of the old, should be re-engineered in Nigeria's higher education system for a global competitiveness. The study employs historical and phenomenological research methodologies or approaches on embarking on this research. Data are generated from secondary materials, for examples, dictionary, textbooks, chapters in books, journal, internet, etc. Materials collected are analyzed with descriptive style of data analysis.

Keywords: Ethics and Values, Higher Education, Leadership, Education and Global Competitiveness.

Introduction

It has been known amongst humans and organizational managers that it is the art of promulgating rules and ethics that adds values to the organizational framework. Education sector is never an exception. Education itself is light. Those who are traditionally and informally well-educated still show some levels of light above others at their various educational and knowledge acquisition. Today, Western civilization has come with a higher level of education than what was obtainable in most African nations. Now, to have an organized educational atmosphere, education has trended to assume an academic form. It is on this platform that education has gone highly sophisticated. This is because

people have begun to professionalize themselves with the corresponding certificates and not the academic knowledge by some people in a negative and illegal ways without any or less attention to the ethical codes or orders and values in education has raised the problem which this research has sought to address, because the negligence on the ethical values in education especially in the midst of the major stakeholders and even the leaders in high education heights is becoming increasingly unbecoming.

This paper, therefore, is aimed at addressing issues necessary for re-engineering leadership in Nigeria higher education for global competitiveness with special attention to unethical actions of stakeholders/leaders in higher institution. Ali et al (2020:79) assert that —a walk through the line of history of education, has informed most educators that before the advent of western education, there was a traditional form of education ... In this traditional form of education, the learners and educators have a reasonable level of ethical order and value observances. In fact, it has been found in this paper that the increase in the negligence of ethical values in higher education keeps growing at its alarming rates consistently. The research recommends in the midst of other things that a stronger disciplinary leadership or leaders greater than the old should be utilized to re-engineer the Nigeria higher education system for a competitive global standard. The study adopts historical and phenomenological research methods. Materials for the research are got from secondary sources, principally from textbooks, journals, etc. Data sourced are analyzed with descriptive style of data analysis.

Conceptualization of Terms

The terms or concepts planned to explain or define here include: ethics, values, education and leadership. Ethics has been explained by Okwueze (2003:1 – 2) thus: Ethics is derived from the Greek word *ethos* which means wisdom, conduct, culture or way of life. Many regard ethics as a branch of philosophy concerned with what is morally good or bad, right or wrong... The word ethics and ethical are often used as synonyms for the words moral and morals especially in contexts which make references to the ethics or to the morality of a person or group. This synonym has a clear etymological basis and justification because the Greek word *ethos* from which Ethics derived, and the Latin word *mores* from which morals is derived both mean habits and customs. In the assertion of Okwueze, ethics has to do with the good or bad, right or wrong, acceptable or unacceptable, approved or disapproved and so on. Agha (2003: 1) on the other hand has asserted ethics thus:

Ethics is a branch of general wisdom called Moral Philosophy. This is the study which led to an examination of all human conduct, and this type of philosophical study is known as Ethics. Ethics is a normative science, which sees man as a moral agent, and considers his actions, habits, and character with a view to their rightness or wrongness.

In fact, ethics is highly concerned with the actions of human beings with special interest on their rightness or wrongness. Agha (2004:15) in another text has emphasized on ethics of responsibility when he associates ethics with other words like duty, obligation, law, goodness, and morality thus: Responsibility is the quality or state of being answerable for all acts of thought and conduct. It is a state of being responsible as a moral, legal or mental accountability. It means reliability and trustworthiness. Christian responsibility is answerable to the teachings of Jesus while civil responsibility is being answerable to the civil or state laws.

It is at this state of being answerable to the civil or state laws that ethics stands to judge our level of responsibility to duties assigned to us at different levels of stewardships. Ethics looks at how well or bad and how far we are able to discharge our duties, obligations, assignments and responsibilities in the sight of the ethics, rules, regulations, ordinances or laws. In this paper, it is concerned with how good or bad the leadership of the Nigeria Education System at higher levels has been able to project the education system to a global scope where the system can sluggishly or comfortably compete with other states of the modern world.

Values has been asserted by Akulue (2013: 55) thus:

—Value¹ as a more concrete noun for example, when we speak of —a value¹ is often used to refer to what is valued, judged to have value, thought to be good or desired. The expressions —his values¹ —her value system¹ etc, refer to what a man, a woman etc, values or thinks to be good. The term value is also used to mean what has value or is valuable, or good as opposed to what is regarded as good or valuable. Then, —values¹ mean, —things that are good or goods and some users, also regard it to mean things that are right, obligatory, beautiful or even true...

This shows that at any point things are responsibly and ethically done, a lot of admirable value are attained. Therefore, a good attention to ethics in discharging one's duties and responsibilities attracts acceptable values to the output or product. Hence, sound ethical observations in Nigerian higher education leadership will re-engineer Nigerian higher education system to global competitiveness.

Education as part of the concepts to be conceptualized is said to be both formal and informal or non-formal. In this context, the interest of this paper is on formal education. Ani (1997:160) responses thus: —To be educated in this view means that both staff and students recognize the worth of each other in the communal search for reasonableness. On a similar realm, Okafor (2016:78) points that: —A blended learning approach to instruction combines face to face classroom methods with computer based/mediated activities, resulting in an integrated learning experience for physics students¹. These authors are cited in explaining education here to emphasize that education meant in this study is principally, formal education where students and their teacher formally meet with the purpose of teaching and learning on a base of professional areas of specializations. In this present time, the face-to-face contact has gone beyond physical contacts to a more or less a computer/online face to face contact. These processes are completely formal form of education which carries the basic idea of the theme of this paper with special interest on higher education.

Leadership in Summer (2001:800) is defined as —the position being the leader of a team, organization, etc: quality of being good at leading a team, organization, country etc; someone with vision and leadership; all the people that lead who lead a group, organization, etc¹. It is on this background, that the need to refer to Nigeria leadership becomes relevant. Ijeoma (1988:149) buttresses thus:

In a nation where sycophants praise leaders to their graves, even when the leaders have nothing to offer, and when their brains are as frozen as corpses in the mortuary, it is obvious that unnecessarily gratuitous adulations add nothing to the moral or intellectual quality of such leaders. In fact, they become blinded, quite oblivious of their negligible poor backgrounds, and indulge in premature gratification in which their sycophants aid and abet them in syphoning money out of the nation.

This leadership problem in Nigeria is lamented on by Dr. Nnamdi Azikiwe in West African Pilot in Ijeomah (1988:149) thus: —It would seem as if our real need today is leadership... with character¹. Dr. Nnamdi Azikiwe made script in 1939. So, we have seen the definition of leadership in the dictionary, but relating it to Nigeria, seems Nigeria has serious leadership challenges which also affects leadership at higher education. Areas of Challenges on Ethics and Values on Nigeria Higher Education Leadership Systems exit till Today

In Nigerian higher institutions, there are some ethical codes of conduct, rules, regulations, ordinances, etc that guide the operations and activities of both students and staff (teaching and non-teaching). These ethical codes guide people in the communities or environment of higher learning especially those in the leadership hierarchies. There are rules guiding people against immoral and irreligious activities, social vices, health and other academic malpractices, and on the political and administrative processes. Today, it has been obvious that their rules seem not to be accorded obedience. The areas where Nigerian higher education faces challenges due to leadership ethical weaknesses include: admission irregularities in higher institutions (from university authorities and educational administrators' different institutions of higher learning, and Joint Admissions and Matriculation Board (JAMB), Sexual Immorality, Cultism, Drug Abuse, Examination Malpractices, Deposit of new born babies at waste dumps, hostels, etc. Misappropriation of fund, punitive transfer or posting,

abandonment of files or sitting on files, nepotism, tribalism or favoritism, vandalization and wanton on institutions' property by members of staff and authorities, frivolous and unprecedented claims, killings and reports against senior staff due to interest on higher offices, bribery for employment and services. At this point, we still need to stress on leadership again, then proceed to education leadership. Ekwunife (2004:260) has viewed leadership as: —a science in the sense that effective leadership involves clear systematic practice grounded on a solid conviction and knowledge of what makes a good leader, a good leader plus the courage and skill to put this into successful action. This explanation of leadership appears to be conceived at a general social context. It goes with special skill of the scientific knowledge of systematic practice that ends in a successful action. Okoh (1985:29) specifies education leadership thus: —the process of influencing the activities of educational personnel towards goal setting and achievement. This exact nature of what educational leadership should be. But in Nigeria higher educational system and leadership or personnel have been influenced negatively, thereby failing to set the goal and achieve the expected success.

In Nigeria, we hear on daily basis acts of examination malpractices in the higher institutions which is turning to a culture. Some of these examination malpractices are encouraged by staff, parents and students. The school authorities in most cases have failed to pursue the vices with drastic actions. The admission process is not something to write home about. University of Nigeria Alumni Association (1999/2000:28) emphasizes on JAMB loose of its admittance ethical values for admission of candidates into institutions of higher education thus:

JAMB's reliability as a reliable measure of qualification into universities, is now suspect, widespread, rampant malpractices as bizarre as the open hiring of mercenary undergraduates to sit the examination have seriously undermined the institution's credibility as the sole medium for university intake...

Though, today, JAMB has improved, but leaving CBT centres with most of the responsibilities in conducting the entrance examination. More so, the year 2025 UTME has been viewed a partial failure due to sectional result output which later called for re-sit by affected candidates.

In higher institutions, some students (male and female) have turned to sex workers and sex slaves to some staff in the institutions of higher learning. Some female students have engaged in giving birth to babies, dump them at hostel or other corners or waste dumps to the mercy of the general public. Some of these girls or ladies are impregnated either by the co-students, sex worker patronage or staff, opposite sex partners etc. Some of these staff that engage female students in immoral sexual relationship are staff in positions of authorities. Secret cultism in the higher institutions has been rumored to be standby machineries used by authorities of the institutions for killings, vandalization and other related illegalities to achieve their selfish interest. There are also highly suspected levels embezzlement of funds and misappropriation by leadership of higher education in Nigeria. Some persons in positions of leadership in Nigerian higher institutions have been suspected to encourage drug abuse by themselves and student allies. All these acts are against the ethical order, and expected values needed in our institutions of higher learning, but the problems or challenges have remained adamant because the leadership crew appears to be guilty of this ethical disobedience because most of them lack the conscience for general academic growth and development which pose a challenge to the global world competitiveness.

Effects and Remedy to these Ethical Value Challenges in Nigeria Higher Education

It is very difficult to feel that issues associated with weaknesses or degeneration of ethical values in higher education in Nigeria do not accrue some effects which automatically call for a process of re-engineering of the leadership incompetencies and inefficiencies for global competitiveness. Okoye, Uche Patrick, et al (2024:4) point thus:

Examination malpractices are gradually becoming thorn in the flesh of the educational sector of this country, especially in tertiary level. This is a very unethical practice that covers the broad range of actions from cheating in impersonation and bribery to use of unauthorized materials at any form of examination. Despite several attempts by the examination authorities to check this scourge, the trends in

examination malpractice have been on the increase giving concern to the validity of academic qualifications obtained from institutions in Nigeria...

For the fact that examination malpractices have resisted measures to control or abort it means the authorities in charge of the examination processes and institutional leadership are failing. Therefore, in the next sub-heading light will be thrown on panacea to the problem in order to re-engineer leadership excesses in Nigeria higher education to empower Nigeria higher education toward challenging the modern world higher educational competitions. consequently, in this sub heading, our interest is on the effects of the scourge. After pointed out above by Okoye Uche Patrick and others above, one of the menaces is that examination malpractices have thrown concern to the validity of academic qualifications obtained or attained from Nigerian higher institutions.

The quest for admission into the higher educational institutions has encouraged the admission of people of questionable character. Nzeakor (2002:286) observes that: —drug abuse leads to various criminal and deviant acts amongst students. It leads violence, wanton destruction of lives and properties and arson. A similar issue is associated with some staff, even amongst those in leadership positions in the higher education being addicted to hard drugs or alcoholism. These acts among staff and student disrupt labour input and output in the higher institutions. In some cases, it leads to suicide, depression and other mental related problems. These acts have seemed to encourage the institutions of higher education to appear commonly unethical.

These low ethical and value consciousness in the higher institutions, irrespective of the health-related issues they cause, they also endanger the economic and human resources' growth and development in the entire society. Since people in leadership positions in higher institution cannot maintain order from the admission processes, where any person is admitted, lives and property are destroyed, authorities' sit on lower staff files, pension, allowances and other entitlements are withheld, funds for salaries, infrastructural developments are embezzled respectively, affected people and those related to them in financial engagements or otherwise suffer the evil actions economically. These acts lower such people's standard of living. It diminishes social interaction of individual and families since every interaction demands for capital no, no matter how little it could be. These unethical acts reduce the value of some individuals in the society and higher educational institutions. It also creates enmities between the leaders and the led, amongst other effects.

The Panacea and Re-engineering Leadership in Nigerian Higher Education for Global Competitiveness

In order to re-engineer the leadership of higher Institution's education for global competitiveness, the following facts are put down in this paper as solution:

1. Stronger disciplinary leadership or leaders greater than the old or the present ones to re-engineer the Nigerian higher education system for a competitive global standard.
2. As it has been suggested by Nzeakor (2002:294), —the sinful nature of man controlling the staff and students of higher institutions in Nigeria persists, Nigerians should make a more serious and radical effort to enforce a positive spiritual change as a solution to this problem. Okwor (2000:6) has pointed that only spiritual or divine intervention can out-run and arrest corruption in Nigeria. So, will divine intervention do to unethical actions in higher educational institutions.
3. Nigerians have to work on their value system for a re-order in the higher institutions of learning. Unnecessary values should not be attached to money, wealth, cheap popularity and pleasure as against character and excellence.
4. Salaries and allowances are poor in some higher institutions and even paid inconsistently. These payments should be made in commensurate to the economic situation in Nigeria and should be paid consistently as at when due.
5. Secret cultism has taken the day in the higher institutions. It should be stamped out by the government and other related stakeholders.

6. Government should fund and monitor the use of the funds adequately, provide textbooks at subsidized rates to make teaching and learning very productive and effective.

Conclusion

Lack of attention to ethical values has caused Nigeria a big harm in her education, especially at higher institutions. This has created several injuries in social, economic, cultural, health, religious, and political problems to Nigeria. Therefore, every hand, associations, groups, government, educational and other institutions should come together to push Nigeria higher education to a world class standard.

Abstract

The study examined administrators' ethical strategies and effective administration in public Universities in Rivers State. Three research questions and three hypotheses guided the study. The study adopted a correlation research design. The area of the study was Rivers State. The population of the study consisted of 1,286 administrators in three Universities in Rivers State, which comprises of Rivers State University (RSU), University of Port Harcourt (UNIPORT) and Ignatius Ajuru University of Education (IAUE). Taro Yamane formula was used to determine the sample size used for the study. Sample size of 305 administrators from the three Universities were drawn from the population using stratified sampling technique. Two structured instruments titled "Administrators' Ethical Leadership Strategies Questionnaire (AELSQ)" and "Effective Administration in Public Universities Questionnaire (EAPUQ)" were used to elicit data from the respondents. The instrument was validated by two experts in the field of Measurement and Evaluation in Rivers State University. The reliability of the instrument was determined using Cronbach Alpha method. The reliability of the instrument gave a Cronbach Alpha index of 0.77, 0.73 and 0.83 which was considered reliable. The Pearson's Product Moment Correlation (PPMC) was used to answer the research questions and test the null hypotheses at 0.05 level of significance. The findings of the study revealed that, there is strong positive relationship between administrator's role modelling strategy, administrators' ethical policy enforcement strategy, administrator's transparency strategy and effective administration in public Universities in Rivers State. Based on the findings, it was recommended among others that, university administrators should demonstrate ethical leadership by maintaining high moral standards, professionalism, and integrity in all decision-making processes.

Keywords: Administrators, Ethical Leadership, Strategies, Effective Administration

Introduction

Public universities serve as pivotal institutions in the advancement of knowledge, societal development and the cultivation of future leaders. In Rivers State, Nigeria, these universities face a myriad of challenges, including financial constraints, infrastructural deficits and a rapidly changing educational landscape. Central to addressing these challenges is the ethical framework within which university administrators operate. Ethical strategies are not merely guidelines for conduct; they shape the very culture of an institution, influencing decision-making processes, stakeholder relationships, and ultimately, educational outcomes.

Recent studies have highlighted the critical role of ethical leadership in enhancing institutional effectiveness. For instance, a study by Oduro, Agyemang and Asare (2022) emphasized that ethical leadership fosters an environment of trust and accountability, which is essential for effective governance in educational settings. Furthermore, Alabi (2023) argues that administrators who prioritize ethical considerations in their decision-making processes are more likely to achieve Sustainable

Development Goals within their institutions. These findings underline the necessity of integrating ethical strategies into the administrative practices of public universities, particularly in regions where corruption and mismanagement have been prevalent.

Ethical leadership in administration is essential for fostering integrity and trust within organizations. Administrators employ various ethical strategies to guide their decision-making and actions, ensuring that they uphold the values of their institutions (Johnson & Smith, 2023). These strategies not only influence organizational culture but also affect stakeholder perceptions and outcomes. Recent studies emphasize the importance of ethical frameworks in administration, highlighting how effective ethical strategies contribute to positive organizational performance and stakeholder relationships (Brown, Treviño & Harrison, 2022; Johnson & Smith, 2023).

In the administration of public universities, ethical leadership plays a crucial role in ensuring transparency, accountability, and overall institutional effectiveness. Ethical leadership in university administration involves decision-making based on integrity, fairness, and the commitment to uphold ethical standards in all aspects of governance. Administrators who adhere to ethical leadership principles foster a culture of trust, respect, and professionalism among faculty, staff, and students. Brown and Treviño (2021), ethical leadership enhance institutional credibility, improves staff and student morale, and promotes adherence to regulatory frameworks that guide the operations of higher institutions. In Rivers State, where public universities play a significant role in higher education development, the adoption of ethical leadership strategies is essential for maintaining quality education, reducing corruption, and ensuring that policies are implemented for the benefit of all stakeholders.

Administrators' ethical leadership strategies encompass leading by example, promoting transparency, enforcing ethical conduct, ensuring inclusivity, and making ethically sound decisions that align with institutional goals. Ethical leaders influence institutional effectiveness by discouraging favouritism, academic fraud, financial mismanagement, and administrative inefficiencies (Treviño, Weaver, & Reynolds, 2022). When administrators model ethical behaviour, they inspire faculty and students to uphold ethical values, which translates to a more disciplined and effective academic environment. Public universities in Rivers State have faced challenges related to mismanagement, corruption, and leadership inefficiencies, which have affected students' academic performance and overall institutional progress. Addressing these challenges requires a strategic focus on ethical leadership practices that prioritize fairness, accountability, and the well-being of all university stakeholders.

Ethical leadership among administrators' is essential for fostering transparency, integrity, and accountability within organizations, especially in educational institutions, government agencies, and corporate settings. Administrators who implement ethical leadership strategies help to create a culture of fairness, respect, and professionalism, ultimately enhancing institutional efficiency and productivity. Below are types of ethical leadership strategies that administrators can adopt:

- i. **Leading by Example (Moral Role Modelling):** Administrators who demonstrate ethical behaviour through their actions set the tone for ethical conduct within their institutions. Brown and Treviño (2021) emphasize that leaders who act with honesty, fairness, and accountability inspire employees, faculty, and students to uphold similar values. By consistently making morally sound decisions, administrators reinforce ethical expectations, discourage corruption, and promote a culture of trust and respect. Example: A university administrator who transparently handles promotions and admissions fosters an environment where merit and integrity thrive.
- ii. **Establishing and Communicating Clear Ethical Policies:** A well-defined ethical framework provides guidelines on acceptable behaviour and decision-making within an institution. Administrators must develop codes of conduct, anti-corruption policies, and ethical guidelines to ensure compliance with organizational values (Treviño, Weaver, & Reynolds, 2022). Ethical policies should be clearly communicated to all stakeholders through training programs, institutional handbooks, and periodic reinforcement. Example: A school principal

implementing a zero-tolerance policy on bribery and favouritism in grading students ensures fairness and academic integrity.

- iii. **Promoting Transparency and Accountability:** Ethical administrators‘ prioritize open communication, fairness in decision-making, and accountability in financial and administrative processes. When employees and students trust that leadership decisions are based on merit and fairness, institutional credibility is strengthened (O‘Fallon & Butterfield, 2020). Transparency also discourages unethical behaviours such as embezzlement, favouritism, and academic fraud. Example: A university vice-chancellor who makes the institution’s financial reports publicly available demonstrates transparency, building confidence among students and staff.
- iv. **Encouraging Ethical Decision-Making:** Ethical administrators ensure that policies and decisions align with ethical principles such as fairness, justice, and integrity. They promote ethical reasoning by considering both the short- and long-term consequences of their decisions. Ferrell and Fraedrich (2021) suggest that administrators should apply ethical frameworks like consequentialism (focus on outcomes), deontology (following rules), and virtue ethics (moral character) when making decisions. Example: A school administrator who refuses to manipulate students‘ grades for political or financial gain upholds ethical decision-making.
- v. **Enforcing Ethical Conduct through Disciplinary Measures:** Ethical leadership requires that administrators hold individuals accountable for their actions by enforcing disciplinary measures for unethical behaviours. Kaptein (2022), leaders must implement whistle-blower protection policies to encourage the reporting of corruption, harassment, and other misconducts. Ethical enforcement ensures that violations are addressed fairly and consistently. Example: A university administrator who ensures that faculty members engaging in sexual harassment face disciplinary action reinforces ethical standards.
- vi. **Fostering an Inclusive and Respectful Work Environment:** An ethical administrators‘ values diversity, fairness, and respect for all stakeholders, regardless of gender, religion, or social background. Institutions that foster inclusivity experience higher engagement, reduced conflicts, and improved performance (Mayer, Kuenzi, & Greenbaum, 2020). Ethical administrators promote policies that support equal opportunities in hiring, promotions, and academic participation.
Example: A university chancellor who implements policies that prevent discrimination in staff recruitment and student admissions promotes inclusivity.
- vii. **Investing in Ethical Training and Professional Development:** Ethical leadership is strengthened through continuous education, training programs, and awareness campaigns. Administrators should organize ethics workshops, leadership training, and mentorship programs to instil ethical values among faculty, staff, and students (Treviño & Brown, 2021). These initiatives help build moral awareness and ethical reasoning skills among all stakeholders. Example: A school administrator who mandates annual ethics training for teachers and students ensures that ethical leadership remains a core value in the institution.

Statement of the Problem

The effective administration of public universities in Rivers State is increasingly challenged by issues of corruption, mismanagement, lack of transparency, and poor ethical leadership. Many university administrators fail to adopt ethical leadership strategies, leading to a decline in academic integrity, financial accountability, and institutional efficiency (Brown & Treviño, 2021). The absence of

clear ethical policies and accountability mechanisms has resulted in cases of nepotism, misallocation of resources, and administrative inefficiencies, negatively impacting the quality of education and research output. Without strong ethical leadership, universities struggle to uphold their mission of delivering quality education, fostering innovation, and maintaining global academic standards.

Furthermore, the lack of transparency in decision-making, financial management, and staff recruitment has contributed to poor governance structures, limiting the universities' ability to function effectively. Ethical leadership is essential for ensuring fairness in promotions, faculty development, and student support services (Kaptein, 2022). However, in many public universities in Rivers State, there is a gap between administrative policies and ethical leadership practices, leading to dissatisfaction among faculty, students, and stakeholders. The failure to adopt student-centered policies, uphold academic honesty, and integrate inclusive leadership strategies has hindered institutional growth and development.

If these ethical leadership gaps are not addressed, public universities in Rivers State risk continued academic decline, poor research output, and loss of credibility. There is an urgent need for ethical leadership strategies that promote accountability, fairness, and institutional effectiveness to enhance staff morale, student performance, and overall university administration. It is for these reasons the researcher carried out the study to find out; What is the relationship between administrators' ethical leadership strategies and effective administration of Public Universities in Rivers State? and to proffer solutions to the stated problems.

Purpose of the Study

The purpose of the study was to examine Administrators' Ethical Leadership Strategies and Effective Administration of Public Universities in Rivers State. The specific objectives of this study are to:

1. Determine the relationship between Administrators' role modeling strategy and Effective Administration in Public Universities in Rivers State.
2. Examine the relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State.
3. Ascertain the relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State.

Research Questions

The following research questions guided the study:

1. What is the relationship between Administrators' role modeling strategy and Effective Administration in Public Universities in Rivers State?
2. What is the relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State?
3. What is the relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State?

Hypotheses

The following hypotheses were tested at 0.05 level of significance;

1. There is no significant relationship between Administrators' role modeling strategy and Effective Administration in Public Universities in Rivers State.
2. There is no significant relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State.
3. There is no significant relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State.

Methodology

The study adopted a correlation research design. The area of the study was Rivers State. The population of the study consisted of 1,286 administrators in three universities in Rivers State, which

consists of Rivers State University (RSU), University of Port Harcourt (UNIPORT) and Ignatius Ajuru University of Education (IAUE). Taro Yamane formula was used to determine the sample size used for the study. Sample size of 305 administrators from the three Universities were drawn from the population using stratified sampling technique. Two structured instruments titled “Administrators’ Ethical Leadership Strategies Questionnaire (AELSQ)” and —Effective Administration in Public Universities Questionnaire (EAPUQ) were used to elicit data from the respondents. Responses to the questionnaire items were structured on a four- point summated rating scale of: Strongly Agreed (SA) – 4points, agreed (A) – 3points, disagreed (D) – 2points and Strongly Disagree (SD)– 1points. The instrument was validated by two experts in the field of Measurement and Evaluation in Rivers State University.

The reliability of the instrument was determined using Cronbach Alpha method. The reliability of the instrument gave a Cronbach Alpha index of 0.77, 0.73 and 0.83 which was considered reliable. The Pearson’s Product Moment Correlation (PPMC) was used to answer the research questions and test the null hypotheses at 0.05 level of significance. This was further tested by transforming the coefficient of correlation r to t in order to establish the significance or other wise of the r - value. The classification of r value magnitude used for decision making according to Mahdavi (2012) is stated as follows;

- i. + 0.30. A weak uphill (positive) relationship
- ii. + 0.50. A moderate uphill (positive) relationship
- iii. + 0.70. A strong uphill (positive) relationship
- iv. Exactly + 1. A perfect uphill (positive) relationship
- v. Exactly – 1. A perfect downhill (negative) relationship
- vii. – 0.70. A strong downhill (negative) relationship
- vii. – 0.50. A moderate downhill (negative) relationship
- viii. – 0.30. A weak downhill (negative) relationship
- ix. 0. No relationship

Results

Research Question 1: What is the relationship between Administrators’ role modelling strategy and Effective Administration in Public Universities in Rivers State?

Table 1: PPMC Analysis on Relationship between Administrators’ Role Modelling Strategy and Effective Administration in Public Universities in Rivers State

Variables	N	$\sum x$ $\sum y$	$\sum x^2$ $\sum y^2$	$\sum xy$	r-value	Decision
Administrators’ Role Modelling Strategy	305	5459	84724			
			93615	913830	0.73	Positive (strong)
Effective Administration in Public Universities	305	6120				

Source: Field survey (2024)

The information in Table 1 shows the relationship between Administrators’ role modelling strategy and Effective Administration in Public Universities in Rivers State. When university administrators’ model ethical behaviour, they set a standard for integrity, honesty, and fairness, encouraging faculty, staff, and students to adopt similar values. Ethical role modelling builds trust among students, faculty, and external stakeholders, fostering a positive reputation for the university. Administrators who lead by example inspire faculty and staff to take responsibility for their actions, ensuring transparency in decision-making and governance. Ethical role modeling creates a positive work and learning environment, leading to higher job satisfaction among staff and improved student

motivation. When administrators uphold ethical standards, they discourage malpractices such as bribery, favoritism, and embezzlement, ensuring proper allocation of resources and funds. The calculated r-value 0.73 shows an uphill (strong positive) relationship between Administrators' role modelling strategy and Effective Administration in Public Universities in Rivers State. This implies that Administrators' role modelling strategy is related to Effective Administration in Public Universities. In other words, this is the type of relationship in which an increase in one variable leads to the increase in another variable.

Research Question 2: What is the relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State?

Table 2: PPMC Analysis on Relationship between Administrators' Ethical Policy Enforcement Strategy and Effective Administration in Public Universities in Rivers State

Variables	N	$\sum x$ $\sum y$	$\sum x^2$ $\sum y^2$	$\sum xy$	r-value	Decision
Administrators' Ethical Policy Enforcement Strategy	305	6314	85304			
			98564	948378	0.80	Positive (strong)
Effective Administration in Public Universities	305	7406				

Source: Field survey (2024)

The information in Table 2 shows the relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State. Enforcing ethical policies ensures that administrators, faculty, and students uphold honesty, transparency, and accountability, fostering a corruption-free university environment. Strict enforcement of ethical policies prevents financial mismanagement, bribery, and favouritism, ensuring that university funds and resources are utilized efficiently for academic and infrastructural development. Ethical policy enforcement discourages plagiarism, exam malpractice, and academic dishonesty, leading to credible research outputs and a reputable learning environment. Strong ethical policies ensure that students and staff receive equal opportunities without discrimination based on gender, ethnicity, or political affiliations, promoting diversity and inclusivity. Ethical policy enforcement promotes responsible leadership, ensuring that university management adheres to best practices in administration, faculty appointments, and student welfare. The calculated r-value 0.80 shows an uphill (strong positive) relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State. This implies that Administrators' ethical policy enforcement strategy is related to Effective Administration in Public Universities in Rivers State.

Research Question 3: What is the relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State.

Table 3: PPMC Analysis on Relationship between Administrators' Transparency Strategy and Effective Administration in Public Universities in Rivers State

Variables	N	$\sum x$ $\sum y$	$\sum x^2$ $\sum y^2$	$\sum xy$	r-value	Decision
Administrators' transparency strategy	305	5150	73518	821505	0.85	Positive (strong)
Effective Administration in Public Universities	305	5590	75548			

Source: Field survey (2024)

The information in Table 3 shows the relationship Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State. Transparency in university administration fosters trust among students, faculty, staff, and external stakeholders, enhancing the university's credibility and reputation. Transparent governance discourages financial mismanagement, embezzlement, and favouritism, ensuring fair allocation of resources and ethical leadership. When administrators uphold transparency, it reinforces strict academic policies, reducing plagiarism, examination malpractice, and falsification of research data. Transparency ensures that policy-making, budgeting, and administrative decisions are inclusive and evidence-based, reducing biases and promoting fair leadership. Public universities with transparent policies encourage faculty, staff, and students to take responsibility for their actions, fostering a culture of honesty and accountability. The calculated r-value 0.85 shows an uphill (strong positive) relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State. This implies that Administrators transparency strategy is elated to Effective Administration in Public Universities in Rivers State. In other words, this is the type of relationship in which an increase in one variable leads to the increase in another variable.

Test of Hypotheses

H₀₁: There is no significant relationship between Administrators' role modelling strategy and Effective Administration in Public Universities in Rivers State.

Table 4: Significant Relationship between Administrators' Role Modelling Strategy and Effective Administration in Public Universities in Rivers State

	N	$\sum x$ $\sum y$	$\sum x^2$ $\sum y^2$	$\sum xy$	Df	r-cal	t-cal	t-crit	Decision
Administrators' Role Modelling Strategy.	305	5459	84724	913826	303	0.73	10.67	1.96	H ₀₂ Rejected
Effective Administration in Public Universities.	305	6120	93615						

* Significance at 0.05

Source: Field Survey (2024)

In Table 4, the t-transformed (calculated) value of 10.67 is greater than the t-critical value of 1.96 for 303 degrees of freedom at 0.05 level of significance, the null hypothesis which states that there is no significant relationship between Administrators' role modelling strategy and Effective Administration in Public Universities in Rivers State is hereby rejected and the alternate is thus accepted. The implication is that Administrators' role modelling strategy is related to Effective Administration in Public Universities in Rivers State, as such the positive relationship between Administrators' role modelling strategy and Effective Administration in Public Universities is significant.

H₀₂: There is no significant relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State.

Table 5: Significant Relationship between Administrators' Ethical Policy Enforcement Strategy and Effective Administration in Public Universities in Rivers State

	N	$\sum x$ $\sum y$	$\sum x^2$ $\sum y^2$	$\sum xy$	Df	r-cal	t-cal	t-crit	Decision
Administrators' Ethical Policy Enforcement Strategy.	305	6314	85304						
				948378	303	0.80	13.57	1.96	H ₀₂ Rejected
Effective Administration in Public Universities.	305	7406	98564						

* Significance at 0.05

Source: Field Survey (2024)

In Table 5, the t-transformed (calculated) value of 13.57 is greater than the t-critical value of 1.96 for 303 degrees of freedom at 0.05 level of significance, the null hypothesis which states that there is no significant relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State is hereby rejected and the alternate is thus accepted. The implication is that Administrators' ethical policy enforcement strategy is related to Effective Administration in Public Universities in Rivers State. To confirm the significant relationship, a t-transformation of the computed r-value was done and the result is as presented above with t-cal = 13.57 > t-crit = 1.96.

H₀₃: There is no significant relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State.

Table 6: Significant Relationship between Administrators' Transparency Strategy and Effective Administration in Public Universities in Rivers State.

Variables	N	$\sum x$ $\sum y$	$\sum x^2$ $\sum y^2$	$\sum xy$	Df	r-cal	t-cal	t-crit	Decision
Transparency Strategy.	305	5150	73518						
				821505	303	0.85	15.63	1.96	H ₀₃ Rejected
Effective Administration in Public Universities.	305	5590	75548						

* Significance at 0.05

Source: Field survey (2024)

In Table 6, the t-transformed (calculated) value of 15.63 is greater than the t-critical value of 1.96 for 303 degrees of freedom at 0.05 level of significance, the null hypothesis which states that there is no significant relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State is hereby rejected and the alternate is thus accepted. The implication is that Administrators' transparency strategy is related to Effective Administration in Public Universities in Rivers State. To confirm the significant relationship, a t-transformation of the computed r-value was done and the result is as presented above with $t\text{-cal} = 15.63 > t\text{-crit} = 1.96$.

Discussion of Findings

The findings of research question one revealed that there is a high and relationship between Administrators' role modelling strategy and Effective Administration in Public Universities in Rivers State. The calculated r-value 0.73 shows an uphill (strong positive) relationship between Administrators' role modelling strategy and Effective Administration in Public Universities in Rivers State. This implies that Administrators' role modelling strategy is related to Effective Administration in Public Universities in Rivers State. In hypotheses four, the t-transformed (calculated) value of 10.67 is greater than the t-critical value of 1.96 for 303 degrees of freedom at 0.05 level of significance, the null hypothesis which states that there is no significant relationship between Administrators' role modelling strategy and Effective Administration in Public Universities in Rivers State is hereby rejected and the alternate is thus accepted. The findings of the study is in agreement with the assertions of Brown and Treviño (2021) which emphasize that leaders who act with honesty, fairness, and accountability inspire employees, faculty, and students to uphold similar values. By consistently making morally sound decisions, administrators reinforce ethical expectations, discourage corruption, and promote a culture of trust and respect.

Research question two shows the relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State. The calculated r-value 0.80 shows an uphill strong positive relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State. In corresponding hypothesis two, the t-transformed (calculated) value of 13.57 is greater than the t-critical value of 1.96 for 303 degrees of freedom at 0.05 level of significance, the null hypothesis which states that there is no significant relationship between Administrators' ethical policy enforcement strategy and Effective Administration in Public Universities in Rivers State is hereby rejected and the alternate is thus accepted. This is in agreement with Kaptein (2022) who argued that, leaders must implement whistle-blower protection policies to encourage the reporting of corruption, harassment, and other misconducts. Ethical enforcement ensures that violations are addressed fairly and consistently.

Research question three shows the relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State. The calculated r-value 0.85 shows an uphill (strong positive) relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State. The calculated r-value 0.85 shows an uphill (strong positive) relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State. The corresponding hypothesis three, the t-transformed (calculated) value of 15.63 is greater than the t-critical value of 1.96 for 303 degrees of freedom at 0.05 level of significance, the null hypothesis which states that there is no significant relationship between Administrators' transparency strategy and Effective Administration in Public Universities in Rivers State is hereby rejected and the alternate is thus accepted. The finding of the study is in agreement with submission of O'Fallon and Butterfield (2020) who argued that, Transparency discourages unethical behaviours such as embezzlement, favouritism, and academic fraud. Ethical administrators prioritize open communication, fairness in decision-making, and accountability in financial and administrative processes. When employees and students trust that leadership decisions are based on merit and fairness, institutional credibility is strengthened.

Conclusion

Based on the findings of the study, the researcher concludes that; There is strong positive relationship between Administrators' role modelling strategy, Administrators' ethical policy enforcement strategy, Administrators transparency strategy and Effective Administration in Public Universities in Rivers State. Administrators' ethical leadership strategies are fundamental to the effective administration of public universities. Ethical leadership fosters transparency, accountability, and fairness in decision-making processes, ensuring that universities operate with integrity and professionalism. By implementing ethical policies, enforcing standards of conduct, and promoting inclusivity, administrators can create an environment that supports academic excellence, faculty productivity, and student success. Ethical leadership also plays a crucial role in minimizing corruption, favouritism, and unethical practices, thereby strengthening institutional credibility and stakeholder confidence.

Recommendations

Based on the findings of the study, the following recommendations were made;

Strengthening Administrators' Role Modelling Strategy:

1. University administrators should demonstrate ethical leadership by maintaining high moral standards, professionalism, and integrity in all decision-making processes.
2. Administrators should serve as role models by promoting accountability, fairness, and respect for institutional policies, thereby fostering an ethical culture among staff and students.

Enhancing Ethical Policy Enforcement Strategy:

3. Universities should establish and enforce comprehensive ethical policies that clearly define acceptable behaviour, responsibilities, and disciplinary measures for violations.
4. Independent ethics and compliance committees should be created to oversee the implementation of ethical policies and ensure impartial handling of misconduct cases.

Improving Transparency Strategy in University Administration:

5. University administrators should embrace open governance by making administrative decisions, financial records, and institutional policies publicly accessible to stakeholders.
6. Regular stakeholder engagement meetings, such as town halls and public forums, should be conducted to promote inclusivity and participatory decision-making.

Abstract

This study explored integrating ethical leadership and sustainable secondary education administration in Anambra State. It aims to examine the relationship between ethical leadership (leadership integrity and accountability) and sustainable secondary education administration. The study adopted correlational research design. Two research questions and two hypotheses guided the study. The population for this study consisted of 257 principals in 257 public senior secondary schools in Anambra State. The sample size used for this study was 257 respondents, representing 100% of the entire population using census sampling technique. The instruments for data collection are two self-structured questionnaires titled —Integrating Ethical Leadership Questionnaire —(IELQ) and Sustainable Secondary Education Administration Questionnaire (SSEAQ) with 40 items. A sample of 30 principals who share the same characteristics were drawn from Imo State for the reliability test. The reliability coefficient of integrating ethical leadership was .84 and sustainable secondary education Administration was .87 while leadership integrity was .86 and leadership accountability was .76 respectively using Cronbach method. Out of 257 copies of the questionnaire administered, 250 copies were properly filled out and retrieved, which represented 97.5% success. The research questions were answered using Pearson product moment correlation (r) statistics, while z-ratio was used to test the hypotheses at 0.05 level of significance. The study revealed that leadership integrity and leadership accountability are the components of integrating ethical leadership and there is a high positive relationship between integrating ethical leadership and sustainable secondary education administration in Anambra State. It was recommended that principals in public senior secondary schools in Anambra State should encourage the use of leadership integrity and accountability for sustainable secondary education administration in Anambra State.

Keywords: Ethical, Leadership, Integrity, Accountability, Sustainable.

Introduction

Recently, the educational sector in Nigeria, especially in Anambra State, has encountered considerable challenges concerning ethical leadership. Examination malpractices, administrative corruption, and a decline in moral standards have been reported, compromising the quality of education and its contribution to national development. The rise of "Miracle Examination Centres" facilitating

examination fraud has been documented, compromising the integrity of the educational system (Agwu et al., 2023). Incorporating ethical leadership in secondary education administration is crucial for fostering enduring national progress in addressing these issues.

In the realm of education, ethical leadership encompasses the demonstration of moral decision-making, justice, and integrity by school leaders, so serving as exemplary for both staff and students. Furthermore, ethical leadership encourages effective governance inside educational institutions, which is critical to national growth. According to research, the absence of ethical leadership causes challenges such as corruption and poor governance, which impede sustainable development Mbonu et al. (2021). School leaders can improve the general efficiency and reputation of their respective institutions by encouraging ethical behaviour.

Ethical leadership in education has a major influence on sustainable national development. Good leadership produces a group of pupils who show moral integrity and academic excellence, therefore enhancing society's contributions. Moreover, ethical leadership improves government inside educational institutions, which is necessary for national growth. Studies show that lack of ethical leadership results in problems such as corruption and inadequate government which impede sustainable development (Jeko & Odigie, 2024). Thus, including ethical leadership into the management of secondary school helps to generate responsible citizens and promotes national development.

Statement of the Problem

Many secondary schools in Anambra State continue to struggle with unethical practices, despite the acknowledged significance of ethical leadership in fostering educational excellence and national development. These challenges are characterized by a general decline in moral values among students and staff, as well as examination malpractices and administrative misconduct. The continuation of these problems shows a lack in the efficient application of ethical leadership in educational systems. This study focuses on the impact of ethical leadership on long-term national development in Anambra State's secondary schools.

Aim and Objectives of the Study

The aim of the study was integrating ethical leadership and sustainable secondary education administration in Anambra State. Specifically, the objective sought to:

1. examine the relationship between leadership integrity and sustainable secondary education administration in Anambra State.
2. assess the relationship between leadership accountability and sustainable secondary education administration in Anambra State.

Research Questions

The following research questions guided the study

1. What is the relationship between leadership integrity and sustainable secondary education administration in Anambra State?
2. What is the relationship between leadership accountability and sustainable secondary education administration in Anambra State?

Hypotheses

The following hypotheses tested at 0.05 level of significance guided the study

1. There is no significant relationship between leadership integrity and sustainable secondary education administration in Anambra State.
2. There is no significant relationship between leadership accountability and sustainable secondary education administration in Anambra State.

Literature Review

Integrating Ethical Leadership in the School System

In education, ethical leadership is the technique wherein school leaders, acting as role models for staff members as well as pupils, show integrity, justice, and moral decision-making. This kind of leadership stresses the need to establish an atmosphere supporting moral values, openness, and responsibility. Ethical leaders model honesty, integrity, and justice (Ghanem & Castelli, 2019), therefore guiding the ethical actions of their subordinates. In education, ethical leadership is based on numerous fundamental ideas that direct leaders in creating a good and efficient learning environment. Integrity means keeping strong moral standards and making sure one's words and behaviour line up. By acting honestly and ethically, educational leaders show integrity and set standards for staff members as well as for pupils.

This integrity-based dedication encourages the school community to grow trusting (Kirk, 2024). Leaders who practice accountability must be liable for their decisions and actions, therefore promoting a culture in which duties are precisely understood and accepted. Educational leaders encourage a feeling of responsibility and ownership among staff and students by making themselves and others accountable, therefore fostering a more open and efficient learning environment (Leithwood, 2023). Educational leaders who live by these values will be able to properly steer their institutions toward academic success and ethical and supportive school environment. These ideas complement some of the Seven Principles of Public Life, which include selflessness, integrity, objectivity, responsibility, transparency, honesty and leadership (Robertleeforth, 2025).

Ethical leadership has been linked to the cultivation of school climates, which are characterized by clear expectations, consistent discipline, and supportive teacher-student relationships. Such environments have been shown to positively influence student behaviour and academic outcomes. Research by Karakose et al. in Da'as, (2023) show that ethical leadership styles subtly lower students' hostile attitudes, therefore creating an environment fit for academic performance. Stated differently, ethical leadership is favourably connected with several measures of school performance. Ethical leaders offer a good setting for learning and instruction, which can help to raise student performance. A study examining the ethical leadership practices of principals in Anambra State revealed that such practices are pivotal for goal attainment in public secondary schools (Obiekwe & Ezeugbor, 2019).

Furthermore, ethical leadership fosters trust and collaboration among staff, reduces incidences of misconduct, and enhances the school's reputation within the community. Instructors report far higher levels of work satisfaction when ethical leadership is present. A trusting and committed workforce are the result of leaders that are trustworthy, fair, and care about their employees. According to Cansoy et al. (2021), the ethical atmosphere of the school mediates the association between ethical leadership and teachers' work satisfaction. This suggests that ethical leaders not only directly affect job satisfaction but also shape the corporate culture, thereby raising morale among teachers (Cansoy et al. 2021). Leaders who respect moral values are more likely to engage in major interactions with stakeholders, therefore strengthening cooperation and confidence among the school community. Negiş and Işık (2020) finds that ethical leadership is positively associated with school effectiveness evident in teachers' affective commitment and job satisfaction. This highlights the role of ethical leadership in promoting a consistent and effective government structure (Işık, 2020). Dealing with present problems and forward sustainable national development in Anambra State calls for including ethical leadership into the running of secondary education.

Incorporating ethical leadership in educational administration is essential in improving student performance, boosting teacher satisfaction and consolidating school governance. The importance of encouraging ethical practices among school leaders to foster sustainable and effective educational environments are shown from these findings.

Sustainable Secondary Education Administration

Secondary school administration in Anambra state of Nigeria encounters problems in relation to ethical leadership. Research findings have revealed mismanagement of resources, lack of transparency,

and inadequate stakeholder engagement challenges. Obiekwe (2019) found that some principals in the state have been implicated in misappropriation of funds intended for school improvement. In this study, Obiekwe reveals that there have been allegations of principals collecting illegal levies from students in public schools that led to the state governor's directives to return such levies or face sanctions. These unethical behaviours are associated with indifference from teachers and problems in attaining educational objectives. This study draws attention to the importance of ethical leadership in school administration and its impact on school effectiveness and teacher commitment. It is imperative for school principals to uphold ethical leadership principles to tackle these difficulties.

Leadership Integrity and Sustainable Secondary Education Administration

Leadership integrity is crucial in promoting sustainable administration within secondary education (Ughamadu & Ezinine, 2021). The effect of ethical leadership on school environments and outcomes has been examined in recent scholarly studies. Bujang et al. (2025) carried out a study on the significance of encouraging integrity among school administrators' ethical leadership through a systematic review. The three main topics that appeared from the PRISMA framework are Academic integrity and ethics in education, leadership and integrity in educational management, and character and value education in schools. The study concluded that all embracing programmes and administrative support are vital for encouraging integrity, and that effective leadership significantly influences a conducive school environment.

Similarly, a study by Obiekwe et al. (2021) investigated the ethical leadership practices adopted by principals for goal attainment in public secondary schools in Anambra State, Nigeria. It was found that principals employed different kinds of ethical leadership practices, including climatic, communicative, behavioural, and decisional strategies, to achieve school goals. The study advocated for educational authorities encourage and train school administrators to exhibit ethical leadership practices to create a positive school climate conducive to goal attainment.

Enwereuzor et al. (2020) carried out a study on the mediating effect of perceived leader integrity in the relationship between ethical leadership and ethical atmosphere among teachers. The study revealed that ethical leadership has a positive effect on teachers' perceptions of their leaders' integrity, successively positive relationship with ethical climate in schools. This suggested that leaders who demonstrate ethical behaviour are perceived as having integrity, hence encouraging a positive ethical climate.

These studies stressed the key role of leadership integrity in encouraging sustainable administration in secondary education. They emphasized the need for complete programmes and training that support ethical leadership practices among school principals to create positive school environments and achieve educational goals.

Leadership Accountability and Sustainable Secondary Education Administration

Leadership accountability forms an important feature in attaining sustainable administration in secondary education. Contemporary scholarly literature has examined how accountable leadership practices affect the effectiveness and sustainability of educational institutions. Ughamadu and Ezinine (2021) conducted a comprehensive examination of effective leadership practices of principals for sustainable development in secondary schools in Anambra State, Nigeria. The research emphasized that principals take on transformational leadership practices, including accountability measures, to encourage sustainable development. They recommended that educational authorities carry out capacity-building programmes to encourage principals' ability to apply instructional leadership practices effectively.

Adeoye et al. (2025) focusing on the connection of accountability with innovation and global citizenship, examined the inclusion of transformational leadership in the educational sector. It was recommended from the result of their findings that redefining accountability, encouraging innovative teaching practices, and including global citizenship into the curriculum are important approaches. The

study underscored that successful transformational leadership involves stabilizing accountability with encouraging an environment favourable to innovation and universal awareness.

Ogundele et al. (2023) explored issues of accountability within Nigerian secondary education, pinpointing problems such as socio-economic crises and inflationary pressures that makes it difficult for effective accountability. The research concluded that accountability is essential for efficient school management and advocated for the involvement of stakeholders in the processes of educational planning and execution. Training principals and teachers in data and financial management was advocated to encourage accountability practices.

Ezeugbor and Akinwale (2018) examined administrators' managerial competencies for sustainable human resource management in secondary education in Enugu State in Nigeria. The study revealed that secondary school administrators often lack managerial competencies needed for effective student human resource management. The authors suggested including student human resource management into training programmes for schools' principals to advance more student-centred policies.

Collectively, these research work underscore the importance of leadership accountability in encouraging sustainable administration in secondary education. They indicate the need for capacity-building programs, stakeholder involvement, and the development of managerial competencies among school administrators to encourage accountability practices and gain sustainable educational outcomes.

Methodology

The study adopted correlational research design. The population for this study consisted of 257 principals in 257 public senior secondary schools in Anambra State. The sample size used for this study was 257 respondents representing 100% of the entire population using census sampling technique. The instruments for data collection are two self-structured questionnaires titled —Integrating Ethical Leadership Questionnaire —(IELQ) and Sustainable Secondary Education Administration Questionnaire (SSEAQ) with 20 items. A sample of 30 principals who share the same characteristics were drawn from Imo State for the reliability test. The reliability coefficient of integrating ethical leadership was .81 and sustainable secondary education Administration was .84 while leadership integrity was .85 and leadership accountability was .76 respectively using Cronbach method. Out of 257 copies of the questionnaire administered, 250 copies were properly filled out and retrieved, which represented 97.5% success. The research questions were answered using Pearson product moment correlation (r) statistics, while z-ratio was used to test the hypotheses at 0.05 level of significance.

Results

Research Question 1: What is the relationship between leadership integrity and sustainable secondary education administration in Anambra State?

Table 1: Pearson Product Moment Correlation Analysis on the Relationship between Leadership integrity and Sustainable secondary education administration in Anambra State.

Variable	Σ	Σ^2	n	Df	ΣXY	r	Decision
Leadership integrity (X)	12311	1515	250	248	2817	0.71	High Positive Correlation
Sustainable secondary education administration (Y)	11412	1302					

Result from Table 1 reveals a correlation coefficient = 0.71. This value is high and positive, indicating that there is a high and positive relationship between leadership integrity and sustainable

secondary education administration. This implies that improvement in leadership integrity leads to corresponding improvement of sustainable secondary education administration in Anambra State.

Research Question 2: What is the relationship between leadership accountability and sustainable secondary education administration in Anambra State?

Table 2: Pearson Product Moment Correlation Analysis on the Relationship between Leadership Accountability and Sustainable Secondary Education Administration in Anambra State

Variable	Σ	Σ^2	n	Df	ΣXY	r	Decision
Leadership accountability (X)	22412	5022	250	248	6324	0.69	High Positive Correlation
Sustainable secondary education administration (Y)	11412	1302					

Result from Table 2 reveals a correlation coefficient = 0.69. This value is high and positive, indicating that there is high and positive relationship between leadership accountability and sustainable secondary education administration. This implies that leadership accountability leads to corresponding improvement of sustainable secondary education administration in Anambra State.

Test of Hypotheses

Hypothesis 1: There is no significant relationship between leadership integrity and sustainable secondary education administration in Anambra State.

Table 3: Transformed z-ratio on the Relationship between Leadership Integrity and Sustainable Secondary Education Administration in Anambra State

Variable	Σ	Σ^2	n	df	ΣXY	r	z-cal	z-crit.	Decision
Leadership integrity (X)	12311	1515	250	248	2817	0.71	14.85	1.96	Sig. Rejected H_0
Sustainable secondary education administration (Y)	11412	1302							

Result from Table 3 reveals that there is a highly positive relationship between leadership integrity and sustainable secondary education administration in Anambra State. To establish the significance of the relationship, a transformed z-value was computed and an index of 14.85 was obtained. This was compared to the critical z-value of 1.96 at 0.05 level of significance with a degree of freedom of 248, indicating that there is a significant positive relationship between leadership integrity and sustainable secondary education administration in Anambra State.

Hypothesis 2: There is no significant relationship between leadership accountability and sustainable secondary education administration in Anambra State.

Table 4: Transformed z-ratio on the Relationship between Leadership Accountability and Sustainable Secondary Education Administration in Anambra State

Variable	Σ	Σ^2	N	df	ΣXY	r	z-cal.	z-crit.	Decision
Leadership accountability (X)	22412	5022							
			250	248	6324	0.69	11.12	1.96	Sig. Rejected H_0
Sustainable secondary education administration (Y)	11412	1302							

Result from Table 4 reveals that a high positive relationship exists between leadership accountability and sustainable secondary education administration in Anambra State. To establish the significance of the relationship, a transformed z-value was computed and an index of 11.12 was obtained. This was compared to the critical z-value of 1.96 at 0.05 level of significance with a degree of freedom of 248, indicating that there is a significant positive relationship between leadership accountability and sustainable secondary education administration in Anambra State.

Summary of Findings

The summary of findings of this study are as follows:

1. Table 1 and 3 revealed that there is a high and positive relationship between leadership integrity and sustainable secondary education administration in Anambra State. The hypothesis showed that there is a significant relationship between leadership integrity and sustainable secondary education administration in Anambra State.
2. Table 2 and 4 revealed that there is a high and positive relationship between leadership accountability and sustainable secondary education administration in Anambra State. The hypothesis showed that there is a significant relationship between leadership accountability and sustainable secondary education administration in Anambra State.

Discussion of Findings

The discussion findings of this study are presented as shown below:

Leadership integrity and sustainable secondary education administration

The study revealed that there is a high and positive relationship between leadership integrity and sustainable secondary education administration in Anambra State. This finding agreed with the finding of study conducted by Ahmed (2021) who pointed out that the challenges secondary schools in Anambra State are facing include lack of integrity and poor financial management in public institutions. Nwangwu (2015) stated that the foundation of education is frail when there is no integrity and the products of such foundation are weak intellectuals. When there were just few secondary administrators, government were able to supervise the schools, there has been massive increase in the number of secondary schools and in students' enrolment in Nigeria. This increase has gotten to the point where Government openly acknowledged that it can no longer saddle the responsibilities of schools alone. Therefore, the null hypothesis of no significant relationship between leadership integrity and sustainable secondary education administration is rejected.

Leadership accountability and sustainable secondary education administration

The study revealed that there is a high and positive relationship between leadership accountability and sustainable secondary education administration in Anambra State. This finding agrees with Wunti (2012) who believed that concern for leadership accountability in the development of education stems

in part, from the recognition that in Nigeria, like other developing countries of the world, the government is financially unable to provide the much-needed educational facilities for all its schools. For this reason, there is leadership accountability in terms of provision and maintenance of basic facilities necessary and required for implementation of a school curriculum. Therefore, the null hypothesis of no significant relationship between leadership accountability and sustainable secondary education administration is rejected.

Conclusion

In line with the findings from this study, it was concluded that leadership integrity and leadership accountability are the components of integrating ethical leadership and have positive relationship with sustainable secondary education administration in Anambra State. Finally, there is a significant relationship between integrating ethical leadership (integrity and accountability) and sustainable secondary education administration in Anambra State

Recommendations

From the findings of the study, the following recommendations were made:

1. Principals in public senior secondary schools in Anambra State should encourage the use of leadership integrity for sustainable secondary education administration in Anambra State.
2. The use of leadership accountability should be employed by principals for sustainable secondary education administration in Anambra State.

Abstract

This study investigated the Impact of social media on Academic Performance of Secondary School Students in Makurdi Local Government Area. Two research question and two hypotheses guided the study. A review of related literature was carried out under theoretical/conceptual framework, empirical studies and summary. Descriptive survey design was used for the study. The population was 8520 students in 25 Secondary Schools in Makurdi Local Government Area. Ten public Secondary Schools out of 25 in Makurdi Local Government Area were selected using simple random sampling techniques to select 200 students in sampled (20 students per school). An instrument titled: "Impact of Social Media on Academic Performance¹. Questionnaire (ISMAP) was used for data collection. Data collected were analyzed using mean and standard deviation to answer research questions and chi-square test of goodness of fit was used to test the null hypothesis. The results showed that use of Facebook, and Whatsapp, have significant impact of social media on Academic Performance of Secondary School Students in Makurdi Local Government Area. The researchers therefore, the study recommended that the School administrators should embark on regular inspection of students to fish out students who engage in facebook during school hours and be punished if caught so as to serve as deterrent for others and the study also recommended that the Parents should also monitor the activities of their children at home especially those who engage whatapp throughout the day do desist from such act and concentrate on their studies even at home.

Keywords: *Impact, Social Media, Academic Performance, Secondary School Students*

Introduction

Academic performance of students especially at the secondary school level is not only pointer to the effectiveness or otherwise of schools but a major determinant of the future of youths in particular and the nation in general (Ewumi, 2012). Adeyemo (2014) also opined that the major goal of the school is to work towards attainment of academic excellence by students. He further maintained that school may have other peripheral objectives but excellent academic performance of children is often the expectation of all parents. Thus, the role of academic performance as one of the

predictors of one's life success and also in the aspect of academic placement in schools to higher institutions as well as the level of employability in one's career is inevitable (Kyoshaba, 2019).

According to Kathryn (2010) academic performance also refers to excellence in all academic discipline, in a class as well as extra- curricular activities. It includes excellence in sporting behaviour, confidence, communication skills, and others. Steinberg (2015) posit that academic performance encompasses students' ability and performance: it is multidimensional; it is intricately related to human growth and cognitive, emotional and social physical development; it reflects the whole child; it is not related to a single instance, but occurs across time and levels, through a student's life in public school and into post-secondary years and working life. It thus, refers to how well a student is accomplishing his tasks and studies (Alexander, 2012).

Social Media on the other hand is a form of electronic communication which facilitates interaction based on certain interests and characteristics. Lenhart and Mattern (2017) defined Social media as any web site that enables users to create public profiles within the web sites and form relationships with other users of the same web sites. Social media networking sites can be described as community- based web sites, online discussion \ rum, chat rooms and other social spaces online. Social media network sites affect individual relationships, expand their personal networks. Therefore, it is an online service that facilitates the building of social relations among people who share the same interests, activity, backgrounds or real life issues. Social network services consist of a representative of each user, for example, a profile, social links and other services in the network (Coyle, 2018).

According to Enikuomelin (2011), a direct relationship exists between social media usage and academic performance of students in secondary schools. However, the darker side within technological evolution has resulted in dilemmas such as the set back of real values of life, especially among teenage students who form the majority of users interacting through the use of social networking sites. With so many social media sites displayed on the internet, students are tempted to abandon their homework and reading times in preference for online chatting with friends. Many students are now addicted to the online rave of the moment, with facebook, Whatsapp, twitter, blog, 2go, instagram, yahoo messages, youtube and myspace.

Facebook According to Alvarez (2015), is a popular free social networking website that allows registered users to create profiles, upload photos and video, send messages and keep in touch with friends, family and colleagues. Anyone can be a roistered user of the website. Users create a profile and add other friends: they can exchange messages, post status, updates and photos, share video and receive notifications •A hen others update their profiles.

Whatsapp according to Fawzi (2015) is a mobile application used for instant messaging purposes to replace the normal phone short messages (SMs) because of its capacity to send large volume of messages and media files unlike the SMs. Once whatsapp application is installed, users can then create their personal whatsapp account which will be visible to other whatsapp users in their phone contact lists upon synchronization. Whatsapp therefore enable two people to chat and make video or voice call, and groups of people to make group chat using internet/Wi-Fi connection or data charges.

Social media generally have one common goal which is to encourage new ways to communicate and share information. It also provides great opportunities for members including secondary school students who use it to promote the services of the library and et first class information of what is happening around them. The students thus, benefit from the postings in some sites because some postings can be informative and educative and the students after reading such posts can comment on them. However, some secondary school students have formed the habit of visiting different social media sites which may be reason for poor academic performance of students in secondary schools in Makurdi Local Government Area. It is in the light of this background that this study seeks to investigate the impact of social media on academic performance of secondary school students in Makurdi Local Government Area of Benue State.

Statement of the Problem

The problem of poor academic performance of students in Nigerian secondary schools in general and Makurdi Local Government Area of Benue State in particular has been an issue of great concern. Parents, teachers, curriculum experts and school counsellors have also expressed considerable concern about this poor performance in external examination such as; West African Examination Council (WAEC) and National Examination Council (NECO). While some students perform well in these examinations, a huge number perform poorly.

The entire process of education and the development of literacy depend on printed words and reading which is the crucial means through which students develop this literacy and the knowledge about its environment. Nevertheless, secondary school students who supposed to use social media to promote and uplift their academic career turn it to a reverse. as these set of students are often being observed during school time in various hiding places either chatting or watching immoral videos.

It is so common these days that many young people are addicted to social media activities, abandoning homework and reading time in preference to chatting with friends, even at lecture times, many students are on phones engaging in one form of chatting or the other which can be quite distracting and loss of concentration most times. The academic performance of students is thus, facing a lot of neglect and divided attention between social media activities and their academic work. It is also observed that students devote more attention to social media sites than they do to their studies. Therefore, this study seeks to investigate the impact of social media on academic performance of secondary school students in Makurdi Local Government Area.

Purpose of the Study

The purpose of this study was to investigate the impact of social media on Academic performance of secondary school students in Makurdi Local Government Area. Specifically, the study seeks to:

1. determine the impact of facebook on academic performance of secondary school students in Makurdi Local Government.
2. ascertain the impact of whatsapp on academic performance of secondary school students.

Research Questions

The following questions are to guided the study;

1. To what extent does facebook impact on academic performance of secondary school students in Makurdi Local Government Area?
2. What is the impact of the use of whatsapp on academic performance of secondary school students?

Hypotheses

The following hypotheses were formulated and tested at 0.05 level of significance:

1. There is no significant impact of facebook on academic performance of secondary school students in Makurdi Local Government Area.
2. There is no significant impact of whatsapp on academic performance of secondary school students.

Scope of the Study

The focus of this study is to examine the impact of social media on academic performance of secondary school students. It is limited to variables such as;facebook and whatsapp. The research is limited to public secondary schools in Makurdi Local Government Area.

Methodology

The research employed descriptive survey design which according to Emaikwu(2013) is one in which a group of people or items are studied by collecting and analyzing data from people considered to be representative sample of the entire population. The research covered Makurdi Local Government area of Benue State. The population of this study consists of 8520 students in public secondary school in Makurdi Local government. The total population of students in public secondary school in Makurdi Local Government according to the Directorate of planning, Research and Statistics of Benue State Teaching Service Board (2022) is 9,852 students.

A sample size of 200 respondents was used for this study. These participants was selected from the population of 8520 from the study using stratified random sampling and simple random sampling. Stratified random sampling was used to select 10 public secondary schools out of the 25 in Makurdi LGA. While, simple random sampling was used to select two hundred 200 students in the proportion of 20 students per schools. The simple random sampling technique was used in order to guarantee equal chances for all the students of been selected into the sample.

The instrument that was used for the collection of data in this study is questionnaire. A structured questionnaire constructed by the researcher titled, "Social Media and Academic Performance Questionnaire (SMAPQ)" was used for data collection. The questionnaire contained 10-items and was structured into two clusters based on the purpose of the study. Cluster A dealt with items concerning facebook, and cluster B dwelled on items concerning whatsapp. The instrument was constructed on a four points rating scale with a response mode of Strongly Agree (SA) - 4, Agree (A) - 3, Disagree (D) - 2 and Strongly disagree (SD) - 1 responses to discriminate the respondents' opinions.

The questionnaire was administered in each school by the researchers after taking permission from the schools authority. After giving permission, the researchers met the students and explained the purpose of the study before given them the questionnaire. The participants were allowed enough time to respond to the questionnaire items before instant retrieval. These methods of administration was adopted to ensure high response rate. Data from the respondents was analyzed using mean scores and standard deviation to answer the research questions and chi-square statistical tool was used to test hypotheses at 0.05 level of significance. Since the four-point rating scale were adopted for the research, 2.50 was used as the cut off mean score. Thus, an item with any mean score of 2.50 and above was regarded as having influence while, any item with a mean score below 2.50 was regarded as negative responses and rejected.

Results and Discussions

Research Question 1:

To what extent does facebook impact on academic performance of secondary school students in Makurdi Local Government Area?

The data that provided answer to the research question are presented on Table 1.

Table 1: Mean Ratings and Standard Deviation of Students on the Impact of Facebook on Academic Performance of Secondary School Students in Makurdi Local Government Area

Item No	Item Description	SA	A	D	SD	$\bar{X}$	SD	Decision
1.	I usually have unlimited access to facebook and this has affected my academic performance negatively.	140	40	15	5	3.53	0.87	Agree
2.	Chatting on facebook sometimes distract me from my studies.	124	50	18	8	3.45	0.82	Agree

3.	The hours spent on facebook can never be compared to the number of hours I spend on reading my book.	120	39	32	9	3.25	0.95	Agree
4.	There is no improvement in my grades since I engaged in facebook usage.	111	56	20	13	3.33	0.90	Agree
5.	I used facebook to facilitate academic discussion.	100	52	27	21	3.20	1.03	Agree
Cluster Man						3.35		Agree

Source: Field Study 2023

Table 1 shows that items 1-5 had mean scores of 3.35, 3.45, 3.25, 3.33 and 3.20 with corresponding standard deviations of 0.87, 0.82, 0.95, 0.90 and 1.03 respectively. Based on the criteria for decision making, it means that all the items were rated above the cut-off point of 2.50. The cluster mean of 3.35 was also above the cut-off point of 2.50. The standard deviation scores of the respondents are small signifying homogeneity for the items raised. This implies that Facebook impact on academic performance of secondary school students in Makurdi Local Government Area.

Research Question 2:

What is the impact of the use of Whatsapp on academic performance of secondary school students?
The data that provided answer to the research question are presented on Table 2.

Table 2: Mean Ratings and Standard Deviation of Students on the Impact of Whatsapp on Academic Performance of Secondary School Students

Item No	Item Description	SA	A	D	SD	$\bar{X}$	SD	Decision
6.	I make use of whatsapp to disseminate knowledge to my class mate	110	63	20	7	3.38	0.81	Agree
7.	Engaging in academic group on whatsapp improve my rate of understanding.	67	71	38	24	2.97	1.03	Agree
8.	The use of whatsapp affects my attention in class.	124	37	21	18	3.34	0.99	Agree
9.	I exchange visual materials related to my subjects on whatsapp which affect my concentration to class lesson.	143	33	19	5	3.49	0.77	Agree
10.	I engage in academic discussion with my classmate through whatsapp which distract me from learning.	100	52	27	21	3.20	1.03	Agree
Cluster Mean						3.35		Agree

Source: Field Study 2023

Table 2 shows that items 6-10 had mean scores of 3.38, 2.97, 3.34, 3.49 and 3.41 with corresponding standard deviations of 0.81, 1.03, 0.99, 0.77 and 0.89 respectively. Based on the criteria for decision making, it means that all the items were rated above the cut-off point of 2.50. The cluster mean of 3.32 was also above the cut-off point of 2.50. The standard deviation scores of the respondents are small signifying homogeneity for the items raised. This implies that the use of Whatsapp impact on academic performance of secondary school students.

Hypothesis Testing

In order to test the three hypotheses of this study, the chi-square (χ^2) test of goodness of fit was used to test the option of respondents at 0.05 level of significance and the result are presented on table 3 – 4 and the detailed analysis shown in appendix C.

Hypothesis 1:

There is no significant mean difference in the impact of facebook on academic performance of secondary school students in Makurdi Local Government Area.

Table 3: Chi-Square Test of the Impact of Facebook on Academic Performance of Secondary School Students

Opinions	Observed N	Expected N	Residual	Level of Sig.	Df	χ^2_{cal}	P.V	Decision
SD	9	50.0	-41.0	0.05	3	140.12	0.00	Sig.
D	34	50.0	-16.0					
A	37	50.0	-13.0					
SA	120	50.0	70.0					

a. 0 cells (.0%) have expected frequencies less than 5. The minimum expected cell frequency is 50.0.

Table 3 revealed that $\chi^2_{cal} = 140.12$, at $df = 3$ and $p = 0.00$. since p -value of $0.00 < 0.05$ at 3 degree of freedom, the null hypothesis which states that there is no significant impact of facebook on academic performance of secondary school students in Makurdi Local Government Area was therefore, rejected. This implies that there is significant impact of facebook on academic performance of secondary school students in Makurdi Local Government Area.

Hypothesis 2:

There is no significant impact of whatsapp on academic performance of secondary school students

Table 4: Chi-Square Test of the Impact of Whatsapp on Academic Performance of Secondary School Students

Opinions	Observed N	Expected N	Residual	Level of Sig.	Df	χ^2_{cal}	P.V	Decision
SD	11	50.0	-39.0	0.05	3	152.20	0.00	Sig.
D	32	50.0	-18.0					
A	33	50.0	-17.0					
SA	124	50.0	74.0					

a. 0 cells (.0%) have expected frequencies less than 5. The minimum expected cell frequency is 50.0.

Table 4 revealed that $\chi^2_{cal} = 152.20$, at $df = 3$ and $p = 0.00$. since p -value of $0.00 < 0.05$ at 3 degree of freedom, the null hypothesis which states that there is no significant impact of whatsapp on academic performance of secondary school students was therefore, rejected. This implies that there is significant impact of whatsapp on academic performance of secondary school students.

Discussion of Findings

Based on the results of the analysis of the three research questions and testing of the three hypotheses postulated for the study, the following findings are organized and discussed here for ease of understanding.

The first finding of this study revealed that Facebook has significant impact on students' academic performance in secondary schools in Makurdi Local Government area. This finding is in agreement with Larson (2014) who found that students use Facebook for entertainment, relaxing/escaping, and passing time, but not for academic and social information- Also, spending time on Facebook has negative effect on their academic performance. The finding also corroborates with Osharive (2015) who found that a great number of students in the university of Lagos are addicted to facebook with disturbing effects on their result in lower Grade Point Average.

The second finding of the study indicated that there is significant impact of whatsapp on academic performance of secondary school students. This finding relates with Adzharuddin (2014) who found that majority of users are familiar with Whatsappmessenger and use Whatsapp for academic purposes. The finding also agrees with Nwaizugbu (2018) who found that no significant difference existed between the mean values of the two groups at post-test level. Hence, supplementing the classroom teaching with newer technologies such as whatsapp group discussion offer the students all times and on-the-go learning opportunities.

Conclusion

Based on the findings of this study, it was concluded that there is significant impact of facebook andwhatapp on academic performance of secondary school students in Makurdi Local Government Area.

Recommendations

Based on the conclusion of the study, the following recommendations were made:

1. School administrators should embark on regular inspection of students to fish out students who engage in facebook during school hours and be punished if caught so as to serve as deterrent for others.
2. Parents should also monitor the activities of their children at home especially those who engage whatapp throughout the day do desist from such act and concentrate on their studies even at home.

Institute of Education, Rivers State University

Abstract

The study investigated organizational ethics variables on effective management of public senior secondary schools in Rivers State. Three objectives and research questions guided the study. The study used descriptive survey design. A self-designed questionnaire titled —school management effectiveness questionnaire was used to collect information for the study. 800 school managers made up the population of the study and a sample of 250 respondents was drawn from the population using stratified random sampling technique. Out of the 250 copies of questionnaire administered, only 238 were retrieved and used for the study's analysis. The instrument was face and content validated through expert review by educational management specialists in Rivers State University and legal/ethical studies scholars, and the internal consistency of the questionnaire was determined using Cronbach Alpha. Overall reliability index of 0.82 was obtained. The data collected were analyzed using mean and standard deviation. Findings revealed that legal compliance, ethical leadership, and core institutional values influence effective school management to a high extent in public secondary schools in Rivers State. It was recommended that, the Ministry of Education should provide regular training and sensitization for school managers on the legal frameworks governing school operations to ensure greater compliance and accountability, school leadership development programmes should prioritize ethical behaviour, focusing on fairness, transparency, and moral responsibility and schools should collaboratively define and promote core values such as respect, excellence, inclusiveness, and accountability. These values should be embedded in school culture and daily practices.

Keywords: Organizational Ethics Variables, Effective Management, Legal Compliance, Ethical Leadership, Core Institutional Values

Introduction

Effective school management is a cornerstone of quality education delivery. Especially in public secondary schools, where managerial leadership significantly influences teaching, learning, discipline, resource management, and stakeholder engagement. In recent years, there has been growing recognition of the role that organizational ethics variables such as legal compliance, ethical leadership, and core institutional values play in fostering a conducive learning environment and ensuring effective governance in schools. According to Okafor and Okocha (2021) these variables are essential not only for regulatory purposes but also shaping the moral and operational character of educational institutions. Legal compliance in school administration refers to adherence to established laws, policies, and regulations that govern the operation of educational institutions. These include national education laws, state policies, teacher service codes, procurement guidelines, and child protection statutes. In the Nigerian context, the Universal Basic Education Act (2004), the National Policy on Education (2014),

and state-level educational edicts provide a legal framework within which public schools must operate. Compliance with these laws helps prevent administrative malpractice, ensures accountability, and protects the rights of students and staff (Adebayo & Ogunyemi, 2019). Failure to comply with legal standards often leads to managerial inefficiency, financial mismanagement, and loss of public trust in school leadership.

Ethical leadership is equally central to effective school management. Ethical leaders are guided by principles such as fairness, honesty, integrity, transparency, and responsibility in decision-making. In the school setting, this translates into equitable treatment of students and staff, honest handling of school funds, ethical hiring practices, and responsible disciplinary measures (Ugwulashi, 2017). Ethical leadership also fosters trust and collaboration among stakeholders, which enhances staff motivation, student discipline, and overall school performance. In Rivers State, where challenges such as politicization of education, mismanagement of resources, and corruption are not uncommon, ethical leadership becomes a critical countermeasure to ensure that school goals are achieved efficiently and morally.

Furthermore, core institutional values such as respect, excellence, accountability, and commitment to service form the cultural bedrock of schools and influence the behaviour of managers, teachers, and students. Values shape how decisions are made, how conflicts are resolved, and how members of the school community interact. Institutions that promote strong positive values tend to promote strong positive values to record higher levels of staff commitment, student discipline, and managerial coherence (Onyije & Olanrewaju, 2020). In Rivers State, where socio-political and economic pressures may challenge the moral compass of public institutions, institutional values serve as internal guiding principles that uphold standards even in the absence of external supervision.

The interrelationship among legal compliance, ethical leadership, and institutional values is crucial. While legal frameworks provide the structural boundaries within which schools operate, ethical leadership ensures moral direction, and institutional values instill a shared sense of purpose and identity. Together, they influence managerial effectiveness by promoting transparency, accountability, and student-centered policies. However, there is limited empirical evidence on how these variables interact to affect the effectiveness of school management in public secondary schools in Rivers State. The study therefore seeks to fill this gap by empirically investigating the influence of legal compliance, ethical leadership, and core institutional values on the effectiveness of school management in public senior secondary schools in Rivers State. The findings are expected to contribute to policy refinement, leadership development programmes, and the formulation of strategies for improved school governance.

Literature Review

Theoretical Framework

This study is anchored on three interrelated theories: Institutional Theory, Ethical Leadership Theory, and Transformational Leadership Theory. Each of these theories provides a conceptual lens through which the variables: legal compliance, ethical leadership, and core institutional values can be examined in relation to school management effectiveness.

Institutional Theory (Meyer & Rowan, 1977)

Institutional Theory posits that organizations function within a structured and regulated environment where formal rules, laws, and norms influence organizational practices. Compliance with these external expectations legitimizes the organization and enhances its credibility and efficiency. In the context of school management, legal frameworks such as the Universal Basic Education Act (2004), the National Policy on Education (2013), and state-level educational policies act as institutional mechanisms that define how public schools should operate. Adherence to these legal instruments foster transparency, accountability, and consistency in school governance (Okafor & Okocha, 2021). Thus, Institutional Theory supports the argument that legal compliance is a prerequisite for effective school management.

Ethical Leadership Theory (Brown, Treviño & Harrison, 2005)

Ethical Leadership Theory emphasizes the role of morality, fairness, integrity, and role modeling in effective leadership. Ethical leaders set standards for behaviour, make fair decisions, and encourage others to act ethically through communication and example. In the context of school leadership, ethical managers create a climate of trust, fairness, and professional conduct, which significantly impacts teacher morale, student behavior, and organizational cohesion (Ugwulashi, 2017). By applying Ethical Leadership Theory, this study recognizes that the presence of ethical behavior in school leadership enhances decision-making, conflict resolution, and staff motivation, thereby improving managerial effectiveness.

Transformational Leadership Theory (Burns, 1978; Bass, 1985)

Transformational Leadership Theory focuses on leaders who inspire and motivate followers to exceed expectations by fostering a shared vision, promoting innovation, and nurturing organizational values. It is particularly relevant in educational settings where leaders are expected to instill a sense of mission and commitment among teachers and students. This theory provides the basis for understanding how core institutional values such as respect, accountability, and commitment can be embedded in school culture and contribute to managerial effectiveness. Transformational leaders align the values of staff and students with institutional goals, creating a cohesive and purpose-driven environment (Sergiovanni, 1992).

Synthesis of Theories

Together, these three theories offer a robust framework for understanding the interplay between external legal requirements (Institutional Theory), internal moral behavior (Ethical Leadership Theory), and shared cultural values (Transformational Leadership Theory) in shaping school management effectiveness. The synergy of these perspectives allows for a comprehensive analysis of how leadership, law, and values interact to enhance the functioning of public secondary schools in Rivers State.

Legal Compliance in School Management

Legal compliance serves as the foundation of responsible and effective school governance. Laws and regulations in the education sector ensure that school managers uphold standards in areas such as curriculum implementation, personnel management, financial accountability, student welfare, and infrastructure development. Adebayo and Ogunyemi (2019) stated that adherence to legal provisions enhances managerial transparency and minimizes occurrences of misconduct or abuse of power. In the Nigeria context, public secondary schools are expected to comply with frameworks such as the National Policy on Education (2014), Child Rights Act (2003), and laws. Non-compliance can lead to legal sanctions, loss of stakeholder confidence, and diminished institutional performance (Okoro & Ibe, 2018).

Ethical Leadership and Managerial Effectiveness

Ethical leadership has been shown to play a pivotal role in influencing the quality of decision-making and the moral tone of school leadership. Ethical leaders demonstrate integrity, fairness, empathy, and a strong sense of justice, which promotes a culture of mutual respect and shared responsibility in schools (Brown & Trevino, 2006). In Nigeria, studies indicate that ethical lapses such as favoritism in staff promotion, misappropriation of funds, and lack of transparency in student assessments hinder managerial effectiveness (Ugwulashi, 2017). Ethical leadership enhances communication, builds trust, and strengthens teamwork among staff and students, thereby improving organizational climate and learning outcomes (Edeh & Nwankwo, 2020).

Institutional Values and School Culture

Institutional values from the cultural identity of schools and guide behaviours, decisionmaking and relationships. Values such as respect, responsibility, excellence, and accountability are instrumental in shaping the ethos of school communities (Onyije & Olanrewaju, 2020). Schools that internalize and promote strong values experience better student discipline, stronger teacher commitment, and improved academic performance. Moreover, institutional values reinforce ethical leadership and facilitate compliance with rules by nurturing a shared understanding of what is right and expected (Adepoju & Adelabu, 2019).

Combined Influence on Managerial Effectiveness

The synergy among legal compliance, ethical leadership, and institutional values is critical to effective school management. Research by Iroegbu and Okafor (2021) demonstrates that school managers who operate within legal boundaries, lead ethically, and promote institutional values tend to achieve higher levels of performance and stakeholder satisfaction. Conversely, schools lacking in these areas often suffer from conflict, poor staff morale, and inefficient resource use. While studies have independently examined each of these variables, there is dearth of empirical research exploring their combined influence, particularly in the public education sector of Rivers State.

Statement of the Problem

School managers in Rivers State often operate in environments marked by irregular policy enforcement, moral dilemmas, and conflicting value systems. These factors can compromise managerial decisions and affect school effectiveness. The extent to which legal compliance, ethical leadership, and institutional values contribute to resolving these challenges remains underexplored.

Purpose of the Study

The main objective of this study is to investigate organizational ethics variables on effective management of public senior secondary schools Rivers State. The specific objectives are to:

4. Determine the extent to which legal compliance influence school management effectiveness in public senior secondary schools in Rivers State.
5. Examine the extent to which ethical leadership influence school management effectiveness in public senior secondary schools in Rivers State.
6. Ascertain the extent to which core institutional values influence school management effectiveness in public senior secondary schools in Rivers State.

Research Questions

The following research questions guided the study.

4. To what extent does legal compliance influence school management effectiveness in public senior secondary schools in Rivers State?
5. To what extent does ethical leadership influence school management effectiveness in public senior secondary schools in Rivers State?
6. To what extent does core institutional values influence school management effectiveness in public senior secondary schools in Rivers State?

Methodology

A descriptive survey design was adopted in the study, and the population of the study consisted of 800 school managers in all the public senior secondary schools in Rivers State. A sample of 250 respondents was drawn from the population using stratified random sampling technique to ensure representation across the three senatorial zones of Rivers State (Rivers East, Rivers West, Rivers South-East). Each stratum included participants from both urban and rural schools to capture a broad range of administrative contexts. The primary instrument for data collection was a structured questionnaire titled —School Management Effectiveness Questionnaire (SMEQ). The instrument

contained 15 items, which were responded to on a 4-point modified Likert scale of Very High Extent (VHE), High Extent (HE), Low Extent (LE), and Very Low Extent (VLE). These weights were summed and divided by 4 to arrive at 2.50, which was the criterion mean score used to agreeing or disagreeing with the questionnaire items. Content and face validity was established through expert review by educational management specialists in Rivers State University and legal/ethical studies scholars, and the internal consistency of the questionnaire was determined using Cronbach Alpha. Reliability indexes of 0.82, 0.84, and 0.80 was realized from the three clusters. Out of the 250 copies of questionnaire administered, only 238 were retrieved by the researchers with the help of a trained research assistant at a date and time agreed upon with the respondents. The research questions raised in this study were answered using mean and standard deviation statistics.

Results and Findings

Research Question 1: To what extent does legal compliance influence school management effectiveness in public senior secondary schools in Rivers State?

Table 1: Mean Ratings on the influence of Legal Compliance on School Management Effectiveness

S/No	Items	Mean	SD	Remarks
1	The school leadership adheres to government educational policies and regulations.	3.52	0.70	HE
2	Managerial decisions in this school comply with the rules and codes of conduct provided by the Ministry of Education.	3.19	1.02	HE
3	Financial expenditures are subject to legal approval and auditing procedures.	2.76	1.14	LE
4	There is regular training on legal obligations and compliance for school leaders.	3.55	0.99	HE
5	The school maintains accurate and legally required documentation for all operations.	3.83	1.08	HE

The data on table 1 showed that the respondents to a high extent generally agreed on the influence of legal compliance on school management effectiveness. Based on the responses of these respondents to the question posed it is obvious that the respondents agreed to a high extent on all the items except variable item 3 which stated that financial expenditures are subject to legal approval and auditing procedures which has a low extent agreement.

Research Question 2: To what extent does ethical leadership influence school management effectiveness in public secondary schools in Rivers State?

Table 2: Mean Ratings on the influence of Ethical Leadership on School Management Effectiveness

S/No	Items	Mean	SD	Remarks
6	The school administrator models honesty and integrity in decision-making.	3.31	0.75	HE
7	Staff are treated fairly and equitably regardless of gender, tribe, or religion.	3.24	1.10	HE
8	Ethical behavior is encouraged and rewarded among staff members.	3.06	1.01	HE
9	The school head accepts responsibility for their decisions and actions.	3.15	0.94	HE

10	Transparency is maintained in the allocation of duties and use of resources.	3.04	1.16	HE

The data on table 2 showed that the respondents generally agreed to a high extent on all the variable items concerning the influence of ethical leadership on school management effectiveness. This can be attested to by the total mean which ranged from 3.04 to 3.31 which is higher than the criterion mean of 2.50. Variable item 6 which concerns the school administrator models honesty and integrity in decision-making has the highest total mean of 3.31.

Research Question 3: To what extent does core institutional values influence school management effectiveness in public secondary schools in Rivers State?

Table 3: Mean Ratings on the influence of Core Institutional Values on School Management Effectiveness

S/No	Items	Mean	SD	Remarks
11	The school promotes shared values such as respect, accountability, and excellence.	3.95	0.82	VHE
12	Staff and students understand and uphold the core values of the institution.	3.20	0.93	HE
13	Conflicts are resolved in line with the moral and cultural values of the school.	3.60	1.13	LE
14	Leadership decisions reflect the school's stated mission and values.	3.45	0.92	HE
15	The school consistently reinforces a culture of professionalism	3.22	1.01	HE

The data on table 3 showed that all the core institutional values items considered on research question 3 were all generally agreed upon to a high extent to influence school management effectiveness. Based on the responses of the managers who constituted the respondents of the study on this research question, it is apparent that item 11 which states: the school promotes shared values such as respect, accountability, and excellence with a mean of 3.95 has the highest total mean. This means that this variable item influence school management effectiveness.

Discussion of Findings

On the first research question which considered the extent to which legal compliance influence school management effectiveness in public secondary schools in Rivers State, the researcher discovered that respondents affirmatively agreed to a high extent on all the items expect item 3 which stated that financial expenditures are subject to legal approval and auditing procedures with a low extent agreement. These responses implies that when school managers adhere to established educational laws, policies, and regulatory frameworks, the school functions more efficiently, with clearer roles, accountability, and operational transparency. This finding supports the view of Ezeani and Ofojebe (2019), who asserted that legal compliance enhances procedural justice and reduces conflict in school systems. It also aligns with Adegbesan (2018), who found that regulatory adherence fosters a climate of fairness and discipline necessary for effective leadership.

The second research question analyzed the extent to which ethical leadership influence school management effectiveness in public secondary schools in Rivers State. It was revealed that respondents generally agreed to a high extent on all the variable items concerning the research question. The

aggregate mean which ranged from 3.04 to 3.31 is higher than the criterion mean of 2.50. Ethical leadership practices such as transparency, integrity, fairness, and accountability were found to positively impact school operations. This supports findings by Brown and Treviño (2006) and Olagunju (2020), which emphasized that ethical school leaders foster trust, boost staff morale, and create environments conducive to teaching and learning. In the context of Rivers State, ethical leadership appears to mitigate issues of favoritism, mismanagement, and poor communication.

The third research question determined the extent to which core institutional values influence school management effectiveness in public secondary schools in Rivers State. Based on the analyzed result, it is apparent that all the core institutional values variables considered on research question 3 were all generally agreed upon to a high extent that core institutional values influence school management effectiveness. From the responses of the school managers who constituted the respondents of the study on this research question, it is apparent that item 11 which states: the school promotes shared values such as respect, accountability, and excellence with a mean 3.95 has the highest total mean. Such a high mean reflects that values such as respect for diversity, inclusiveness, accountability, and shared vision were instrumental in guiding school practices. This agrees with the work of Sergiovanni (1992), who argued that strong institutional values bind school communities together and provide a moral compass for leadership decisions. In public secondary schools in Rivers State, such values seem to help shape a professional culture that enhances collaboration and goal attainment.

Contribution to Knowledge

This study contributes to the existing body of knowledge by empirically demonstrating that legal compliance, ethical leadership, and institutional values jointly and significantly predict school management effectiveness in the Nigerian public secondary school context. It also highlights the importance of aligning managerial practice with law, ethics, and values for sustainable school development.

Conclusion

The findings of this study affirm that legal compliance, ethical leadership, and core institutional values are critical to effective school management in public secondary schools in Rivers State. School managers who adhere to legal standards, uphold ethical principles, and cultivate institutional values are more likely to run effective and result-oriented schools. Therefore, fostering legal literacy, promoting ethical conduct, and institutionalizing core values in school management are strategic steps toward achieving better educational outcomes in the public school sector.

Recommendations

Based on the findings and conclusions of this study, the following recommendations are made:

4. The Ministry of Education should provide regular training and sensitization for school managers on the legal frameworks governing school operations to ensure greater compliance and accountability.
5. School leadership development programmes should prioritize ethical behaviour, focusing on fairness, transparency, and moral responsibility.
6. Schools should collaboratively define and promote core values such as respect, excellence, inclusiveness, and accountability. These values should be embedded in school culture and daily practices.

RE-ENGINEERING HIGHER EDUCATION LEADERSHIP IN NIGERIA THROUGH ETHICAL AND VALUES EDUCATION FOR GLOBAL COMPETITIVENESS

Muhammad Saratu Mera Ph.D.

Department of Educational Foundations,
Federal University Birnin Kebbi, Kebbi State.

Email: saratu.mera@fubk.edu.ng, merasaratu@gmail.com

Abstract

Globally, Leadership in higher education continues to be under intense pressure to respond to societal issues resulting from trends in economic and social forces that bring both possible disruption and/or opportunity. Thus, integration of ethical and values education into higher education leadership in Nigeria is pivotal to fostering transformative leadership that aligns with global standards. This is in realization of the fact that Nigeria's higher education system faces challenges such as corruption, lack of accountability, and ethical lapses that hinder its global competitiveness. The lack of proper moral insight may be one of the explanations for the social upheavals and crisis that are prevalent in the higher educational institutions today. This paper emphasized that a deliberate re-engineering of higher education leadership in Nigeria, grounded in a robust framework of ethical and values education, is crucial for achieving and sustaining global competitiveness. The paper examined the conceptual underpinnings of ethical and values education, analyzing the current state within Nigerian institutions, identifying key challenges exploring the concept of global competitiveness, and draws upon international best practices and the specific cultural context of Nigeria, and offer actionable recommendations for stakeholders committed to elevating Nigerian higher education on the global stage.

Keywords: *Re-engineering, Ethics, Values, Higher Education Leadership, Global Competitiveness*

Introduction

In an increasingly interconnected and competitive global landscape, the role of higher education leadership in shaping the trajectory of nations cannot be overstated. Higher education is now considered one of the most important social institutions in our society for many good reasons; It has helped lead the world in research, as evidenced by the number of its Nobel laureates; almost all professions require some form of higher education for certification; and, as indicated by employment statistics, a college education is almost mandatory to get and keep a high-paying job (Wilcox, & Susan, 1992). For Nigeria, a nation aspiring to greater socio-economic development and a prominent position on the world stage, the effectiveness and integrity of its higher education sector are paramount. This is because Nigerian Universities are tasked with producing graduates who are not only equipped with cutting-edge knowledge, skills and competence but also imbued with a strong sense of ethics and values, capable of leading with integrity and contributing to national progress (Ofor-Douglas, 2021). Higher education is essential for all round development of the child, the first and for most aim of the higher education is the formation of character of the child (Shah, 2018). Clearly, the moral and ethical vision of an institution of higher learning must be promulgated and protected by all its members. By virtue of their special position to articulate and disseminate that vision, however, college or university leaders must be particularly aware and committed to ethical concerns. Therefore, the role of leaders of tertiary institutions in transforming its human resource provides a major role in fostering the ability of people in recognizing and managing opportunities and resources. Higher education institutions are custodians of knowledge and since the possession of knowledge is the source of power, this means that these institutions are also the gateway to power, significantly affecting the quality of economic and social life throughout the world. Thus, insofar as higher education institutions create and disseminate

knowledge within a particular society, they are institutions with moral responsibilities to maintain the well-being of that society (Wilcox, & Susan, 1992). This is because work in academic life, like any other kind of work, is laden with values and has a moral dimension that emerges from the ethical reflection characteristic of institutional self-scrutiny (Wilcox & Susan (1992). Hence, leadership in higher education continues to be under intense pressure to respond to societal issues resulting from trends in economic and social forces that bring both possible disruption and/or opportunity coupled with the fact that higher education is faced with globalization and international competition, which means that some of these challenges and competition are no longer only from within the country, but also from overseas (Hendry, Satryo, Engkos & Dyah, 2019).

Thus, the leadership can set the moral tone of the institution by ensuring that ethical issues are raised and discussed. These requirements are especially important in a learning community that, despite the often hierarchical distribution of power within which it must operate, seeks to recognize and value the multifarious voices of its diverse populations (Wilcox, & Susan, 1992)

Ijohn-nelson, Ihunwo, & Ohanyiri (2025) equally observed that, the Nigerian higher education system currently faces significant challenges in its leadership, hinting at the potential for ethical and values education to serve as a transformative force. Often ethical problems exist due to the competing needs of the various roles assumed by the leaders. Wilcox, & Susan (1992) pointed that to assist in dealing with these problems, the institution itself must take a leadership role by properly formulating mission statements based on ethical practices and concerns; fostering collaboration among all faculty, administrators, staff and students to work with the values necessary for institutional effectiveness and overall integrity; and by employing the use of models of ethical decision making.

Ideri (2015) noted that lack of proper moral insight may be one of the explanations for the social upheavals and crisis that are prevalent in our societies today. This means that although, Higher education institutions in Nigeria are at the forefront of moulding future leaders; however, their potential is often undermined by ethical deficits and inadequate values-based leadership. Addressing this gap through ethical and values education could be the key to achieving global competitiveness. Thus, this paper posits that a deliberate re-engineering of higher education leadership in Nigeria, grounded in a robust framework of ethical and values education, is crucial for achieving and sustaining global competitiveness.

Conceptual Framework

The terms "ethical and values education" in the context of higher education encompass a multifaceted approach aimed at cultivating moral character, promoting responsible behavior, and fostering a commitment to ethical principles within the academic community. Academic literature offers various definitions, often converging on the development of individuals who not only possess knowledge and skills but also demonstrate integrity and a concern for the well-being of others and society. According to Ideri (2015) ethics are the universal values and standards of conduct that every rational person wants every other to follow, he asserts further that, the essence of ethics is to enable man to fully understand the reasons underlying the approval and disapproval of both his actions and that of his fellow men (Ideri, 2015). Therefore, ethics or values education is fundamentally concerned with developing good character, emphasizing core ethical values such as fairness, honesty, compassion, responsibility, and respect for oneself and others (Zohoor & Miller, 2003). These principles are not confined to specific cultures but are widely accepted as foundational for a functional and just society. The authors asserts further that these values are essential for the proper functioning of institutions of higher learning as engines of knowledge production, innovation, and societal progress.

Ethics education in higher education also involves understanding the principles of right and wrong across legal, social, and moral dimensions, striving for an integration of these aspects in decision-making (Shah, 2018). It can be viewed as the codification of morality within the rules and norms established by institutions and society (Pijanowski, 2022). A key component of this education is the development of moral reasoning skills through critical thinking, enabling students and leaders to analyze complex ethical dilemmas and make informed judgments (EuroSchool, 2023). Ethical and

values education emphasizes integrity, accountability, and social responsibility. These principles are essential for creating leaders who can navigate complex global challenges while upholding ethical standards. In the Nigerian context, embedding these values in higher education leadership is vital for:

1. Fostering Accountability: Encouraging transparency in decision-making processes.
2. Building Trust: Enhancing the credibility of institutions both locally and internationally.
3. Promoting Equity: Ensuring inclusivity and fairness in leadership practices.

Therefore, the purpose of ethical and values education in Universities extends beyond individual moral development to include the formation of ethical citizens and professionals who are equipped to contribute to a sense of social justice and engage in critical thinking about societal issues (Gallant, 2019). Academics, in particular, bear the responsibility of upholding these ethics and values through their integrity, social responsibility, and commitment to academic freedom, serving as role models for students (Teachers Institute, 2023).

Global competitiveness in higher education refers to the ability of Universities to effectively position themselves within the international academic landscape, attracting and retaining high-quality students, faculty, and resources while contributing significantly to research, innovation, and societal impact (Günay, 2021). This concept extends beyond mere institutional success, playing a vital role in a country's overall economic and social competitiveness.

Increasingly, ethical leadership is recognized as a fundamental contributor to the international standing and competitiveness of higher education institutions globally. Ethical leadership fosters trust, accountability, and a positive institutional reputation, which are essential for attracting international students, faculty, and partners (Peterson, Sandy, & Rideaux, 2025). It also positively impacts organizational performance, innovation, and employee engagement, creating a thriving academic environment.¹⁰³ Notably, ethical considerations are increasingly being incorporated into university ranking methodologies, with rankings like the WURI ranking specifically assessing ethical value and others, such as the Sub-Saharan Africa University Rankings and QS Stars, including pillars or metrics related to ethics and governance.⁸⁵

The Current State of Ethical and Values Education in Nigerian Higher Education Institutions

The current landscape of ethical and values education within Nigerian higher education institutions presents a complex picture marked by both stated intentions and persistent challenges. Nigeria, as a society, grapples with pervasive anti-social behaviours and a noticeable moral decadence that unfortunately reflects within its higher education sector (1john-nelson, Ihunwo, & Ohanyiri, 2025). Issues facing higher education, such as racism, sexism, homophobia, substance abuse, and academic dishonesty to mention but a few. All those issues argue for the pursuit of an ethical environment that consistently asserts the importance of human dignity, nourishes growth and achievement, and insists on respect in interpersonal communication and relations ((Wilcox, & Susan, 1992). Similarly, Ejeh (2022) equally observed that immoral activities and behaviours have permeated and adversely affected the Nigerian educational system, thereby violating and making mockery of the entire National Policy on Education. Looking at the philosophy of education in Nigerian as highlighted in the National Policy on Education as the building of;

—A free and democratic society

A just and egalitarian society,

A united strong and self-reliant nation,

A great and dynamic economy,

A land of bright and full opportunities for all citizens (FGN, 2013)l.

The second statement in the policy - a just and egalitarian society emphasizes the need for a society in which there is justice and equity and this can only be possible if morality forms the foundation of our educational system (Ejeh, 2022).

This is because while the National Policy on Education outlines core values such as respect for dignity, faith in rational decisions, and moral and spiritual principles (1john-nelson, Ihunwo, &

Ohanyiri, 2025), the practical integration of robust values-based curricula, particularly those deeply rooted in indigenous or religious moral philosophies, appears to be insufficient and often, the emphasis remains on policies and pronouncements rather than on the tangible implementation of ethical values in the daily lives of students and leaders (Amechi, n.d). Also, the government's dual role as both the proprietor and regulator of many institutions can lead to a conflict of interest, potentially undermining ethical oversight and enforcement (jehe.globethics.net, n.d). Akintayo (2008) equally observed that several specific ethical lapses continue to plague Nigerian higher education, including examination malpractices, sexual harassment, diverse forms of corruption etc. Ideri (2015) also lamented that —many of the educated Nigerians with various classes of degree, found in private and public lives are involved in corruption, embezzlement of public funds, greed, selfishness, cheating, injustice, indiscipline, ritual killings, stealing, deviant behaviour in educational institutions, kidnapping, armed robbery, suicide bombing, rigging of elections etcl. These issues indicate systemic weaknesses in the ethical environment and highlight the urgent need for more effective interventions. It has as well raised doubts on the phrase —found worthy in character|| which is one of the criteria in the awarding of certificates and degrees to the graduates of Nigerian higher institutions (Ideri, 2015).

Indeed, several ethical lapses continue to plague higher education institutions in Nigeria. Thus, issues such as indiscipline, corruption, and inadequate resources further complicate the landscape (Paulinus, 2022). Moreover, changing societal values and a shift away from traditional ethical norms pose a significant hurdle to instilling strong ethical principles within the academic community (Obijekwu & Obiesili, 2022). However, Ideri (2015) in his opined that, the problem is not that there is lack of morality in our tertiary institutions currently; rather the problem is that even the leaders seem helpless and confused about how to tackle the hydra-headed problem of immorality that has dominated almost every facet of the contemporary society.

Therefore, the increased incidents of ethical misconducts and numerous other issues had exerts increasing pressure on the leadership in higher education to deal decisively with the ethical implications of these issues. More disturbing is the fact that although, a range of values including honesty, kindness, responsibility, courage, and solidarity, are often mentioned within the higher education setting the challenge remains in ensuring their effective inculcation and practical application in the lives of students and leaders (Bette & Esu (2011),

Challenges Facing Higher Education Leadership in Nigeria

Higher education leadership in Nigeria operates within a complex environment characterized by a multitude of interconnected challenges.

1. **Corruption and Ethical Lapses:** These undermine the credibility and effectiveness of higher education institutions.
2. **Lack of Visionary Leadership:** Many leaders fail to prioritize long-term strategic goals over short-term gains.
3. **Inadequate Policy Implementation:** Policies promoting ethics and values are often poorly enforced.
4. **Global Disconnect:** Nigerian institutions struggle to meet international standards, diminishing their competitiveness.
5. **Governance challenges:** Governance challenges, including weak administration, corruption, and a lack of accountability, further undermine the integrity and effectiveness of university leadership.⁴
6. **Lack of Adequate Training and Development Opportunities:** Notably, there is often a lack of adequate formal leadership development and training opportunities, particularly for middle-level academics who play crucial roles within Universities.

Best Practices for Re-engineering Higher Education Leadership through Ethical and Values Education in Other Countries

Several best practices in ethical leadership training for tertiary institutions have emerged internationally. These include the use of case studies and real-world scenarios to facilitate the analysis of ethical challenges and the application of ethical frameworks. Thus, developing ethical frameworks and decision-making skills is a key focus, providing leaders with tools for navigating complex situations. Values-based leadership models are also prominent, emphasizing the integration of ethics into leadership curricula and the alignment of personal and organizational values (Clements, 2025). Open communication, transparency, and the importance of leaders modelling ethical behaviour and setting clear standards are consistently highlighted as crucial elements (Kirk, 2025). Successful ethical leadership development programs can be found at Universities worldwide. Institutions like Harvard, Yale, and Duke offer programs that emphasize ethical leadership and social responsibility and also the case studies from various universities, including those focusing on business ethics competitions and real-world ethical challenges, provide valuable learning opportunities (Kirk, 2025).

Examples are:

Singapore's Education Model: Emphasizing ethics in leadership development has propelled Singapore's universities to global recognition.

Finland's Inclusivity Policies: Promoting values of equality and social justice in education has enhanced Finland's global standing.

These case studies provide valuable insights for Nigerian higher education institutions aiming to reform their leadership framework.

Models of values-based leadership development emphasize the alignment of individual and institutional values, with approaches like the Social Change Model of Leadership and virtue-based models gaining traction (Nulty, Owens & Brooman-Jones, 2025).

Strategies for Re-engineering Education Leadership for Positive Change and Global Competitiveness.

In order to drive positive change and global competitiveness a comprehensive approach to re-engineering leadership in higher education is necessary. To achieve this, the following suggestions are proposed:

1. **Curriculum Reform:** Develop and implement comprehensive curricula for leadership development programs that explicitly integrate ethical theories, values clarification exercises, and case studies relevant to the Nigerian context. These curricula should draw upon both universal ethical principles and core Nigerian cultural and societal values. Values-based leadership development in Nigeria should therefore focus on empowering leaders to understand and articulate their own values, align them with the values of their institutions and the broader Nigerian society, and use these values as a guiding compass for ethical decision-making and the cultivation of a culture of integrity within their universities (Copeland, 2014).
2. **Experiential Learning:** Emphasize experiential learning methodologies, such as simulations, role-playing exercises, and community engagement projects, to provide leaders with practical opportunities to apply ethical principles in real-world scenarios.
3. **Faculty Development:** Invest in training and development for faculty and administrators to equip them with the knowledge and skills necessary to effectively teach and model ethical leadership. This should include workshops on ethical pedagogy and the integration of ethics across disciplines.
4. **Strengthening Governance:** Implement and enforce robust codes of conduct and ethical guidelines for higher education leaders, faculty, staff, and students. Establish independent ethics and disciplinary committees within Universities to provide confidential channels for reporting and addressing ethical concerns. Also, members of committees on ethics and

disciplinary matters must be people of high repute and integrity.

5. **Promoting Transparency and Accountability:** Foster a culture of transparency and accountability in all aspects of higher education institutions operations, including financial management, admissions, examinations, and research. Also, implement mechanisms for regular internal and external audits to ensure adherence to ethical standards.
6. **Ethical Leadership Training and Development Programs:** Integrate mandatory ethical leadership training into all leadership development programs. Develop and widely disseminate clear codes of conduct for all the staff, emphasizing integrity, accountability, and professional responsibility. Also, promote a culture of continuous learning among leaders through workshops, seminars, conferences, and access to online learning resources on contemporary leadership theories and practices. These programs should incorporate mentorship, coaching, and opportunities for reflection on personal and professional values. Such integration can foster trust, accountability, and ethical decision-making among leaders, creating a more transparent and reliable academic environment (Kirk, 2025).
This, integration can also lead to improved organizational performance, enhanced innovation, and higher staff morale within Nigerian Universities (Ayorinde, n.d). Similarly, Stein (2024) noted that Ethics training within these programs can equip leaders with the necessary skills to recognize and navigate complex ethical dilemmas, providing them with frameworks for principled decision-making.
7. **Partnerships and Collaborations:** Encourage collaborations and partnerships between Nigerian institutions and international institutions or organizations with expertise in ethical leadership development. This can facilitate the exchange of best practices and access to global resources.
8. **Values-Based Culture:** Promote a values-based culture within the institutions by explicitly articulating and communicating core institutional values. Recognize and reward individuals and initiatives that exemplify ethical behaviour and promote the university's values.
9. **Strengthening Anti-Corruption Policies and Committees within the Institutions:** Review and strengthen existing institutional laws and regulations to ensure they are explicit about ethical conduct and provide for severe penalties for breaches.
10. **Policy Advocacy:** Advocate for policy changes at the governmental level that prioritize ethical leadership and good governance within the higher education sector. This includes ensuring adequate funding for ethics education initiatives and protecting university autonomy from undue political interference.
11. **Promoting Meritocracy in Appointments and Promotions:** Implement strict merit-based systems for all appointments and promotions, from faculty to administrative positions and leadership roles. This involves clear, objective criteria, rigorous selection processes, and independent oversight committees. Actively discourage and penalize nepotism, favouritism, and political interference in human resource management.
12. **Enforcing Strict Academic Integrity Policies:** Develop and rigorously enforce zero-tolerance policies for academic malpractice, including plagiarism, exam malpractices, and "sex-for-grades." This requires strong disciplinary committees, swift investigations, and appropriate sanctions for both students and staff. Technologies for plagiarism detection should be widely deployed.
13. **Whistle-blower Protection:** Establish secure and confidential channels for reporting corrupt practices and ethical breaches, along with robust protection mechanisms for whistle-blowers to safeguard them from retaliation.

Conclusion

Re-engineering higher education leadership in Nigeria through a concerted focus on ethical and values education is not merely an aspirational goal but a fundamental necessity for achieving global competitiveness. Therefore, embracing a holistic approach that integrates universal ethical principles

with Nigeria's rich cultural heritage, fosters ethical decision-making skills, and cultivates a culture of integrity within the higher education sector, Nigeria can empower its higher education leaders to navigate challenges, promote excellence, and ultimately position its institutions as key contributors to national development and respected players on the global academic stage

RE-ENGINEERING ETHICAL STANDARDS FOR EFFECTIVE SECONDARY SCHOOL SUPERVISION IN NIGERIA FOR SUSTAINABLE NATIONAL DEVELOPMENT

Muhammad Saratu Mera (Ph.D)
Department of Educational Foundations,
Federal University Birnin Kebbi, Kebbi State.
Email: saratu.mera@fubk.edu.ng

Abstract

Ethical supervision practices in secondary schools play a vital role in fostering a positive and productive educational environment, ultimately leading to improved educational quality. However, there is a recognized erosion of ethical behaviour including trust and integrity within the Nigerian education system. Thus, the alarming rate of misconduct in Nigerian schools underscores the need for re-engineering ethical standards to maintain integrity within the educational system. This paper examines the profound impact of ethical standards in the supervision of secondary schools in Nigeria on the overarching goal of sustainable development. In order to achieve this the researcher examined scholarly perspectives on the conceptual framework of ethical standards and supervision, exploring their interplay with educational quality and national development goals, analysing supervisory functions, identifying existing challenges in maintenance of ethical standards in school supervision, and suggesting strategies for re-engineering ethical standards in the supervision of secondary schools in Nigeria.

Keywords: Ethics, Supervision, Ethical standards, Sustainable National Development.

Introduction

Education, particularly at the secondary level, serves as a cornerstone for the holistic advancement of any nation, and Nigeria is no exception. It is at this critical juncture that young individuals acquire the knowledge, skills, and values that will shape their future contributions to society and the overall trajectory of national development. Ensuring the quality and relevance of secondary education necessitates effective supervision, a process designed to support teachers, improve instructional practices, and ultimately enhance student learning outcomes.

Ethical supervision practices in secondary schools play a vital role in fostering a positive and productive educational environment, ultimately leading to improved educational quality. When supervisors uphold principles of fairness, transparency, and support, it directly impacts teacher motivation and morale. Okekeuche (2019) opined that supervision aimed at improving teacher quality and standards can maximize student performance. Ethical supervision enhances the quality of teaching through various mechanisms. Adeoye (2023) noted that effective supervision provides continuous support and encouragement to teachers' instructional practices, keeping them dynamic, knowledgeable, and up-to-date in their profession. In similar line of thinking Mohammed, Asante and Tilibe (2025) also observed that it provides constructive feedback that helps teachers reflect on their practices and identify areas for improvement. The authors asserts further that it fosters professional development by encouraging teachers to seek new knowledge, share experiences, and develop a sense of control over their work. Moreover, ethical supervision promotes synergy and teamwork among teachers, creating a collegial environment where they can learn from each other and collectively work towards instructional improvement. Wu, Kulophas, and Xupravati, (2024) observed that supervisors who demonstrate ethical leadership, characterized by integrity and a commitment to guiding academic and ethical growth, can significantly enhance trust and job satisfaction among teachers. Instructional supervision, when implemented ethically, becomes a collaborative process focused on supporting teachers in creating valuable learning experiences for students (Basilio, 2021). Quality assurance through regular and

ethical supervision ensures that teachers' capabilities and pedagogical practices are continuously improved (Constance, Ogbonnia & Waniita, 2022).

The link between ethical supervision and improved learning outcomes for students is significant. Effective and ethical supervision has been shown to contribute to better academic performance, enhanced critical thinking skills, and the development of positive values (Suleiman, Ijaya, Ishola, & Joshua (2020). The authors remarked further that genuine supervision can reduce negative behaviours among students and improve their overall performance. By facilitating the implementation of effective teaching roles, ethical supervisors contribute to a more qualitative educational system (Kotirde, & Bin Md-Yunos, 2024). Studies have established a positive correlation between school supervision and teachers' job performance, which directly impacting students' learning (Niyi, Ogunode, Thankgod & Olatunde-Aiyedun, 2023).

Also, instructional supervision serves as a tool for checking teachers' performance and improving the teaching-learning situation to the benefit of students (Usman & Dangara, 2015). Ethical supervision ensures the provision of quality teachers and promotes ethical practices, ultimately affecting learning outcomes (Constance et. al., 2022). Teachers' expertise, including adherence to ethical values, has been shown to positively predict students' learning outcomes (Umeano, Onyishi, Adimora, & Onah, 2019). Promoting ethical standards within the education system, particularly in the supervision of schools, is crucial for ensuring that the quality of education delivered aligns with these national and global aspirations for sustainable development.

A significant ethical challenge in the Nigerian education sector is corruption, defined as the systematic use of public office for private benefit, significantly impacting the availability and quality of educational goods and services. Teacher absenteeism is also a serious ethical concern, reducing school effectiveness, diminishing student achievement, and damaging the school's reputation Musa, (2018). Another pressing issue is aiding examination malpractice for a fee. Therefore, ethical standards in educational supervision must actively work to prevent and address such issues, ensuring a conducive and equitable learning environment for all students.

A crucial element of ethical supervision is the building of trust between supervisors and teachers (Nwikina, & Nwile, 2015). This is because when supervisors act with fairness and transparency, they foster an environment where teachers feel respected and supported, making them more receptive to feedback and guidance aimed at enhancing their teaching practices. Trust is essential for effective communication and collaboration, which are key components of successful supervision (Nwikina, & Nwile, 2015).

Conversely, unethical supervision can have detrimental effects on educational quality. Supervisors who are bullying or excessively critical can demotivate teachers and create a climate of resentment (Osakwe, 2013). Suleiman, Ijaya, Ishola, and Joshua (2020) observed that issues such as victimization, harassment, and corruption in supervision undermine the integrity of the process and can lead to a decline in teacher performance and overall educational standards. Therefore, upholding ethical standards in supervision is not merely a matter of principle but a critical factor in ensuring a high-quality secondary education system that can effectively contribute to national development.

Thus, when ethical principles guide the supervisory process, it fosters an environment of trust, accountability, and mutual respect, leading to more meaningful engagement and positive educational outcomes. Conversely, a lack of ethical standards can erode the integrity of the supervisory function, undermining its potential to contribute to the nation's progress. However, presently ineffective supervision remains a significant concern in Nigeria, contributing to the decline in the quality and standard of education leading to mass failures in examinations and producing graduates that are not ethically sound in character and values. Thus, the thrust of this paper is to examine the profound impact of ethical standards in the supervision of secondary schools in Nigeria on the overarching goal of sustainable national development.

Conceptual Framework

School supervision in Nigeria plays a multifaceted role aimed at enhancing the quality of education and ensuring the effective functioning of secondary schools. Supervision can be broadly defined as an intervention provided by a superior officer to a subordinate to ensure that expectations are appropriately met (Suleiman, Ijaya, Ishola, & Joshua, 2020). Supervision in Nigeria operates at different levels. Internal supervision is conducted by individuals within the school, such as the principals, vice-principals, and heads of departments, focusing on the day-to-day administration and instructional leadership (Kotirde, & Bin Md-Yunos, 2024). While external supervision is carried out by officials from the State Ministry of Education, Universal Basic Education Board and Secondary School Management Board, or other similar government agencies, ensuring compliance with regulations and standards. In the educational context, it is a process focused primarily on achieving the instructional expectations of the educational system (Afariogun, & Omoniyi, 2024). The fundamental purpose of school supervision is to improve pupil learning, with a direct focus on teachers and the educational sector as a whole. It is a service activity designed to help teachers perform their jobs better through collaborative efforts (Ekundayu, Oyerinde & Kolawole, 2013). The primary responsibility of supervisors is to ensure high standards are maintained and schools are run according to established regulations (Kotirde, & Bin Md-Yunos, 2024). While Ekundayu, Oyerinde, and Kolawole (2013) opined that effective supervision involves assessing student progress, ensuring teachers prepare and maintain accurate records, and utilizing evaluation processes to plan meaningful instruction.

Ethics, in its essence, refers to a system of moral principles that guide human actions and decisions, distinguishing between right and wrong, acceptable and unacceptable behaviour (Musa, 2018). The author remarked further that, ethical standards within an organizational context, can be understood as the moral codes or benchmarks associated with operations, management, and the performance of duties by individuals. In the specific realm of educational supervision in Nigeria, these standards extend to the conduct of supervisors in their interactions with teachers, students, parents, and the broader community. Thus, effective teaching requires subject content knowledge, pedagogical knowledge, and an understanding of educational contexts and goals (Musa, 2018). Ethical standards in this domain demand that supervisors act in ways that promote the learning and growth of students, helping them realize their full potential. This necessitates a commitment to fairness, impartiality, and a recognition of the diverse characteristics of pupils and students, regardless of their physical, mental, emotional, social, racial, or religious backgrounds (Musa, 2018).

Several research efforts have explored the meaning of ethics in the Nigerian educational landscape. Bateman and Snell define ethics as the system of rules governing the ordering of values, while Siropolis in Nwikina & Nwile (2015) views it as the rules or standards governing conduct within a profession. Ethical behaviour aligns with the standards set by society whereas, unethical behaviour deviates from these norms. In the context of school management, trust, responsibility, and integrity are considered integral to excellent leadership (Nwikina & Nwile, 2015). Ethical conduct builds upon trust, which is a fundamental ingredient for quality management, influencing communication, interpersonal relations, conflict management, problem-solving, teamwork, and overall focus. The National Policy on Education in Nigeria cited in Nwikina and Nwile (2015) emphasizes national ethics such as discipline, integrity, dignity of labour, social justice, religious tolerance, self-respect, and patriotism, underscoring the importance of these values within the education sector. Despite such commitment, there is a recognized erosion of ethical behaviour including trust and integrity within the Nigerian education system.

Various scholars have further elaborated on ethical standards in education. Omisore and Oyende cited in Nnadiesube, (2018) suggested that ethics is a set of principles relating to morals, especially as they apply to human conduct, and work ethics concerns what is morally correct, honourable, and acceptable within an organization or society. Ethical behaviour occurs when individuals act with equity, fairness, and impartiality, respecting the rights of others (Nnadiesube, 2018).

Ethical issues in education encompass basic principles, procedures, and behaviour patterns rooted in core values, aimed at establishing a disciplined and purposeful school environment dedicated to improving the learning process. Fairness and equity are vital aspects of ethical standards in education, requiring fair treatment in the administration of resources and in the admission and management of students and staff, without discrimination (Oyetubo, 2021). In the context of educational supervision, ethical guidelines should ensure honesty, integrity, fairness, justice, impartiality, loyalty, and faithfulness. The British Association of Counselling Professionals identifies traits like sincerity, resilience, wisdom, humility, integrity, respect, competence, courage, and fairness as essential ethical qualities for school counsellors, a role that shares similarities with supervisory responsibilities (Adikwu, 2021). The alarming rate of misconduct in Nigerian schools underscores the need for ethical standards to maintain integrity within the educational system. Compliance with codes of ethics ensures institutions promote an environment of academic integrity, strengthening public trust and fostering sustainable educational development (Kehinde, 2023).

Sustainable national development is a dynamic and progressive transformation process through which nations meet their current needs and aspirations without compromising the capacity of future generations to meet their own needs (Shobayo & Ajayi, 2023). It encompasses improving the range of opportunities that enable individuals and communities to achieve their full potential over a sustained period while maintaining the resilience of economic, social, and environmental systems (Boyi, 2013). The key pillars of sustainable development include economic viability, social equity, and environmental sustainability.

Ethical Supervision as Foundation for Sustainable National Development

The establishment of ethical standards in the supervision of secondary schools in Nigeria forms a critical foundation for achieving sustainable national development. Effective secondary education, fostered by ethical supervision, plays a vital role in cultivating a skilled and knowledgeable citizenry, which is indispensable for economic growth and innovation (Shobayo & Ajayi, 2023). Higher education, built upon a strong secondary education foundation, advances society through technology and innovation, creating a quality workforce essential for sustainable economic progress (Abanyam, David & Ibrahim, 2025). Quality education equips individuals with the necessary skills for effective functioning in society and contributes significantly to economic advancement (Shobayo, & Ajayi, 2023). Investment in the quality of education is pivotal for sustainable economic growth by transforming human resources into valuable human capital.³⁷ Education serves as the bedrock for all sectors, nurturing and sustaining ideas that drive development and aiming to produce a skilled workforce (Nwuche & Charles, 2022). Indeed, skilled manpower is a fundamental requirement for national development, and this can only be effectively cultivated through a robust and ethically supervised education system (Boyi, 2012).

Furthermore, ethical supervision is instrumental in promoting core values such as integrity, responsibility, and civic engagement among students (Nwikina, & Nwile, 2015). The authors remarked further that, these values are not only essential for social cohesion and good governance but also for fostering a sense of national ethics encompassing discipline, integrity, dignity of labour, social justice, religious tolerance, self-respect, and patriotism. Education for Sustainable Development (ESD), which aims to create a more sustainable and just society, relies heavily on instilling these ethical values in learners (Ukanga & Ashiwere, 2019). Moral education, with its focus on values and character development, is an imperative for sustainable development in Nigeria (Chizaram & Uche, 2019). By emphasizing ethical conduct, schools contribute to the development of responsible and well-rounded individuals who can contribute positively to the nation's progress (Nwangwu, Onoyima, & Aka, 2022).

The long-term achievement of sustainable development goals in Nigeria is intrinsically linked to having a well-educated and ethically grounded population, which is a direct outcome of effective and ethically supervised secondary education (Boyi, 2013). By equipping individuals with the necessary knowledge, skills, and ethical framework, education empowers them to become responsible and self-sufficient members of society, thereby driving national development (Akinyemi, & Mohammed, 2013).

Ensuring adequate funding and support for education, underpinned by ethical supervision, is paramount for enhancing sustainable national development in Nigeria (Joseph & Ofoego, 2020). The successful implementation of national visions like Vision 2030 and the Sustainable Development Goals, particularly the goal of quality education, hinges on the establishment and maintenance of high ethical standards in the supervision of secondary schools (Eli, 2019).

The erosion of ethical behaviour within the education system, often exacerbated by lapses in supervision, directly undermines the very foundations required for sustainable national development (Nwinkina & Nwile, 2015). Trust, integrity, and a commitment to the common good are essential for societal progress, and these are directly impacted by the ethical climate within schools. Unethical supervision can perpetuate a cycle of poor values and practices, hindering the development of a responsible and ethical citizenry. Therefore, the promotion of ethical standards in secondary school supervision is not just an educational imperative but a fundamental requirement for building a sustainable and prosperous future for Nigeria.

Functions of Secondary School Supervisors in Nigeria

The functions of secondary school supervisors are diverse and crucial for maintaining standards and fostering improvement. These functions include:

1. The appraisal of specific learning situations to ascertain the needs of children and the efficiency of instruction;
2. Provides professional information and technical assistance to teachers in the form of improvisation and use of instructional aids and also suggestions for instruction improvement;
3. Guidance on management of classroom discipline,
4. Boosting morale and suggestions on ways to improve teaching performance (Omorobi, 2025).
5. Conducting research for curriculum instruction and revision; and offering professional leadership and cooperation with teachers (Omorobi, 2025).

Challenges of Maintaining Ethical Standards in School Supervision

Several challenges and or obstacles hinders effective maintenance of ethical standards in school supervision in Nigeria. Those challenges includes:
